Address of Thomas Shillitoe to Friends in Great Britain and Ireland.

(Concluded from page 410, vol. L.)

"The door has of late been set open much wider than was the experience of our first friends, for the members of our Society to associate with those of other religious professions, in the management of the various institutions for benevolent purposes that are on foot. Let us be careful, that this does not lead us to assimilate ourselves to the world, the world hated our first Friends, because they maintained a faithful protest against its spirit, its maxims and manners; but, in proportion as we put away from us the weapons of the Christian's warfare, and join in league with the world, a wider door of admittance into all companies and all societies will be opened to us. Thus we have, indeed, occasion to look well to our stepplings and standings; remembering, that so far as we join ourselves to the world in any respect, we shall be commended with the world. 'If ye were of the world,' said our blessed Lord to his immediate followers, 'the world would love its own; but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you.'

"In order that we may not further forfeit the confidence of the public, but regain that which we may have lost, let me again repeat caution, that by others' harm we may take warning; and by our future conduct give proof of our belief in this incontrovertible truth, that man's life or the true enjoyment of it, consisteth not in the abundance of the things which he possesseth. Let us learn that essential lesson of contentment with little things to this world, remembering that He, whom we profess to take for our leader, declared respecting himself, although Lord of the whole world, 'The foxes have holes and the birds of the air have nests, but the Son of man hath not where to lay his head,' so void was he of earthly inheritances. It was the exhortation of the prophet to Baruch, the son of Neriah, 'Seekest thou great things for thyself? seek them not; for behold I will bring evil upon all flesh, saith the Lord; but thy life will I give unto thee for a prey, in all places whither thou goest.' Whilst then we are engaged to circulate more generally, among mankind at large, publications explanatory of our religious principles, and religious tracts, may we give proof, in the first place, of their

happy effects upon our minds, for example will do more than precept.—actions will speak louder than words; so shall we each one become a preacher of righteousness, that cannot fail to reach to the pure witness in the minds of others. Thus may we become as saviours on Mount Zion, 'For saviours shall come upon Mount Zion, to judge the Mount of Esau; and the kingdom shall be the Lord's!'

"And let us all return to our tents; for if I am not mistaken, such are the signs of the times, that they loudly call upon us so to do, and there closely to keep. The Lord is in this tent, unto which the true Israel of God must flee to be safe; and as there is thus an abiding in him, who is the munition of rocks, should the pot-sherds of the earth begin to smite one against another, such will be preserved from smiting with them, in word or deed, and escape that danger which will more or less follow those who are found so meddling; and that perturbation of mind, that instability of confidence and want of support, under the various probations that may, in unerring wisdom, be permitted to overtake, which ever was, and will be, the case of those who make flesh their arm.

"I cannot forbear to express a fear, that there are among us who are not sound in the faith, as it respects an entire reliance on the all-superintending care of Divine Goodness, in times of danger and difficulty, but who are making flesh their arm; and when at times their minds are awakened to behold the approach of danger, as respects national affairs, are placing their confidence in, what they esteem, the wise conducting of a well-disciplined army, and a large store of weapons of defence, all which may effect the very destruction of those who are thus relying upon them, instead of the living God, for preservation. Such is the great uncertainty of all human events! It must with reverence be acknowledged by every serious observer, that the Divine protection has long been over us as a nation; and the chain of the evil power be loosened for a time, this arm of flesh, which there is reason to fear many are depending upon for support in such perilous times, will become but as tow in the furnace! Happy will it be in that day, for those who have made the Lord alone their refuge, and placed their dependence on that Omnipotent and Omnipresent Being, who will prove in such seasons a covert from the heat, a shelter from the storm, and as the shadow of a great rock in a weary land; a day and time when the minds of all may be clad with dismay as with a garment, for fear of what is coming upon this part of the Lord's foot-stool.

"And, Friends, let us not dare to meddle with political matters, but renewedly seek for holy help to starve that disposition so prevalent in us to be meddling therewith. Endeavour to keep that ear closed, which will be itching to hear the news of the day, and what is going forward in the political circles. We shall find there is safety in so doing; it is the only way for us to experience our minds to be preserved tranquil, amidst all the commotions, all the turnings and overturnings that may be permitted to take place, when the measure of iniquity may be filled up. I have found, that if we suffer our minds to be agitated with political matters, our dependence becomes diverted, by little and little, from the true centre and place of safety, where perfect peace is experienced, though the world and all around us may speak trouble. Such as have this disposition, will know it to be a truth fulfilled in their own individual experience, that 'They that trust in the Lord shall be as Mount Zion, which cannot be removed; but abideth for ever;' and that as 'the mountains are round about Jerusalem, so the Lord is round about his people from henceforth even for ever.' Now, Friends, be willing to take up this cross, for I have found it to be one of the many crosses I have had to take up, and avoid reading political publications, and, as much as possible, newspapers; and I am persuaded, if a willingness, but manifest on our part so to do, sufficient help will be afforded from time to time, to withstand this and every other temptation of the great adversary of our peace. I am well aware that men in trade, and sometimes those who are free from its incumbrances, have occasion to resort to those channels of general information; but when this is my case, I find it safest for me, after I have received information on the subject in question, then to put the paper away from me. I am aware that it requires firmness so to act, there being something in our nature so anxious to know what is going forward in the world; but, my friends, nature must be overcome by grace, which I never found to be wanting, if rightly sought after.

"I must now conclude, with expressing the earnest solicitude I feel, that we may each of us be found willing to unite with that all-sufficient help, which I believe, yet waits our acceptance; and suffer it so to operate in and upon us, that we may become a people wholly separated in heart and mind, love and affection, from everything that has a tendency to dim our brightness, to prevent us from being as lights in the world; and be clothed with those beautiful garments, which so adorned our worthy ancestors—humility, self-denial, and an entire dedication of heart to the work and service of our God; a disposition truly characteristic of the disciples of him, who declared, 'My kingdom is not of this world;' and thus may the enemy no longer be permitted to rob and spoil us, but the language go forth respecting us, 'Happy art thou, O Israel,

who is like unto thee, O people; saved by the Lord." THOMAS SHILLITOE.

"Hitchin, 1st of Eleventh month, 1820."

Letters from Unfrequented Places.

(Continued from page 40, vol. 1.)

DAMASCUS.

Damascus, the oldest city in the world, is a curious old place. Had I not been in Cairo, and become acquainted all along with these oriental mixtures of people and their peculiar manners and customs, it would have produced a strange sensation.

I often wish I could just pick up some of you home-folk, and set you down in the middle of these scenes. It would not do unless I could put my arms round you, and had our big Diabes hovering over all, for it would frighten you so; but there is nothing like getting used to a thing! The surroundings of Damascus are the most interesting to me. Wish I could show you some views we had this morning from a tall minaret, of the famous old mosque of St. John the Baptist. The mud colored city spread widely beneath us, we looked down on countless domes and round tops, for almost every house has a large inverted bowl on top of it—not so bad here as at Jerusalem—I thought there, that not only every house, but nearly every upper room had its inverted cover. "The street called Straight" we could trace by its sharp, triangular cover, put on to keep out the sun. Beyond the city are miles and miles of rich cultivation, trees and gardens, with suburban villages nestling among the luxuriant vegetation. The Abana and the Pharpar rivers water the immense plain, and nourish all the wilderness of verdure, fruits and flowers. The Abana (Barada it is called here) flows into and through the city; every house seems to have its fountain, and the cool, refreshing sound of trickling water is heard on every side; large streams, too, rushing in many courses with force enough to keep every thing clean, but they do not! My guide book gives so much better descriptions than I can, that I will try to copy it: "The fame of Damascus begins with the earliest patriarchs, and continues to modern times. While other cities of the East have risen and decayed, Damascus is still what it was. It was founded before Balbeck and Palmyra, and it has outlived them both. While Babylon is a heap in the desert, and Tyre a ruin on the shore, it remains what it is called in the prophecies of Isaiah, 'the head of Syria.' It is evident, to use the words of Lamartine, that, 'like Constantinople it was a predestinated capital.' Nor is it difficult to explain why its freshness has never faded through all its series of vicissitudes and wars. Among the rocks and brushwood at the base of Anti Libanus are the fountains of a copious and perennial stream, which, after running a course of no great distance to the south-east, loses itself in a desert lake. But, before it reaches this dreary boundary, it has distributed its channels over the intermediate space and left a wide area behind it, rich with prolific vegetation; these are the 'streams from Lebanon,' and the 'rivers of Damascus' which Naaman preferred to all the 'waters of Israel.' And this stream is the inestimable treasure of Damascus. The habitations of men must have been always gathered about it, as the Nile has inevitably attracted an immemorial population to its

banks." "Damascus remains the true type of an oriental city. Caravans come and go from Bagdad and Mecca as of old; merchants sit and smoke over their costly bales in dim bazaars, drowsy groups sip their coffee in kiosks overhanging the river; and all the picturesque costumes of the East mingle in the streets. The first view of the town from one of the over-leaning ridges, seems like the vision of the earthly Paradise. Marble minarets, domes glittering with the crescent, massive towers and terraces of level roofs rise out of the sea of foliage, the white buildings shining with ivory softness through the broad, dark clumps of verdure, which, miles in breadth, and leagues in circuit, girdle the city—making it, as the people love to say, 'a pearl set in emerald.' It is a wilderness of bloom and fragrance and fruitage, where olive and pomegranate, orange and apricot, plum and walnut mingle their varied tints of green—a maze of flowering and scented thickets, pierced with wild woodland glades that are sweet with roses and jasmine blossoms, and alive with springs and rivulets. And close up to the forest edge comes the yellow desert, and around it are the bare mountains, with the snowy crest of Hermon, standing like a sentinel with shining helmet, on the west—the tower of Lebanon that looketh towards Damascus."

The population of Damascus has been variously estimated; in round numbers it may be taken at about 150,000, of whom about 100,000 are Muslims and 6,000 Jews—others to fill up. The bazaars are in long avenues, roofed over; not a mere jumble of miscellaneous shops, but each bazaar devoted to some especial trade or manufacture. There is the saddler's bazaar, where the gay but uncomfortable Syrian saddles may be seen, in all varieties. The silk bazaar, where western travellers generally linger to inspect the gorgeous robes of Damascene work, and to purchase at least one of those gay head-dresses seen so often in Palestine. Then there are the Greek bazaar, the tobacco bazaar, the perfume, the coppersmith's, the boot and shoe, booksellers' and so on, bazaars for every branch of trade and manufacture, where the traveller may purchase anything he requires "from a shoe-string to a camel." "On the market day, the crowds are enormous, and then the 'Eye of the East' sees, and is to be seen to the best advantage. Then, as in fact, on other days, there will be seen Persians in gorgeous silks, Nubians in black and white, Greeks in national costume, Jews with ringlets, and without, Bedouins of the desert, pilgrims on route to Mecca, a marvellous medley. The hubbub is generally terrific. Now way must be made for some crowd, now a string of camels drives the erode into a mass, or a party of midshipmen, just arrived from Beyruth, rushes through the bazaars on fleet donkeys, scattering sherbert stalls as they pass. And in the midst of all this, the richly robed merchants sit on the sills of their shops, smoking their tobacco, and sipping their coffee, with the most consummate indifference."

In addition to the bazaars are the khāns, where the wholesale trade is carried on. They are, for the most part, owned by merchants of immense wealth, and the carpets of Persia, the muslins of India, the prints of Manchester, &c., form the stock in trade. The street vendors go about in legions—lemonade,

raisin water, liquorice water, fruits, nuts, if fact everything that can be hawked about is sold in the streets. The bread boy cries, "Oh Allah! who sustaineth us, send trade!" The drink seller cries, "Oh cheer thine heart," a he rattles his copper cups in his hand, and so on.

We are going now to mount donkeys and ride to the top of the mount from whence Mahomet looked down upon Damascus when he was but a camel driver from Mecca. Gazing upon the beautiful scene he said, "Man can have but one Paradise, and my Paradise is fixed above," and turned away without entering the city. I can but admire his self-control in resisting such a temptation, for he would not feel the contrast of the dirty city to the fulness of beauty without, as we do. A modern writer says: "Damascus is beautiful from the mountain, and "If I were to go to Damascus again, I would camp on Mahomet's hill about a week, and then go away!" I might do so too, having seen the inside of the city, but unless it were necessary to remain in my tent, would prefer the real comfort of the Demetri Hotel, the most decidedly oriental hotel we have been in—modern comforts mingled with eastern luxuries, and making a very enjoyable whole, so very, very grateful to the weary traveller.

We have been shown the place of St. Paul's conversion, and where he was let down at night over the wall. Have visited the houses of Ananias and of Naaman, and the old mosque supposed to be the Temple of Rimmon where Naaman deposited his "two mules burden of earth," and reared his own altar (2d Kings v. 17), the same which king Abaz saw and copied in Jerusalem (2d Kings xvi. 10—12). We have also traversed the "street called Straight," a mile in length, and now we must go.

Beyruth, 4th mo. 15th, 1878.—You would not envy me if you could feel as tired and worn out as I do! I am almost astonished to be alive after twenty days on horseback! and now the reaction from constant pressing or is nearly as bad as the fatigue. To-morrow we expect to go on board a French steamer for Constantinople, and are promising our selves ten days of delicious rest, yes rest.

My brother has gone up Mt. Lebanon to visit a school in which New England Yearly Meeting is interested through Eli Jones. I wanted to go, had looked forward to that as one of the things to do here, but tired nature forbids. It is a three hour's ride on horseback, and E will stay the night, and return early to-morrow morning. In the meantime I am going to drive about the city, and see something of it, thinking it will be a luxury to sit in a carriage once more. Beyruth is very beautiful and more civilized than any place we have seen in Asia. The only road in Syria is from here to Damascus, and that is perfect as Macadamized road can be—a diligence runs to and fro daily.

(To be continued.)

What solemnity does it cast over life to know that our times are in God's hand! A life thus wholly ordered by the infinite Jehovah must be a solemn thing. What hope for the future! What comfort for the present. We know that there is a joy beyond the highest earthly joy, and light beyond any earthly gloom. The storm may be for an hour; the calm that follows is eternal.—H. Bonar.

For "The Friend."

TO THE EDITORS:—Having just received from a friend, the 7th month number of *The (London) "Friend,"* containing a critique on two or three paragraphs in the fore part of "An Examen" of parts of the recent work of R. Barclay, on the "Inner Life of the Religious Societies of the Commonwealth," I wish to offer a few remarks thereon, as it may come under the eye of some of the readers of "The Friend."

The critic supposes he has discovered a "fundamental error" in the paragraphs on which he comments, and which in his judgment "deprives the examen of value;" he therefore takes no notice of any other portions of the work.

To do him entire justice, I will ask space enough to give the greater portion of the article. After quoting from the Examen the opinion expressed, that an author not adhering in the immediate revelations of the Holy Spirit to the mind of man, as Friends have ever held the doctrine invariable of "fathomless" Friends believe to be the "inner life" and motive power that actuate the founders and consistent members of the Society, the quotation proceeds: "That this serious defect existed in the author of 'The Inner Life,' is made manifest in the early pages of the work, and shows its effects in various parts of it. He says: 'If a Christian voluntarily forsakes the appointed channels of divine grace and help, which are described in the New Testament as only in connection with a Christian society, will be remain a member of Christ's mystical body' " (p. 4.) And again, "True it is that the body without the Spirit is dead; but it is equally true that the Spirit without the body cannot effect its desires and aims" (p. 6).

The assertion that the appointed channels of divine grace and help exist only in connection with a Christian society, and that it is so described in the New Testament, contradicts one of the fundamental principles of Friends, who have ever believed that Christ, the true light, lighteth every man that cometh into the world; and the declaration of the Apostle that "The grace of God that bringeth salvation hath appeared to all men." True, the Church of Christ, the body of sanctified believers of which He is the glorified head, is a society—!—for which it may be called—through which He works for the fulfilment of His redeeming purposes, and through its organism His Holy Spirit ministers to the stability, comfort, and fellowship of the individual members. But to say that the omniscient, omnipotent Jehovah, "who will have all men to be saved, and to come unto a knowledge of the truth," cannot effect His "designs and aims" without the instrumentality of a visible Church, is presumptuously to limit the Holy One of Israel, and to cut off from any hope of salvation millions of those whom He has created for the purpose of His own glory, and for whom His only begotten Son suffered and died.

Then comes the criticism. "Now what was it that Robert Barclay really did say? The paragraph from which Dr. Evans has detached the sentences quoted, is as follows, 'A Christian may be really united to the Church universal in a desert or a prison, but who will venture to say that, because Christ there supplies all his need without human means, religious isolation is Christ's ordinary method of doing this? If a

Christian voluntarily forsakes the appointed channels of divine grace and help, which are described in the New Testament as only existing in connection with a Christian society, will he remain a member of Christ's mystical body? Who will venture to say that a Christian is performing all his duties, as described in the New Testament, if he does not seek the communion of the saints, if the establishment and comfort of the church members is a matter of indifference to him, and if he does not do his part, however small, in assisting in the propagation of the Gospel?" (*Religious Societies of Commonwealth*, p. 4.)

"The great leading principle expressed in the New Testament is that the Church is 'His body.' All the members of the Church have some office. True it is that 'the body without the Spirit is dead,' but it is equally true that the Spirit without the body cannot effect its desires and aims. We are 'workers together with God,' and when we refuse to be so we frustrate those loving purposes which God has towards our race—purposes which He designs to accomplish by human instrumentality. The elaborate machinery of a steam-engine is useless without the motive-power, but without this machinery the steam will not accomplish the object which it is designed" (p. 6).

Robert Barclay's position is so clearly true and Scriptural that some ingenuity is needed to misconstrue or pervert its meaning. R. B. says in plain words that association with an outward Church is not necessary to spiritual life, but that it is the ordinary and the appointed means through which it is fed and maintained. Is not this the fact? R. B. does not say, and we are assured he never thought, that "the millions outside the Church's pale were cut off from the hope of salvation. Dr. Evans says Robert Barclay's book is vitiated by a radical error at its outset. This assumed radical error is Dr. Evans' own creation. Such a fundamental misconception of the views of the author he is criticising deprives Dr. Evans' examen of value. To understand and fairly to represent the opinions of an opponent is the first requisite of a critic. That requisite Dr. Evans does not possess."

The parts of the paragraphs from which the expressions controverted are "detached," do not change the meaning of the assertions made, and were not calling for other remarks than those setting forth the position occupied by the Church, and the high privileges it confers on its members. But the sentences "detached" are the salient points of those paragraphs, being the bold and unqualified assertions that the *Scriptures* describe the appointed channels of divine grace and help, "only in connection with a Christian society," and that the Spirit without the body— "that is, a Christian society"—cannot effect its desires and aims." It would have been well if the critic, who pronounces this position to be "true and scriptural," had given at least one text that holds out such an idea. What is said of a Christian being united to the church universal, though "in a desert or a prison," and that there Christ supplies all his needs without human means; or that a Christian is not "performing all his duties" if he "does not seek the communion of the saints," no more removes or mitigates the "radical error" in the two detached sentences, than does the critic's assumption that what he calls my "fundamental misconception of the views

of the author" deprives the "Examen of value."

He remarks, that "R. Barclay says in plain words that association with an outward church is not necessary to spiritual life, but that it is the ordinary and the appointed means through which it is fed and maintained;" and then asks, "Is not this the fact? It is not, even in this modified presentation of R. B.'s teaching. What he does say is, 'The appointed channels of divine grace and help are described in the New Testament as only (not ordinarily) in connection with a Christian society.'" Were this true, even the Christian in a desert or prison would run the risk of being deprived of divine grace and help, (on which depends spiritual life) inasmuch as he might thus be cut off from the only channels for conveying them. But every one who is grafted into Christ draws his "spiritual life" immediately from Him the living Vine, without the intervention of any christian society or other human organization. The benefits conferred by and through the church are inestimable, but it is its glorified Head alone that can break man off from his natural and fallen nature, graft him into himself, and nourish the spiritual life He has created.

If R. Barclay does not say, nor as this critic "is assured" "never thought" that "the millions outside the Christian pale were cut off from the hope of salvation," it was because his own belief did not correspond with the theory he inculcated, that "the Spirit without the body—an outward church—cannot effect its desires and aims." "The wind bloweth where it listeth and thou hearest the sound thereof but canst not tell whence it cometh and whither it goeth, even so is every one that is born of the Spirit."

CHARLES EVANS.

8th month, 1878.

A chamois case has just been decided in Switzerland. Two men of Dresbach in the canton of Glaris, caught in 1876, a young chamois, aged six months or thereabouts, on the Braunwald, took it home and made a pen for it. Unhappily a gamekeeper heard of this, and laid an information, and the capture of a young chamois being interdicted, had the two hunters fined 10 francs. Now arose the question what to do with the chamois. The local court could find no precedent, neither any law, concerning the animal, and referred the matter to the Federal authorities, who ordered that it should be set at liberty. His sorrowful masters opened the pen, and the chamois wouldn't go out. Depositions to this effect were duly drawn up and witnessed, and forwarded to Berne, where the Federal Council decided that a gamekeeper should remove the contumacious chamois, and turn him loose in a mountain district, where he would be under the protection of a game law. The official lodged the animal away to the appointed spot and set him at liberty, and the chamois at once turned round and sped for home, till he had once more reached his beloved prison. The gamekeeper returned and reported, and before the Federal Council could decide what to do next the animal grew out of his minority, and thus placed himself beyond its jurisdiction. Herr Wunderlich, of Zurich, has bought him for 350 francs and has given him free range of his park.—*Late Paper.*

Watch ye, stand fast in the faith.

For "The Friend."

Separation in the Western Yearly Meeting.

The *British Friend* for the 7th month contains five articles referring to the separation in Western Yearly Meeting. This indicates an unusual awakening of attention to this subject.

The first in order in its columns is from William Ball, who alludes to the probable course of the delegates sent to this country by London Yearly Meeting.

The editor of the paper next prints his own view, on an important question, which he first propounds:

"When two bodies come forward, each claiming to be a particular Yearly Meeting, of which there can only be one, what substantiates the right of either to the name and standing of that meeting? A right conclusion on this point would greatly help in any future emergency. It seemed to claim little thought in our late Yearly Meeting, and is but slightly adverted to by our correspondents. We would, therefore, with becoming diffidence, submit that the sole claim of either body to the title assumed must ever rest on a strict adherence to the original religious profession of the Society of Friends, with a practice in conformity; and by no means exclusively or chiefly in consideration of certain Friends being officials—the clerk and correspondents—or contingent on the number of members in either constituency. In the event of either party in these cases emitting no declaration of their adhesion to the original faith of Friends, let this point be ascertained, and then make election which epistle and party to accept. Decisions being known to be thus ruled, we are strongly inclined to believe that an effectual check would be placed upon divisions, attended, as they are, with such unhappy results and seldom entirely overcome."

In a supplementary account of Dublin Yearly Meeting, attention was called to the fact, that when the case of the *Ohio* separation came before it years ago, the Epistle that was read was not that which bore the signature of the former clerk.

Richard Hall addresses the following letter to the Editor, which contains some sentiments worthy of careful consideration.

"Dear Friend,—In thy report of the proceedings of our late Yearly Meeting in reference to its correspondence with Western Yearly Meeting, the view held forth and acted upon as to what constitutes the claim to the title and rights of a Yearly Meeting to a correspondence with other co-ordinate bodies appears open to objection, inasmuch as the faithfulness or otherwise of a body so constituted to those principles professedly held by it is not taken into account. If a Yearly Meeting abandons such principles, fails to vindicate these in practice, and to encourage and assist its individual members in a course of action agreeable therewith, does it not forfeit its claim to the character it professes to hold, and not only loses its right of support from such of its members as continue to adhere to the truth, as held by Friends, but its claim also to the sympathy and Christian communion of other Yearly Meetings?"

As one illustration of this in the present instance: Although divisions and secessions are undesirably and properly disapproved as an undesirable method of relief from suffering, yet when the conducting of Meetings for

Worship is no longer left to Him who has promised to be in the midst of those gathered in His name, who alone affords the power to perform acceptable worship 'in spirit and in truth,' and practices are adopted which preclude the quiet and solemnity requisite for that thorough avoidance of mere creatively impulses, what course are those to adopt, we may reasonably inquire, whose hopes of spiritual benefit and the performance of a Christian duty are thus persistently frustrated; and what advantage is likely to result from further communion in such a mixture?

One Friend, I observe, claims the title of 'a Meeting for Worship' for one which he says 'he conducts,' as an illustration of allowing the free exercise of the gifts of the Holy Spirit. The 'conductor' of a Friends' Meeting for Worship is, I apprehend, an official never before recognized in our economy—the true and living Head of the Church Himself, through the working of His divine power, being the moving and directing authority owned amongst us, whether operating immediately in the hearts of those assembled, or by qualifying and going before His appointed and delegated instruments. It is under this power alone that the true liberty as well as restraints are felt and enjoyed; and is it not the lack of reverent dependence on divine power, and sometimes the introduction of creatively interference, that is the real cause of what we deplore—viz., the want of a lively, refreshing, spiritual influence in our meeting, together for the solemn purpose of worship?

Is it not a sound view to take—that the legitimate right to the privileges of membership in the Society of Friends consists in our adhesion to its professed principles, and a life and conversation agreeing thereto; and none the less so in reference to a constituent body or meeting in the exercise of its functions and duties?

In the absence of anything to the contrary, I suppose we are to conclude that the statement in thy former number of *The British Friend*, from the seceders, and signed by their clerk, is a candid and truthful one. From this it appears that the only means of restoration to true unity and harmony consists in a return to and continuance in first principles, by discarding everything at variance therewith."

(To be concluded.)

For "The Friend."

Incidents and Reflections.—No. 12.

So transcendently important are the eternal interests of man in comparison with those which relate to his present existence only, that no degree of success in business or politics, or any other pursuit, can prevent our looking on a life as aught else than a failure, where the heart of the individual has not been brought to submit to the visitations of Divine Grace, and enabled through repentance and faith to know the forgiveness of sin, and the cleansing operations of the Spirit of God.

It is peculiarly pleasant, in reading the lives of those who have filled conspicuous positions in the world, to find evidences that they have experienced the visitations of Divine Grace, and been at times engaged to labor in the vineyards of their own hearts, while they have been engaged in the pressing duties of their stations.

Peter Harvey, in his affectionate tribute to the memory of his long-loved friend, Daniel

Webster, has mentioned several incidents which show that that distinguished states man was not insensible to religious impressions.

On one occasion Daniel Webster met; party of his friends at dinner at the Asto Hotel, New York. This was while he was Secretary of State in President Fillmore's Cabinet.

There were twenty or so at the table Daniel seemed wearied by his journey, and speaking but little, if at all, plunged into a darksome sort of reverie, not well calculated to enliven his friends. This at length became so apparent, and the situation of all so unpleasant, that one of the company urged upon a distinguished man present, a warm friend of Daniel Webster, to get him into conversation. It was thought he only need to be jogged, to become as lively as they wished.

This friend consented, and asked him some question, that in ordinary circumstances and with ordinary men would have led to conversation; but it failed in the present case. The dark Secretary of State merely raised his head and answered simply, and crept into his cave again.

Again his friend, frightened by his failure, was urged to renew the attempt to draw him out. He summoned courage, and said:

"Mr. Webster, I want you to tell me what was the most important thought that ever occupied your mind."

Webster slowly passed his hand over his forehead, and in a low tone said to a friend near him:—

"Is there any one here who does not know me?"

"No sir, they all know you—are all your friends."

Then he looked over the table, and (says the narrator of the incident) you may well imagine how the tones of his voice would sound upon such an occasion, giving answer to such a question.

"The most important thought that ever occupied my mind," said he, "was that of my individual responsibility to God!"—upon which, for twenty minutes he spoke to them, and when he had finished he rose from the table and retired to his room. The rest of the company, without a word, went into an adjoining parlor, and when they had gathered there some of them exclaimed, "Who ever heard anything like that?"

Profound and argumentative as was the cast of Webster's mind, when attending religious services, he altogether preferred such preaching as appealed to the conscience of the hearer, and avoided topics of controversy. After listening to an elaborate discourse on the Revolutionary movements in Europe in 1848, he said to his family, "The pulpit is not the proper place for such speculations. I do not go to church to learn history, but to be reminded of duty."

He once attended a place of religious worship in a quiet country village, where a simple-hearted old man rose, and after repeating a text, said with much simplicity and earnestness, "My friends, we can die but once," then he paused.

"Frigid and weak as these words might seem at first," said Webster, "they were to me among the most impressive and awakening I ever heard. I never felt so sensibly that I must die at all, as when that devout old man told me, I could 'die but once'!"

For "The Friend."
THE DESERTED MEETING HOUSE.

This sketch refers to Upper Springfield Meeting house, Burlington county, N. J., and was written by a person who when young belonged to and attended that meeting. It was initiated more than ten years ago in a city newspaper; but does not appear to have been much circulated. It was only a few days since that we met with it, and being much struck by its sweet pastoral and tender pathos, offer it for publication in "The Friend." We are unwilling that a picture etched by so fine and true a hand, should be passed and forgotten.

How few the years that youth and age divide,
And yet of startling change how sadly ripe!"
How'er a blighted shrine, a pilgrim sign,
Where crowds had worshipped in his spring of life.

he ancient face in Druid loneliness stood,
Just as of yore on gently rising ground,
Within the precincts of a sheltering wood
Where leafy limbs seemed still to clasp it round.

orm it looked along the public way;
No wall befit it, no protector nich;
A roofless sheds, fast tumbling to decay,
Matched well the tottering grave-yard fence hard by.

he approaching paths where luser feet once trod,
Uncalled by tolling bell at meeting-time,
fill faintly ran beside the grass-green road
Whence country grandeur came in sabbath pride.

re none molested, visited by few,
With unresisting doors and crumbling wall,
he sacred awe its ancient memories threw,
Alone remained to shield it in its fall.

et still the oak's their wealth of leaves renewed,
Where "early comers" once within their shade
With studied courtesy and voice subdued,
Their stores of knowledge modestly displayed.

he interest grew each accession there,
Till entering, passed the Christian fathers by,
With looks ecstatic as of coming prayer,
About to plead for mercies from an high.

hen, half reverent, though by duty led,
The young in whispering converse, neared the door;
And soon each one stole in on tiptoe tread,
Afraid to wake an echo from the floor.

n either hand the dais-like galleries rise;
There were the elders of each sex arrayed,
With serious mien but keen observant eyes,
The vocal surveying and by them surveyed.

o vocal hymns, no organ, pealing loud,
No bustling verges, no robed priests were there,
o separate altar veiled in incense cloud—
But all, as equals joined in silent prayer.

o solemn hush o'er all the assembly stole;
Each scanned the past and sought as guiding light,
he still small voice, that Mentor of the soul,
By great Elijah heard, on Horeb's height.

ot that the stringent rules the old had made
Could always curb the errant thoughts of youth,
Or those of other sects, who came and prayed
With men they honored as the types of truth.

oft must youth break the forms the old obey;
Slight causes there might serious thoughts restrain,
s bright eyes glancing o'er the passage way,
Or prisoned insects whirring gainst the pane.

oom fed such lightness when the speaker rose,
Whose touching eloquence could quickly bring
ll hearts to sorrow o'er the Saviour's woes,
Or plead self-humbled with Judea's King.

he meeting closed, with mutual greetings shared,
The stately seniors, then emerging slow,
aised off to question how the absent fared,
And on the sick their sympathies bestow.

ot so the young, elastic as a spring
From strong constraint released, rebounds the more—
hey gaily chat, or boldly venturing,
Accost the gentle maidens at the door.

o'twas in the old and better times: Alas!
That troublous themes bewildering earnest men,
ould through that realm of peace resistless pass,
And break the bonds of brotherhood in twain.

Al! happy days, thus sadly brought to mind,
Al! hapless house whose worshippers are fled,
Or of their jarring creeds oblivious, find
A quiet meeting place among the dead.

For where are they, those seniors of old time?
Where—he of grave fourscore, the first in place,
Whose forward youth in wildness spent, not crime,
Had ploughed deep furrows on his rugged face?

And he whose lofty faith, and sombre mind*
Awe'd all the weak and oft repressed the bold,
Severely just, yet generously kind,
An ancient Cato, in a Christian mould?

And he, of massive form, and bearded face,
Who like old Chronos, in grey marble wrought,
Sat, grim and still, in one unvaried place,
Yet revelled in fantastic fancies of thought?

And they, most prized, whom gushing memory here
With many a sweet yet painful thought revives,
Whose loving hearts, in their parental sphere,
Poured floods of happiness on younger lives?

Yes, where are they? Where, too, their brethren now?
Those plain exemplars of unconscious worth?
Move—search a bow-shot forth—and humbly bow,
For there they slumber in one common earth.

Few lettered stones, no mouldering vaults are there—
Round kindred groups of graves the pathways run—
No monumental marbles chill the air
Or check the radiant glories of the sun.

Hearts, that ache most, grieve least to outward show,
And for the living and the just, too deeply mourn,
To rear such pagan monuments of woe,
As broken shaft, inverted tower or urn.

There round each grave the sunbeams freely play,
The zephyrs softly wave its tufts of green,
And save the cool west wind's plaintive cry,
No sound disturbs the silence of the day.

An hundred years had Death his harvest there,
Of those whose fame yet sanctifies his ground,
For grasses worn with hereditary care,
Keep fresh the story of each cherished mound.

Seek ye their monuments? look the country o'er,
And know that all men called them wise and just;
Learn how in reverence held, the names they bore,
In new lives spring, like blossoms from the dust.

* WILLIAM NEWBOLD. This valuable and exemplary Friend departed this life on the 17th of the 8th month, 1828, in the 62d year of his age. From the obituary notice published in "The Friend," vol. I, p. 360, we take the following: "He was an exemplary member and elder in the Society of Friends, and having been experimentally convinced of the truth of the doctrines of the Christian religion, and practically acquainted with their happy effects on the human mind, he cherished to the close of his life a sincere and humble belief in them; endeavoring to regulate his conduct by those pure and self-denying precepts which the gospel inculcates. When a spirit of unbelief in some of these doctrines began to make its insidious approaches under the specious pretence of more cultivated views, and greater spirituality, he was prompt to detect and stand fast in opposing it. With many of those who were unhappily beguiled by it, he labored with the most affectionate tenderness to convince them of their errors; and as his prayers became more alarming, and his disorganizing effects more conspicuously apparent, he stood with calm intrepidity against its assaults, and fearlessly raised his voice and exerted his talents in defence of the gospel of his crucified Lord and Master. Neither the smoothness of flattery, the empty promise of popular applause, nor yet the venomous shafts of calumny and reproach, could move him from the integrity of his faith, or the integrity of his purpose. He knew in whom he had believed, and rather than deny Him before men, or reject the precious truths of Holy Scripture, the divinity, mediation, or the propitiatory sacrifice of the Lord Jesus, he was prepared to sacrifice the friendships and honors of this inconstant world, and to accept the despised portion of a humble disciple of the Lamb of God. To the service of the Society of Friends he cheerfully devoted a large share of his time and talents, laboring with fidelity and industry to promote its prosperity, and to resist the torments of libertinism which for a time seemed to threaten destruction."

What broad domains they tilled when strong and young—

What kindness shown to those of humbler state—
What maxims left conched in their dulcet tongue,
With fond remembrance many still reiterate.

See these poor graves! revered by all around
No mirth profanes, no reveller comes this way;
With bated breath each pilgrim trends the ground,
And sorrowing, views the ancient shrine's decay.

Deem we not well, such memories of the dead,
May stone outworn in tributary worth,
And o'er their slumbers hallow halos spread,
Than towering pyramids or piles of earth?

Evolution, or the theory of the natural development of forms of organic life from lower or anterior forms or types.

From a work entitled "Present Conflict of Science with the Christian Religion," by Herbert W. Morris, A. M.

(Continued from page 411, vol. II.)

"No theory could easily be imagined more fundamentally adverse to Christianity than that of development as presented by Charles Darwin; its direct and undisguisable bearing is to sap and remove the very foundation upon which it rests. Man's original righteousness, his fall into sin and condemnation, and his redemption by the death of Christ—these three are the fundamental doctrines of the Christian religion. But this theory does away with all these. By ascribing the origin of man to a hairy brute, it denies his primitive righteousness; by denying his original righteousness, it denies his fall; by denying his fall, it denies his redemption therefrom; by the death of Christ. It denies that primitive man had any knowledge of or belief in 'a God having sin and loving righteousness.' It is evident, then, that under the garb of Development we discover an insidious but deadly foe to our holy religion, that hopes, by this gnawing at its roots, to see its whole fair form wither away from the earth.

This theory, moreover, denies to man an immortal spirit, and blots out all his hope of future existence. If, as this hypothesis asserts, there has descended from the monkey a series of advancing and improving creatures, each succeeding one less ape-like and more human-like, until at length they developed into man, it follows that man's mind has been derived from the monkey mind, just as his body has been derived from the monkey body—the two animals, man and the monkey, are in their nature identical; there, therefore, can be, no essential difference. This Darwin openly avows, and persistently attempts to prove. Man, according to his doctrine, is merely a more perfectly developed animal. Hence we are landed in this dilemma—we must either hold that all monkeys have, like men, immortal souls; or, that all men, like monkeys, are soul-less and doomed to eternal extinction—conclusions alike repugnant to religion and to common sense.

The representation that man has descended from 'a hairy quadruped' is not less derogatory in its influence than it is repulsive in its aspect and profane in its spirit. This attempt to give man a brutish origin, not only lowers him in the scale of being, but in his own estimation, and tends inevitably to injure and degrade his character. Let our children once be brought to believe that they are but brothers and sisters to the apes, instead of being the offspring of God, and that their forefathers were but beasts in the forests, and it will take away from them the most power-

ful of motives to act a rational, worthy and noble part on the great stage of human life.

This materialistic doctrine, we have sufficient reasons to believe, is already beginning to produce its direful but legitimate fruits. Denying, as it does, all real distinction between man and beast, between the spirit of the brute that goeth downward and the spirit of man that goeth upward, and thus banishing from the mind and heart all sense of *accountability*—who but must see that its direct and certain tendency is to take away the fear of God from before the eyes of men, to break down all the restraints arising from an apprehension of His righteous judgment, and to extinguish all hope, all desire of His approbation and reward in a future state? Those teachers who would make man believe that he is a brute in his origin, take the most effectual course to make him a brute in his character; and they are, we doubt not, in no trivial measure accountable for the reckless disregard and violation of law, human and divine—the low estimate set on human rights and human life, and the frequent dark and shocking crimes—that have so marked the past few years.

Of all this it will be sufficient proof to quote a single paragraph from Darwin's work, *Speaking of Natural Selection as affecting civilized nations*, he says: "With savages the weak in body or mind are soon eliminated (*i. e.*, are killed off), and those that survive commonly exhibit a vigorous state of health. We civilized men, on the other hand, do our utmost to check the process of elimination; we build asylums for the imbecile, the maimed and the sick; we institute poor-laws, and our medical men exert their utmost skill to save the life of every one to the last moment. There is reason to believe that vaccination has preserved thousands, who from a weak constitution would formerly have succumbed to small-pox. Thus the weak members of civilized societies propagate their kind. No one who has attended to the breeding of domestic animals will doubt that *this must be highly injurious to the race of man*. It is surprising how soon a want of care, or care wrongly directed, leads to the degeneration of a domestic race; but excepting in the case of man himself, hardly any one is so ignorant as to allow his worst animals to breed.* Thus plainly are we given to understand, that in building asylums for the imbecile, the maimed, the sick; instituting poor-laws; administering vaccination—endeavouring thus to prolong the lives of our fellow-creatures—we are directing our care wrongly, and causing a degeneration of the race of man! Who would wish, who would consent, to have such a passage as the above introduced into our national School Books? Could any sentiment or principle be inculcated more ruinous to morals, or more opposed to the spirit of Christianity, or more withering to all the kindly feelings of our nature? And that dark hint at "elimination,"—what more effectual encouragement could be given to the commission of Infanticide and Feticide, crimes already so shockingly prevalent?

Again: This theory which would identify the human race with the brutes of the forest, and avers them to be subject to the same laws and doomed to the same fate, tends to work national as well as individual evil. When sinful and selfish and sensual beings, as fallen

humanity are found to be, are taught, as they are by the theory of Natural Selection, that it is a law of nature to *M*on, no less than to beast, that the strong should trample down and exterminate the weak, and that when they are successful in doing so, they are only inheriting their legitimate destiny as 'the fittest to survive'—what results, what fruits could be looked for from such a doctrine but high-handed injustice, oppression and cruelty, on the one hand, and suffering, slavery and extermination on the other? Is not the tendency, if not the design, of evolutionism, therefore, to favor the strong, and to crush the weak—to elevate the favored few, and to depress the less fortunate multitude? Is not its very spirit that of the tyrant's maxim, 'Might makes right'? Certain it is that, *The Survival of the Fittest*, and LIBERTY, FRATERNITY AND EQUALITY can never be inscribed on the same banner."

(To be continued.)

For "The Friend."

Extracts from Letters of Margaret Morris.

(Continued from page 412, Vol. I.)

The pestilence which desolated Philadelphia in 1793, fell heavily upon the family of Margaret Morris, and called forth all her fortitude and resignation to bear up against the calamities which overwhelmed her. In the early stage of the epidemic, she was urged by her son Richard to leave the city for a place of safety, and her reply is characteristic of her unselfish heroism. The coming events seem already to have cast their shadows upon her spirit.

"To Guilema Maria Smith.

Philadelphia, 8 mo. 11, 1793.

Under the present awful visitation, I think I would not dare to seek a retreat from the spot where Providence has placed me, and flee a place more polluted with the sins of its inhabitants than the infectious fever now raging amongst us. We cannot fly from the rod commissioned to strike us amongst the rest, and the Hand that directs it can preserve us amidst the thousand slain. May you, my beloved children, with me, be preserved in humble, holy confidence in that all-sufficient Arm which hath hitherto helped us! It is, indeed, an awful time in our city. The dead and dying are carried by our door, yet the infection hath not appeared near us. My family are as yet, all well, and for myself, I have not been afraid to go where duty calls me. I burn tar and tobacco many times a day in all our rooms, and have done the same with Debbie's, and sent tar to thy brothers; but they seem as though they would not submit to any precaution. How they will fare, I know not. Eight days after the date of that letter to my eldest son, Dr. John Morris, had fallen a victim to the disease under circumstances that wrung the heart of his widowed parent. Her own pen must describe the agonies which she endured "and the ensuing sorrows."

The following to J. and G. M. S. is without date, but appears to be the first written by her, after the melancholy event.

"M. M. to J. & G. M. Smith.

My dear son and daughter,—I have received your several affectionate letters, and desire to be thankful, that in the midst of the present afflictive scene it has pleased the Divine Goodness to leave me blessings that call for

the tribute of gratitude and praise from my chastened heart. My dear Abbie's* pulse is rather better this afternoon, and I am almost ready to flatter myself that her life may be spared for my future comfort, and the benefit of her little ones. Has any body told you I was three nights and days in Pear street, with no other help than little Polly and our Tommy, and both my sick children to wait upon? Late on seventh day dear B. S. sent a colored man and woman to me, and my dear son inclining to doze, I lay down by him and got a couple of hours sleep, and waking found him much altered. I sat by him till it was time to send out, and sent the man to B. S. and placed the woman with Abbie, and then by myself I watched the parting breath. The closing scene was all still; no sigh, or groan, or struggle discomposed his face and limbs; and then, oh! then, 'the hands of the pitiful mother,' prepared her child's body for the grave. And well would it have been, if I could have contented myself with doing this much. But vain and foolish, I thought myself strong enough to do every thing, and insisted on seeing the dear remains deposited by the beloved companion of my youth. Presuming on my own strength I went, but what followed I know not. When I awoke after two days of delirium I found myself in bed in my own front parlor, and my dear D. S. and others tenderly watching me. I believe from my present weakness, I have been ill, but hope soon to be able to go about again. Let my suffering be a means of preservation to you my tenderly beloved children. Presume not on your own strength in any case, and learn from your mother's example and experience that resignation is the road to peace."

"To Richard Hill Morris.

Philadelphia, 9 mo. 19, 1793.

My beloved son,—I have seen thy letter to B. S. of this day and have undertaken to reply to it. In the first place I may inform thee, that through the mercy of Providence I am recruiting from my late fatigue, and endeavoring to reconcile my mind to the dispensations of unerring Wisdom. My dear, sweet Abby Morris was laid by her husband on Second-day last. Thy dear uncle and my beloved brother, Wells, was taken yesterday with an ague. The doctor (Rath) pronounced it to be the prevailing fever, though mild in its appearance. He took the medicines and was twice bled, and this evening at 9 o'clock I had a note from his daughter Hannah, who tells me with heart-felt pleasure, the doctor says her dear father is in a safe way. * * *

There were eight or ten died in Pear street in the course of two or three days. W. Waring died the day after my poor son. Every house was shut up. Dr. G. — was better and getting out again. Adieu my love, may Heaven preserve thee. This is the affectionate and daily prayer of thy tender mother,

M. MORRIS.

9 mo. 23d, 1793.

To the same. * * * Thus we are in the midst of danger, and whose turn it may be next, we know not. Charles Lee was buried yesterday. Sallie Dorsey and the man who attended B. D.'s store are both confined; in short it is endless to say who are sick and

* Wife of Dr. John Morris whose death is recorded in his letter.

† Benjamin Smith, husband of her daughter Deborah.

and; it seems as if the hearse were going
day and night. This day week we were
old 126 were buried; but the number has
gradually lessened since that time, and though
many are sick yet fewer die now than in the
beginning. * * * * *

P. S. As to myself, I dare not quit the
most assigned me by Infinite Wisdom. Alas!
what should I go and for what? I have
heard of some who in the moment they were
cutting their goods into a cart to remove
from their own house, were seized with a fever
and before their goods were unloaded at an-
other place had died. * * Dear B. S.—
has been more than a son to me, and amidst
the late and present trials, I desire to be
truly thankful for the blessings still left me;
amongst which I account thy absence from the
city not the least, and entreat thee not to at-
tempt a visit to us. The time may come, when
by personal appearance here may be indispen-
sably necessary; and then will be the proper
time to come and not till then. I wish thee,
my love, to take great care of thy health;
avoid fatigue, and take moderate exercise.
Yrom, my beloved son, thy tenderly affection-
ate mother
M. M.

To the same. * * * As for myself, I am
endeavoring to reconcile my mind to the dis-
sensations of Infinite Wisdom; and it will be
long before my poor tabernacle recovers from
the shock it has sustained. S. Dorsy is sick
of the fever, but the doctor thinks it is not at
present of the malignant kind. My W. M.,
and Patty are at B. D.'s for the present; S.
and Mollie are here, and the dear little baby
is put out to nurse for the moment. As soon
as I am able to get abroad, I expect to have
all my dear little *orphans brought home.
What a charge it will be at my time of life!
But the Hand that has appointed my portion,
I doubt not, will qualify me to perform all
that He shall be pleased to require of me. If
I am favored to act my part well, it matters
not whether I have a rough or a smooth path
to walk in, while walking through this vale
of tears to the promised land, of which I have
 lately thought I had a little glimpse. And,
oh! what a mere nothing did the world, and
all the goodly things in it, appear to my
mind, when endeavoring to reach after the
enjoyment of ever enduring happiness. May
by mind, my dear child, often seek to be
favored with a foretaste of what I hope is in
store for thee, and thy dear companion, to
whom, with thyself and children, I shall ever
remain, a tender and affectionate mother.
M. M."

No Cross, No Crown.—Every one that gets
to the throne must put his foot upon the
horn. We must taste the gall if we are to
taste the glory. Whom God justifies by faith,
He leads into tribulation also. When God
brought Israel through the Red Sea, He led
them into the wilderness; so, when God saves
his soul, He tries it. The way to Zion is through
the valley of Baca. You must go through
the wilderness of Jordan, if you are to come
to the land of promise. Some believers are
much surprised when they are called upon to
suffer. They thought they would do some
great thing for God; but all that God per-
mits them to do, is to suffer. Go round to
visit them in glory, every one has a different
story, yet every one has a tale of suffering.

* Children of Dr. Jno. Morris.

One was persecuted in his family, by his
friends and companions; another was visited
with sore pains and humbling diseases, neg-
lected by the world; another had all these
afflictions meeting in one—deep called upon
deep. Mark, all are brought out of them. It
was a dark cloud but it passed away; the
water was deep, but they have reached the
other side. Not one of them blames God for
the road He led them; "salvation" is their
only cry. Are there any of you, dear chil-
dren, murmuring at your lot? Do not sin
against God. This is the way God leads all
His redeemed ones. You must have a palm
as well as a white robe. No pain, no palm;
no cross, no crown; no thorn, no throne; no
gall, no glory. Learn to glory in tribulation
also. "I reckon that the sufferings of this
present time are not worthy to be compared
with the glory that shall be revealed in us."
—*M. Cheyne.*

He who knows how to pray has the secret
of support in trouble, of relief from anxiety,
and of strength for the performance of duty;
the power of soothing every care, and filling
the soul with true trust and confidence for
the future.—*Wm. Jay.*

LIST OF AGENTS.

We append herewith a list of Agents to
whom applications may be made, and who
are authorized to receive payment for "The
Friend."

PENNSYLVANIA.

John Trimble, Concordville, Delaware Co.
Joseph Scattergood, West Chester.
Thomas M. Harvey, West Grove, Chester Co.
George Sharpless, London Grove, Chester Co.
Benjamin Gilbert, Yoboghan, Westmore-
land Co.

Reuben Battin, Shunk P. O., Sullivan Co.

NEW JERSEY.

Charles Stokes, Medford, Burlington Co.
Joel Wilson, Rahway.
William Carpenter, Salem.

NEW YORK.

Robert Knowles, Smyrna, Chenango Co.
Alfred King, Ledyard, Cayuga Co.
Joshua Haight, Somerset, Niagara Co.

MASSACHUSETTS.

William B. Oliver, Lynn.

OHIO.

George Blackburn, Salem, Columbiana Co.
Daniel Williams, Flushing, Belmont Co.
Asa Garetson, Barnesville, Belmont Co.
Benj. D. Stratton, Winona, Columbiana Co.
Gilbert McGrew, Smithfield, Jefferson Co.
James R. Kite, Pennsville, Morgan Co.
Dr. Isaac Huestis, Chester Hill, Morgan Co.
Parker Hall, Harrisville, Harrison Co.
Jehu L. Kite, Damascusville.

William H. Blackburn, East Carmel, Colum-
biana Co.
John M. Smith, Smyrna, Harrison Co.
Edmond Fowler, Bartlett, Washington Co.

INDIANA.

James Woody, Thornstown, Boone Co.

IOWA.

Joseph Hall, Springdale, Cedar Co.
Nathan Warrington, Coal Creek, Keokuk Co.
Richard Mott, Viola, Linn Co.

GREAT BRITAIN.

Joseph Armfield, South Place Hotel, Fins-
bury, E. C. London.
Richard Hall, Waverton, Wigton, Cumber-
land, England.

THE FRIEND.

EIGHTH MONTH 17, 1878.

The commencement of a new volume of our
Journal naturally gives rise to a train of re-
flections on the objects to be attained, and the
responsibility connected with a publication of
this kind.

It was originally established about fifty-one
years ago as a medium of communication
among Friends, at a time when our Society
was much disturbed by the spread within its
borders of Unitarian sentiments. A know-
ledge of the events which were transpiring in
the different meetings was thus made easily
accessible to its readers.

A review of its pages, as they have ap-
peared in successive years since 1827 (when
it was commenced) would show the record of
many wonderful inventions and discoveries in
art and science; and of great changes wrought
in social habits by their application to civil
life.

In political history, the reader might trace,
among other noteworthy events, the consoli-
dation of the German States into one Empire,
under the leadership of Prussia; and of the
Italian States, under the government of the
Sardinian King; the remarkable wave of revo-
lution that swept over Europe in 1848; the
extension of Russian sway in the central re-
gions of Asia; the changes in the government
of France; the general enfranchisement of
serfs and slaves by nearly all the civilized
world; and the desperate effort made by the
slave-holding interests of our United States
to support a system which was out of harmony
with the civilization of the age—efforts which
caused a prolonged and bloody war, but which
ended in the destruction of the system itself.

The records of our own beloved Society
during the same period present many evi-
dences of the unsettlement and disturbance
caused by the introduction into a religious
body of new doctrines and feelings. The
bond which united us as one people has been
weakened thereby. In some parts, where
outward fellowship is still maintained, there
is a lessening of that inward union which
exists only between those who are of one
heart and of one mind. In other places, this
weakening of the cord has progressed so far,
that divisions have been effected among those
who claim the same honorable appellation of
"Friends." That such results should follow
from such causes, is neither unexpected nor
unreasonable; however saddening it has been
to many hearts. But there is one feature
which is peculiarly trying to us. Differences of
judgment, as to the proper steps to be taken
in the emergencies that have arisen, and other
secondary causes, have, in some cases, been
allowed to separate those who are really
united in the attachment to our religious doc-
trines.

We have been comforted however in the
belief of latter times, that in some such cases
there is less of a disposition to judge mechani-
cally of the actions and motives of others, and
more of a concern to watch closely their own
footsteps. We sincerely desire that this soften-
ing process may continue and spread until,
in the Lord's way and time, all may be done
away with, that hinders the full enjoyment
of unity, and the harmonious working to-

gether as one body, of all those who believe in the precious doctrines which George Fox and his associates were commissioned to revive and promulgate.

SUMMARY OF EVENTS.

UNITED STATES.—Violent local storms prevailed in Connecticut, Massachusetts, New Hampshire, and northern New York, on the 29th inst., doing great damage to property and at Wallingford, Connecticut, causing sad loss of life. For a few minutes there was a deluge of rain, with terrific thunder and lightning, and for about a minute the wind burst in fury, demolishing forty houses, and about fifty barns.

The Committee of Accounts of the School Board of Boston, state the number of pupils belonging to all the schools in that city, to be 47,212, and the average cost per pupil \$3.33. The assessed value of school property is \$7,211,500. The total expenses of the schools were \$1,282,116.00.

The official figures of the transatlantic steamship companies show, that during the past three months 200,253 passengers have left the port of New York for Europe. These returns, as compared with former years, show the prevailing tendency of replacing old steamers with larger and faster vessels, and thus, with less trips and fewer steamers, carrying larger numbers of passengers.

In the last fiscal year, the total number of letters and packages registered was 4,348,127, and \$307,438.88 was collected in fees. The percentage of ordinary letters lost was about one-fifth of one per cent.; 345,922 packages of stamped envelopes, and postal cards, valued at \$26,925,826.47, and 31,811 packages of United States bonds, currency and internal revenue stamps, valued at \$124,147,040.54 were forwarded for the Government without charge for registration. Out of the immense sums collected for the expense of the post office was \$61,364. The amount credited for the Post-office Department to reach their destination. It is thought the registry system will be self-sustaining when extended to all classes of mail matter.

Reports received from most of the gold and silver mines on the Pacific slope, state the total production at \$24,438,500; nearly 40 per cent. of this was gold, about \$14,000,000 silver, lead \$200,000.

The yield of wheat in Dakota territory is estimated this year at 15,000,000 bushels.

During last winter, 56,000 emigrants arrived at New York. Twelve came from Germany; 2974; Russia 1249; England 1115; Ireland 1072; Scandinavia 978.

A passenger car, propelled by compressed air, has been running on one of the railroads of New York city. The experiments were first made at Glasgow, and having come under the notice of Americans, the inventors were brought to this country, and for nearly a year have been making improvements on the original patent. The motive power is supplied by reservoirs under the floor and seats; which are capable of holding in store 17,000,000 pounds of working power. The air received is tested up to a pressure of 900 pounds to the square inch, but is not worked above 250. The bursting pressure of the machinery is about eight times above the working pressure. The car can be run quite as fast as the steam dummies which are used on the elevated railroads, and on surface roads may be run at the rate of fifteen miles an hour, and is so constructed it can be increased to forty miles an hour. It is claimed the expense of these cars will be thirty per cent. less than steam cars, and fifty per cent. less than horse cars.

The Surgeon-General of the Marine Hospital Service reports the existence of yellow fever at Port Eads, New Orleans, Havana, Matanzas, Cardenas, and some other places. In New Orleans, 451 cases and 118 deaths have been reported.

There were 1967 deaths in Chicago during last month. In this city there were 301 deaths during the past week. The greatest number in any ward was 29.

Markets. A.—American gold 100, U. S. sixes, 1881, 107 1/2; 5-20 coupons, 1865, 102 1/2; do. 1867, 104 1/2; do. 1868, 108; 5-20, 106 1/2; new 1/2 per cents, 104 1/2; do. new, 104; 10-20, 104.

Cotton.—Sales of 50 bales at 12 1/2 cts. etc. 50 bales of M. Mississippi 42 cts. 50 bales, \$47.50 a 56; Penna. and Ohio flour, \$2.25 a \$2.50; patent and other high grades, at 25 a 27.50. Rye flour, \$2.75 per barrel. Corn meal, \$2.75 per barrel.

Grain.—Red wheat, \$1.01 a \$1.03; amber, \$1.06 a \$1.07; white, \$1.08 a \$1.10. Corn, 45 a 52 cts. Oats, white, old, 36 a 38 cts.; new, 21 a 25 cts. per bushel.

Hay and Straw.—Average price during the week—Prime timothy, 65 a 75 cts. per 100 pounds; mixed, 54 a 60 cts. per 100 pounds; straw, 45 a 55 cts. per 100 pounds.

Cattle were firmer and prices 1/4 cts. higher; 1800 head arrived and sold at 31 a 67 cts. for common to prime. Sheep, 31 a 6 cts. Hogs, 6 1/2 cts. per pound as to quality.

FOREIGN.—The mechanics in the shipyards on the Clyde have unanimously refused to submit either to an increase of their labor or to a reduction in the per cent. reduction of their wages, the alternative of which was offered them by their employers.

In the last six months, the value of coal exported from Great Britain was \$17,675,180, against \$18,369,600 in the same period of 1877.

The Orleans dispatch says: The rains have been abnormally heavy. Great damage has been done to the crops, and great distress prevails in consequence of the floods. The canals and irrigation works have been breached. Terrible distress prevails in Cashmere, and energetic steps are being taken to relieve the people, who in many parts of the country are subsisting upon herbs and unripe fruit.

The Franco-American Commercial Conference, have prepared a memorial to the United States Congress and French Chambers, calling attention to the languor of commercial relations between the two countries, and declaring that the time is to be found in their respective import duties. They urge the necessity for a treaty of commerce; and a general revision of the American tariff.

The Swiss National Council has voted \$1,200,000 as the contribution of Switzerland towards completing the St. Gotthard tunnel.

A dispatch from Alexandria says the river Nile is rising favorably. It is now higher than at any time last year, and the prospect for the crops are excellent.

George F. Seward, U. S. Minister to Peking, says that the prospect of American trade with Chinese ports was never so bright as at present. Cotton manufacturers are beginning to find a good market, in competition with English goods, and the general disposition of the Chinese Government is, to abandon to some extent, the policy of isolation, and to favor foreign intercourse.

FRIENDS' SELECT SCHOOLS.

These schools, under the care of the three Monthly Meetings of Friends in this city, will re-open on Second-day, Ninth mo. 2d, 1878.

A limited number of children will now be admitted to these schools, not members of our religious Society, whose parents may desire to have them educated free from the unnecessary but fashionable accomplishments, too common in many schools at this day.

The attention of Friends residing in the city and its neighborhood is particularly invited to them. The terms are moderate, and Friends belonging to Philadelphia Yearly Meeting, sending children to these schools, as a-late members, who may find the charges burdensome, can fully rely.

The principal schools will open for the next term, under the care of John H. Dillingham and Margaret Lightfoot, as Principals, both successful teachers of many years' experience. Opportunities will here be afforded of obtaining a liberal education in useful branches of study, and in the Latin, Greek and French languages. Facilities for illustration are afforded by a valuable collection of philosophical and chemical apparatus, minerals, and Anzoux's models of parts of the human system, &c.

In the primary schools the children are well grounded in studies of a more elementary character.

Further information may be obtained upon application to the Treasurer of the Committee,
JAMES SHELLEY, No. 415 Market St.

WESTOWN BOARDING SCHOOL.

The Committee on Instruction of Westown Boarding School meet at Philadelphia in the Committee room on Arch street, on Seventh-day, the 21st inst., at 10 A. M.

MALVERN BOARDING AND DAY SCHOOL.

The next school year will commence on the 9th of Ninth month. For circular, address
JANI M. ELDREDGE, box 55, Malvern, Pa.

MOORESTOWN ACADEMY

Will be opened 9th mo. 2d, under the care of Chester Monthly Meeting of Friends, for children of both sexes.
RICHARD T. CARRIER, Principal,
ANNA WOOLMAN, Ass'tant.

RECEIPTS.

Received from Susanna F. Sharpless, Pa., \$2.10, 7c 5/2; from Sarah Green, R. L., \$2.10, 5c, and of Eliza G. Sheffield, Conn., \$2.10, 5c; from Georg F. Wood, N. Y., per J. C. Manly, \$2.10, 5c; for Rentals (various), Pa., \$2.10, 5c; for Isaac Lead N. J., \$2.10, 5c, and for Isaac Perrell Leeds, \$2.6 to No. 52, 5c, and Susan Povl, H. Pa., \$2.10, 5c, 5c; from Edward Thorn, N. J., \$2.10, 5c, 5c, and 6 Barton F. Thorn, \$2.10, 5c, 5c; from Elizabeth E. Engle, N. J., \$2.10, 5c; from Sarah C. Ford, N. Letters from Unfrequented Places.

(Continued from page 2.)

On board the steamer "Tage" Levant, lying off Messina, 4th mo. 21st, 1878.

We came on board this ship on the afternoon of Third-day, the 16th, and this is our fifth day at sea, if I may so say, when we are lying in port most of the time, for this steamer stops at all ports along the Levant. We were three days at Alexandretta, the port of Aleppo, and great quantities of grain, cotton and wool were taken on board. Aleppo is four days' journey from Alexandretta, by camel train, and these trains are just winding over the hills in the distance. Seen about the port is one flat marsh, dreadfully unhealthy; I went on shore and walked about some, but scarcely dared to take a whole breath, it seemed so malarious. Tarsus, the birth place of St. Paul, is about fifteen miles from this place, and one of our fellow-travellers has gone to visit it. I was told there is scarcely a vestige of the place left, so contented myself with looking towards it with my glass. There are but seven first class passengers besides myself on this ship. I have a large room all to myself, and little wash-room attached, and much I enjoy them after tent life, when a hurried toilette was the order of the early day, with so little light that it was seldom I had a chance to see how brown I was getting, and concluded I should need an introduction to myself whenever broad daylight should enable me to see my reflection—this same reflection is a brown study now, and I feel as if looking at a native of the country. On our decks is a motley crowd that I wish you could look upon—Moslems and Turks, veiled women and some unveiled—families with their mats and cushions spread—and we see the customs of oriental traveling. The Moslems (that is, the strict ones) do not neglect their prayers, but at the regular time, wash their faces, hands, arms and feet, then step out into a clear space, spread a shawl on the deck and go through their prayers, bowing towards Mecca. Those who have made the pilgrimage to Mecca wear a green turban and are very zealous in their religious exercises. The delicious rest on this ship is so grateful, and was so much needed, that it is hard to get enough. For two or three days I did nothing but sleep, go out to my meals, look about a little, and then sleep again. The French stewardess would come in and say, "Dormir, dormir, dormir." I would

answer, "Oui, oui, oui," and that was about the extent of our conversation. As for writing letters, I have been almost in despair with myself for not being more energetic about it, and yet when one is completely tired out, what is to be done?

Well, from Damascus, we went to Baalbeck, two day's journey; leaving Damascus by the "Gorge de Barada," through which passes the excellent road to Beyrouth, and which we follow for several miles; the scene is just exquisite! The gorge is narrow and wild, with the Abana river rushing through it; pretty villas and gardens and orchards filling every inch of space beside the river and road. But we had to leave that and take our way over the hills and mountains, sometimes in a warm valley, and then up, up, surrounded by snow. Two or three hours from Damascus we halted at the Fountain of Fijeh (ain Fijeh), the chief source of the Abana, and a great curiosity it is, as well as very beautiful. Over it there had once been a splendid temple, now only a fine old ruin, and at its base a sort of cave, from which boils up, not only a stream, but a full grown river, as clear and bright, sparkling and joyous as a river can be, escaping from the dark recesses underneath the mountain, no one knows where. It dashes away over the rocks a short distance, and joins another smaller stream, and these two form the river which the Arabs call the Barada, and the ancients called Abana. I did not wonder that Naaman thought the Abana and Pharpar more inviting to taste and use than the muddy Jordan. We lunched at Suk Wady Barada—a most charming spot. I think wady means *glen*, and here the river rushes and tears away among the rocks in a deep chasm, over which is a bridge; and, by the way, I must tell you that a bridge is a luxury not often met with in Palestine or Syria. I have forded streams where it seemed as if horse, rider and all must be swept away, and had to put on the whip to urge my steed against the current. On the high rocks are many tombs (cut in them) and some with Latin inscriptions. On a high hill is pointed out the tomb of Abel, thirty feet long! and this is supposed to be the place where he was murdered! Other authority supposes it (the tomb) to be a Moslem wely (tomb), and so we are crammed with supposes. There are also traces of an aqueduct supposed to have been made by Zenobia, to conduct the water from Ain Fijeh to Palmyra.

We camped in the beautiful valley of Zebedany, and near the town, which is a thriving one of over 3,000 inhabitants, and rich in gardens and trees. Leaving Zebedany on the morning of the 11th, we travelled over high spurs of the Anti-Libanus. Lunched near "Noah's tomb," which is 132 feet long! The tomb is in a stone building and kept carefully covered with cloth—it looks like an aqueduct covered over. What with the snowy mountains, green hills and valleys, beautiful views were our only variety, till the ruins of Baal-

beck loomed up in sight and we were soon there. We found our tents pitched in the court of the Great Temple. This court is about 150 yards long and 125 wide. On the north side our tents were pitched, and far away in the south-east corner of the court were grouped the tents of the Cook party, who were there to welcome us, they having preceded us one day.

We enter the court by a long, dark, arched way, which I thought was a tunnel, but it was once a grand high entrance to the level of the court. This court is now so filled up with the accumulations of ages, that we have to rise a steep pitch to gain the present level from the tunnel. We dismounted and walked about among the wonders, then climbed up on the cyclopean walls to watch the sunset. I fear I cannot of my own poor self, stretch your imaginations sufficiently to take in the vastness, the grandeur, the beauty of the giant pile. Dr. Prime says: "If all the ruins of ancient Rome, that are in and around the modern city, were gathered together in one group, they would not equal in extent the ruins of Baalbeck." They would certainly look like a pile of brick-bats and dust beside these mammoth relics of Phœnician strength, and

"Not in Egypt's ruined land,
Nor mid the Grecian Isles,
Tower monuments so vast, so grand,
As Baalbeck's early piles—
Baalbeck, thou city of the Sun!
Why art thou silent, mighty one?"

Thus thought I, while wandering among the piles, and often said, "Oh, if these stones would only speak, and tell us how they got here!" A few facts and figures and I am done with Baalbeck, which one can only understand by the evidence of sight. One must see it, explore it and study for himself. These temples stood on a platform raised 30 feet above the plain, having immense vaults underneath. Three stones in this foundation-measure, one 64 feet long, another 63 feet 8 inches, the third 63 feet, and each is 15 feet wide by 13 feet high, and raised to a height of 20 feet above the ground. On the outside of this wall is another wall, where many of the stones measure 30 feet long, 15 wide and 13 high. The great temple was 290 feet long and 160 broad, surrounded by Corinthian columns 75 feet high and over 7 feet in diameter at the base, and the stones of the entablature which reached from column to column, 15 feet high and 15 long, making the entire height at the top of the entablature 90 feet. Six of these immense columns remain standing. Of the columns of the temple of the sun, 19 are standing, and they are each 63 feet high, including base and capital. An author says: "The peculiar characteristics of this architecture is the combination of the immense and the graceful, of Cyclopean vastness with refined elegance—nowhere is the Corinthian acanthus carved with more deli-

cacy than on those gigantic blocks." The fallen fragments heaped on the ground are as wonderful as those standing—the earth is strewn with enormous debris, it is the ruin of an entire city. We viewed the wonderful scene by moonlight and by daylight; walked through it and round about, and visited the quarries, near which lies one of those great stones, all hewn out, but never removed. It is 69 feet long by 17 wide and 14 deep—I hope to show you some views sometime.

(To be continued.)

Epistle of George Fox.

Friends, dwell in the Living Spirit, and quench not the motions of it in yourselves, nor the movings of it in others; though many have run out and gone beyond their measures, yet many more have quenched the measure of the Spirit of God, and have become dead and dull, and questioned through a false fear so their faith, been hurt both ways. Therefore be obedient to the power of the Lord, and his Spirit; war with that Philistine that would stop up your wells and springs; and the belief in the power keeps the spring open; and none to despise prophecy neither to quench the Spirit; so that all may be kept open to the Spirit, that every one's cup may run over. For you may all prophesy one by one, and the spirit of the prophets is subject to the prophets. Would all the Lord's people were prophets, said Moses in his time, when some found fault; but the last time is the Christian's time; who enjoys the substance, Christ Jesus, and his church is called a royal priesthood, offering up spiritual sacrifices; and his church are his believers in the Light. And so in the Light every one should have something to offer; and to offer up offering in righteousness to the living God, else they are not priests; and such as quench the Spirit cannot offer, but become dull. I will pour out my Spirit upon all flesh, in the last time, saith the Lord, which is the true Christian's time; God's sons and daughters shall prophesy, and your young men shall see visions, and old men shall dream dreams; and on my servants and handmaids I will pour out of my Spirit in those days, and they shall prophesy. Now, Friends, if this be fulfilled, servants, handmaids, sons, daughters, old men, young men, every one is to feel the Spirit of God, by which you may see the things of God, and declare them to his praise; for with the heart man doth believe, and with the mouth confession is made unto salvation; first, he has it in his heart, before it comes out of his mouth; and this is beyond that brain-beaten heady stuff which has long studied, about the sainted words which the holy men of God spake forth, as they were moved of the Holy Ghost.

So with the Holy Ghost, and with the light and power of God, do you build upon Christ, the Foundation, and Life; and by the same heavenly Light, and Power, and Spirit, do you labor in the vineyard, and do you minister and speak forth the things of God, and do you dig for your pearls; therefore bring them forth, and let them be known how they glister. Friends, you see how men and women can speak enough for the world, for merchandise, for husbandry, the ploughman, for his plough; but when they should come to speak for God, they quench the Spirit, and do not obey God's will.

For "The Friend"

Letters, &c., of Margaret Morris,

(Continued from page 7.)

To her son, Richard Hill Morris.

9th mo. 27th, 1793.

* * * Pray keep up thy spirits and, above all, endeavor to gain access to the throne of mercy, and join thy intercessions to those who are engaged to implore the Divine Goodness to give command to the destroying angel to stay his hand, that a remnant may be spared to tell to others what the Lord has done for them.

To the same.

Philadelphia, 10th mo. 10th, 1793.

I received thy acceptable and affectionate letter of the 8th, this morning, and have the happiness of informing thee, that W. N. and my maid Sallie, are raised from the brink of the grave. I don't know if I told thee, I had two beds in the front parlor; I laid in one and Sallie in the other, being determined to keep the infection from my dear sister, if possible. When W. N. was seized, which was violently, I sent Tom out, and bought a large Windsor settee, and fixed it in the back parlor for him, and got a black man to attend him, and my sweet Pollie Morris procured me a white woman to attend Sallie, and I then left her room and returned to my own lodging. The children were sent to B. S.'s—he kept S. and Mollie, and took Wm. and Pattie to the grandfather's. So far all went well; but, behold, thy sister D. S., three servants and two children, were taken ill last Seventh-day night. I went there on First-day to bring S. and Mollie home. But Debby had nobody but herself to wait on the sick, and I left Sallie and Tommy and brought M. along. That night Mollie was taken sick, but the fever has left her now, and she is playing about. On Second-day morning B. S. came to let me know S. Morris was very ill, and they feared she would be like her mother. David was here at the time; I sent to B. M. for his horse and chair, and David went and brought her home; but we could hardly keep her from fainting, she was so ill. He took her up stairs and put her to bed, and sent for good Dr. Rush. He said it was impossible for him to attend or to send one of his young men, but directed me what to do for her, which, through the blessing of Heaven, has raised her up again, and she has had no fever since Third-day. I should have told thee, that thy poor aunt Hannah Moore had another stroke of the palsy last Fifth-day morning; she lay a long time speechless and insensible,—we thought her dying. I got good Dr. Rush to look at her, and she is now restored nearly to her former state, except that she is more helpless than ever she was, and its difficult for three women to move her in and out of bed; and her groans and screams, when we do attempt it, are hardly to be borne. My tale of woe is not yet all told. While I was at B. Smith's, on First-day morning, E. Hicks,* was taken ill, and I found her in bed when I returned. Dr. Rush, dear, good man, sent one of his pupils to see her. She was to be bled, and we sent to eight or nine bleeders before one could be found; however, after 9 o'clock at night, we got it done, and though she is still very low, I have hopes of her recovery. Does thee not wonder what kind of stuff thy mother

is made of, that she is still living, after having gone through all this? Let the praise be given where it belongs, for I know that thy sufficiency is not of myself. Thy dear sister, through fatigue and anxiety, is beginning to droop. Jno. ordered her to be bled, for the doctor who attends their family, young Mease, is himself very ill, and can't attend. B. S.'s servants are recovering, but little Peggy is very much amiss. From I. Lewis's to I. Todd's, we have counted 29 or 30 that have been carried to the silent grave, and through the boundless goodness of Providence, none have yet been taken from under our roof. I was going to conclude, but must tell thee something as true as strange; when my family was at the worst, old Captain S. sent his compliments, and desired to know how we all did, and that if Mrs. M. stood in need of anything, at all, requested she would send him, and she should be welcome to anything he had. See how the mollifying hand can soften marble. Thy tenderly affectionate mother,

M. M.

To the same.

Philadelphia, 10th mo. 12th, 1793.

* * * I have the satisfaction of informing thee all my invalids, except my dear afflicted sister, are getting out of the hospital. But B. S. is very poorly, a high fever, and other symptoms of a smart attack. I hope he will yet be spared, and the favorable state of the weather encourages me to cherish the flattering hope, in humble confidence and desire of being resigned; for indeed the present dispensation calls upon us loudly to give up all. Alas! my dear, if ever thou re-visits thy native city, how many of thy former acquaintances will thou miss of seeing in thy walks abroad! Did I mention to thee that there are 52 orphan children, whose parents have died in the present calamity, now under care of the committee. I think they have converted the Logzania Library into an orphan house, and the committee hire a wagon two or three times a week to give the children an airing. Stephen Girard is a noble spirited man; he may be ranked with thy equally noble uncle Wells. I hear that he is constantly at Bash Hill; performs the part of a nurse to the poor sufferers there, and does the worst offices of a nurse—shifting the sick, and changing their bedding with his own hands. Does he not obey the command of his Lord, who said to one formerly, "go thou and do likewise" when He was asked who was neighbor to the man who fell among thieves—the Levite or Samaritan? Last night, good Dr. Olfrey was carried to the silent grave, and a few days since Rowland Evans. * * * I have done, when I tell thee that present or absent I shall ever be.

Thy tenderly affectionate mother,

M. M.

To the same.

Philadelphia, 10th mo. 15th, 1793.

* * * I have been closely tried for several days past on account of dear B. Smith, who has been, and still is, very ill, though I hope a little better to-night; he has not a sick stomach, but a very distressing pain in his head, and a fever. My poor Debby is also drooping, and I know not how soon she may be laid up; and I have both been bled twice. Their children are well, and servants bravely, although not able to do anything. When I returned home last evening, I found my late valuable black man, who I wrote went away

* The faithful maid who accompanied Mollie Moore and Mideah Martha from Madeira.

sick, laid on my kitchen floor very sick,—even ill—the people where he lodged having turned him out in that condition, and being a stranger in town, he knew not where to go. I gave him something, and this morning went myself to one of the committee and got a permit to send him to the hospital, and the good creature cheerfully got into the sick cart, thanking me for providing a place for him, where he might lay his sick head. Oh! my dear, you who are at a distance can have but a very imperfect idea of the mournful situation of our city! indeed, it looks dismal to see so many houses shut up. All the neighbors on the opposite side of the way gone out of town, and most on this side of the street.* My sick folks are all getting well, except my poor sister, on whose account my sorrowful family must remain at the place they are stationed at. Alas! whither could we go? We cannot flee from the rod commencing to strike us. Thy dear good uncle W—— looks like himself again, and my precious sister and the girls are as well as usual. Through the mercy of Heaven, I am able to be with my dear Debby part of every day, and esteem it a singular favor that her husband and self were not taken sick at the time my own afflicted household were ill, as I could not possibly have been spared from home at that time. Indeed I have renewed cause for humble gratitude, when I see my dear little ones, lately so ill, and our valuable domestics, meeting me, on every little absence, with countenances expressive of filial love and gratitude. It is almost too much for me to bear, weakened as my spirits have been of late, and fearful of their ascribing to me, a poor, weak instrument, what belongs to the Great Physician alone. I have good grounds to hope that the late afflictive sickness will prove of lasting benefit to our servants; thus good will grow out of the evil they have so much dreaded, and I have much desired to be a partaker with them in it. Patience and resignation should go hand in hand; the latter may be compared to the philosopher's stone, which is said to turn all it touches into gold; and resignation to the Divine will, turns every afflictive dispensation of Providence into real and substantial good, while patience, fits and prepares us to endure all evils without murmur or complaint. I am so far from branding thy conduct with the odious name of "cowardice," that I commend thy resolution, in absenting thyself from the city, a place where all that is dearest to thee on earth, at present are necessarily confined; and if I am right, let me have the comfort of still enjoying the hope that *my only son* will take care of his precious life for my sake, and yet "rock the cradle of reposing age."

Thy tenderly affectionate mother,

M. M.

(To be continued.)

He that is sincerely obedient will not pick and choose what commands to obey and what to reject. He will lay such a charge upon his whole man as the mother of Christ did on the servants at the feast: "Whosoever He saith unto you, do it." With eyes, ears, hands, heart, body, soul, he will endeavor, seriously and lovingly, to observe and diligently do whatever Christ says unto him.

* Her residence was on the north side of Walnut, one door below Fourth street.

Incidents and Reflections.—No. 13.

For "The Friend."

The wise man says, "Whoso diggeth a pit shall fall therein." We naturally experience pleasure in seeing the wicked designs of unscrupulous men react to their own injury; and the religious mind can often trace in such instances the overruling power of the Lord, who saves the simple, and ensnareth the crafty.

In Harvey's Reminiscences of Daniel Webster, an interesting illustration of this character, is given in the history of a law suit with which that eminent statesman was connected, and which is thus narrated.

Matthew Bramble was a wealthy resident of Portsmouth, and, as the sequel proved, an unscrupulous man. His social position was good, but a feeling of distrust towards him existed in the community. It seems that Bramble had given to a man named Brown an annuity bond, agreeing to pay him one hundred dollars a year as long as he lived. This was to keep dormant a title to some real estate. Bramble had more than once tried to persuade Brown to take a "lump" sum of money, and cancel the bond; but Brown persistently declined to do, and in this he was supported by the advice of his friends. After in vain offering one thousand dollars, Bramble resorted to the following method of getting rid of his obligation. He was accustomed, when he paid the hundred dollars, to endorse it on the bond. The next chance he got, he endorsed, not one hundred dollars, but one thousand dollars, adding, 'in full consideration of and cancelling this bond.' Brown, who could not read or write, unsuspectingly signed his mark to this endorsement. Bramble then coolly handed him back the bond, and of course said nothing of the matter. When the year came round, an altercation took place between them. Bramble said: "I owe you nothing; I paid you a thousand dollars, and it is certified on your bond." Brown was a poor shoemaker—simple-minded, truthful, weak,—not capable of coping with this wily scamp. He was friendly, while Bramble was a rich man. Poor Brown did not know what to do. He had convinced his neighbors that he was right. He went to Jeremiah Mason, who told him he was Matthew Bramble's lawyer. Mason had asked Bramble about the matter, and the latter had showed the bond; and Mason probably believed him. A friend then advised Brown to go to Webster; and, after hearing his story, Webster was quite convinced of the truth of Brown's statement. He had no confidence in Bramble. In relating the story, he said to me: "I knew nothing positively against Bramble, but something impressed me that he was not a man of honor. I was at once satisfied that he had committed this fraud upon Brown, and I told the latter that I would sue Bramble for the annuity. He said he had nothing to give me in payment. I said I wanted nothing. I sent Bramble a letter, and he made his appearance in my office.

"I should like to know," said he sharply, 'if you are going to take up a case of that kind in Portsmouth. It seems to me that you don't know on which side your bread is buttered.'

"This man has come to me," I replied, 'without friends, and has told me a plain, straightforward story; and it sounds as if it were true. It is not a made-up story. I

shall pursue this thing and sue you, unless you settle it.'

Bramble went to Mason who afterwards said to Webster: "I think you have made a mistake. Bramble is a man of influence. It can't be that the fellow tells the truth. Bramble would not do such a thing as that." Webster replied: "He has done just such a thing as that, and I shall try the suit."

So the preliminary steps were taken, and the suit was brought. The case came on at Exeter in the Supreme Court, Judge Smith on the bench. It created great excitement. Bramble's friends were incensed at the charge of forgery; but Brown, too, in his humble way, had his friends. Webster said:—

"I never in my life was more badly prepared for a case. There was no evidence for Brown, and what to do I did not know. But I had begun the suit, and was going to run for luck, perfectly satisfied that I was right. There were Bramble and his friends, with Mason; and poor Brown only had his counsel. And Mason began to sneer a little, saying, 'That is a foolish case.'

"Well, a person named Lovejoy was then living in Portsmouth; and when there is a great deal of litigation, as there was in Portsmouth and many towns in New Hampshire, there will always be one person of a kind not easily described.—a shrewd man who was mixed up in all sorts of affairs. Lovejoy was a man of this kind, and was a witness in nearly all the cases ever tried in that section. He was an imperturbable witness, and never could be shaken in his testimony. Call Lovejoy, and he would swear that he was present on such an occasion; and he seemed to live by giving evidence in this way. I was getting a little anxious about the case. I was going to attempt to prove that Brown had been appealed to by Bramble for years to give up his bond, and take a sum of money, and that he had always stontly refused; that he had no uses for money, and had never been in the receipt of money; and that he could not write and was easily imposed upon. But although I felt that I was right, I began to fear that I should lose the case.

"A Portsmouth man, who believed in Brown's story, came to me just before the case was called, and whispered in my ear: 'I saw Lovejoy talking with Bramble just now in the entry, and he took a paper from him.' I thanked the man, told him that was a pretty important thing to know, and asked him to say nothing about it. In the course of the trial, Mason called Lovejoy, and he took the oath. He went upon the stand and testified that some eight or ten months before he was in Brown's shop, and that Brown mended his shoes for him. As he was sitting in the shop, he naturally fell into conversation about the bond, and said to Brown: 'Bramble wants to get back the bond,—why don't you sell it to him?' 'Oh,' said Brown, 'I have; he wanted me to do it, and, as life is uncertain, I thought I might as well take the thousand dollars.'" He went on to testify that the 'said Brown' told him so and so; and when he expressed himself in that way, I knew he was being prompted from a written paper. The expression was an unnatural one for a man to use in ordinary conversation. It occurred to me in an instant that Bramble had given Lovejoy a paper, on which was set down what he wanted him to testify. There sat Mason, full of assurance, and for a moment I

hesitated. I took the pen from behind my ear, drew myself up, and marched outside of the bar to the witness stand. "Sir!" I exclaimed to Lovjoy, "give me the paper from which you are testifying!" In an instant he pulled it out of his pocket; but before he had it quite out, he hesitated and attempted to put it back. I seized it in triumph. "There was his testimony in Bramble's handwriting!" Mason got up and claimed the protection of the court. Judge Smith inquired the meaning of this proceeding. I said: "Providence protects the innocent when they are friendless. I think I could satisfy the court and my learned brother, who, of course, was ignorant of this man's conduct, that I hold in Bramble's handwriting the testimony of the very respectable witness who is on the stand." The court adjourned, and I had nothing further to do. Mason told his client that he had better settle the affair as quickly as possible. Bramble came to my office, and as he entered, I said: "Don't you come in here! I don't want any thieves in my office." "Do whatever you please with me, Webster," he replied; "I will do whatever you say." "I will do nothing without witnesses—we must arrange this matter." I consulted Mason, and he said he did not care how I settled it. So I told Bramble that, in the first place, there must be a new life-bond for one hundred dollars a year, and ample security for its payment; and that he must also pay Brown five hundred dollars, and my fees, which I should charge pretty roundly. To all this he assented, and thus the case ended.

Willing to Live Honestly.

"Pray for us," said the apostle, "for we trust we have a good conscience, in all things willing to live honestly."—Heb. viii. 18.

To live honestly in all things, we must first be willing to earn our own living. God said that man should eat his bread in the sweat of his brow. Paul said, "If a man will not work neither shall he eat." The man who is "willing to live honestly" in all things, accepts these primary conditions of existence, and rejecting the bread of idleness, labors, working with his hands and with his brains, that he may earn his daily bread. The man who is not willing to win his bread by honest labor, is not willing in all things to live honestly.

Again, a man who is willing in all things to live honestly, is willing to accept such a living as he can earn. There are very few people who cannot live honestly, if they will be content with such a living as they can earn. Many a man can live honestly in a cottage or a cabin, who cannot live honestly in a costly mansion. He can live honestly in the quiet country, when he cannot live honestly in the roar and rush of the crowded city. He can live honestly by dressing himself in comfortable raiment, and his family in clean and decent apparel, but he cannot live honestly while he robs himself in broadcloth, and decks his wife in satins and in silks. He can live honestly if he is willing to live on roast potatoes and corn cakes, but he cannot live honestly if he must fare sumptuously every day. He can live honestly if he will go on foot; he cannot live honestly if he must have his coachman and his carriage.

The man who is willing to live honestly in all things, is a man who submits to the necessities of his position, and who limits his desires and brings them within the range of his

means. The man who resolutely determines to do this; to live within his income, to earn his money before he spends it, to labor diligently and dispense with things which he cannot purchase and pay for; the man who has given up the idea that the world owes him a living, and has set himself to earn a living, by hard and diligent labor; the man who will persist in such a course as this, though he may not be able to gratify every taste, nor follow every fashion, or move amid the gayety and hollowness of a wicked and perverse generation, may yet be blessed in the enjoyment of good health, a good conscience, a good appetite, and a good living. For he who lives honestly in all things, has little fear of the afflictions and troubles which come upon dishonest souls, and which make the way of the transgressor so hard. "Pray for us; for we trust we have a good conscience, in all things willing to live honestly."

TRUST.

"I will lead the blind by a way they know not."

Led by a way that we know not,
 Wrapped in the darkness of night,
 Tossed by the storm and blinded,
 We cannot walk by sight.
 Knowing and trusting our leader,
 We know that our path is right,
 Child-like we follow him onwards—
 Follow him into the light.

Led by a way that we know not,
 A way that is thorny and steep,
 Footsore already, and fainting,
 Upward and onward we creep;
 One who Himself has trodden
 Each step of the thorny road,
 Bids us take courage and follow Him
 Into the presence of God.

Led by a way that we know not,
 A dreary and desert way,
 While snares encompass our footsteps,
 And lions roar after their prey;
 Helpless and trembling, yet trusting,
 We cling to our heavenly Guide,
 For in the gathering dangers,
 Safe are the weak at His side.

Led by a way that we know not,
 A way that is lonely and long,
 Feeble and faint are the pilgrims,
 But our Redeemer is strong.
 Kept by His arm from falling,
 Cheered by His words of love,
 Onward we go rejoicing,
 On to the mansions above.

Led by a way that we know not,
 But led by a Guide whom we know,
 Let us not seek to discover
 More than He pleases to show.
 Step after step as we follow,
 We know we are nearing our rest,
 Surely the way that He leads us,
 Must be, of all ways, the best.

Power of a Little Child.—Yesterday afternoon (says the San Francisco Post) two men engaged in an angry dispute on the street, during which one shook his fist beneath the other's nose, and appeared to have worked himself into a fever heat of passion. Just then a little girl, almost an infant, who had been going by, stopped, apparently paralyzed by the man's fury, moved quite close to him, and, looking up into his face, inquired, "What makes you so cross, mister?" It was so unexpected that the man evidently felt a complete revolution of feeling. Gradually his countenance cleared, and finally was lit up with a smile, as he patted the little peace-maker's head, and remarked, as he moved

away, ignoring the other man altogether, "I guess you're right, little pet."

Reflections on My Forty-seventh Birthday.

How rapidly time passes! How unmindful we are of its flight, or of the necessity of being prepared to meet its close! While youth, beauty or vigor remain, we are apt to forget that age, weakness, death, and judgment are daily approaching nearer to us. Months and years glide away almost imperceptibly, until on reflecting we discover the clock of life had already run more than half its round, even should the extraordinary number of four score and four years be allotted to us. So shortsighted is human nature; so contented with sailing on health's smooth surface, so prone to grasp at every tempting enjoyment presented within reach, that many thoughtless beings have unconsciously reached the summit of life's hill, and are day by day descending its declining slope, without appearing to perceive their downward journey is liable to be much shorter and more difficult than their ascent was.

The farther we advance on life's road, the more rugged it appears; we feel that cherished joys have departed, ties of kindred have been sundered, health and strength are diminished, debility and dependency are fast overtaking us, and treasured recollections of ambition, pride or avarice prove unstable anchors in the sea of infirmities. Meekness, patience, faith, hope, charity and forgiveness, are necessary attainments to preserve us from falling into dangers which naturally prevail in seasons of misfortune, affliction, or dependency, unless the mind is firmly established upon the rock of conscientious piety, which is the only rock sufficiently strong to stand unmoved amidst tempests of multiplied trials. Another year of the time allotted to my portion has flown away, and a review thereof clearly presents omissions and commissions which must tarnish the beauty of its picture. Methinks many fellow-pilgrims might acknowledge the same unfaithfulness on their part, would they carefully ponder their actions during that period of time. Should this suspicion be correct, I can only recommend repentance of the past, and an earnest endeavor to improve the future, by devoting the remainder of our days more fully to the Lord's service in whatever manner He may be pleased to require. His grace, which appeareth unto every rational mind, convinceth us beyond a doubt what His requirements are; consequently unfaithfulness to follow its pointings in all things is the great secret of much of the misery existing among mankind in general. God, according to His wisdom in creating us, endowed different individuals with different capacities, to be exercised in different spheres. It matters not in what sphere we are spiritually called to labor, it matters not how trifling or peculiar the labor within that sphere may appear, the call is incumbent upon us to obey; and the more willingly we submit thereto, the more easily our task is performed. Many, far too many, regard the requirements of conscience in small things as mere trifles, unworthy of attention; but to me they appear comparable to small duties in outward business, which every skillful manager will admit must be carefully attended to, or matters of apparently greater importance suffer thereby. Inattention to small mental duties is no less serious in its results. The origin of slander,

alice, resentment, and divers gross evils commonly occurring in every-day life, may generally be traced to small offences, or neglect to amend offenses while they are small, and within our power to control. A grain of seed or a cent of money is considered by all a trifling thing; yet none can deny it is by carelessly regarding grains and cents, that we innumerate valuable sums of bushels and dollars; so in like manner, a faithful adherence to spiritual requirements in small things constitutes the grand basis of practical Christianity.—*Musings of a Blind and Partially deaf Girl.* By Mary Ann Moore.

Indian Stone Pots.

A correspondent of the New York Post, on Amelia Co., Va., mentions the discovery of a mine or quarry from which the Indians formerly quarried or shaped the stone pots which are preserved in museums. The farm on which it is located was bought in 1872 by a farmer named J. Wiggins, from one York State; who in making the circuit of his new purchase, sat down to rest on a large boulder. Taking out his knife, he carelessly made an incision in it, and found it was soapstone. Having an idea that it might prove useful, he began to excavate, and scooped, after going down a few feet, that superabundant earth over the ledge had evidently been dug over before, being made of clay, bits of stone from the ledge, traces of charcoal, stone hatchets and fragments of Indian pottery. At the bottom of the Indian excavation the hollows remained where the utensils of various shape had been dug out, and such is the peculiarly unchangeable nature of the stone that the rough centre or stem from which each was broken is as distinct to day as if the covering of earth and debris had only lately been removed and immediately replaced. Having no money, Wiggins has only been able to make very partial excavations, and these are only intended to develop his discovery as a soapstone quarry. The stone is a variety of steatite entirely without mica, of tough interlocking fibre and dull yellowish color, becoming dark gray and hard on exposure to the atmosphere. It is soft and can be cut, turned or carved when first taken from the ground, and it does not even split like a common carpenter's hand-saw.

Wiggins began his excavation at the point where the Indians began theirs; this is evident by the accumulation and the kind of implements found there, as well as by the recent effect work. It seems that they worked in large numbers, from the fact that General Hundley's farm was evidently a vast camp, over which the pottery was distributed to be finished, and over which are still scattered fragments of incomplete utensils and tools with which they were fashioned, so far the quarry, as worked by the Indians, as been shown to be at least an acre in extent. Having no shovels with which to throw out the six or seven feet of clay, they seem to have simply thrown it back behind them as they advanced, so that at different points where they finally left off work there remain depressions, while around them the surface is level with the surrounding land, though full of fragments of pottery and tools down to the surface of the rock.

Judging from the accumulation of mould over the excavated earth as well as from the size of the trees now standing over the exact

spot of their apparently latest workings, it was abandoned some three hundred and fifty years ago. They evidently began work with their stone hatchets or tomahawks of kyanite, very hard and brittle. These, with the blades broken, were found only at the place where they are supposed to have begun work. They then seem to have brought crystals of quartz from every out-cropping ledge in the surrounding country—specimens of each are to be found in the quarry—and picks of granite, necessarily from a great distance. They finally seem to have selected the crystals of quartz from a ledge about a mile off, which, no matter how broken, always present points well suited for digging out pots. Many pieces are flat on one side, and rounded on the other, with a sharp edge, making a natural tool of the best shape for hollowing out the inside of a pot. The whole surface of the quarry ledge, so far as excavated, is covered over with the projections or stems from which the pots were broken and the hollows from which they were dug. The Indians seem to have first dug out a pot right side up, finishing the inside first, and then digging around it, leaving a stem at the bottom, and breaking it off by a blow from a maul made by beating a piece of the stone in a fire to harden it. The excavation necessary to get the first pot out left the rounded form for the bottom of another. One specimen now in the Smithsonian Institution is oblong, two feet one inch long by thirteen inches wide and eight inches deep, with handles at each end. Hollows remain where pots have been taken out holding many callous, some of them round and two feet wide, and the specimens and fragments found range all the way from this size down to those of drinking cups the size of a teaspoon, one of which was found at a spring near by.

This quarry is less than a mile distant from the Richmond and Danville Railroad, and only thirty miles southwest of Richmond."

For "The Friend."

Separation in the Western Yearly Meeting.

(Continued from page 4.)

The longest of the series of articles in the "British Friend," bears the title "*Judge righteous Judgment*," and criticises an article signed W. P. S. that appeared in a previous number of that journal.

From the article criticized, E. F. quotes the query, whether "it will tend more to the glory of God, or be better for us as a people, for any to become discouraged because of some changes in the workings of the Church, or deviations from some of the teachings and practices, and withdraw from it either individually or in a body than to remain at their posts, and labor faithfully as the Lord gives ability not only for the preservation but for the building up of the Church." On this he observes, "Why did he not say in accordance with the fact, *because of an abandonment of some of its vital or fundamental principles*? from which legitimately follows the train of departures in practice which he so justly enumerates, a result which was clearly seen, and foretold by some of those faithful worthies who first saw, and within the pale of the Society testified against those sad departures from our ancient and well-established principles on the part of some occupying high stations in the Society. They did not withdraw from it, but labored within it, as advised by W. P. S. Now mark the result, they were

blamed, they were censured as disturbers of the peace of the Church, as having no interest in the Society, and as deserving none of its privileges, as caring for nothing but to pull down and destroy. Some were harassed by committees for years, and finally disowned; all on account of their faithful labors in the ability afforded, (just as they believed the Lord required) for the preservation of the Church. This in New England Yearly Meeting years ago—and recently we have seen it repeated in that of Indiana. So while such are censured for withdrawing, if they remain they are thrust out if faithful in testifying against erroneous principles and practices which they see coming in. Is it strange in view of all this, and of the fact, that London Yearly Meeting has turned its back on Barclay, and virtually endorsed the unsound and heterodox views of some modern authors, that Friends concerned for the preservation of the Society on its original ground of principle and practice should become discouraged, and ready to give up all hope of successful labor within its pale?

"The whole scope and tenor of the article under review is to enjoin silence on the part of those Friends who feel concerned and alarmed for the safety of the Society on its original ground, and to recommend their continuing to remain in it without testifying against what they believe and see and feel to be wrong; thus becoming responsible for all that is passing therein, as very many have done and are doing—a course which, if persevered in, can scarcely fail ultimately to land the Society on the same ground from whence our forefathers first took their departure. All that was said by our Lord and his apostles in regard to Church government, goes to prove that it is not only the prerogative, but the duty of the Church in some way to free itself from disorderly walkers, and from those who depart from its doctrines. Hence, if those professing Quakerism become corrupt and change the doctrines and practices of the Society, they who remain firm to the ancient Christian views professed by all sound Friends must separate from the others and disown fellowship with them if the latter cannot be reclaimed. This view is fully sustained by Robert Barclay,* as follows:—After quoting Gal. i. 8, 1 Tim. i. 19, 20, 2 John 10, he then says—

"(Page 514.) 'These scriptures are so plain and clear in themselves as to this purpose, that they need no great exposition to the un-biassed and unprejudiced reader. For, seeing it is so, that in the true church there may men arise and speak perverse things, contrary to the doctrine and gospel already received, what is to be the place of those that hold the pure and ancient truth? Must they look upon these perverse men still as their brethren? Must they cherish them as fellow members; or must they judge, condemn, and deny them? We must not think the Apostle wanted charity, who will have them accused; and that gave Iymeneus and Alexander over to Satan, after that they had departed from the true faith, that they might learn not to blaspheme.' * * * (Page 515.) 'If the Apostles of Christ, of old, and the preachers of the everlasting Gospel in this day, had told all people, however wrong they found them in their faith and principles, 'Our charity and love is

* In his Anarchy of the Ranters.

such, we dare not judge you, nor separate from you? but let us all live in love together, and every one enjoy his own opinion, and all will be well; how should the nations have been? Or what way now can they be brought to truth and righteousness? Were such a principle to be received or believed, that in the church of Christ no man should be separated from, no man condemned or excluded the fellowship and communion of the body, for his judgment or opinion in matter of faith, then what blasphemies so horrid, what heresies so damnable, what doctrines of devils, but might be harbored in the Church of Christ? What need then of sound doctrine, if no doctrine make unsound? What need of convincing and exhorting gain-sayers, if to gainsay be no crime? Where should the unity of the faith be? Were not this an inlet to all manner of abomination? And to make void the whole tendency of Christ and his Apostles' doctrine? And render the Gospel of none effect? And give a liberty to the inconstant and giddy will of man to innovate, alter, and overturn it at his pleasure? So that from all that is above-mentioned, we do safely conclude, that where a people are gathered together into the belief of the principles and doctrines of the Gospel of Christ, if any of that people shall go from their principles, and assert things false and contrary to what they have already received; such as stand and abide firm in the faith, have power, by the Spirit of God, after they have used Christian endeavors to convince and reclaim them, upon their obstinacy, to separate from such, and to exclude them from their spiritual fellowship and communion; for otherways, if this be denied, farewell to all Christianity, or to the maintaining of any sound doctrine in the Church of Christ.

"What can be clearer or more to the purpose than the foregoing sentiments of this eminent writer and 'Apologist,' for the Society? Yet all know that Barclay was pre-eminently the friend of good order, well knowing from that root it springs—even from pure principles and sound doctrine; and when these are departed from by large numbers, disorder and confusion ensue. This whole argument against separation under any circumstances is a recurrence to the principle of majorities, a principle never recognized by Friends in their system of Church government. And it is a lamentable truth that they who sustain the Society in its ancient faith, and in opposition to an organization which, having passed into corrupt hands is made an instrument of oppressing and a means of promulgating and establishing error, are very unjustly stigmatized as separatists, being in reality the true Society of Friends as was maintained in the Hicksite times.

"The writer has been informed by a Friend who was present at the Yearly Meeting of New York in 1828, that after Friends had left the house and had assembled in another place, considerable uneasiness was felt and expressed by some on account of their proceedings and position, which it was apprehended might look too much like separation. After considerable expression in this line a prominent Friend present from Philadelphia rose and said in substance that they are the separatists who separate themselves from the doctrines and testimonies of the Society, whether they be few or many, and this view appeared to strike Friends as the correct one, and to be accepted as satisfactory. And to this point, argue the ques-

tion as we may, it must come at last; or otherwise the Society becomes extinct when even a ruling majority depart from its principles and control its acts, unless we take the no less absurd position that a body which has repudiated the well known principles of the Society, adopted new ones, and converted the discipline into an instrument of oppression and misuse, may nevertheless be the legitimate Society of Friends."

Wonders of Mechanism.

One of the most remarkable sights at the great Paris Exposition was a mammoth toy, about which crowds were always gathered. The first glance took in merely a rock some twelve feet high, about which, in a very tangle of weird beauty, were growing mosses and ferns, lichens, parasites and creeping things generally. Then, from one side of the huge rock was seen a tiny silver spring, reminding the beholder of God's care for His people in the wilderness, when, at His command, "Moses smote the rock, and the waters gushed out and followed the Israelites." But, while the visitor stopped to view the myriads of gold and silver fish that gleamed and gambled like shining arrows in the clear waters of the pond, he was startled by the spring of a huge Newfoundland dog, who placed himself in full view of the crowd, as if courting attention. He rolled his eyes, opened wide his fierce jaws, showing a tongue and teeth that made many a beholder shudder and stand back. Then he barked—not angrily, but a good, honest bark of courteous welcome to his master's guests, who helped to fill the master's pockets with francs to buy food; and "Carlos" looked, with his frisky airs, as if he meant to have his full share of the feast.

Next came the sound of music—a strange, wild tauto, just over the people's heads, and looking up, they saw a cunning little hare, sitting perched upon a huge boulder of the rock and playing on a drum. Faster and faster each moment flew the tiny paws, and wilder with each stroke became the strange music, till it suddenly ceased with a wild shriek, as a huge, grinning baboon, with open fore-paws and rolling eyeballs, made his appearance on one side, at the same moment that a juvenile shepherd entered on the other. In the distance was seen a dainty little maiden, to whom the shepherd bowed and smiled, while he raised his flute and played softly and sweetly, till interrupted by the jibes and fierce drumming of the hideous baboon, who seemed determined to drown the flute's soft melodies. Both seemed intent on winning a smile from the demure little damsel, who sat with downcast eyes, bestowing not so much as a glance on either.

Suddenly all became quiet, the strange pantomime ended, and the crowd learned, to their amazement (if they had not seen it before), that they had been watching only an automaton. A very amusing one certainly, but only stone figures after all, that were moved by springs, wound up like a clock, and set going, and then stopped just as does a clock or a watch when it has "run down." So likeliest were both figures and motions, that the observer could hardly realize that he was gazing only at a machine, even after he had found out the illusion. The rock was of course an artificial one, and the springs were all inside; while this wonderful piece of mechanism could be taken to pieces and moved

about almost as readily as a soldier's terrier. The only real live things about it were the fish; all the rest—the lady and shepherd, baboon, hare and dog—were stone; and neither their motions nor music were acts of volition any more than is the running or striking of a clock.

Now, do you think this curious combination of works and springs, all working together so harmoniously, and carrying on so perfect a system of design, made itself? Would you not think one very silly, who would say it had no maker, but got together by chance? Then can it be possible that the whole systems of worlds, sun, moon and stars, trees and flowers, birds, beasts and fishes, an above all, man with his immortal soul, his volition and consciousness, were formed without a Creator? The Bible tells us, "Even house has some builder, but He who built a thing is God;" and remember it is only "thou" who "saith in his heart, There is no God."—F. R. F., in *Little Gleaner*.

For "The Friend."

Letter of John Thorp to Frances Dodson.

8th month 23rd, 1778.

* * * * * The Lord's ways are not of ways, His thoughts are not our thoughts; on day with Him is "as a thousand years, ar a thousand years as one day." His depth the designs, the concealed mercy in His various dispensations, when his way is in the thic darkness, are beyond our comprehension; b this we know, that with Him there is "i variableness, neither shadow of turning that having loved His own, He loveth the to the end; that through whatsoever sufferings, tribulations, or conflicts, He may i pleased to lead His chosen ones, that it is H good pleasure to give them the kingdom that He is greater than all, and none shall b able to pluck them out of His hand.

Be not then, my dear friend, discourage when the enemy may be permitted to sit at to buffet thee; endeavor to stand still in the times of trial, and in the Lord's time He w lift up an effectual standard against him, at cause thee afresh to experience His comple salvation. Deeply have the most dignified, all the children of God often been tried; oft led in paths of unutterable humiliation an abasement, in the course of their purification; yet were none that ever trusted in the Lor and abode in His fear, confounded or forsake Whom hath He ever prepared for a habitatic with Him in glory, who have not measurab drunk of this cup, and been baptized with th baptism? "I am a worm, and no man;" have not the spirit of a man; "I am forgotte as a dead man out of mind; I am like broken vessel," is a language in which al redeemed of our God have been more or le instructed. "Are ye able to drink of the c that I shall drink of, and to be baptized with the baptism that I am baptized with?" wa the very query proposed by our blessed Lon to the two disciples who were envious of situation at His right and left hand in glori * * * * * "Father, if this cup may not pa from me, except I drink it, thy will be done On the perfection of this state! wherein t choice is formed, no desire arises, no praye are offered up, but what are circumscribible, and centre in, "not my will, but thine I do." It is to reduce us to, or rather, rais us into this state, that all the varied turning of His holy hand and the dispensations

is providence are directed; and then, in this state, whether we are called to mite in the psanna to our adorable Redeemer, or go with Him over the rock Cedron, and with Him reap great drops of sorrow, we are equally acceptable unto Him. It is to this state all things are equally sanctified, whether it be to sigh or to suffer with Him; whether the north or south wind blows upon it, the spices equally flow out, and ascend as incense, equally acceptable unto the God of heaven and of the whole earth.

* * * How canst thou think, my dear friend, at any time, that thou art finally forgotten or forgotten of God, though in unsearchable wisdom, He sees meet to hide his face, at seasons, from thee? Is God unrighteous? do His compassions ever fail? are not His promises sure? and doth He not strictly keep his covenant? Hath He not delivered thee out of six troubles, and is His arm shortened? Hath He vouchsafed, in unutterable love, to draw thy soul after Him in infant years, and to reveal Himself unto thee, to be the ray of thy youth, the God of thy life, and will He now forsake thee? He is the same ever was when thy soul was first ravished with Him, and He became to thee "the chiefest among ten thousand." His regard, His love, the yearning of His bowels, are as much as ever towards thee; and, as He hath vouchsafed to be thy morning light, and the stay of thy youth, so will He be thy evening song, and the staff of thy old age.

Endeavor then, my dear friend, to cast out all discouragements and painful doubtings, and let thy hope, thy trust, thy only expectation be from Him; and though thou mayst seem cast out from His sight, yet, let thy looking be towards His holy temple; and in its own time He will give thee the desire of thy heart, and thou shalt yet praise Him on the banks of deliverance, and a God of His wonders in the deep, who is the full, infinite in power, wisdom and love; whose "mercy endureth forever," and of whose loving kindness there is no end. JOHN THORP.

Syria—A Blind Colporteur.—Professor Lewis, Beirut, sends the following statement:

In the districts of the Lebanon, near Beirut, have employed a blind colporteur, who has one most excellent work. He has not sold any books, but what he has sold have gone to the hands of persons whom missionary influences do not reach. He has copies of those portions of the Scriptures which have been published in raised characters for the blind. With these in a satchel and led by a guide he goes to all quarters and all sects. He finds access to Druzes, Moslems, and the most bigoted Maronites. Even the priests are willing to see the wonder (a blind man reading with his fingers), and so are compelled to hear. For instance, he visits a village and is invited to give a reading at some house, perhaps the dwelling of the principal man of the village. In order to test the blind man it is necessary that some one have the Bible for comparison as he reads. This is furnished, and a chapter selected by the scribe or leading man. The blind colporteur finds the same in his book and begins to finger the raised letters and read. Now he is not the man to read and not call attention to the words and evident meaning. He reads sometimes until midnight, the room becoming more and more crowded.—*Bible Society Record.*

Hard Times the Best for Young Men Just Starting.—Young men coming upon the stage of active life during the present hard times are much more likely to be permanently successful than those who made their advent in business during the period of inflation, of high prices and of fabulous nominal profits. The great reason of this is that the young men who begin now, from necessity, form their business management and personal habits on principles of rigid economy. These, in the long run, tell so powerfully as to make, in many cases, the difference between failure and success.

Men who began when everything was at the top find it very embarrassing to come down and adapt themselves and their business to the times that try men's purses, as war is said to try their souls; whereas, those who commence when economy is the order of the day experience no difficulty whatever in starting upon an economical basis, and once started, it will be easy to adhere to it.

So that for young men just embarking for themselves, we may almost assert the paradox that bad times are the best.—*Churchman.*

A poetical divorce between poetry and piety may take place; and though no direct war be proclaimed against religion—as in Lucretius—a pious man feels a sort of want in the effusion of poets of this defective type, somewhat as if one were to walk through Windsor Palace and see splendid traces of everything but the Queen.—*Prof. Blackie.*

There is a dark, and also a bright side to every providence, as there was to the fiery cloudy pillar that guided God's people of old in the desert. Nature looks on the dark side, and calls it sorrow and sadness; but faith sees the sun dispersing the darkness, and calls it by the name of joy.—*H. Bonar.*

THE FRIEND.

EIGHTH MONTH 24, 1878.

The Psalms and other portions of the Holy Scriptures contain many precious promises and assurances of the greatness of the Divine love and mercy; that the Lord watches over his people, and helps them out of all their distresses; that though the young lion may lack and suffer hunger, yet they that fear the Lord shall not want any good thing; that his name is a strong tower into which the righteous may run and find safety.

We doubt not that such passages have been a source of consolation to thousands of the honest-hearted from the day they were uttered down to the present time; and that they will continue to strengthen the faith and revive the courage and drooping spirits of the Lord's exercised and tried people in future ages. Yet there is a condition, expressed or implied, attached to all these promises, which we must not overlook. It is the *weak*, whom the Lord will guide in judgment, the *humble* that He will teach of his ways, those who *hunger and thirst* after righteousness that shall be filled, those who *cry* to the Lord that he hears and delivers out of their distresses. If we would receive the manifold mercies and blessings which the Lord is ready to pour out upon us, we must open our hearts to let Him

enter; we must submit ourselves to the workings of His Holy Spirit within us; and joining therewith, must know our own will brought into subjection; and being thus grafted into the true Vine, experience the growth in us of purity and holiness.

The humble penitent, the sincere seeker after Heaven, may safely trust to the mercy of his Heavenly Father, who for our sakes spared not his own Son, and who with Him, will freely give us all things necessary. But he who still clings to his own selfish propensities, who retains the government of his conduct in his own hands, and who is not willing to take the Lord for his Judge, Lawgiver and King—cannot, in this state, appropriate the promises which are made to those in another mental condition, without self-deception and spiritual blindness.

OMISSION.

In the List of AGENSIS published last week, the name of Samuel Shaw, New Waterford, Columbiana Co., Ohio, was inadvertently omitted.

SUMMARY OF EVENTS.

UNITED STATES.—The condition of the national finances has been a source of general congratulation at recent cabinet meetings. It is thought the Treasury will proceed very rapidly to call in the 5-20 bonds; and the employees of the loan branch department have not for a long time been more actively engaged in recording subscriptions and performing clerical work relating to the Government loans than at present. The impression still exists that the minor gold coins will soon be paid from the Treasury in the ordinary course of business. The coin balance records show an increase of coin in the Treasury. The currency balance, including the ten millions' fractional currency redemption fund, shows at comparatively very low figures.

The statistics of our foreign commerce for the year ending 6th mo. 30th, 1878, show an excess of exports over imports of \$257,809,000. Prior to 1873, the balance of trade was largely against us, ranging from \$89,000,000 to \$182,000,000. Since 1875, imports have fallen off, while exports have greatly increased.

The anthracite coal trade is said to present a better outlook than at any time this year. The demand for coal is good, and the orders greater than can be filled by the companies during the present month.

A powder magazine on Mount Hope, one mile from Pottsville, containing 27,000 pounds of blasting powder, was exploded by lightning on the 17th inst., two persons were killed, and several seriously injured.

The Pittsburg wagon works, in Pittsburg, occupying a whole block, were destroyed by fire on the evening of the 16th inst. Nevada, was visited on the 15th by a "cloud barst," which flooded the business portion of the town, causing losses estimated at \$100,000.

Kansas has increased her population over 150,000 during the year ending 6th mo. 30th, and over two million acres of Government land were taken up.

Reports from the South indicate a rapid spread of yellow fever. During the past week there have been 509 new cases in New Orleans, and 140 deaths.

The statements of mortality issued by the Board of Health of this city, show that during the seven months of this year the total number of deaths has been 9,248. Of these 207 were from typhoid fever; scarlet fever, 352; diphtheria, 246; cholera infantum, 422. For the past week there have been 553 deaths. In New York during the same period 569.

Markets. *Am.*—American gold 1005. U. S. sixes, 1881, 1072; 5-20 coupons, 1865, 1024; do. 1867, 1051; do. 1868, 1035; new 5's, 1061; new 4½ per cents, 1053; new 4 per cents, 1041.

Cotton quiet and firm at 12½ a 12½ cts.

Petroleum, \$1; 8½ cts. for crude in barrels, and 10½ for refined.

Flour and Meal.—Flour market is firm, with a steady demand for all choice descriptions. Minnesota extra family, \$5 a \$6 for low, and \$7 for choice. Penna. and western, \$5 a \$5.50. Rye flour, \$2.75 a \$3. Corn meal, \$2.75 per barrel.

Grain.—Wheat is in good demand—red, \$1.35; amber, \$1.06; and white, \$1.10 to \$1.15. Rye, 55 to 58 cts. Corn, 46 to 52 cts. per bushel, as to condition and quality. Oats, 31 to 35 cts. per bushel.
Hay and Straw.—Prime timothy, 60 to 70 cts. and best, 40 to 55 cts. per 100 pounds. Straw, 40 to 50 cts. per 100 pounds.

ENGLAND.—Parliament was prorogued on the 16th until the 24 of Eleventh month. The Queen, in her speech, attributes the pacific solution of difficulties in the East, largely to the action of Parliament, and expresses the hope that the peace concluded by the Congress of Berlin will be satisfactory and durable. The independence of Turkey has been secured, the integrity of her territory guaranteed, and reforms in her administration pledged by a defensive convention between her Majesty and the Sultan, in accordance with which Cyprus has been occupied by British forces. The Queen praises the spirit and alacrity of the land and naval forces, and refers with especial gratification to the condition of the Indian army and the loyal attitude of the Indian princes.

The Queen declares that her relations with all the foreign powers continue friendly. The speech concludes with reference to supplies and internal legislation.

The writer of a paper recently read before the British Iron and Steel Association, estimates that 30,204,000 tons of iron rails have been laid down during the last ten years, and that the quantity required for repairs is 3,020,400 tons; for new lines, &c., 1,000,000 tons. The writer estimates the current production of rails to be 2,745,000 tons, 879,000 tons of which are produced in the United States. This shows a deficiency of production of 1,255,000 tons, the amount of which, it is stated, has not been given, is attributed to that economy or necessity which has forced railroad companies to postpone repairs as long as possible, and somewhat to the substitution of steel rails, which are more durable. These statistics are regarded as encouraging to the iron interests.

An official statement of the public debt of Great Britain gives the following figures: Funded debt of the United Kingdom £710,843,007, and the unfunded debt £20,693,000; capital value of terminable annuities in 5 per cent. stock, £4,386,859, and the deficits due to the savings bank and friendly societies on the 20th of 11th month, 1877, £42,388,308 5s.

The cattle bill recently reported to Parliament shows, that during the first six months of the present year, 87,700,000 pounds of fresh meat, valued at over \$5,000,000, was imported into England. Living cattle there were more than 100,000, and valued at nearly 10,000,000, and more than half a million sheep and swine, the total value being nearly \$15,000,000.

During the year 1877, 1175 persons were killed and 8705 injured by railroad accidents in Great Britain.
At Bristol on the 10th, 2000 cotton operatives struck.
The recent elections in Alsace and Lorraine show an increase of the moderate party, and a decline of the irreconcilables.

A bill for the purpose of preventing the spread of socialism, has been submitted to the German Federal Council. It provides for the suspension of all publications in furtherance of Socialist or communistic objects. The central authorities of the Federal States are declared competent to deal with all offences against this law. Appeal from their decisions will be to an Imperial Bureau to be created for the purpose of considering questions of public meetings and the press. The central authorities may, with the sanction of the Federal Council in districts where public safety is endangered, prohibit public meetings for a year, unless the meetings are sanctioned by the police authorities; prohibit the sale of interdicted printed matter in the streets, restrict the sale or possession of arms, and expel unemployed persons.

MORESTOWN ACADEMY

Will be opened 24th mo, 24, under the auspices of the Chester Monthly Meeting of Friends, for children of both sexes.

By H. B. T. CADBURY, Principal.
AND ANA WOOLMAN, Assistant.

WESTTOWN BOARDING SCHOOL.

A well qualified woman is wanted to take the situation of Nurse in the West Town Department.

Application may be made to
Anna V. Edge, Downingtown, Chester Co., Pa.
Susanna E. Sharpless, Street Road, " " "
Edw. H. Hoopes, Haddonfield, New Jersey.
Elizabeth R. Evans, 222 S. Front St., Philada.

RECEIPTS.

Received from Edward Sharpless, N. J., \$210, to do; from John W. Hilyard, N. J., \$210, to do; from William Hill, Me., \$210, to do; from Jacob P. Jones, Gt. Conn., \$210, to do; from Mary E. Hoopes, N. J., \$210, to do; from Charles L. Wilts, N. J., \$210, to do; from William C. Ivins and Mary DeCoo, N. J., \$210 each, to do; from Joseph N. Taylor, Ind., \$210, to do; from Josiah Fawcett, O., \$210, to do; and for Richard B. Fawcett, Robert Miller, Rachel Ebbelby and Ann Fawcett, \$210 each, to do; from Mabel C. Hoopes, N. J., \$210, to do; from Levi L. Hoopes, Pa., \$210, to do; from William Bettles, Ill., \$210, to do; from Walker Moore, Pa., \$210, to do; from John Carey, O., \$210, to do; and for Seth Compton, Cornelius Douglas, Jacob Barrett and Jordan Ballard, \$210 each, to do; from Mary E. Hoopes, N. J., \$210, to do; from Matilda Warner, Pa., \$210, to do; from Susannah Marriott, N. Y., \$210, to do; from George Sharpless, Agent, Pa., \$210, to do; and for Morris Cope, Maria Pusey, Margaret Maule, Isaac Good, J. Borton Hayes, Hannah N. Harry, Margaretta J. Mercer and Joshua Sharpless, \$210 each, to do; from Joseph Scattergood, Agent, Pa., for Mary H. Parke, Sarah Yarnall, Elizabeth S. Thomas, Eusebius H. Townsend, Alfred Embree, Rachel E. Woodward, William P. Townsend, Thomas Thors, S. Emelen Sharpless, Mary Ann Newlin, Philena C. Adams, Price Z. Adams, \$210 each, to do; from Samuel S. Thomas, and Susanna S. Thomas, \$210, to No. 31, vol. 53; from Isaac Hall, Pa., \$210, to do; from David Heston, Fkild, \$210, to do; and for William Nuly, Colorado, \$210, to do; from Mary Kaighn, in Ann Kaighn, Ann Evans and Joseph K. Evans, N. J., \$210 each, to do; from Sarah A. Cope, \$210, to do; from Caleb P. Haines and Samuel Haines, N. J., \$210 each, to do; from Jeremiah Foster, R. I., \$210, to do; from Stephen M. Trimble, Pa., \$210, to do; and for John Wetherill, and Dr. Samuel Trimble, \$210 each, to do; from M. M. Thornhill, \$210, to do; from J. M. Whitaker, Pa., \$210, to do; from Benjamin Sheppard, N. J., \$210, to do; from Penington Kiteley, Canada, \$210, to do; from Thomas Satterthwaite and Sarah Satterthwaite, Pa., \$210 each, to do; from Samuel Mason, City, \$210, to do; and for Sarah Mason, George Sharpless, Pa., \$210, to do; and for Lewis Sharpless, Jo., \$210, to do; from Joel Wilson, Agent, N. J., \$210, to do; and for Ruth A. Harned and Isaac C. Stokes, \$210 each, to do; from Lettie Evans, N. J., \$210, to do; from John D. Harrison, Pa., \$210, to do; from William D. Hoopes, Pa., \$210, to do; from Hannah Hoffman, W. Philada., \$210, to do; from Joseph Elkinton, Pa., \$210, to do; from Elizabeth H. Eddy, Mass., \$210, to do; from Lydia Ann Hendrickson, N. J., \$210, to do; from Royal Woodward, N. Y., \$210, to do; from Elizabeth B. Meredith and Saffie L. Hoopes, Pa., per Susan T. Hoopes, \$210 each, to do; from Samuel A. Shaw, Agent, O., \$210, to do; and for James Held, Barak Ashton, Job Huestis, Rachel Cope, Levi Boulton, Millin Caldwell, Joseph Taylor, Nathan M. Blackburn, Hannah Blackburn, Jonathan Blackburn, Abner Allison, Benjamin Harrison, and John W. Hilyard, N. J., \$210 each, to do; for Francis Bartley, Mich., \$210, to No. 22, 51; from Deborah Hopkins, City, \$210, to do; from Phebe C. Parker, Pa., \$210, to do; from Mary Allen, City, \$210, to do; from Esther S. Prickett, N. J., \$210, to do; from William C. Buzby, N. J., \$210, to do; from John B. Smith, N. J., \$210, to do; from John Bishop, N. J., \$210, to do; and for Jane DeCoo, N. J., and Mary J. Bowen, Md., \$210 each, and Lucy A. Pauscott, City, \$210, to do; from Hannah Mickle, N. J., \$210, to do; from Valentine Meader, Mass., \$215, to do; from Benjamin D. Stratton, Agent, O., \$215, to do; from George A. Weaver, O., \$210, to do; from Joshua Gilbert, Uriah Price, John F. Stratton, Joseph Winder, and Henry Clark, \$210 each, to do; from Sarah C. Gaskell, N. J., \$210, to do; from Joel Thompson, Del., \$210, to do; from Sarah Hoopes, Pa., \$210, to do; from George A. Weaver and Charles T. Jenkins, \$210 each, to do; from John M. Stratton, N. J., \$210, to do; from Mary R. Clement, N. J., per Samuel P. Leeds, \$210, to do; from John M. Stratton, O., \$210, to do; for Elizabeth R. Redell, Ill., \$210, to do; from Benjamin W. Pasmore, Westtown, \$210, to do; from John W. Hoopes, N. J., \$210, to do; from Wm. DeWees, C. Only Barberston, Edwin Brown, Anna Barberston, Ann Sharpless, Thomas Turner, Charles Potts, Richard W. Hutton, and Lewis Forsythe, \$210 each, to do; and for Amanda Gallinor, O., \$210, to do; from Hannah C. Wills, N. J., \$210, to do; from Deborah Hoopes, N. J., \$210, to do; from Charles Rhoads, N. J., \$210, to do; and for Samuel

N. Rhoads, Westtown, \$2, and Eliza A. Somers, N. J., \$210, to do; from Sarah Ann Cox, N. J., \$210, to do.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

HADDONFIELD ACADEMY.

Under the care of Haddonfield Monthly Meeting, is open on the 2nd of Ninth month, 1878, for boys & girls. A few boarders will be taken. Apply to

CHARLES W. RYDER, Principal,
Haddonfield, New Jersey.

The Yearly Meetings Committee on Education has appointed J. R. Allen, No. 119 Arch St., Philadelphia, to receive applications from teachers wanting situations, and committees or others who desire to employ teachers among Friends.

WESTTOWN BOARDING SCHOOL.

The Committee on Instruction of Westtown Boarding School met at Philadelphia in the Committee room, Arch street, on Seventh-day, the 24th inst., at 10 A. M.

MALVERN BOARDING AND DAY SCHOOL.

The next school year will commence on the 9th of Ninth month. For circular, address

JAMES M. ELDRIDGE, box 35, Malvern, Pa.

A well qualified Teacher wishes a situation in Friends' School, in city or country.

Inquire at the Office of "The Friend."

FRIENDS' SELECT SCHOOLS.

These schools, under the care of the three Month Meetings of Friends in this city, will re-open on Second day, Ninth mo, 24, 1878.

A limited number of children, not members of a religious Society, will now be admitted to these schools whose parents desire to have them educated in accordance with our principles.

The attention of Friends residing in the city and neighborhood is particularly invited to them. Terms are moderate, and Friends belonging to Philadelphia Yearly Meeting, sending children to the schools, (also members), who may find the charge burdensome, can be fully relieved.

The principal schools will open for the next term under the care of John H. Dillingham and Margar Lightfoot, as Principals, both successful teachers many years' experience. Opportunities will here be afforded of obtaining a liberal education in useful branches of study, and in the Latin, Greek and French languages. Facilities for illustration are afforded by valuable collection of philosophical and chemical apparatus, minerals, and Anzoux's models of parts of human system, &c.

In the primary schools the children are well ground in studies of a more elementary character.

Particular attention is obtained upon application to the Treasurer of the Committee.

JAMES SMEDLEY, No. 415 Market St.

FRIENDS' ASYLUM FOR THE INSANE.

Now Franklin, (Twenty third Ward), Philadelphia.
Physician and Superintendent.—JOHN C. HALL, M. D.
Application for admission may be made to the Superintendent, or to any of the Board Managers.

DIED, at Highland, New York, on the 23d of 7th month, 1878, JOHN BAERLE, a member of Haddonfield Monthly Meeting, in Jersey, in the 74th year of his age. He was a man of a pure and Christian spirit firmly attached to the principles of Friends; and it is the consoling belief of his friends that he has entered into heavenly rest.

At his residence, Hancock, N. J., 7th mo, 28th, 1878, JOHN WILLIAMS, in the 76th year of his age, member and overseer of Burlington Monthly and Eastern Particular Meeting. He was warmly attached to the principles of the Society as upheld by our car Friends. Although his removal was sudden, his friends have the consoling belief that his end was peace.

Eight months, 2d, 1878, at his residence, at Mount Laurel, Burlington Co., N. J., JAMES BRIDAY, member of Evesham Monthly Meeting of Friends, the 72d year of his age.

WILLIAM H. PALE, PRINTER.

No. 422 Walnut Street.

Letters from Unfrequented Places.

(Continued from page 10.)

On the morning of the 13th we turned our faces westward towards Beyrouth, taking our course over the Bukaa, the broad valley between Lebanon and Anti-Lebanon, having a good graded road, which really seemed more agreeable than the crooked paths we had traversed! Passed some pretty villages, Nuralaka and Zableh—the latter a large thriving town of 16,000 inhabitants, the prettiest town I had seen in Syria. It is situated on the side of a mountain and the neat looking houses rise like terraces, row above row among the green trees. Nur-Albaka is on an opposite declivity and also very pretty, the two towns divided only by a swift little river rushing through the defile between them. I forgot to say that at Baalbeck we called at one of the missionary schools; it was after school hours, but we were pleased to hear of the good work from a very pleasant, kind lady, who had been long in the service, and reported very favorably of the progress being made at Baalbeck. She said she had also labored at Nur Albaka with good results, and that that place we happened to meet with persons who were engaged in the schools, and reported them prosperous in awakening an interest in the natives to study, as well as to become Christians. Beyrouth is noted for its excellent schools—a large American college and numerous other seminaries of various grades. Our latest night of encampment was near Shtôza and our last morning's start was in the rain, but not so heavy but my waterproof kept me dry, and we hurried on as fast as possible, now in the good road from Beyrouth to Damascus, with Mt. Lebanon to cross. We went by zig zag to the height of 5,600 feet among the heavy snow banks, and once on the top, the scenery was magnificent. Mountains and gorges of terrible depth around us, and before us, down at the depth of that 5,600 feet by Beyrouth, basking in the sunshine, for the rain had not reached there, and we too had left it behind. And there too, was our old friend the Mediterranean Sea, looking as placid as a lake. It was just four weeks but day since we landed at Jaffa, and we had been horse-backing almost every day since.

I cannot remember but two days that I was not on the back of horse or donkey. The long descent to Beyrouth was made much easier

than I feared it might be. The prospect of rest at the end of our journey, and of finding letters awaiting us, spurred us on with good spirits. We stopped for lunch in full sight of the city, yet three hours away, but did not wait for the after-rest, horses and all were anxious to get to the end. My brother galloped on, and when I rode up to the hotel, there he sat on the terrace with a pile of letters, quietly reading one, with his feet up on the rail as if he had not crossed Mt. Lebanon in a week. Do you ask if I saw the "Cedars of Lebanon?" Oh no—they are tucked away up in the snow, and can only be visited later in the season, and then, there are only a few left. Guide Book says: "The renowned Cedars are found in a vast recess, in the Central ridge of Lebanon, about eight miles in diameter. They stand alone, with not another tree in sight, at an elevation of 6,000 feet above the Mediterranean. They are about 400 in number and vary much in size, some being very old. They are in the centre, and the young ones cluster around them,—only about twelve of great antiquity remain and measure 40 feet in circumference. The trunks not high.

Constantinople, 5th mo. 5th, 1878.

From Mersina, the time of my last winter, we steamed away to Rhodes, 36 hours, the longest run without stopping. Arrived at Rhodes early on the morning of the 23rd ult., and went on shore in the rain for a hurried look about the town, as the ship only stopped there three hours. The night had been stormy and the sea was rough, requiring some courage to go on shore in the small boats, but we went, getting more or less ducked with the splashing waves. I thought I was going to escape dry shod, but as I stepped from the boat to the ship's steps, and was aiming to hurry up before a large wave came, my waterproof caught on the rail, and consequently the wave caught me in quick, laughing embrace and fled, much to my disgust, but to the amusement of the lookers on. We saw where once the Colossus stood, walked up the street of the Knights,—"Rae des Chevaliers," where still remain the old palaces of the Crusaders with the armorial bearings of the Knights sculptured on shields over the doors, visited the "Church of St. John," bought some roses, &c., and back to the ship. Then on to Smyrna, where the ship stopped three days, affording us time to visit the ruins of the once great city of Ephesus, to which a railway takes us from Smyrna. The trains leave Smyrna at 9 A. M., and as it takes three hours to go 40 miles in Asia, we could not have time to see the ruins before a return train, so packed our bags to stay all night and return next day. On entering the railway carriage we were agreeably surprised to be addressed in English by a party who were also going to Ephesus, and proved to be the family and guests of the chief manager of the railway, and they were going to hold the return train till

they were ready to come, so we rejoiced in our good fortune, and were further favored. The manager had telegraphed to Ephesus for horses to be ready for their party, and he offered to do the same for us, so when we arrived there were eight horses saddled and bridled, ready for a march. As the ruins are a mile away from the station, and of great extent, they could only be seen on horseback, or, by men, on foot. So, after an acceptable lunch, we mounted and were off, it seeming really pleasant to my brother and self to be on horseback again. The ruins, though scarcely visible in much of the space, give evidence of a once vast city, said to have been, next to Jerusalem, "the holiest of Christian cities," and next to Athens, the most memorable for its schools of art. On a hill are the ruins of a prison supposed to be where Paul was imprisoned. I have a photograph of it, and other portions of the ruins. Quantities of material have been carried away to put in other buildings round about, a large mosque near by, and a castle, but there are still many relics of beautiful white marble columns, arches and various monuments, and traces of the city walls and Port, along the quay of which we rode and looked into the massive arched chambers once used for store houses, up to which the ships came to discharge and receive their wealth of freight; and the heavy rings to which they were fastened, have, till lately, been seen in the walls, but have been stolen away for modern use. In those days the sea came up to the city, but now only an extensive plain or marsh is to be seen.

Before arriving at Smyrna we had concluded to visit Athens before going to Constantinople, so we did not leave our home on the "Tage" at that place, but kept on to Smyrna one more night, making twelve nights and ten days passed most pleasantly on that good, clean, swift ship. It was the most comfortable sea voyage I ever took. Arrived at Smyrna early on the morning of the 27th, and learned that an Italian steamer was going that day to Athens (we expected to have to wait till the next morning) so we made a hasty departure from the "Tage," leaving our companions at the breakfast table.

It was lovely to arrive at Athens on Seventh-day evening with the prospect of a quiet First-day before us. Not since leaving Cairo had we had a whole one, except the one on ship-board at the sea port of Athens and six miles distant. A railroad extends between them, but the drive is a very pleasant one, and we chose to take carriage and horses, which brought us to the Hotel des Etrangers in good time for the 7 o'clock dinner. You may be assured that we enjoyed that drive just at sunset, with all those classic scenes around us. The Acropolis was in full view, illuminated by sunset glow, and near by "Mars Hill," from which the Apostle Paul addressed the

people of Athens, and there too, stood the Temple of Theseus (just like Girard College, and many other imitations.)

Modern Athens is very beautiful; it seemed doubly so to us. After dwelling nearly four months among the Moslems, and being in their dirty cities and towns, Athens seemed so clean, so civilized, so elegant? We had only four days there—we must content ourselves with that or stay another week on account of the steamers—another week and we should have to return to Syria to get the French steamer; now we could take steamer direct from Piræus to Constantinople, and though we should have much liked a week or two more at Athens, we felt that it was best to come to this place while there is a lull in the war spirit, which, we are told, is likely to break into active demonstration any day.

There are many Russian officers at this hotel and plenty of gold lace and orders decorating fine forms. From my windows I can see the encampments far away upon the hills, and also overlook a large portion of beautiful Constantinople. I forgot to say that we arrived here on Seventh-day morning the 4th. The steamer arrived in the harbor the previous evening, but too late to be officially recognized, so we slept on board, making 48 hours from Piræus. We enjoyed the Dardanelles. I could see the Asiatic side from my windows all the way. I have now "done" the Mediterranean Sea pretty well from Gibraltar to its eastern extremity. The Adriatic, the Grecian Archipelago, the Ægean Sea, and the Marmora. Now for the Black Sea! Shall we go to the Crimea? That depends upon the war developments. I shall feel more at ease when we get out of this place, though to appearance it is very quiet and peaceable just now. I have not been out at all since I came to this "Hotel Byzance"; it rained while we were on the Marmora, rained when we came here, and has kept it up, showers, mist and fog, ever since. The hotels are very full, and we are much favored to get such pleasant comfortable quarters, with excellent table.

(To be continued.)

For "The Friend."

"It is good for thy soul, and much to thy advantage, to be variously exercised of the Lord."

These words of Isaac Pennington are fraught with a deep meaning, and carry with them to the hearts of such as have been thus exercised, a settled conviction of their truth.

It would be hard indeed for those who have not come under the Power which can alone subdue; and have never allowed His yoke to be fitted to their shoulders, to understand why it would be good to be brought into tried places, into depths, and even into the fire, and difficult would it be for these to acknowledge that any advantage would arise therefrom.

But oh! what a blessed thing it is, when those who have been thus exercised, who have passed through deep afflictions, and have known the fire to have passed over them, can acknowledge that to be exercised of the Lord has been good for their souls.

Various may have been the experiences of such, and as varied the different means with which an All-wise Father may have seen meet to try his children; yet He who knows all things, knows just what trial to mete out, just how long to exercise them therein, as well as how much they can bear. May these exer-

cised and tried ones be made more willing to become as clay in the Heavenly Potter's hand, submitting themselves unto Him to fashion and form into whatsoever vessel pleaseth Him. These may have been moulded upon the wheel into the vessel which pleaseth Him, they may have been placed upon the shelf to dry, for this is needful, as it is a waiting posture, but have they yet been tried (baked) in the furnace? for until this important operation has been gone through with, they are not fully ready for use: The Heavenly Potter alone knows when they are prepared to be placed there, and when He pleases, the flames are kindled around them; but as the earthly potter watches well that the heat is not too fierce, or does not consume, even so does the Heavenly Potter, keep very near, and though the "furnace may be heated seven times more than it was wont to be heated." He goes with them into the very fiercest of it, and by His grace they are enabled to pass through, and to come forth as vessels unto honor in His house, fitted for the Master's use.

These tried vessels are willing to be used in His service. They have been *willing through suffering*, to be just what He would have them to be; and no matter whether they fill a conspicuous place in His household, or whether they are to serve Him in a more humble sphere, they but wait His pleasure.

For "The Friend."

Extracts from Letters of Margaret Morris.

(Continued from page 11.)

To Richard Hill Morris.

Philadelphia, 10th mo. 19th, 1793.

My beloved son,—I have just received thine, and it falls to my lot to inform thee another breach is made in my family. Our beloved B. S. [Benjamin Smith] is taken from us—he was violently seized at the first, just as my dear J. M. was. I sent to Dr. Rush; he was confined, and two of his pupils. I went to Dr. Mease—he was too ill to be spoken to. I asked B. S. who I should send for—Parke was ill and I knew of none else—however I went to Dr. James; he was also ill, but spoke highly of Dr. Cathrall. I went for him—he came, and said it was not the disease; but I knew he had it, and told him I would consult Dr. Rush; on my way I met one of his young men—he came that evening and continued to visit him—paid close attention—but, alas! all in vain—the dear, hopeful young man departed between 3 and 4 o'clock this morning. His brother Joshua was here, and I sent for B. W. M., who came, and this evening he was laid by my dear J. and A. M. My precious Debby, who was his faithful nurse, is greatly afflicted, and notwithstanding the situation of my own family, I must remain in Front street till I see how it will please Providence to dispose of her.

Seventh-day, noon.

My poor, dear girl had a restless night, and I was fearful would be very ill to-day, and I sent early to Dr. Rush. One of his good young men came, and he assured me she had no fever. We are in want of nothing at present, but to feel a perfect resignation to the Divine will, who is pleased to strip, first one, and then another, and who shall say "What doest Thou?" The sympathy of the few friends we have left us, is truly acceptable, but their faces we must not hope to see.

To the same.

Philadelphia, 10th mo. 21st, 1793.
* * * My dear Debby has passed a other night with very little sleep, and this was only broken slumbers. The great loss she has sustained has sunk very deep, and her foreboding fears suggest to me, that I must give up all. She has no fever, nor at all pain at all, but continual moaning and weeping on the late gloomy scene is too much fear, for her sensitive nature to struggle with. Dr. Rush has sent one of his good young men to visit her, and he has directed a medicine which I have given day and night; but if it does rise above it, time alone, with the Divine assistance, must be the physician.

Looking in the Bible to-day, I came to a remarkable prophecy which seems fulfilling at the present time; I was struck with it, and enclose a copy.* * * What a trying stroke it will be to dear brother Smith to hear of his and our loss, but to my poor Debby, it is doubly so. What a world of woe we live in! and by what a frail tenure do we hold it that is most dear to us. Happy are those who have secured an interest in the ever enduring mansions of endless eternity. If ever we again on earth, how many mournful things shall have to relate; and if we meet not her let us cherish the hope, the heart renew hope, that there is a place where the weak will be at rest, where tears will be wiped from every eye, and all sorrows be at an end; and if we are favored to meet in that happy place all that has passed will be forgotten.

To the same.

Philadelphia, 10th mo. 23d, 1793.

My beloved child,—I have received thine and S. E.'s acceptable letters; to the latter mean to reply to-morrow, and now sit down to tell thee, I have got my dear mourner at her little girl in thy room, the maid at Daniel in the kitchen chamber, and our own invalids still occupy the two parlors. God Dr. Rash sent his carriage to bring us here but, my love, no language can describe what we have passed through. I wish not to afflict thee, or painfully to dwell on the past, but only to give thee an idea of it—may tell thee that one day last week, when I had walked about more than usual, my spirits so failed me that I fainted away, at a time when a standing child stood most in need of my help, but, like a thunderbolt that clears the air, awoke from it, and almost with the vigor youth was able to assist thy dear afflicted sister; time alone can heal her wound, at bind up her broken heart. Yesterday I Hicks wrote me a note, informing me that my dear sister had a fit, and that Wm. was relaxed. I would not leave my Debby till in the evening; when I came home and found Wm. very poorly, but he is now effectual relieved; before I could get back to Front's thy poor aunt had another violent fit. Alas! what a world of woe we live in. Surely the is a better country than this, and if it was not for the staff on which thy tribulated mother has leaned from youth to old age, how would she be able to bear the chastisements of a rod. But with reverence let me say, "Thy

* * * And the songs of the temple shall be howlings that day, saith the Lord God: there shall be no dead bodies in every place; they shall cast them forth with silence."—Amos viii. 3.

† Samuel Enlen, the partner in business of her deceased son-in-law, Benjamin Smith.

od and thy staff they comfort me," for truly in proportion to the bitter has been the sweet; and they have been so blended together amidst the checkered scenes of my life, that ill within a few weeks past, I could hardly tell which was greatest; for, although like my poor Debby, I was early deprived of the beloved companion of my youth, the cultivation of my little vineyard—my hopeful orphans—so engaged my care and attention, and repaid all my anxiety, that the remembrance of what I had passed through, though never to be forgotten, was in measure compensated; and when I had been favored to see them all arrive at maturity without a blot on their fame; Lo! the destroyer came, and robbed me of one of my choicest plants; the child of my fondest hopes became the son of my sorrow, and I thought I should go sorrowing to the grave. But to the praise of His goodness, who has thus permitted it to be,—in the hour, the awful hour of death, he was made "the son of consolation," and my chastened heart, though bowing under the heavy stroke, was enabled to say in reverent thankfulness, "Thy will be done," and now, again, my truly valuable son, whose connexion with me was a sweet, unmingled with bitter, has been called from works to rewards; and dare I murmur at the call, when I am made the humble instrument of comfort to a child who is worthy of a better comforter. Allow me, my love, to give vent in this way to my full heart. Thy sympathizing nature feels what I have gone through.

Third-day morning,—My dear Debby has passed another night almost without sleep. * * I wish thee, my dear child, to endeavor to keep thy mind calm, and do not suffer thyself to harbor one murmuring thought against the allwise Disposer of human affairs. He best knows what is best for his creatures, and He knows how to bring them to resignation, and thy mother can say from experiment it is the road to peace.

M. M.

(To be continued.)

From the "Philadelphia Ledger."

Wide Range of Quaker Influence.

A learned but somewhat mystical German, Bruno Bauer, has recently published a brief essay on the influence of English Quakers on German culture, and on the Russian project of a universal church. It has a certain interest for us in the fact that he makes Philadelphia the capital of all modern forms of Quakerism, and, starting with Penn's far-reaching and far-seeing plan of a peaceful settlement in the new world, traces out the efforts made in other countries in the same direction. The meeting of Penn with Peter the Great, in the Dockyard at Deptford, where the Russian Czar was living in the midst of sailors and ship-builders, led the latter to make frequent visits to the Quaker meetings, and he was so attentive and sympathetic a listener that the Quakers almost felt sure they could count upon him as one of their own number. In 1698, when Peter the Great was in England, Philadelphia and Pennsylvania were already attracting attention in Europe and America as a refuge and haven for people who sought peaceful enjoyment of their religious belief; the Quakers driven from New England had found safety under Penn's government, as they had already obtained protection by appealing to the king, whose kindly interposition was successfully invoked by Penn and his influential friends

at the English Court. Following the example of the new colony and the city on the banks of the Delaware, Peter the Great began the establishment of St. Petersburg by a manifesto issued in 1702, promising religious freedom to its citizens. The same influence of the Quakers is traceable in several German States and cities, whither Penn had gone in 1671 and again in 1677, while George Fox, with another band of devoted friends, had travelled in other parts of the same country; and a large influx of German settlers brought strength and wealth to Penn's new colony, and made it a common haven of rest for the German Pietists and Moravians, whose settlements and descendants are still among the best elements of strength of our State. In close imitation of Penn's purpose to make Philadelphia a city of brotherly love, some of the Germans who sympathized in his longing for perfect religious freedom sought to establish in their own country German Philadelphia, where the practice of every form of religion should be open to all comers, but one after the other failed, and only furnished new emigrants for the Quaker commonwealth, where Penn gave them a home and shelter in peace and safety.

Count Zinzendorf, the leader, if not the founder of the Moravian Church in this country, was, like Penn himself, of a good family, and perhaps owed to that influence something of the strength of his headship over the struggling community in both continents. Like Penn, too, as a young man he saw the world, and shared in its pursuits in Paris, and met prominent men of all faiths, and many of none at all, and was all the better fitted to deal with them in the interests of the new religious society, whose name and fame are now so indissolubly connected with his own. He came to this city in 1741, and made Philadelphia the headquarters of his Indian missions, declaring that he owed to the Quakers all that he had done in Europe, and that his aim was to give a common faith alike to the inhabitants of both continents. On his return to Germany he sent out missionaries, who found their greatest success in Russia, and established there, and in Greenland, and other far off regions, branches of the Moravian Church, some of which are still flourishing. He secured the passage of an Act of Parliament in 1749, which gave a legal recognition to the Society, and enabled it to take a still stronger hold of the outposts of civilization, where it was busy spreading a peaceful religion and giving a wise civil government among thousands where life hitherto had been a continuous struggle for existence and unceasing warfare. Much, too, of the best elements of modern German philosophy and theology is clearly traceable through and to the influence of the Moravians and the Quakers, and one of the most curious characters in recent European history, Madame Krudener, the intimate friend and trusted adviser of the Emperor of Russia at the time of the reorganization of Europe after the fall of Napoleon, drew her inspiration from the same source. She, too, had spent her youth in worldly pursuits, and was brought to serious thoughts mainly by the earnest lessons of a preacher of the Moravian Church, and in turn made such strong appeal to the Czar that he promised to give both to his own people and to the rest of Europe both religious freedom and political protection. The name of the Holy Alliance still perpetuates the pro-

posed system of political religion that was then intended to cure all the evils of Europe, but in the rush of events and amid the shock of successive revolutions and under the pressure of an almost total change in the political geography of the Old World, little trace of it is left.

William Penn found in his enforced leisure during his imprisonment in the reign of William the Third, due to the financial troubles and difficulties of administering his great estate, time to write a plea for perpetual peace, and to propose an international court of arbitration to avoid future wars. In 1854, the English Quakers, as if mindful of the intimate friendship of their great leader with Peter the Great, sent a deputation to the Russian Czar to plead for peace, and, after war had broken out, to endeavor to soften its rigors and mitigate its destruction. The same feeling of brotherhood that united Penn and Peter the Great in their hope of establishing religious unity, inspired the attempt in our own days to bring the Church of England and the Greek Church into close communion. It was in answer to an invitation from the American Episcopate, that Russia sent a missionary of its church to this country, Dr. Bjerring, the priest of the Greek Church in New York, who modestly officiates for his countrymen, and at the same time seeks to make better known the points of sympathy and of common religious belief between his own faith and that of the bulk of American Protestants. The same refusal to recognize any earthly power as competent to bind the conscience or to guide the religious belief of any individual that inspired Penn and his friends, is the characteristic of the new school of Protestant theology of our own day. In Russia, the impulse given by Peter the Great lasted down almost to the present, although, under the pressure of political changes, and in order to secure certain advantages of a closer union with the Roman Catholic hierarchy, some modifications of its old liberty of religion have been recently made. The recent threatened hostility between Russia and England seems to be ended, for the present at least; and in the growth of the Russian Empire over what were until lately provinces under Mohammedan sway, it is not unlikely that the Greek Church will find abundant occasion to return to its original liberal views, and carry into practice that lesson of religious toleration which William Penn taught Peter the Great, and he in turn enforced in his vast dominion. It would certainly be a curious proof of the power of Penn's principles if they were to be adopted anew on the Continent, where they were first preached, while here, too, their practice has grown so universal, that the Quakers themselves are only a small minority of those who really follow the teachings of their founder.

Selected for "The Friend."

Baltimore, 17th of 2nd mo. 1784.

My Dear Cousin,—I am glad our poor child was so agreeable to you, and am pleased that we let her go to you. The hand of an infinitely wise and gracious Providence saw meet, I believe, to unite the hearts of the parents with a holy cement of His pure love, and I trust it is of the same condescending goodness that a friendship is formed among our children. May we of the retiring generation be happily continued objects of Divine regard and compassion, and be ended, from

season to season, with fresh supplies of heavenly wisdom, that so we may walk in and be fore our families with propriety, and leave such vestiges, in all parts of our conduct, as our successors may safely follow; and may our beloved offspring and their connections, having been favored to see a glimpse of the beauty which is in the Truth, dwell low in humble, watchful fear that this eye may ever be kept open in them, that the vision may be of more and more cleared and extended, and the god of this world never be permitted to close or obscure with the dust of the earth, or dazzle and dim with worldly splendor. I am anxious for the coming forward of the youth of our day; something or other retards their growth; with divers it is not any evil disposition, any criminal pursuit, but I fear there is a want of a steady, solid, diligent waiting for the renewal of those baptisms which purify the soul, and prepare it for further illuminations and discoveries of duty. There is a seeking and desiring after good, and a looking towards the servants and messengers and expecting from them; but if, under a sense of our wants and weaknesses, our attention was more immediately turned to the Master himself, and our dependence more abstractedly fixed on Him, I believe there would be more of a growing in the root, the tender plant would sooner become a tree of righteousness and fruit would be brought forth in due season, grateful to God and man.

RICHARD SHACKLETON.

Richard Shackleton to his daughter G.

Baltimore, 1st mo. 25th, 1791.

May we all be preserved objects of gracious condescending regard; and if it should please Infinite Wisdom to give any of us an understanding in spiritual things, and to qualify us at times a little to handle them, let us in all humility and reverence receive the commission and command as a favor far transcending all worldly honors and emoluments; let us not slight nor regret nor repine at the heavenly gift, but gratefully attend upon it, and use our diligent endeavors to improve it to the honor of the giver. That so our lives may flow on as comfortably as is to be expected in this mixed state of existence, under the renewed evidence of Divine approbation; that we may leave vestiges and way-marks, to the succeeding generations, which they may safely and happily follow; and having had the high honor of being, in any degree, engaged in the promotion of the reign and government of Christ on earth, may be eternally happy with Him, in His heavenly kingdom.

R. SHACKLETON.

Full a man or woman wishes to realize the full power of personal beauty, it must be by cherishing noble hopes and purposes; by having something to do and something to live for, which is worthy of humanity, and which by expanding the capacities of the soul, give expansion and symmetry to the body which contains it.—*Upham.*

The faith to which all things are possible, is something of a much deeper nature than the *assent* of the judgment to the truth of doctrines; or a concurrence with what is called by many, "the Gospel plan of Salvation;" or even with what is contained in the whole credenda of systematical divinity.

THE TWO ALABASTER BOXES.

When Thou in patient ministry
Didst pass, a stranger, through Thy land,
Two costly gifts were offered Thee,
And both were from a woman's hand.

To Thee who madest all things fair,
Thrice fair and precious things they bring,
Pure sculptured alabaster clink,
Perfumes for earth's anointed King.

Man's hasty lips would both reprove,
One for the stain of too much sin,
One for the waste of too much love!
Yet both availed Thy smile to win.

The saint who listened at Thy feet,
The sinner sinner scorned to touch,
Adoring in Thy presence meet,
Both pardoned and both loving much.

Thus evermore to all they teach,
Man's highest style is, "much forgiven,"
And that earth's lowest yet may reach
The highest ministries of heaven.

They teach that gifts of costliest price
From hearts sin-beggar'd yet may pour;
And that love's costliest sacrifice
Is worth the loving, nothing more.

From Pike's Peak.—The Eclipse as seen 11,000 feet above the sea.

The sky was cloudless and the atmosphere wonderfully clear. The range of vision extended for probably 100 miles in every direction. The mountains north and west stood out clear cut against the sky, and the plains to the eastward stretched away until they seemed to mingle with the horizon. It is a rare occasion when distant objects can be so clearly and distinctly seen from the Peak. There was no haze or mist to cloud the view in any direction. There was, perhaps, no special feature observable in the eclipse, as noted from the summit, which could not be seen from any point on the plains below, except such as might arise from the clearness and rarity of the atmosphere incident to the elevation. This clearness and the absence of moisture doubtless gave great advantage for scientific observation and for the use of astronomical instruments.

But there was no point, probably, within the entire limit of total obscuration, which afforded such an opportunity for noting the approach of the shadow of totality, or which gave an equal opportunity for taking in at a single sweep of the eye such an extended area of the earth's surface.

To the unscientific observer, the most remarkable phenomenon observable from the summit of the Peak, was the approach of the shadow of totality from the north, its swift passage, and the sudden burst of sunlight which followed.

It must be remembered that the movement of the shadow from north to south was at the rate of about thirty miles per second, and it was necessary that one should have stretched beneath him a wide expanse of the earth's surface, in order that the eye could seize with a glance the line of the approaching shadow, and follow it, as it rushed away to the southward. This advantage an observer who stood upon the Peak possessed.

Gen. Myers had very kindly advised our party where, and how, to look for the coming shadow, and we had taken our station on the northern edge of the summit several minutes before the period of total obscuration of the sun's disk. Without the aid of a glass, the

eye could at this time, distinctly note the shimmering of the bright sunlight on the mountains more than 100 miles to the northward. Suddenly we observed them disappear, and a great wall of darkness, stretching out on either side as far as the eye could reach, concealed them from us. With inconceivable rapidity the shadow swept toward us, its front a clear black line, bordered with a fringe of yellow. It hid from sight range after range of the more distant mountains and quickly covered with a ghastly pall, the peaks and foot-hills and plains close beneath us.

When the shadow reached and enveloped us, the eye could dimly outline the nearer mountains, and could single out with strange distinctness the houses and farms in the valley below. The sky overhead seemed heavy and leaden, and every visible object was pallid and ghastly. The very shadow seemed tangible and to weigh upon us, but the horizon all around us was brightly illumined by flashing rings of red and yellow lights like those of the Aurora. While we on the Peak were still enveloped in the depth of the shadow, its upper line passed over the far off range to the northward, and the clear sunlight struck the mountains, and a way beyond and through the darkness they burst suddenly into view. In an instant, other and nearer mountains appeared, and then the dimly-shaded parks and the wooded divide were bathed in sunlight, and the shadow rushed passed us.

During the period of darkness, the view around us was weird and terrible; but the sudden burst of sunlight which appeared upon the distant mountains as they seemed to spring up instantaneously from the bosom of the earth, was one of the most sublime and joyous visions that it is ever given to mortal eyes to witness. It brought a sense of relief and delight, and no one who saw it can forget it.

There was one peculiar phenomenon of color, connected with the approach and disappearance of the shadow of total obscuration, which may perhaps have some scientific value, and be worthy of note. It was observed that along both lines of the shadow, and especially along its departing edge perhaps more distinctly than its advance line, there was a well-defined strip of yellow color, shading off into orange and light red. This appearance was well defined and bordered the dark lines like a fringe. These lines of color were noted by three or four persons, who all agree as to their appearance. Will some scientist tell us why they were there and what they indicate?—*Charles B. Lamborn in the Phila. Press.*

Testimony of Aberdeen Monthly Meeting, (Scotland), concerning Lydia Ann Barclay, who died on the 31st of 1st month, 1855, aged 55 years, and whose remains were interred at Cokermonth, on the 7th of 2nd month, following: a minister about 20 years.

Lydia Ann Barclay, daughter of Robert and Ann Barclay, members of our religious Society, was born at Clapham, in Surrey, on the 25th of 10th month, 1790, and when very young was deprived by death of her mother. In the season of youth she appears to have been tendered and contrived by the visitations of heavenly love, and, under the quickening power of the Spirit of Truth, was given to

the necessity of obedience to all its manifestations and pure leadings in the secret of her soul. To Him who was thus knocking at the door of her heart she was enabled to open; and, through co-operation with His grace, she was strengthened to take up her ally cross and walk in the narrow path of self-denial and regeneration, esteeming all things but loss that she might "win Christ," and be found in Him. The following extract, from a letter to a friend, shows the work of the Lord's Spirit on her mind in her younger days:—

"My dear friend: Thou queried of me yesterday, how the work of religion was begun in my heart? to which I believe I gave thee a satisfactory answer. I feel afraid of expressing much on such subjects, or of 'judging my own self;' but now, fearing, lest my silence should have done harm, I feel at liberty to tell thee, I trust under a humbling sense of the tender mercy of my heavenly Father. Ah! His compassionate regard was to me, when but a child, visiting me by His love, making me sensible of the depravity of my evil heart, of the exceeding sinfulness of sin, of my great need of a Saviour, and of His saving, sanctifying power: and this, my dear friend, was not through the instrumentality of any outward means, but mostly during the time of my being confined on a couch, and in my secret retirings to wait upon Him. We were brought up to the use of trayers morning and evening, and very often went with our governess (who was of the established Church) to her place of worship; and I became uneasy with, when about fifteen, and showing a dislike to it, she never pressed it again; places of public amusement and dancing were also given up at the same time, and music soon after! Oh! how tenderly have I been dealt with! I can never sufficiently remember it. He has led me gently along, showing me by degrees, first, what He would have me avoid and forsake, and then what He would have me do and pursue; but how many times have I revolted and turned away from His offers, disobeyed His commands, and grieved His Holy Spirit! I desire to be continually humbled under a sense of these things, and animated to renewed dedication of heart to Him who has loved me, and given Himself for me; waiting for the fresh discoveries of His blessed will."

As she continued faithful to Him who had allured her out of darkness into His marvelous light, passing through those deep baptisms of spirit which are necessary for the education of self, and are preparatory to service in the Church, she saw clearly that it would be required of her to engage in the work of the ministry; in allusion to which, she writes, on the 15th of 1st month, 1827:— "Oh Lord, my God! if in the riches of thy mercy and condescending goodness to a poor creature, thou see meet to require of me to speak forth for thee, to 'speak of the glorious honor of thy majesty; and tell of thy wondrous works;'—thy will be done. Behold the handmaid of my Lord; do what thou wilt with me, only make me thy dear child, thy faithful servant. Be thou my strength; let it be in thy power and authority, and to the utter abasement and deep humiliation of the creature, that so all power and glory may be ascribed unto thee, to whom it is ever due!"

*On account of spinal weakness.

Amen." Again in reference to this awful engagement, the breathings of her soul are penned, on the 1st of 10th month, 1830:— "Let the mountains flow down at thy presence, and cease the hills of opposition to melt like wax before thee: bring all within me into pure resignation, into holy obedience; then open thou my lips, and my mouth shall show forth thy praise; then speak thou the word, and I will publish it in thy night; and, O Lord! I beseech thee, bring me into deep humility and nothingness of self, and keep me there for ever."

She appears to have first come forth in the ministry at Friends' Meeting at Epping, in allusion to which she writes, on the 17th of 2nd month, 1831:—"And now it seems well for me to acknowledge (I trust under a deep sense of the condescending goodness of my dear Lord and Master, and of my own utter unworthiness), that having often felt uneasiness in not having yielded to a secret desire that has seemed to attend me in these several years, to go and sit with Epping Friends in their meeting, I ventured to go there yesterday fortnight, in fear for the body, it being a deep snow and severely cold; and in mental fear also, lest it should be presumptuous and wrong. But oh, what a favor! it pleased Divine Goodness again, as it were, to overshadow me with His love, and to require obedience in the expression of a few words; after fearing and hesitating, and at last trembling, till near the close of the meeting, I ventured and was enabled to stand up. How unworthy am I to make mention of His name! What great condescension and mercy, thus to make a way where I can see no way, to take away fear, to remove doubt, and to give strength! and not only so, but afterward to favor with peaceful quiet! And now, what can I render for all His mercies? The answer seems, 'All that you requirest, my whole heart, O Lord! But, oh, may He enable me and undertake for me, for I am indeed weak and feeble; and may He purify and prepare me for Himself to dwell in!' And now, whenever and wherever such another sacrifice may be again required of me, no matter—may He make me more and more His simple, His obedient child! And seeing I am such a poor, weak, ignorant child, may He take me by the hand and show me how to go, and all the snares and dangers that surround, enabling me to take right steps; and when I slip or miss my way, may He tell me and reprove and chasten me, humbling me as His tender love and wisdom see meet. And, oh! saith my soul, may He keep me low in His pure fear, that all praise and glory may ever be ascribed to Him to whom alone it is eternally due!"

(To be continued.)

For "The Friend."

Incidents and Reflections.—No. 11.

The Life of Abraham Lincoln, by J. G. Holland, furnishes some pleasing illustrations of that straightforward honesty, which was so marked a feature in the character of this illustrious man.

When a young man, he was employed as clerk and manager of a store at New Salem, Illinois. Here, on one occasion, he sold a woman a little bill of goods, amounting in value, by the reckoning, to two dollars and six and a quarter cents. He received the money, and the woman went away. On adding the items of the bill again, to make him

self sure of correctness, he found that he had taken six and a quarter cents too much. It was night, and closing and locking the store, he started out on foot, a distance of two or three miles, for the house of his defrauded customer, and delivering over to her the sum whose possession had so much troubled him, went home satisfied.

On another occasion, just as he was closing the store for the night, a woman entered and asked for half a pound of tea. The tea was weighed out and paid for, and the store was left for the night. The next morning Abraham entered to begin the duties of the day, when he discovered a four ounce weight on the scales. He saw at once that he had made a mistake, and shutting the store, he took a long walk before breakfast to deliver the remainder of the tea. His biographer remarks that these are very humble incidents, but they illustrate his sensitive honesty better perhaps than they would if they were of greater moment.

About this period of his life, he was appointed post-master for New Salem. The business and the emoluments of the office were both very small, and it was given to him, because he was the only man in the neighborhood willing to take it, who could not make out the returns. Not willing to be tied to the office, as it yielded him no revenue that would reward him for the confinement, he made a post-office of his hat. Whenever he went out, the letters were placed in his hat. He kept the office till it was dis-continued or removed, but his accounts with the post-office department were not settled till several years afterwards. In connection with this settlement occurs an interesting exhibition of his rigid honesty:

It was after he had become a lawyer, and had been a legislator. He had passed through a period of great poverty, had acquired his education in the law in the midst of many perplexities, inconveniences, and hardships, and had met with temptations, such as few men could resist, to make a temporary use of any money he might have in his hands. One day, seated in the law-office of his partner, the agent of the post-office department entered, and inquired if Abraham Lincoln was within. Lincoln responded to his name, and was informed that the agent had called to collect a balance due the department since the discontinuance of the New Salem office. A shade of perplexity passed over his face, which did not escape the notice of friends who were present. One of them said at once: "Lincoln, if you are in want of money, let us help you."

He made no reply, but suddenly rose, and pulled out from a pile of books a little old trunk, and, returning to the table, asked the agent how much the amount of his debt was. The sum was named, and then he opened the trunk pulled out a little package of coin wrapped in a cotton rag, and counted out the exact sum, amounting to something more than seventeen dollars. After the agent had left the room, he remarked quietly that he never used any man's money but his own. Although this sum had been in his hands during all these years, he had never regarded it as available, even for any temporary purpose of his own.

Because they have not acted on this principle, of never using any man's money as their own, many have suffered in reputation, and have found themselves entangled in almost

inextricable difficulties without any dishonest intention. They have allowed money belonging to others in their hands to become mingled with their own; the feeling that funds were at their control has encouraged expenses, or uses of it, which might have been avoided; the want of strict business habits, which would lead them closely to scrutinize their income, outgoings, and liabilities, has in some cases added to their embarrassment; and a time of reckoning has caught them when unprepared to meet it. We doubt not there are thousands who have had cause bitterly to repent that they had not been as scrupulous in this respect as Abraham Lincoln.

The anecdote above narrated illustrates what was a usual habit with him. He had always a partner in his professional life, and when he went out upon the circuit, this partner was usually at home. While out, he frequently took up and disposed of cases that were never entered at the office. In these cases, after receiving his fees, he divided the money in his pocket book, labeling each sum (wrapped in a piece of paper) that belonged to his partner, stating his name, and the case on which it was received. He divided the money so that if by any casualty he should fail of an opportunity to pay it over, there could be no dispute as to the exact amount that was his partner's due.

The same honesty was exhibited in Abraham Lincoln's conduct after he had been admitted to the bar, and came to practice as a lawyer. His biographer says of him: "If a man went to him with the proposal to institute a suit, he examined carefully the man's grounds for the action. If these were good, he entered upon the case, and prosecuted it faithfully to the end. If the grounds were not good, he would have nothing to do with the case. He invariably advised the applicant to dismiss the matter, telling him frankly he had no case and ought not to prosecute. Sometimes he discovered, in the middle of a trial, by the revelation of a witness, that his client had lied to him. After the moment that he was convinced that justice was opposed to him and his client, he lost all his enthusiasm and all his courage. He would not strive to make the worse appear the better reason for any man. As a citizen, as a lover of good order, as a man who believed in truth and justice, he was, by every instinct of his nature, opposed to the success of villainy and the triumph of wrong, and he would not sell himself to purposes of injustice and immorality. He repeatedly refused to take fees on the wrong side of a case. When his clients had practised gross deception upon him, he forsook their cases in mid passages; and he always refused to accept fees of those whom he advised not to prosecute. On one occasion, while engaged upon an important case, he discovered that he was on the wrong side. His associate in the case was immediately informed that he [Lincoln] would not make the plea. The associate made it, and the case, much to the surprise of Lincoln, was decided for his client. Perfectly convinced that his client was wrong, he would not receive one cent of the fee of \$2000 which he paid. It is not wonderful that one who knew him well spoke of him as 'perversely honest.'"

A sheep grower sold a number of sheep at a stipulated average price. When he delivered the animals, he delivered many lambs or sheep too young to come fairly within the terms of

the contract. He was sued for damages by the injured party, and Lincoln was his attorney. At the trial, the facts as to the character of the sheep delivered were proved; and several witnesses testified as to the usage by which all under a certain age were regarded as lambs, and of inferior value. On comprehending the facts, Lincoln at once changed his line of effort, and confined himself to ascertaining the real number of inferior sheep delivered. On addressing the jury, he said that from the facts proved they must give a verdict against his client, and he only asked their scrutiny as to the actual damage suffered.

Evolution, or the theory of the natural development of forms of organic life from lower or anterior forms or types.

From a work entitled "Present Conflict of Science with the Christian Religion," by Herbert W. Morris, A. M.

(Continued from page 6.)

Though the arguments presented in the preceding chapter, against the transmutation of Species in general, are of course of equal force against this transformation of monkeys into men; nay, are of tenfold greater force, for the gulf which divides man from the monkey is incomparably broader and deeper than the intervals which separate the different species of the inferior creatures—yet, conclusive as those arguments are, the evil bearings of the theory of Natural Selection, as above indicated, render it necessary to consider particularly the more specific facts urged by evolutionists in support of the idea that man is descended from the monkey.

The arguments offered in support of the theory that the human race is descended from the ape race are mainly based upon the fact that there exist certain points of similarity between the bodily structure of man and that of the ape. "It is notorious," says Darwin, "that a man is constructed on the same general type or model with other mammals. All the bones in his skeleton can be compared with corresponding bones in a monkey, bat, or seal. So it is with his muscles, nerves, bloodvessels, and internal viscera. The brain, the most important of all the organs, follows the same law, as shown by Huxley and other anatomists."

This statement, in a general and qualified sense, is correct. All admit that man has an animal nature; and there is no question that his bodily frame is constructed on the same general plan as that of other mammal creatures. How could it be otherwise? Like other mammals, man is made to live and move and have his being on the earth, in connection with and in dependence on its material productions. He is made to eat and drink, to rest and sleep, like them, and to perform numerous other functions precisely similar to theirs. Hence his bodily structure and theirs of necessity must exhibit many points of resemblance, more or less remote. The animal frame of man, all acknowledge, has been moulded after the same general type as other mammals; but that affords no grounds for the assumption that they are of the same origin. All steam-engines are constructed on the same general principle, and have many parts that can be compared one with another; but that is no evidence that

the Stationary Engine in the factory, and the Locomotive on the Railroad have been made in the same workshop, much less that both have descended from one and the same engine parent. Man's corporeal frame resembles that of the ape, not because he is descended from the ape, but because he requires for his habit and special mode of life precisely such bodily structure as he possesses. If the argument of evolutionists is, in itself, worth anything, it will prove quite as conclusive that the ape is descended from man—indeed a little more so, for to degenerate from higher to a lower is by far the more prevalent course of nature.

Of extant or living monkeys, which the advocates of Development designate as being nine like, there are four tribes, the Gibbon, the Orang, the Chimpanzee, and the Gorilla, and of these they have chosen the last for comparison with man, as coming upon the whole the nearest to the human form, and for this reason serving their purpose best. We shall therefore, confine our observations for the most part to the same.

Between Man and the Gorilla there exist many points of wide and distinctive difference, and to these we now wish to call the attention of the reader.

1. *Difference in general aspect and habits.*—The Gorilla is an inhabitant of the equatorial regions of western Africa. It is a savage-looking quadruped, thickly covered with coarse black hair, excepting the face and ears. Staring on its hind legs, which it sometimes awkwardly does, it is found to measure nearly five feet in height. Across the shoulder it is disproportionately broad, the girth of the chest being almost equal to its height. The face is of a dark brown color, almost black. The face is very wide and of great elongation. The eyes are very large; the nose broad and quite flat, with wide open nostrils. The cranium is low and of very small capacity; the muzzle broad, and exhibiting a frightful array of teeth; the lips are coarse and prominent, the under one being remarkably elastic and mobile, and when the animal is enraged hangs down over the chin. On the head is high ridge, or crest of hair, resembling many which meets a transverse ridge of the same running round from the back of one ear to the other. The animal has the power of moving the scalp freely forward and backward, and when angry is said to contract it strongly over the brow, thus bringing down the hair ridge, and pointing the hair forward, so as to present a most ferocious aspect.

The neck is short, thick, and hairy; the arms are very long, reaching some way below the knee; and the hands are huge, the thumb being much larger than the fingers.

The gait is shuffling; the motion of the body, which is never upright as in man, but bent forward, is rolling from side to side; advances by thrusting its arms forward, resting the hands on the ground, and then giving the body a half-jumping, half-swinging motion between them.

The dwelling of the Gorilla, if such a thing can be called a dwelling, consists simply of a few sticks and leaves, supported by the crochets and limbs of a tree; it affords a shelter from rain or sunshine, and is occupied only at night.

(To be continued.)

THE FRIEND.

EIGHTH MONTH 31, 1878.

We have transferred to our columns an editorial article from the *Philadelphia Public Ledger* of the 20th inst., entitled, "Wide Range of Quaker Influence," which has special interest to members of our religious Society, and particularly so to those of Philadelphia and its vicinity; inasmuch as the essay of Bruno Bauer, which is commented on, gives prominence to William Penn as a representative type of the Society of Friends, and characterizes his "boly experiment" of founding a colony here as a model of religions and lib liberty, which has influenced the world vitally for good. It is doubtless quite natural that we of this day may with too much self-complacency plume ourselves upon the influence which our Society has had and now possesses in moulding the views and practices of the world at large in regard to the special principles that we have always professed; and we would be far from cultivating such a sentiment in any sense of self-exaltation. There are around us so many proofs of the wisdom of the majority of those who claim to represent the Society of Friends, and their faithfulness to its true objects, that we can hardly appropriate much of the commendation that occasionally falls from the pens of those respecting its influence, to our personal merit. Nevertheless, it is well that we should gather up and examine such testimonies as these to the intrinsic worth of those principles upon which the religious association of William Penn and his coadjutors was based, as a means of stimulating us to greater zeal and energy in adhering to and pressing them to their legitimate consummation. The particular phase of Quakerism that is commented on by the essay in question, is religious liberty, or according the free exercise of the rights of conscience to all by the ruling power in governments. We can scarcely appreciate, in this day and country, how great an advance such a liberty was upon the ideas and practices that prevailed at the rise of the Society. Wherever the Romish sacerdotal power held sway, in Europe or America, she used the secular arm of government in forcing the consciences of men to conform to her ritual. Scott, in his Commentaries on Revelations, remarks, "It was given to the beast to wage war against the saints and to overcome them; and no computation can reach the numbers who have been put to death in different ways on account of their maintaining the profession of the gospel and opposing the corruptions of the Church of Rome. A million of the poor Waldenses perished in France; nine hundred thousand orthodox Christians were slain in less than thirty years after the in-titulation of the Jesuits; the Duke of Alva boasted of having put thirty-six thousand to death in the Netherlands by the hands of the common executioner during the space of a few years. The Inquisition destroyed by various tortures, one hundred and fifty thousand Christians within thirty years." It was not only the governments which were under Romish sway that used their power to coerce their subjects in matters of religion. The Lutherans, the Episcopalians, the Presbyterians, and the Independents, all in turn, as they succeeded in

holding the reins, persecuted those who disented from them in faith, and strove to enforce uniformity by the civil power. A great stride has indeed been taken by most of the European powers since Penn's day, in granting religious toleration, and doubtless his "experiment" has had a large share in bringing on this step, although Roger Williams had asserted the same principles, and carried them out, in founding the colony of Rhode Island in 1638.

The fifth article of the late treaty of Berlin, is a striking and encouraging proof of the world's progress in this direction. It provides that "the following shall form the basis of the public laws of Bulgaria: Distinction of religious belief or confession shall not operate against any one as a reason of exclusion or incapacity in what concerns enjoyment of political rights, admission to public employment, functions of honors, or the exercise of the different professions and industries. Liberty of public professions of all creeds shall be assured to all the returned populations of Bulgaria, as well as to strangers. No trammel shall be imposed upon the hierarchie organization of different communions, or their relations with their spiritual chiefs."

Whatever advantage may have accrued to mankind by the advocacy and example of the Society of Friends respecting religious liberty, civil freedom, peace between nations, integrity in dealing, temperance, or other beneficial practices, is simply to be imputed to their being the out-growth of those invaluable truths promulgated by the Redeemer of mankind, and their obedient reception by those members of the Society who truly represent its principles. These truths are inseparable elements of one harmonious plan for the elevation and happiness of man, and far glorifying his Creator. "For this cause came I into the world, that I should bear witness to the truth. Every one that is of the truth heareth my voice," was Christ's language to Pilate when he questioned Him of His Kingdom and objects. His Sermon on the Mount exhibited these truths in their practical application to daily life. Men generally treat them as utopian in their ultimate and literal scope, and hence have failed to realize the fulness of the blessing which would have accompanied their simple reception. The early Friends, and some of later days have heard Christ's voice, and obeying His commandments, have shone as lights in the world in exemplifying the harmony and adaptation of all His precepts to the needs of mankind.

If William Penn had rejected those commands of Christ which enjoin taking up the cross daily, the duty of forsaking even father and mother in order to follow the Saviour, and to "resist not evil," he would not have been prepared to found and successfully carry on a government based on the power of Christian love to subdue the passions of men, and conciliate even the untutored savage.

We need, as a Society, to rally again to the united support of all the doctrines and testimonies of Wm. Penn and the early Friends, in renewed faith that they must ultimately prevail because they proceed from Christ himself. That the little stone cut out of the mountain, without hands, is destined to break in pieces the false image that aspires to reach unto heaven, and, filling the whole earth, shall set up a kingdom that will never be destroyed.

SUMMARY OF EVENTS.

UNITED STATES.—The visitation of yellow fever in the South seems to be steadily increasing. From the first to the twentieth of this month, there had been 1220 cases in the city of New Orleans, with 357 deaths, of which only eight were native-born. The average number of daily deaths from the fever in that city, has lately been about 40. In the little town of Grenada about one-twentieth part of the population have died from the fever.

There is now in the Sub-Treasury at San Francisco, \$12,000,000 in gold, the accumulation of this unprecedentedly large amount due to two causes. One is the unusually large payments which have been made to the Government for currency obligations, and the other the purchase of a large amount of silver certificates for gold for shipment East. It is now doubtful whether the expenditure of so much of the coin as third-class mail matter will be resorted to.

The business of the money-order branch of the Post-office Department shows a steady increase, both in the domestic and foreign exchanges.

For the quarter ending 31st mo. 31st there was remitted from the United States to Great Britain upwards of £37,000, and received from there £17,000, leaving a balance to be remitted in settlement of account upward of £20,000. The remittances of the previous quarter, which, including the holidays, is always the largest of the year, aggregated £41,000 sent from this country and £15,000 from Great Britain.

The average quarterly remittances from Germany are about £215,000, and the amount sent thither about \$190,000.

Switzerland receives from the United States about \$45,000 and sends \$25,000 here per quarter.

Money-order exchanges with Italy have only been in operation since 7th mo. 1st, 1877. The quarterly averages are about \$28,000 sent to that country and less than \$2000 received from thence.

Canada remits an average of about \$100,000 and receives about \$75,000, being fully Government business, which we have no money-order exchanges where the balance is in favor of the United States. This arises from the fact that the system is used between the United States and Canada for commercial purposes, while with the European nations its use is confined almost wholly to social purposes.

It is computed that California will have 750,000 tons of wheat to export to foreign countries the present year, which would be freight for several hundred large ships, without taking into account other exports.

During 48 hours, ending at midnight of the 25th, there had been raised in New York, 925,900 bushels of wheat, in 111 cars.

The City of Baltimore recently exported to France, in two days, 322,265 bushels of wheat.

A man named Benton is travelling through California making contracts to destroy the squirrels which have hitherto been so formidable a plague to farmers. The *Los Angeles Herald* says that at the ranch of R. T. Buel he killed 13,470; at J. S. Bell's, 10,000; at the Surgis Brothers', 4000; at S. P. Stow's, 6000; at W. W. Hollister's, 2700.

The aggregate crop of cranberries in New Jersey, in a favorable season, exceeds half a million bushels.

The migratory quails of Western Vermont are proving indefatigable destroyers of the potato beetles.

The reintroduction of salmon and other species of fish into our eastern rivers, has apparently been attended with the unlooked for result of increasing sharks in the mouths of these streams. A fish bathing at Brooklyn was recently terribly bitten by a shark, and although rescued alive by a companion, afterwards died from his injuries. Bathing has been a common practice in New York harbor, and no such occurrence has previously been noticed for many years.

A man fishing in the mouth of the Housatonic river hooked a fine striped bass, and, as he was hauling in the prize, what was his astonishment to behold a large shark make a dash for it and take it, tackle and all.

The shark was eight or nine feet long.

While a party of 25 persons was ascending Mount Washington by rail last week, the engine of the last train broke a cog wheel near "Jacob's Ladder," but the accident merely brought the engine and cars to a stand still.

It is considered proof of the safety of this remarkable railroad.

During a cold thunder storm in Muscatine, Iowa, on the 20th inst., 4.68 inches of rain fell in short time. Three creeks which traverse the city rose 15 feet in half an hour, causing great destruction of property.

A correspondent of the *New York Times*, at Dodge City, the principal shipping point, makes the drive of Texas cattle this year will be between 225,000 and 250,

000 head. Some of the best blooded stock have been introduced, improving the quality of the increase, and enabling the plains breed to bring high prices in the eastern market. The head of cattle from Eastern Oregon and Washington Territory, and from Snake river, Yakima and Walla-Walla counties, are ready to be driven across the plains. Some of these will be kept in Colorado, Nebraska and Wyoming until the prices improve, while others will be sold for export to the buffalo plains, and the middle portion of the continent, together with the Pacific States, are rapidly taking the place of Texas as the great feeding grounds, and are leading in the production of beef. The estimated returns for this year gives Colorado, 550,000 head; Wyoming, 235,000; Nebraska, 600,000; Montana, 200,000; Oregon, 175,000, and California, 650,000. In addition to these, there are raised in Florida thousands of head of cattle, whose meat is as tender as any that can be had in the North. The choicest pieces of Florida beef can be bought for eight cents a pound, and the average for five cents; while in the North, with the advantages of rapid transportation, double those prices are paid.

The Chinese embassy will take up their residence in Washington about the middle of next month, and present themselves to the President after his return from Mexico. It is announced by their American Secretary that they do not intend to give grand entertainments, but desire to live quietly and attend to the business upon which they were sent.

The report of interments in the city of Philadelphia, for the week ending 24th inst., shows a decided decrease, viz: 283 as compared with 323 of the previous week.

Markets.—American gold 100 U. S. sixes, 1881, 107½; 5-20s, 1865, 102½; do 1867, 101½; do 1881, 107; new 1/8s, 106; new 1/4s, 104½; new 1/2s, 100½. Cotton, 12½ to 12½ cts. Flour, Minnesota extra, \$5.75 a 57; Penna. and western, \$4.70 a \$5.40. Live flour, \$2.25 and over; superfine, \$1.90; extra, \$1.75; and common, \$1.50; \$1.07, \$1.08 a \$1.12. Hye, 57 a 60 cts. Corn, 46 a 51 cts. Oats, 25 a 27 cts.

Beef cattle, sales of 4300 head at 23 a 35 cts. per lb. Sheep, 16,000 head at 23 a 31 cts.

FOREIGN.—Dr. Nobiling, who attempted to assassinate Emperor William, is suspected of being mad. He will shortly be conveyed to a lunatic asylum, to be placed under the observation of experts.

A religious fanatic named Lazzarotti, who called himself "David the Saint," and had established a semi-political and religious sect near Grosseto, a little town in the Leghorn Archipelago, is suspected of having attracted the attention of all Italy. He had declared himself to be Christ come again, and had chosen twelve apostles, and surrounded himself with a large number of proselytes, who required the surrender of all property for common benefit, and the labor of all alike for the society, the latter undertaking to maintain them and their families and educate their children. Their creed is an extended paraphrase of the Nicene creed, with some alterations in a Protestant sense.

On the morning of the 18th instant the prophet, at the head of between two thousand and three thousand disciples, started on a village of Ardenza, with the purpose is not known, but it said it was not peaceful. A hundred believers, dressed in white tunics, like ancient Jewish priests, led the column. At their head walked David, the saint, attired in a half-red and half-pinkish costume, wearing a crown on his head, and an iron collar about his neck. He was followed by a young man with the refrain, "Long live God and the Christian Republic!" "Praise be to Christ—come a second time on earth!"

The mob was met half way by a delegate of police, accompanied by two carabinieri, who directed down a disparted "I put this David cried, "I am the king!" and ordered his followers to disarm the soldiers. As he spoke a discharge of firearms was made upon the police, and a shower of stones followed. Again the delegate gave the requisite warning to disperse, which was obeyed by the village of Ardenza, and then by the club. Then the police, finding themselves surrounded, opened fire. Among the first to fall was the prophet, who was shot full in the forehead. His followers, seeing their leader down, gave way. Four of the police were badly wounded.

The student rioting in which has been in session at Paris, is expected to terminate this week. Germany declined to take any part in its proceedings.

The Turkish Government is neglecting to carry out the reforms required by the Berlin Treaty, in the old Turkish fashion, and has no money to employ soldiers and civil officers required to effect these reforms. A more serious complaint against the Porte

is that it is delaying a settlement with Greece and Russia, and apparently favoring the opposition made to that extension of power by Austria and Servia, and the Turkish Government is treating the Armenians as being laid for a new war, one that will in all probability forever settle one phase of the Eastern question by the expulsion of the Turk from Europe.

Last year's revenue of the German Central Exchange falls short of the estimate by £6,000,000, and the Government is in a predicament, the demand for money suffering from the continued depression of trade. The deficit is covered by the savings of the occupation money paid by France. A rapid increase of indirect taxation is looked for.

The Island of Cyprus having been transferred from Turkish to British control, a change in the postal arrangements follows as a natural consequence, and the British Government has applied to the nations belonging to the International Postal Union for the admission of Cyprus, under the Treaty of Berne, as a British dependency. Having, as Turkish territory, been in the Union, there will be no opposition to the request. The assent of the United States was forwarded on the 22d.

The paper currency of Austria has risen to the level of silver, and the question of resumption is beginning to be agitated, but is complicated there as here with that of the proper relation of silver and gold.

RECEIPTS.

Received from Susan J. Yerkes, PkL, \$2.10, vol. 52; from Ambrose Smith, for copy to Md., \$2.10, vol. 52; from Rebecca W. Smith, City, \$2, vol. 52; from Mary B. Young, No. \$2.15, vol. 52; from Jacob W. Fry, City, \$2, vol. 52; from Susanna R. Leeds and Priscilla M. Lippincott, N. J., \$2.10 each, vol. 52; from Samuel Allen, City, \$2, vol. 52; and for Horatio G. Cooper, Pa., \$2.10, vol. 52; from Samuel F. Receipts received after Fourth-day morning will appear in the Receipts with the following week.

WANTED.

A well qualified woman Friend as Matron at Friend Asylum for the Insane, near Frankford, Philadelphia Apply to Samuel Morris, Olney, Philada. John E. Carter, Fisher's Lane, Germantown.

CORRECTION.—In the 6th entry notice of Daniel Will, published last week, the date should be 7th mo 20th, instead of 28th, as printed.

MOORESTOWN ACADEMY.

Will be opened 9th mo 24, under the care of Chester Monthly Meeting of Friends, for children of both sexes. RICHARD T. CANAWAY, Principal. ANNA WOOLMAN, Assistant.

HADDONFIELD ACADEMY.

Under the care of Haddonfield Monthly Meeting, will open on the 2nd of Ninth month, 1878, for boys and girls. A few boarders will be received. CHARLES W. BYRDE, Principal. Haddonfield, New Jersey.

The Yearly Meetings Committee on Education have appointed Richard J. Allen, No. 119 Arch St., Philadelphia, as a member of the Yearly Meeting, to be in charge of the situation, and committees or others who desire to employ teachers among Friends.

WESTTOWN BOARDING SCHOOL.

A well qualified woman is wanted to take the situation of Nurse in the Boarding Department. Application may be made to Anna V. Edge, Downingtown, Chester Co., Pa. Susanna F. Sharpless, Street Road, " " " Deborah Rhoads, Haddonfield, New Jersey. Elizabeth R. Evans, 252 S. Front St., Philada.

MARRIED.—at Middleton, Delaware Co., Pa., on 5th mo, 9th, 1878, FENNELLE L. WEBSTER to MARY W. YARNALL, daughter of the late Isaac Yarnall.

DIED. at his residence, near Parkersburg, Chester Co., Pa., on the 26th of First month, 1878, after a short and severe illness, PARVIN SMITH, a member of Salisbury Monthly Meeting, in the 57th year of his age. He passed through severe mental conflict during his sickness, being concerned to be fully prepared for his final journey. He was a devoted and long-continued member of the lifting up of the light of his countenance upon him and we believe that through the mercy of God in Christ Jesus our Saviour, he was enabled to realize his sins to go beforehand to judgment, and to be clothed with the spotless robe of Christ's righteousness, and we trust has passed through the portals of glory into heaven.

He was born in Pennsylvania, Chester Co., Pa., Third month 5th, 1878. LYDIA BRISTON, in the 93rd year of her age, an esteemed member of Kennett Monthly Meeting of Friends, on the 3d of Seventh month, 1878. MARY JANE WIFE of Charles Adams, at their residence in Plainfield, N. J., in the 51st year of her age, an esteemed member of Plainfield Preparative and Railway and Plainfield Monthly Meeting of Friends. It is believed that she was of those who are endeavoring to watch for the coming of the Bridegroom, and has, we trust, entered in with Him.

Letters from Unfrequented Places.

(Continued from page 15.)

5th mo. 8th. We have spent a day on the Bosphorus, introduced ourselves to the Black Sea, and returned delighted with the excursion. Steamers run up and down, making tops all along, and running close up to the floors, as if we were on the Grand Canal in Venice. Her last stop was on the Asiatic side. The whole trip was one beautiful moving panorama, the shores on both sides lined with palaces and fine dwellings and buildings of all kinds and uses—the hills rise up behind them dotted with villas, and clad in fresh spring verdure and flowers. The tall dark cypresses stand out in bold relief. They prevail in all Turkish cemeteries, and in looking over a landscape we need not ask what those dark spots are. On the water were floating all kinds of craft, in great numbers, from the great men of war and giant steamers, down to the brisk little caiques that are shooting about everywhere. That excursion occupied Sunday, and yesterday morning we were gladdened by the arrival of several Cairo acquaintances—they had followed on our track all through Palestine and Syria. With some of them we went on the Golden Horn, and across it to Stamboul yesterday. You know that Stamboul is Constantinople proper. We are in Pera, on the north side of the Golden Horn, rather, on the northwest—on the eastern is Scutari, on the Asiatic side, across the Bosphorus.

I said when approaching Constantinople from the Marmora, that it looked more like New York, or the approach to New York, of any place I had seen. To-day we are going to visit the Sublime Porte, St. Sophia, &c. The mosques have been used for hospitals, but we are told that Santa Sophia has been cleaned out and fumigated, and that it will be quite safe to go there. Some of our fellow-travelers went when it was filled with sick refugees two weeks ago, they said there was plenty of chloride of lime about. Others of our companions have gone to ride along the lines of the encamped army. We have seen many large encampments far and near, but have not visited any. I am writing with cold fingers—mercury at 60°—there is a nice stove, and wood in a box, but as I go out soon, have no fire. This is our second or third spring.

5th mo. 10th. We have been busy sight-

seeing, and do a little every day. We ride all we can, for it is miserable walking among the crowds of refugees, and the wonderful mixture of human beings that throng the streets, and the pavements are such that it is almost as bad riding over them as over the Jerusalem and Jaffa road. My company have all gone up the Bosphorus and I have been out peering about by myself. I went out to get some ink and so wandered on. Yesterday we went to see the Sultan, with hundreds of others, just to see him ride on horseback from his palace to a mosque near by, it being the Muslim sabbath. There was a great display of military of all grades, and we had not seen many of the gold-bedecked Turks before—some of them were very fine-looking men. We waited the hour that the Sultan was at his prayers, and saw him again. After he dismounted on his arrival, his beautiful horse was led back to the palace, and in due time a carriage set to take him home. Poor man! we all thought that he looked pale and worn, as if he carried a great weight upon his mind. I thought perhaps he would look brighter after his religious exercises, but he did not—he took his seat in the carriage, leaned back and crossed his hands, looking as we boggle as ever, and scarcely noticed the salutes of his generals and officers who were stationed near. I felt rather sorry for him, and yet I should like to see him gently lifted out of his throne, and this country, and a more civilized government substituted. The poor Syrian says, "Give us anything but this oppressive Turkish rule."

You have heard of the dogs of Constantinople? Well, they are here yet, lying about in the daytime asleep, in everybody's way, or snarling at you and at each other. At night they keep up a disturbance, many barking at once; occasionally they quiet down and you think they are going to sleep themselves, and let you do the same, then something stirs up one, and that starts the whole crowd off again. Nobody owns them, they are a community of themselves. An extermination of some of them would be a great favor to the people who do not like to stumble over them or to be snapped at.

I must tell you what a frightful way they have here of managing their funerals. We may be on the street and hear a sort of singing or chanting, and see a thicker crowd than usual (the streets are always full), and soon a priest appears, and then some men carrying something the sight of which startles you, for there, exposed to public view, and the hot sun, lies a corpse, arrayed in the best clothes the person owned, with flowers tucked in around it. The first one of the kind I saw in Athens, and daily meet them here. The cover of the casket, highly ornamented, is carried with other "sacred" ornaments, at the head of the procession. In Cairo the Musselmans carry their dead in a half sitting posture, no coffins, but the remains always covered with Persian

shawls, or stuffs imitating them as nearly as they could. I shall not be sorry to leave all these strange people and their customs behind, and get back to European people and customs.

5th mo. 11th. We made a daring visit to Santa Sophia, and, with the process of cleaning going on, it appeared to disadvantage. One of my early dreams was a desire to see this mosque, having read in my youth that it was at the risk of his life for any Frank man to enter a mosque, and also of a woman who disguised herself as a Turk and went to St. Sophia at the time of the feast of the Ramadan, when it was illuminated. I was impressed the first time I entered a mosque, and looked upon the kneeling and prostrate crowd, but now St. Sophia did not astonish me, especially in the dirty state in which we found it, and I admire the outside more than the inside. I looked at it as quickly as possible, and retreated to the outside air. There is a mosque in Stamboul with six minarets, which is a very pretty structure.

Yesterday I went up the Bosphorus again. We stopped on the way an hour to visit an "American College" most beautifully situated on an eminence overlooking a long stretch of the Bosphorus, and Europe and Asia on either side. The college is prospering, and has educated a great many young men, who are now active in the world, and making good use of the knowledge of Christianity and civilization which they have gained.

A trip up the Golden Horn was also a great pleasure. We went in a steamer a mile or two, then took a caique and rowed up another mile or two through sylvan scenes until we came to the walls of a palace and its surroundings; we were allowed to enter and walk miles if we chose, also to enter and be shown over the palace, which is expressly for summer use, and seldom used at all, but all kept in order and quite oriental. The beautiful gardens and parks interested me most—there were flowers and fountains and various kinds of web footed birds, from the large black swan to the tiny duckling, swimming in the streams—and peacocks were strutting about by the dozen.

These caiques are a mixture of Indian canoe and gondola, and very lovely it is to float about in them. We sit on a low seat, our heads just above the sides, and enjoy the swift and quiet gliding over the water and among the varieties of craft. There are said to be nearly 100,000 of these little caiques plying on the waters of Stamboul and its surroundings. Says an author, "Nowhere does the sea come so close home to a city as to the Mahomedan capital. There are no pebbly shores, no sandbars, no slimy river-beds, no locks, no docks to divide the very heart of the place from the deep waters. If, being in the noisiest mart of Stamboul, you would stroll to the quiet side of the way, amid the cypresses opposite, you will cross the fathomless Bos-

phorus. If you would go from your hotel to the bazaars, you must pass by the bright blue pathway of the Golden Horn, that can carry a thousand sail of the line. You are accustomed to the gondolas that glide among the palaces of Venice; but here at Stamboul it is a one hundred and twenty-gun ship that meets you in the streets!"

We have earthquakes here. Just before we came there was one that rocked things smartly, both on land and sea, and last week we had quite a shake. I looked from my room down a long, narrow hall, and saw the wall vibrating like a sheet of paper held up and shaken a little. I said, "it must be a cloth and paper wall," but on testing found it solid.

For "The Friend."

Extracts from Letters of Margaret Morris.

(Continued from page 19.)

Although the following letter is somewhat of a recapitulation of some events heretofore narrated in this correspondence, yet as it enters rather more into detail, it was thought best to include it, as showing how this interesting woman was sustained under complicated and unusual trials.

To *Guliana Maria Smith, (without date.)*

I concluded a letter to thee last 5th or 6th day, which was begun long before, and for want of time to write lay in the letter case. We were encouraged to flatter ourselves, that day being the seventh from the time our beloved B. S. was taken ill, that the disorder was going off, as some favorable symptoms appeared—but alas! it was only a flash, for he grew worse, and it was only a short time before we were obliged to relinquish all hopes. The dear, innocent, worthy young man, was taken from us between 3 and 4 in the afternoon. I sent for his brother when I perceived his change approach, and when it was all over, felt ourselves so destitute: no man to apply to but his weeping brother, to send out to bespeak a coffin. I sent to Benj. Morris; he came, though obliged to ride, being still weak from the same fever. He went and got the grave dug, next to my dear J. and A. M., and poor Joshua was obliged to bespeak a coffin, while thy sorrowful mother was occupied, one moment in endeavoring to keep life in thy dear afflicted sister, and the next, in the other room, preparing her dear son-in-law for the grave. Don't ask for particulars at this time; suffice it to say, that all my efforts to soothe and comfort my dear child are yet in vain, and if she is favored to get through it, time alone, assisted by the Divine goodness, must reconcile her to the heavy stroke. I prevailed on her to come to my house on Sunday, with the two maids. Before I left the house, I had the beds, blankets, carpets, &c., all buried—the rooms well cleaned, &c. * *

To the same.

Philadelphia, 10th mo, 29th, 1793.

"It is said the violence of the fever has abated, and I hope it may prove so, but fear that when the exiled citizens return to town they will be fresh subjects for the contagion. From our corner of Fourth St., down to G. Guests, fifty have died that I know of and have kept a list of, as they passed by my door; yet, through the boundless mercy of Providence, not one has been taken away from under my own roof; and although I have been ready at times to think a double portion of

the bitter cup had been allotted to me, my chastened heart, while under the afflictive stroke of the rod of chastisement, has endeavored to say 'Thy will be done.' * *

To the same.

Tenth month 31st.

My beloved child's letter of the 26th relieved my mind of much anxiety, and amidst the gloom that has long surrounded me, I desire to be thankful that some of the dear blessings of my life are excused from the sufferings I have passed through. My dear mournful Debby refuses to be comforted. Tell her the *Allwise Disposer of human affairs has many arrows in His quiver, and she may, by resisting His will, provoke Him to send forth another, and be deprived of the dear pledges of her spotless love.* But, alas, I am a poor comforter, and though I have long trod the dreary path of sorrow, I find myself unequal to the task of administering comfort to my child, who stands much in need of it. Ah! my dear, thy poor mother has hitherto had only her own burdens to bear; but now she must exert herself to help to bear the burdens of the child who was her delight in youth, and a comfort through all the chequered scenes of a life marked out by Divine Wisdom as a sample of the instability of human happiness; and now, in the decline of life, when nature calls for retirement and a recess from the cares and concerns of this world, and the long exercised mind languishes to be at rest, the care of five helpless orphans calls upon her to arouse with redoubled confidence in the Friend of her youth, the spouse of her riper age, the support of her evening, to "thank God and take courage." These were some of the last words of dear S. Emien, when he called to take leave of me before he embarked for England, and often have I thought of them, since I have been, as it were, in the furnace of affliction.

The foregoing very much concludes the account of the devastations of the yellow fever in 1793; but the following letters to her sister M. M. Moore, show that her many trials were not yet ended.

1794.

My dear sister,—I am at present anxiously engaged in attending to the fatal progress of the scarlet fever and putrid sore throat: my dear little Sallie* was very suddenly seized with it, and very soon became delirious. Drs. Rush and Griffiths both attend her. They were both so candid as to tell me, she was very dangerously ill; hardly the shadow of a hope remains of her recovery. Alas! my Patty, how many hard lessons I have had to learn; indeed, I did not think it would have been so hard for me to part with one of these dear orphans; but, so it is, I am called upon to give up all, and as Dr. Young says: "The weeping parent builds her children's tombs."

Thy tenderly affectionate sister.

M. M.

The following from M. M. Moore to Margaret Morris, alludes to the death of this child.

"The very unexpected news contained in my beloved sister's letter of this day week, was truly distressing. What a hard lesson indeed, to learn, is true resignation; yet how very necessary to our happiness. I thought the dear little creature was never so much

beloved by me, as the last time I saw her, and I promised myself great pleasure in having her here in the summer. She is, I trust, removed to a happier scene; and to wish her back is not wishing for her happiness, however it might contribute to our own; the Giver best knows when to recall such precious gifts, and acquiescence is certainly our duty. May we, my sincerely beloved sister, be made willing to give up all that is required of us, however great the sacrifice."

From Margaret Morris to M. M. Moore.

Eighth mo. 7th, 1797.

My beloved sister's two letters came to hand at a time I could not reply to them while at my son J. Smith's, where my sweet Mollie[†] had been for several weeks; and every letter brought me the pleasing account of her being grown fat and hearty, till the last informed me she had a fever. I soon took thy alarm, and found on arrival it was of a bilious kind. I sent for Dr. McIlvaine; but, alas, I proved a highly putrid fever, accompanied with violent convulsive fits, and on Third-day morning, at 6 o'clock, my sweet child was released from her sufferings. There was a necessity for her being soon interred, and the same evening I saw her laid in the grave, next to my dear sister Wells' little son. And now my dear Patty, what can I say, but that of truth, death has been stamped on all or most of my "pleasant pictures," and with my mouth in the dust, I can say, "Thy will be done." Though my foolish heart was willing, to take pleasure in the prospect of rearing a second offspring to comfort me, for the loss of the first, it has seemed good to Him, who doeth all things right, to disappoint me, and I submit, without murmuring, to His decrees * * * I hope the hot weather is nearly over, and that I shall soon have my poor little flock about me again; indeed, I feel very much stripped; these dear children have so hardened themselves about my heart, that I hardly know how to disengage myself from them. I am, my beloved sister, thy own

M. M.

The fever prevailed again both in 1797, and 1798. She thus writes to G. M. Smith:

Philadelphia, 8th mo. 19th, 1797.

"My beloved child's letter of the 16th came to hand last evening, and was more acceptable than the promised visit would have been as I was fearful of your visiting us during our present alarming situation. The appearance of a dangerous malignant fever in different parts of the city, has obliged many to hasten to the country, and it was with the same intention that R. H. Morris visited all the villages near to procure a house for my own family; but every place is full. He wrote to S. Emien in hopes of succeeding better in Burlington, which if he does we shall soon be there. * * * I have now written all that is necessary on the subject, and when he recollects the dispensation I passed through in the desolating year of '93, will not say am too urgent in pressing on S. E. to be expeditious in giving us early information of his success. Imagination sickens on a retrospective view of the scenes I witnessed, and bor a part in, at that time—and though I have fewer now to care for than I had then, yet a merchant who has once been a bankrupt resolves to be more careful in future, and u

* A grand-daughter, child of Dr. Jno. and Abby Morris.

† Another grand-daughter, child of Dr. Jno. and Abby Morris.

endeavoring to avoid his former mistakes becomes parsimonious, so I, who have lost half my earthly treasure, am become a miser of the little store that yet remains of my former happy, prosperous days, and wish to secure, by all allowable means, the possession a little longer."

To the same.

Eighth mo. 22d, 1797.

In hopes of an opportunity I steal the time to acquaint thee with our proceedings; and, in the first place, inform thee that S. Emlen has secured a good three-story house for us in Burlington, and to-day we sent our household goods. We have fixed on Fifth-day to remove our families, if D. S. is well enough. She and I, with the three children, are to go by land; my poor dear sister (Hannah Moore, now in extreme ill health), the three girls, my son Richard, and Delby's maids, in the boat. Richard has engaged the captain to take no other passengers. He has also provided a commodious chair to set H. in and take her down stairs, and a nice sedan to convey her to the boat. * * * Dr. Griffiths took one of his children out of town yesterday, and to-morrow the others are to go; himself and wife intend to stay a little longer. Our situation in town is growing very serious; the disease (yellow fever) is making its progress with slow but awful steps; into various parts of the town; the sick cart has taken several by our door; and yesterday one that lived very near us was removed, and died last night. To my beloved C. M. M., who knows in part the dispensation I passed through "in the desolating year of '93," it will not look strange that I have now given up my own will, and suffered myself to be guided by my children in the momentous undertaking of removing my family. When I take a retrospective view of the scenes I witnessed and bore a part in, at that awful period, my heart sickens at the remembrance, and hints to me that if I should, by resolving to remain here, detain my children, and they should be taken away by the malignant fever, as the others were, who refused to go and leave me behind, it would be more than I could bear."

Her sister bore the removal to Burlington very well, having, M. M. says, "a fine passage of four hours."

(To be continued.)

Evolution, or the theory of the natural development of forms of organic life from lower or anterior forms or types.

From a work entitled "Present Conflict of Science with the Christian Religion," by Herbert W. Morris, A. M.

(Continued from page 22.)

The Gorilla is an exceedingly ferocious animal; it never runs from man, and is an object of terror to the natives. It is said, that when the male is first seen, he gives a terrific yell that resounds far and wide through the forest. His enormous jaws are widely open at each expiration. He always rises to his feet when making an attack, though he approaches his antagonist in a stooping posture.

Though he never lies in wait, yet, when he hears, sees, or scents a man, he immediately utters his characteristic cry, prepares for an attack, and always acts on the offensive. The cry he utters resembles a grunt more than a growl, and is similar to the cry of the Chimpanzee, when irritated, but vastly louder.

His preparation consists in attending the females and young ones, by which he is usually accompanied, to a little distance. He, however, soon returns, with his crest erected and projecting forward, his nostrils dilated, and his under lip thrown down, presenting an aspect of indescribable ferocity; at the same time he utters his usual yell, designed it would seem, to terrify his antagonist. Instantly, unless he is disabled by a well-directed shot, he makes an onset, and, striking his antagonist with the palm of his hands, or seizing him with a grasp from which there is no escape, he dashes him on the ground and lacerates him with his tusks. Such is the power of his great jaws that he can, it is said, instantly crush the barrel of a musket between his teeth; and his exceeding savage nature is sufficiently indicated by the impudic desire of the young, which, so far as tried, have proved utterly unattainable.

Such are the character and aspect of the Gorilla—*man's nearest ally!* Now, who that, in the exercise of simple common sense, contemplates this animal, but must instinctively ask, What is there about such an ugly and ferocious beast that can be regarded as resembling man? What is there in this prone and savage quadruped to be compared to the erect and graceful and commanding figure of man? What is there in its brutish face that makes the most distant approach to the human countenance, with its expressive eye, its intellectual features, its affecting tear, and the charm of its smile? No more than in the grim visage of a Grizzly Bear.

2. *Difference in bodily structure.*—Man differs from the Gorilla, not simply in external appearance and expression, but also in the proportions and conformations of the parts and members composing his whole system—osseous, muscular and nervous.

"The differences between man's *Skull* and that of the Gorilla are truly immense. In the latter, the face, formed largely by the massive jaw-bones, predominates over the brain case, or cranium proper; in the former the proportions of the two are reversed. In the man the occipital foramen, through which passes the great nervous cord connecting the brain with the nerves of the body, is placed just behind the centre of the base of the skull, which thus becomes evenly balanced in the erect posture; in the Gorilla it lies in the posterior third of that base. In the Man, the surface of the skull is comparatively smooth, and the supraciliary ridges or brow prominences usually project but little—while, in the Gorilla, vast crests are developed upon the skull and the brow ridges overhang the cavernous orbits, like great penthouses."⁶

Man differs immensely from the Gorilla also in the *capacity of the cranium*, or brain case. The collections of Dr. J. B. Davis and Dr. Morton give the following figures as the average internal capacity of the cranium in the chief races of man:

Teutonic Family	94 cubic inches.
Esquimaux	91 " "
Negrees	85 " "
Australians	82 " "
Bushmen	77 " "
Fins and Cossacks	98 " "
Average	87 5-6 "

The largest Gorilla cranium examined, according to Professor Huxley, measured 34 $\frac{1}{2}$ cubic inches; the smallest 24 cubic inches;

these give us for the Gorilla cranium an average of 29 $\frac{1}{2}$ cubic inches. We see, hence, that the average human brain is exactly *three times* the size of the average Gorilla brain. Professor R. Wagner, who carefully weighed more than 900 human brains, states, "that it may be safely said, that an average European child, of *four years old*, has a brain twice as large as that of an adult Gorilla."

Man differs from the Gorilla in the formation of the *Brain itself*. Scemmering enumerates as many as fifteen important anatomical differences. The ape brain exhibits but a skeleton map of the human brain. The two differ both in the disposition and proportions in their convolutions; and these convolutions, in the middle and frontal lobes, are developed, M. de Quatrefages informs us, in an inverse order of time.

The great French anatomist, Cuvier, held that the distinctions between Man's organism and the organism of the highest among the beasts are of such magnitude and importance that the human race cannot be classified as belonging to the same "Order" with any other creature, but must be regarded as constituting an "Order by itself." And Professor Owen, at the present time, holds the same opinion.

And Professor Huxley, though an avowed friend of the Development Theory, finds himself constrained to make this acknowledgment.

"I must guard myself against a form of misunderstanding, which is very prevalent, viz., that the structural differences between Man and the highest apes are small and insignificant. Let me take this opportunity, then, of distinctly asserting, on the contrary, that they are great and significant; that every bone of a Gorilla bears marks by which it might be distinguished from the corresponding bone of a man; and that in the present creation, at any rate, no intermediate link bridges over the gap between *Homo* and *Troglodytes*. It would be no less wrong than absurd to deny the existence of this chasm."

The structural differences between Man and the man-like apes certainly justify our regarding him as constituting a family apart from them.*

To the above we may add the testimony of another distinguished naturalist, whose acknowledged abilities well qualify him to pronounce an opinion in this matter. M. de Quatrefages, Professor of Anthropology in the Museum of Natural History at Paris, in a late work on this subject,† has entered very fully into the question of man's descent from the ape. He has summed up the contents of a multitude of contemporary works on this subject, and has delivered this as his confirmed opinion—that, in an anatomical point of view, the *transmutation of the ape into Man is a perfect impossibility*.

"Man and apes in general," says he, "present a most striking contrast. The former is a *walking animal*, who walks on his hind legs; all apes are *climbing animals*. The whole locomotive system in the two bears the stamp of these two very different intentions; the two types, in fact, are perfectly distinct.

"The very remarkable works of Duvvernoy on the Gorilla, and of MM. Gratiolet and Alix on the Chimpanzee, have fully confirmed this result as regards the man-like apes—a result

* *Man's Place in Nature*, pp. 123, 124.

† *Rapport sur le Progrès de l'Anthropologie*, published in 1868.

* *Man's Place in Nature*, p. 93.

very important, from whatever point of view it is looked at, but of still greater value to any one who wishes to apply *logically* Darwin's idea. These recent investigations prove, in fact, that the ape type, however highly it may be developed, loses nothing of its fundamental character, and remains always perfectly distinct from the type of man; the latter, therefore, cannot have taken its rise from the former.

"The theory of the ape origin of man, therefore, is nothing but pure hypothesis, or rather nothing but a mere *jeu d'esprit* which everything proves utterly baseless, and in favor of which no solid fact has as yet been appealed to."

Such is the conclusion reached by Professor Quatrefages, and with whom substantially agree Vlix-d'Azyr, Serres, Duvvernoy, Gratiolet, Alix, Welker, Bert and Pruner Bey, men whose scientific researches place them in the first rank of the Naturalists of the day.

(To be continued.)

Testimony of Frankford Monthly Meeting concerning Alfred Cope.

Feeling that "the memory of the just is blessed," and that as the faithful members of the Church on earth are removed to the Church triumphant, it is good for us to magnify and exalt that Divine Grace which made them what they were, we have believed it right to issue a brief testimony concerning our deceased friend Alfred Cope.

He was the son of Thomas P. and Mary D. Cope, and was born in Philadelphia, on the 13th of the 4th month, 1806. He appears to have been early and deeply impressed with a sense of the infinite purity of the Most High, and His abhorrence of sin in its varied forms. Under this view, he saw that the standard of holiness to which the religion of the Lord Jesus Christ calls all who would be his disciples, leads to nothing less than the subjection of the will of man to the will of God, and to a change of heart so thorough and effectual that, as "new creatures in Christ Jesus," sin should no longer have dominion over us. Deeply humbled under a sense of his own imperfections and frailties, and almost despairing of ever reaching that state of acceptance with his Father in Heaven for which he fervently longed, much of the early manhood of Alfred Cope was passed in deep conflict with what he felt to be the most easily besetting sins of his nature. A retiring disposition instinctively caused him to shrink from unburthening his inward distress to others, but as he patiently yielded to "the baptism of the Holy Ghost and fire," he experienced a living faith in the Redeemer of men in all His gracious offices. "Who of God is made unto us wisdom, and righteousness, and sanctification, and redemption." Thus in the Lord's own way and time was he brought as out of the "miry clay," knew his feet to be set upon the Rock of Ages, and his goings to be established. Henceforth the path of duty, as it was from time to time made clear to him, was in his estimation the only path of peace and safety, while to know the Divine will concerning himself in the varied relations of life, and in simplicity to follow it, came to be among his most earnest desires.

Thus deeply impressed with the reality of a restraining as well as constraining power, whereby as it is yielded to, the Christian may

experience not only a deliverance from his spiritual enemies, but guidance in the way of holiness, his subsequent course was not a devious one. And now in reviewing the well-spent life of our departed friend, we witness a striking illustration of that Scripture, "the path of the just is as a shining light, that shineth more and more unto the perfect day."

In the year 1829, Alfred Cope, in partnership with his elder brother, Henry Cope, succeeded to their father's business, and for many years they continued to carry on successfully a great part of the shipping trade between Philadelphia and Liverpool; their course as a leading commercial house being marked by unswerving integrity. Notwithstanding considerable disparity in age, as they both deepened in the Christian life, the brothers became more and more closely united in the fellowship of the gospel, as well as in fraternal affection; and although their natural tastes and dispositions drew them into somewhat different channels, there was strikingly manifested as years increased, a unity of spirit which led them often to take sweet counsel together concerning "the things of God," and to become increasingly one another's "helpers and joy" in Him.

In the year 1839, Alfred Cope was united in marriage to Hannah Edge, of Chester Co., Penna., and in 1842 he removed with his family to reside within the limits of this Monthly Meeting. After only about one year's residence in Germantown, it pleased Infinite Wisdom to remove by death his valued and affectionate wife. His qualifications for usefulness in the Church were soon recognized by his Friends, who appointed him to the station of overseer, in discharging the duties of which he was very acceptably engaged until near the close of his life. Not long after this appointment, it was believed by his fellow-members that he was qualified for the weighty duties of eldership,—a position for which, by his gifts, he was peculiarly fitted.

In the year 1851, he was joined in marriage with Rebecca Biddle of Philadelphia. His union with this our late valued friend, proved in various ways conducive to his comfort; her own religious experience and affectionate care tending largely to soothe his trials as years advanced and the infirmities of the body multiplied. Having been herself placed in the station of elder, they were mutually helpful in discharging the weighty duties which from time to time devolved upon them. The health of Rebecca B. Cope had been long frail and, after the decease of her beloved companion, it rapidly declined until the 18th of 2nd month, 1876, when, as we reverently believe, she peacefully entered into her everlasting rest.

In the character of Alfred Cope, a striking feature, indeed it might be said to be, the secret of his life of unobtrusive worth and humble piety, was that sense of personal accountability under which he seemed to live and move. Hence it was that he regarded the outward substance with which he had been largely intrusted, as but a loan from the Great Giver, and himself but a steward who must ere long "give an account." Never possessing robust health, his thoughts had been early turned to the uncertainty of life; and the value of time and the importance of its right employment, came to be strongly impressed upon him. In this respect he afforded a remarkable instance of what may be accom-

plished, even under the depressing influence of physical discomfort and suffering.

Being endowed with intellectual abilities of no common order, strengthened by culture and sanctified by Divine Grace, much of the confinement within doors to which long continued ill health subjected him, was devoted to reading. Nor was this for self-gratification or recreation merely, but wishing to promote the dissemination of sound views on religious and scientific subjects, his leisure was largely occupied in critically reviewing works of acknowledged merit, and as these proved satisfactory to himself, he made valuable donations to various libraries, chiefly connected with schools for which he was interested.

Strong as were his own convictions of truth and duty, and faithfully as he lived up to them, he possessed a Christian charity which could appreciate and was ever ready to own the good in all. He was quick to discern tendencies in others which he feared might lead them astray, and it was at times laid upon him to administer the word of caution or Christian counsel.

His natural disposition led him to shrink from "the praise of men," but he did love and earnestly sought after "the praise of God;" and when inclination and a clear sense of duty came in conflict, he promptly responded to the latter, though often greatly in the cross. Habitually cheerful yet grave, his conversation might be truly said to have been "seasoned with Grace;" his lively feelings, his cultivated intellect, together with a large fund of narrative and anecdote, made him an agreeable and profitable companion, yet there was strikingly observable in his intercourse with others, that careful guard over the lips which should ever mark the Christian; minding the injunction of his Divine Master—"What I say unto you I say unto all, watch!" Preserved as he thus was from much which tends to disturb that inner "life which is hid with Christ in God," our beloved friend was kept habitually in a serious and weighty frame of mind, whereby he was fitted in no common degree to deal with cases of difficulty, while that discretion and foresight which were notable qualities in his character, made him a safe counsellor.

Grateful for the comforts with which he was surrounded, his heart went forth in lively sympathy with the wants and sufferings of his fellow men. This sympathy was of that active and practical nature which promptly seeks to supply the help or the remedy; and his numerous benefactions, whether public or private, were marked not only with liberality but with an enlightened forethought which was often remarkable.

Strongly attached to the views of Friends by conviction, he observed with sorrow and anxiety any attempt to unsettle them, believing they have their foundation in the principles which underlie Christianity itself; and that our religious Society can only fully occupy the important place which the great Head of the Church designed for it, by continuing faithfully to maintain them before the world.

As the complication of diseases under which he had long suffered gradually but surely impaired the vital powers, it was evident to those about him that the "inward man was being renewed day by day." The trials of life which had been meted out to him in no small

asure, had wrought much "patience, and
tience experience, and experience hope,"
which "maketh not ashamed." A quiet se-
livity was now the prevailing covering of
his spirit, betokening a soul at peace with
God and man. On one occasion he briefly
expressed to a friend—"I feel nothing in my
eye." After a renewed attack of disease,
followed by great prostration, our dear friend
is confined to his bed for a few days, and
on the 11th of 12th month, 1875, he peace-
fully breathed his last, in the 70th year of his
life. "Blessed are the dead which die in the
Lord from henceforth, yea saith the Spirit,
that they may rest from their labors; and
their works do follow them."

For "The Friend."

Attending Meetings.

"Friends in the beginning, if they had
health and liberty, were not easily diverted
from paying their tribute of worship to the
mighty on week-days as well as First-days;
but after a while, when outward sufferings
ceased, life and zeal decaying, ease and the
spirit of the world took place with many, and
as it became customary for one or two out
of a family to attend meetings, and to leave
their children much at home. Parents also,
worldly concerns were in the way, could
neglect their week-day meetings sometimes;
it was willing to hold the name, and plead
excuse because of a busy time, or the like;
I believe that such a departure from primi-
tive integrity ever did, and ever will occasion
withering from the life of true religion."

The foregoing is extracted from Jno. Church-
man's Journal. It is to be feared that there
is some of the present day, who have too
loosely turned aside from attending their mid-
week meetings, and allow the things of time
to come in between them and the assembling
of themselves together for the purpose of
worshipping Almighty God. Would that they
could be endued with a little of that zeal that
characterized our worthy forefathers in the
Truth, who not only left their outward con-
cerns, but endured many hardships—some
travelling many miles over difficult roads, others
ascending through streams of water in cold
weather, while others were cruelly treated,—
that they might meet together for solemn
worship. And if a living concern is felt on
the part of parents to perform this solemn duty,
I believe they will not feel easy to leave their
children at home on such occasions, but will
take them to meeting, explaining the object
of thus assembling together, as ability is af-
forded them. Example speaks louder than
words, and if children see their parents are
zealous or indifferent about attending meet-
ings, and treat the subject as a matter of little
consequence; that they can go, or remain at
home according to convenience; instead of
showing them that it is a most solemn duty
well as great privilege thus to meet to-
gether, how can it be expected that there
will be a succession of living and true mem-
bers in the Society. Will they not feel that
religion is but a name, and betake themselves
to some of the many temptations surrounding
them,—the acquisition of wealth, the applause
of men, or other gratifications of a worldly
nature? May all, both older and younger,
prize the privilege Friends of to-day
enjoy as compared with that of Friends in
the rise of Society. Meetings may be small
many places, yet the encouraging language

still continues the same, "That where two or
three are gathered together in my name, there
am I in the midst of them."

For "The Friend."

Incidents and Reflections.—No. 15.

There has been in the Christian world much
conflict of opinion on the subject of the pro-
per maintenance of those who are called to
labor as ministers of the Gospel. The Scrip-
tures declare that a laborer is worthy of his
hire; and speak of those who sow spiritual
things partaking of carnal things; yet the
command of our Saviour to those whom He
sent forth to preach was imperative, "Freely
ye have received, freely give."

John Richardson remarks that the outward
maintenance of ministers, so far as depends
on their hearers, is shown by Christ, who
directed that where they were received, they
should eat such things as were set before
them. When the disciples returned from
their mission, and were asked whether they
had lacked anything, they answered "noth-
ing." The effect of their ministry among
their hearers had been such, that those who
had been convinced by their doctrine, and
turned to the effectual power of Christ in
themselves, had from thence known their
hearts so opened, as to administer to all their
immediate necessities; and these, thus sent,
had only eaten such things as were set before
them, as they were appointed.

In a conversation on this subject, it was
urged, "that if the maintenance of the priests
was to be wholly withdrawn, or left to the
freedom and generosity of the people, many
of them would want and come to poverty,
and be forced to labor with their hands,
which would distract or at least impede, their
studies." To this, John Richardson replied,
"That with such ministers as they were, this
might be the case; but if all would come truly
and rightly to wait on the great Teacher, the
Anointing in themselves, it would greatly
tend to the advantage of Christendom; for
the Almighty, who by his good Spirit is alone
able to raise up and qualify Gospel ministers,
as He knows the wants of his people and their
faith and trust in Him, would no doubt raise
up from among them faithful ministers; such,
who being humble, meek and low in heart,
like Him of whom they had learned, would
be content to live in moderation on a little,
and to labor in their respective callings, like
the Apostle Paul, that great minister of the
Gentiles, working with their hands that their
ministry might not be chargeable, such as
fishermen, collectors of customs, &c., whose
ministry being not their own, but received
immediately from the great Shepherd of the
sheep, would not require much time and study
to pen down, but coming from the Spirit of
truth immediately moving upon the minis-
ter's heart, would be more effectual to reach
the Witness of truth in the hearts of their
hearers than all the labored discourses of the
most subtle priest, though the produce of
much pains and study. Neither have I found
in all my travels from any observation I have
made, that ever the faithful ministers of
Christ became any great burden or charge to
the churches; for I have seen the Divine
Providence attend the Lord's faithful ser-
vants, who thereby have been enabled to
order their affairs with discretion, so as to
want little."

In Thomas Story's journal, under date of

1699, it is mentioned that a law had been
passed in Massachusetts requiring each town-
ship in the province to employ a minister,
who should be paid by the inhabitants, &c.
He says, "Pursuant to this law, the towns
who had no ministers, made choice of some by
votes of the inhabitants; yet others, looking
upon it as an imposition upon them, contrary
to their religious liberty in calling, or not
calling, any minister, eluded the force of it,
by nominating several of our ministering
Friends, and returning their names as the
choice of the people. They were answered,
"These are not ministers in the intent of the
law." It was replied, "They were the people's
choice, and such as the law required; they
were able, learned and orthodox ministers of
the Gospel, and would appear to be so upon
proper examination; and they could not re-
turn any other." The Friends thus chosen
by the people, did sometimes visit them, and
had meetings among them, as they found
liberty in the Truth, and were very accepta-
ble in that service; which they did freely, with-
out any view to maintenance or filthy lucre."

T. Story relates a conversation with one
who was not a member of the Society of
Friends, and who had made this remark, "No
doubt but you have a good intent in what
you do, in travelling so in the world; but you
must have some good considerations for it, as
our priests have gold and silver;" and men-
tioned about 300 guineas for that time. He
says, "I told him, 'No; we whom God had
raised up, and qualified in some degree, in
this age, to that service, were advanced above
any such mean, base, and mercenary con-
siderations, as to take anything from men for
this labor; which we bestow freely in the
love of God, and by his commandment, for
the common good of men.' "Why," said he,
"the apostles were but poor men, and wanted
necessaries, and must have received of the
people, or wanted." "True," said I, "but then
they say, Having food and raiment, let us be
therewith content; and where that is really
the case, such as are poor among us we would
not begrudge them that; but it is very seldom,
or never so among us; but rather, with Paul,
we can generally say, These hands of mine
have ministered to my necessities, having no
desire that any such thing should be done
unto us; and we generally have sufficient of
our own."

"Then, said he, 'But in case your friends,
after some very good sermon, that pleaseth a
great congregation well and generally, should
offer you a purse of 200 or 300 guineas, would
not you accept it, being freely given?'"

"I replied, 'No; I hope it would be no
temptation, if so it were; which never can
be as long as they and I abide in the Truth
we profess, either to give or receive that way.
I should rather be grievously troubled to see so
great a degeneracy, as to subject them to so
great an evil.'"

In the year 1719, Thomas Story, in company
with some other Friends, called on the Arch-
bishop of Canterbury and other dignitaries,
to solicit their favor in an application to Par-
liament for an amended form of affirmation
to be used by Friends as a substitute for an
oath. The maintenance of ministers coming
up in their conversation, Thomas thus ex-
plained to him the practice of our Society.

"When at any time we are sitting together
in silence, (as we usually do) waiting upon
the Almighty for the influence of his Holy

Spirit, that we may be comforted, refreshed and edified thereby; if any one hath his understanding enlightened thereby into any edifying matter, and moved and enabled to speak, the rest have proper qualifications, by the same Spirit, to discern and judge, both of the soundness of his speech and matter, and also of the spirit and fountain from which his ministry doth arise; and if from the Holy Spirit of Christ, who is Truth, it hath acceptance with the congregation, and though but in a few words, it is comfortable and edifying; for as the palate tasteth meats, so the ear, or discerning faculties of an illuminated, sanctified mind, distinguisheth words, and the fountain from which they spring. And such a person thus appearing, may so appear at another time, and be enlarged in word and in power, and so on gradually, till he hath given proof of his ministry to his friends and brethren, among whom, in the neighborhood, he hath been exercised therein, until he becomes a workman in the Gospel, in some good degree fitted for the service; and then it may so happen, as often it doth, that this person is moved or called by the Word of God, to travel in this service in some other places remote from his habitation, which will take him off from his business whereby he maintains himself, his wife and family; and suppose him to be a cobbler of old shoes, a patcher or translator of old clothes, or the meanest mechanic that can be named, poor, and not able to fit himself with common necessaries for his journey, he wanteth a horse, (though some only walk,) clothing and the like; in such a case the Friends of the meeting to which he belongs provide all such things and furnish him. And if at that service he is so long from home, as that his horse fails, and his clothes wear out, and necessaries are wanting unto him, then the Friends where he travels, where his service is acceptable, take care to furnish him till he returns to his family and business. And in the time of his absence from them, some Friend or Friends of the neighborhood visit his family, advise in his business, and charitably promote it till he return. But as to any other temporal advantages, or selfish motive of reward for such service, there is no such thing among us: For if our ministers had the least view that way, and insisted upon it, or our people were willing to gratify that desire, we should then conclude we were gone off from the true foundation of Christ and his apostles, and become apostates. But though our principles allow such assistance to our ministers as I have related; yet I have not known any instance (save one) of any such help: for, by the good providence of God, our ministers have generally sufficient of their own to support the charge of their travels in that service, and are unwilling that the gospel should be chargeable to any; only as their ministry makes way where they come, their company is acceptable to their friends, who afford them to eat and drink and lodge with them for a night or two, more or less, as there may be occasion."

"*Farming Under the Sea.*"—The fact is not generally known that within three hours' ride of Boston a large and profitable business has been carried on ever since 1849, along the sea shore, which is nothing more or less than "farming under the sea." Everywhere upon the coast of Eastern New England may be

found, about ten feet below water-mark, the lichen known as carrageen—the "Irish moss" of commerce. It may be torn from the sunken rocks anywhere, and yet the little seaport of Scituate is almost the only place in the country where it is gathered and cured. This village is the great centre of the moss business in the country, and the entire Union draws its supplies from those beaches. Long racks are used in tilling this marine farm, and it does not take long to fill the many dories that await the lichen, torn from its salty, rocky bed. The husbands and fathers gather the moss from the sea, and the wives and daughters prepare it for market. Soak it in water, and it will melt away to jelly. Boil it with milk, and a delicious white and creamy blanc-mange is the result. The annual product is from ten to fifteen thousand barrels, and it brings \$50,000 into town, which sum is shared by some one hundred and fifty families. Its consumption in the manufacture of lager beer is very large, and the entire beer interest in the country draws its supplies from Scituate beaches, as the importation from Ireland has almost ceased. An article of food is made from it called "Sea Moss Farina."

For "The Friend"

Some Queries concerning Christ, &c.

Believing that many important truths are very imperfectly understood by many professing the name of Friends, I feel a particular desire to see published in "The Friend," *Some Queries Concerning Christ and His Appearances, &c., &c.*, contained in Isaac Pennington's works.

If the editors of "The Friend" would comply with this proposition to publish all contained in the above mentioned pages, it would be relieving to the mind of their friend,

I. W.

Iowa.

Query 1. Whether there was not a necessity of Christ's taking upon him our flesh, for the redemption of those that had sinned, and the satisfaction of the justice offended?

Query 2. Whether the Father did not accordingly prepare a body for him, to do his will in all things in; and particularly to offer up to him the acceptable sacrifice for the sins of the whole world?

Query 3. Whether it was not necessary, in this respect also, that Christ should take upon him our flesh, that he might have experience of our temptations and infirmities, and become a merciful and faithful high-priest and intercessor for us?

Query 4. Wherein lay the value and worth of his sacrifice, and of all he did? Did it lie chiefly in the thing done, or in the life wherein he did it, in that he did it in the pure faith and obedience to the Father? He became obedient unto death, even the death of the cross; and he, through the eternal Spirit, offered himself without spot to God.

Query 5. What was he, for whom the Father prepared a body, and who took it up to do the will, and did the will in it? Was he not the arm of God, the power of God, the Saviour and salvation of God, the Jesus and Christ of God?

Query 6. To whom do the names and titles Jesus and Christ chiefly and in the first place belong? Do they belong to the body which was taken by him, or to him who took the body? The body hath its nature and properties, and the eternal Word, or Son of God (the

pure, spotless Lamb, the fountain of innocency, its nature and properties. Now the query is, which was the appointed Saviour of the Father? Which was the anointed of the Father, chiefly, and in the first place? Whether the body prepared, or he for whom the body was prepared, to do the will, and offer up the acceptable sacrifice in?

Query 7. Which is Christ's flesh and blood which we are to partake of, whereof we are to be formed, which we are to eat and drink, and which is meat and drink indeed, nourishing to life everlasting? Is it the flesh and blood of the body, which was prepared flesh and taken by him, wherein he tabernacled, and appeared? Or is it the flesh and blood of him who took, tabernacled, and appeared in the body? For that which he took upon him was our garment, even the flesh and blood of our nature, which is of an earthly, perishing nature; but he is of an eternal nature, and his flesh and blood and bones are of his nature. Now as the life and nature which he begotten in his is spiritual, so that which feeds, and is the nourishment of it, must needs be of a spiritual and eternal nature.

Query 8. What is the bread which came down from heaven? Is not the bread as the flesh all one? Outwardly-visible flesh and blood was not in heaven, nor came down from heaven; but the bread of life did come down from heaven, which the heavenly birth feeds on and lives by. For that which redeems that which is Jesus (the Saviour), came down from heaven, and took upon him a body of flesh here on earth, in which he manifested himself as King, Priest, and Prophet, and as the work appointed him by the Father. Job xvii. 1, &c.

Query 9. What was that which saved people outwardly from their outward infirmities and diseases, while Christ was on earth, that body? Was it the body, or the life, power, and Spirit of the Father within the body, and manifest through the body? At can any thing less save inwardly? Now that which saves, that which hath the virtue and power of salvation in it,—that the eye-faith is to fix upon, and not to stick or stop, that through which the life works it.

Query 10. Who was he that humbled himself, that made himself of no reputation, that took upon him the form of a servant, and was made in the likeness of men, and found fashion, or habit, as a man? Was it the body of flesh, or was it he that was glorified of the Father before the world was? And who to have the honor and exaltation? At who name is every knee to bow? Is not the reward to him who laid down his glory to take upon him the body of flesh, and appear in it, that he might honor, glorify, and fulfil the will of his Father?

Query 11. Are not the children and he one? Are not he and they of the same stock ("Both he that sanctifieth, and they who are sanctified, are all of one," Heb. ii. 11.) Is not from thence that he is not ashamed to call them brethren, even because he finds the nature, Spirit, and life of his Father in them. What makes a child to God? Is it not to be begotten of the Father, and born of the Spirit? And that which is born of the Spirit is Spirit. Now mark: have we the denomination and relation with Christ from that which is spiritual, and hath Christ himself the name from or because of the body of flesh? Nay, nay; the name Christ was from the

pointing which was in the body, which ran to and filled the vessel. It is true, the body, I and by the union, partakes with him of his name; but the name belongs chiefly and most properly to the treasure in the vessel.

Query 12. What is it to put on Christ, or that is the putting on of Christ? Is it the putting on of that body of flesh? Or the putting on a belief concerning him, according to that is said of him in scripture? Or is it not after a putting on of his nature, his seed, his spirit, his life, wherewith the souls of those that are born from above are clothed, as the body is with a garment?

Query 13. Who was it that said, I am the resurrection and the life? Was it not Christ? and what did he say it concerning? Did he say it concerning the body, or did he say it concerning the power and virtue of the Father which was in the body? Did he not say it concerning that which had the power of life in it before he took up the body, and had also the power of life while it was in the body? and, could raise up not only other bodies, but that also after it had laid it down? For after it was laid in the grave, he could raise up, and take it on again, as well as he did at first, when it was first prepared. John x. 7, 18.

(To be continued.)

Yellow Fever.—From a volume compiled by order of the New York Health Board several years ago the following facts relating to the history of yellow fever in Northern cities are gathered:

The first case of yellow fever which occurred in this country and of which any official report exists happened in New York City in 1668. In September, 1702, 502 deaths from yellow fever occurred in New York. In 1713 the fever killed 219 persons. New York was again visited severely by the fever in 1795, when 730 deaths occurred. Three years hereafter, from August to November, 2080 persons died of the fever. The city was not visited severely again by yellow fever until 1803, when, according to the statistics, 6700 persons perished in the epidemic of that year. In 1822 230 deaths occurred from the fever, and since then but few fatal cases and no epidemics have occurred in any year. Philadelphia was first visited by yellow fever in 1695. In 1793, 4041 persons died of the fever or malignant fever. The epidemic of 1797-8 carried off 5300 lives, and in 1805, 400 died of the fever in Philadelphia. Mobile received her first visitation from the fever in 1705. The fever appeared for the first time in New Orleans in 1769. The years and mortality of the great epidemics in that city are as follows: 1819, 2190 deaths; 1847, 2259 deaths; 1853, 7970 deaths; 1854, 2423 deaths; 1855, 2670 deaths; 1858, 3889 deaths; 1867, 1093 deaths. The mortality this year on account of the yellow fever will probably exceed any year since 1867.

At the Surgeon-General's Office it is claimed that yellow fever is a disease produced by an invisible poison, capable of self-multiplication outside of the human organism. This something—the germ or miasm which has hitherto eluded microscopical demonstration—is a product of the tropics. The fever is not communicated from the sick to the well, the sick being dangerous only as possible carriers of the poison germ or miasm. All persons from an infected district may be con-

sidered harmless when the period of incubation, which lasts from two to six days, has passed. Yellow fever has never in an epidemic form reached an elevation of 500 feet above the sea level.—*Phila. Inquirer.*

Memoranda of Meetings.

5th mo. 7th, 1843. Samuel Bettle gave an impressive sermon; spoke of the woman who asked for her two sons, disciples of Jesus, that they might sit the one on his right and the other on his left, in his kingdom. He queried if they were able to drink of his cup and to be baptized with his baptism, and when they answered that they were able, He told them they might drink of his cup, and be baptized with his baptism, but to sit on his right and left in his kingdom was not his to give, but it should be given them for whom it was prepared by his Father. If I comprehended aright, S. considered his cup a cup of suffering, his baptism the baptism of fire, the baptism of Calvary, for after He had submitted to the symbol of purification (water baptism) He said He had baptism to be baptized with and He was straitened until it be accomplished, and this fellowship in suffering they might in degree partake of. Christ was an example. He sought solitary places, and remained whole nights in prayer. He was a man of sorrows and acquainted with grief; had not whereon to lay his head, although the Maker of the world; and millions since who are now surrounding the throne have found the way to the Kingdom of Heaven one of baptism into suffering: but with it all, now and then rich consolation and communion with the Saviour have been afforded, and are afforded in the Christian's journey, verifying the declaration, that one hour in His courts is better than a thousand elsewhere. The only ground of hope for forgiveness for past sins, is the propitiatory sacrifice of Jesus for the sins of the whole world. He has done so much for us that nothing short of the power of God can make us love Him as we ought. A word of warning was held out, that inasmuch as time was rapidly passing away, it was indeed needful to know regeneration to be going on within our hearts, and to be obedient to known duty, or mercy would be succeeded by justice, and great would be our condemnation.

Thomas Kite afterwards brought forward the circumstance of those who were hired, called at different hours of the day, and each receiving the same wages, a penny. We were sure each one must have his day of visitation, and it was a serious consideration that his Spirit would not always strive with man. There was encouragement for all, even to the eleventh hour of the day, to hope for his salvation, as all were to be visited. Some may have been called early, and known in degree the strivings of the Spirit with them: there was encouragement for them if they had back-slidden, to lay hold of the offers of a long-suffering God at a later period of their day. He thought one or more present might regard it as a token of favor, that they were now reminded of a state they had retrograded from.

Mary Kite supplicated as though some among us felt humbled as in the dust: she asked of the Almighty to work for us, and to create clean hearts and renew a right spirit within us. 5th mo. 18th. T. Kite was impressed with

the passage, Examine yourselves, try yourselves: know ye not that Jesus Christ is in you, except ye be reprobates: he was willing to believe, through mercy, there were none present, reprobates, or those with whom the Holy Spirit had ceased to strive. It was important to keep the faith once delivered to the saints. Christ had said in the prepared body, If I be lifted up I will draw all men after me. He was lifted up on the cross, and ascended up on high and gave gifts unto men. Our doctrines and testimonies he believed would never be suffered to fall to the ground; if we forsake them others would be brought in, as from the highways and hedges.

NINTH MONTH 7, 1878.

SUMMARY OF EVENTS.

UNITED STATES.—Governor Hartman has issued a proclamation announcing the creation of the new county of Lackawanna.

A dispatch from Washington states, that the report of the Sioux Indian Commission reviews at much length the working of the agencies, and the condition of the Sioux in Dakota. It states that the Indians, when left to their own judgment in the matter of removal, admit that with the occupancy of their country by settlers, and the opening of wagon and railroads, there is no other alternative, but to accept a suitable location in some distant part of the West, where they could remain under protection of the Government. The location of the agency for Spotted Tail, is fixed on the South Fork of the White river, at the mouth of the Rose; and that for Red Cloud, on the Wounded Knee, at Pine Ridge, about 170 miles from the Missouri. The Commission state they would have preferred to have established the agencies nearer the river, as more economical for the transportation of supplies, but after a careful inquiry respecting the character of the country contiguous to the river, it was found unfavorable on account of the absence of arable land, good water, and lumber in sufficient quantity to meet the purposes of the agencies and Indians. The commissioners congratulate themselves upon a peaceful solution of this part of the Sioux question, and anticipate their action will be permanent in its results.

The railroad companies who have been threatening to stop carrying the mails, on the ground that they are inadequately compensated, have notified the Post-office Department at Washington, that they intend pressing before Congress a claim for proper compensation. This trouble between the railroads and Post-office Department, grows out of the fact, that the rates of the agencies and Indians. The commissioners congratulate themselves upon a peaceful solution of this part of the Sioux question, and anticipate their action will be permanent in its results.

A detailed statement of the internal revenue receipts for 7th mo. last, shows that the aggregate increase over the receipts for 7th mo. 1877, was \$1,215,633. The increase of receipts for spirits of all kinds \$321,501; for tobacco \$709,917, and for fermented liquors \$187,874. This exhibit has been more than overcome by the heavy decrease during the 8th month, and the aggregate figures for 7th and 8th months of this year, as compared with the same period last year, will probably show a decline of nearly half a million of dollars. Should this decrease continue at an approximate rate, the receipts from internal revenue must fall below the estimates to an extent embarrassing to the country.

The religious population of the world is thus stated: Protestants, 109,000,000; Roman Catholic, 200,000,000; Greek Church, 85,000,000; Mohammedans, 175,000,000; Jews, 6,000,000; Asiatic religions, 648,000,000; other religions, 242,000,000.

On the 31st inst., the last day which the old Bankrupt Law was in force, there were 394 petitions in bankruptcy filed in New York, 69 in Philadelphia, 375 in Chicago, 195 in St. Louis, and 143 in Pittsburg.

Distressing accounts continue to be received from those sections of our country visited by the yellow fever. On the 1st inst, there were in New Orleans 260 new

Some Queries concerning Christ, &c.

(Continued from page 31.)

Query 14. If I, or any one else, have felt he saving arm of the Lord revealed in us; if we have felt a measure of the same life, power, and anointing revealed in our vessels as was revealed in his, is it not of the same nature? Is it not the same thing? Is not Christ the seed? And is not this seed sown in the heart? Now if this seed spring and grow up in me into a spiritual shape and form (though it be but of a babe), is not Christ then formed in me? If I be ingrafted into, and grow up in it, am I not ingrafted into Christ (the true vine-tree, and true vine), and do I not grow up in him? And is not this the same Christ that took upon him the body of flesh, and offered it without the gates of Jerusalem? Is there any more than one, or is there any other than he? Is Christ divided? Is there one Christ within, and another without? He that knoweth the least measure of the thing, doth he not know the thing in some measure? And he that is in the least measure of the thing, is he not in the thing? He that knoweth the Son, doth he not know the Father? And he that knoweth the Spirit, doth he not also know the Son? And he that is in the Spirit, is he not in the Son? For they are one nature and being. A man may have notions of the one, and not of the other; but their nature, their being, their life, their virtue, is inseparable. And as Christ said concerning the Father,—that he was in the Father, and the Father in him; and that he that saw him saw the Father; so may it not be as truly affirmed (in the true sense and understanding of life) concerning Christ, that he is in the Spirit, and the Spirit in him; and that he that seeth the Spirit seeth him; and he that seeth him seeth the Spirit? For he is the Spirit, according to that scripture, 2 Cor. iii. 17. "Now the Lord is that Spirit; and where the Spirit of the Lord is, there is liberty." What do? Why, to see and read within the veil, and to behold the glory of the Lord, which is revealed there; which they whom the veil was over formerly, or whom the veil is over now, have not liberty to do. Here is confusion and impossibility to man's wisdom; that Christ should be all one with the Spirit; that Christ should send the Spirit in his name, and also himself be the Spirit whom he sends. (This is a hard saying,

who can bear it?) And yet this confusion to man is God's wisdom, and precious in their eye who are taught of him.

For it is one and the same Christ that was signified in types and shadows under the law, revealed in the fulness of time in that prepared body, and afterwards in Spirit. Now after he was ascended, he received the Spirit so as he had not received him before; and so having received the promise of the Father, he so dispensed the Spirit to his brethren and disciples, as it had not been dispensed before. Indeed he comforted and refreshed his people under the law by his Holy Spirit, which was their instructor then, Neh. ix. 20, and taught them the things of God under types, shadows, and resemblances. When he came in the body, he chose out disciples, whom he taught the things of the kingdom, and was a refresher and comforter of them therein. And was not this another comforter than those had under the law? Had the Jews before ever any such comforter, as Christ was to his disciples in his bodily presence? Now when he ascends, he receives the Spirit from the Father, as the Father had promised him; and having so received him, he sends him to them for their comforter. And may not this justly be termed another comforter than Christ was in his bodily presence? And yet is it not also the same Spirit of life, that had been with them in that body? So that it is another in the way of administration, but the same in substance; even the Word which was from the beginning, the Spirit which was from everlasting; and to everlasting there is no other.

Now as the Father sent the Son, and yet was with and in the Son, so the Son sending the Spirit, he also is with and in the Spirit. And as it is the Father's will, that the same honor be given to the Son as is given to him; so it is the Son's pleasure, that the same honor be given to his Spirit, as is given to him. Yea, as he that will worship the Father, must worship the Son, must come to him in the Son, must appear before him in the Son, must reverence and kiss the Son; so he that will come to Christ, will worship him, must come to him in the Spirit, must bow to him in the Spirit. Yea, he that will know and worship Christ in his fulness (in the majesty of his glory, dominion, and power), must learn to bow at the lowest appearance of his light and Spirit, even at the very feet of Jesus; for that is the lowest part of the body.

Query 15. Did not the bridegroom go away, as to his appearance in flesh, that he might come again in Spirit? Did not the apostles, who knew his appearance in flesh, and his tabernacling among them, know also afterwards his appearance in Spirit, and his tabernacling in them? And were not their hearts filled with joy unspeakable, and full of glory, because of the presence of the bridegroom? Did they not know the man child born and brought forth in Spirit, as really as ever he was born and brought forth in flesh? Yea, did they

not travail and help to bring him forth? Were there not many in that day, who could say concerning the spiritual and inward appearance of the bridegroom: We know that the Son of God, the eternal life, the pure power and wisdom of the Father is come? Did they not receive from him the understanding which he gives in and by his coming? Yea, were they not in him that is true, even in Jesus Christ the Son, who is the true God, and life eternal? 1 John v. 20. Had they not received the kingdom which could not be shaken? And did they never see and converse with the King in the kingdom? Nay, did not he walk in them, and they in him, and be sup with them, and they with him, in the kingdom? Oh that ye could read in Spirit! Oh that ye did receive that measure of life from Christ, which the Father hath allotted you, that ye might read therein! but the letter, read out of the Spirit, darkeneth and killeth.

Query 16. What is the laver of regeneration, or the water wherewith the soul is washed, and wherewith a man is born again? Is it outward or inward? Is it the water which ran out of the side of the natural body, when it was pierced with a spear? Or the water which springs from the fountain of life, the water which floweth from the Spirit? What are the waters which corrupt, mud, and defile the mind? Are they outward waters? And what are the waters which purify and cleanse it? Can they be of a lower nature than spiritual? What are the waters which answer the thirst of the soul after life, after purity, after salvation; that refresh and glad the heart of him that drinketh thereof? Are they not from the pure river, clear as crystal, which runs from the throne? And if the water which cleanseth and nourisheth the soul be spiritual; can the flesh and blood (which falleth not short of the water in its virtues, properties, and operations) be inferior to it in nature and kind?

Query 17. Can outward blood cleanse the conscience? Ye that are spiritual consider. Can outward water wash the soul clean? Ye that have ever felt the blood of sprinkling from the Lord upon your consciences, and your consciences cleansed thereby; did ye ever feel it to be outward? It is one thing what a man apprehends (in the way of notion) from the letter concerning the things of God, and another thing what a man feels in Spirit.

Query 18. Seeing the apostle speaks of purifying the heavenly things themselves, Heb. ix. 23, it would seriously be inquired into, and the Lord waited on, to know what nature these sacrifices must be of, which cleanse the heavenly things? Whether they must not of necessity be heavenly? If so, then whether was it the flesh and blood of the veil, or the flesh and blood within the veil? Whether was it the flesh and blood of the outward, earthly nature, or the flesh and blood of the inward, spiritual nature? Whether

was it the flesh and blood which Christ took of the first Adam's nature, or the flesh and blood of the second Adam's nature?

A Trip to Muncy, by J. S. L.

Among our many pleasant travelling experiences, during nearly twenty years past, has been an annual trip to Muncy, on the West Branch of the Susquehanna, and a visit of a few weeks in autumn, among dear friends in that delightful valley. It is a privilege we truly enjoy, to leave our low-land heats and common-place surroundings, for cool retreats in the highlands, to rusticate among scenes as varied and diversified as they are attractive and admirable.

These several approaches to Muncy are pleasant, each in its peculiar way, and in many respects diverse from each other. That traversed, in olden time, by the worthy residents of the then remote region toward which we are wending, we have tried on more than one occasion, and though upwards of five days were spent in the slow travel of thirty miles a day, we found it, with agreeable companions, most interesting and instructive. Perhaps the venerable fathers and mothers of the colony that was ensconced in the lone valley of Muncy, often felt their faith tried by this toilsome journey over mountain after mountain, performed at inclement seasons, and upon roads worn by torrents or obstructed by snow, or the more annoying mud of the heavy clay valleys. Four or five times a year, did these devoted ones pass through the dark forests and look upon many a dreary scene, before they emerged upon the smiling slopes of the fertile valley of the southern land.

The old route from Muncy to Philadelphia lay through the ancient village of Catawissa, on the North Branch of the Susquehanna, and Roaring Creek Valley, where once were many Friends, who were early tempted to remove to Canada; thence by a present town of Ashland, then innocent of coal-beds and piles of slate, over the Broad Mountain to the now busy hives of Port Carbon and Pottsville, and down the long valley of the Schuylkill, following its general windings through Port Clinton, where they left the coal mountains, to Maiden Creek, where were many Friends, and where our travellers were doubtless often made welcome by the Starrs, the Lightfoots, and the Parvins, from whose families some of the members of Muncy were having been drawn. Onward, now descending across the fertile valley of Berks to Exeter, the next settlement of Friends, and by Pottstown and Norristown, they entered Philadelphia by the well paved Perkiomen turnpike and the Ridge road, now the Wissahickon avenue. A long distasteful upon this route was the turnpike road in Pennsylvania, boasted the most perfect roads and bridges in the Union, and upon it the United States mail was carried in a lumbering stage coach, to the tender mercies of which our Friends sometimes entrusted themselves, for the entire distance, or later to Pottsville, when the railroad had penetrated thus far towards their homes. In yet earlier days, ere roads had been made entirely serviceable, many Friends performed the journey on horseback, and even the grandmothers of the living did not hesitate, prompted by the calls of duty or affection, to ride the 150 miles that

separated them from their beloved Philadelphia.

An illustration of trials of those days appears in the journal of James Kiteley, one of the pioneers of Muncy Valley, an excellent man and the preceptor of some of the older residents, who remember him with reverent interest.

On 1795, 10th mo. 26th. Set out on foot for Philadelphia, and was extremely tired by the time I reached it. Attended Quarterly Meeting. On my return put up at a German tavern near the iron works, [Potts', now Pottsville perhaps], on this side Schuylkill. The family appeared an abandoned, wretched set of creatures. I spent the evening in pain and distress."

How changed the scene, and what improvements have been brought about by the activities of two generations! Our Friends plodded onward, innocent of all knowledge of the treasures of iron and coal that lay hidden beneath them, the development of which has transformed the face of nature, and given to man the powers of the fabled Titans. Upon this theme we need not dilate—a theme familiar to all—but will place ourselves upon one of the railway trains that will bear us to Muncy in as many hours as our friends were days upon the journey.

The route pursued by the North Pennsylvania Railroad to Bethlehem, and by the Lehigh and Susquehanna and Catawissa roads, passes over the grassy fields of Montgomery and Bucks counties, and the iron and zinc districts of Lehigh county, and the exceedingly picturesque coal region west and south-west of Mauch Chunk. The bright green of the quiet grassy slopes, and the deep red rocks of the secondary red sandstone, which gives the peculiar character to the soil, attract our attention in the earlier part of our trip, while the many extended ridges or conical eminences formed by the upheaval of trap-rocks are striking features in the landscape.

To one of geological proclivities this route is exceedingly interesting, and let me here remark, that those who do not observe the geology of the region they traverse do not rightly perceive the aspects of the country, and cannot comprehend the history of its origin, or understand the processes by which the surface was shaped, nor the character of the rocks that underlie or compose its soil. The traveller who has been trained from childhood in the school of observation, and has not permitted himself to pass over any peculiarity or novelty without enquiry into its cause or origin, will ask, why does this district so abound with red clay and a tough retentive soil adapted to grazing, rather than to the growth of cereals? He will observe that the market wagons of the Bucks and Montgomery county farmers bear with them evidences of the nature of the soil they traverse, and can thus be readily distinguished from similar vehicles reaching the city from the adjacent counties of Delaware and Chester, or New Jersey. No doubt, if a citizen of Philadelphia, he will have observed with his satisfaction, the discolored water flowing from his hydrant, and bearing a strong resemblance to the mud which adorns the wagons of his Bucks county friends, a coloring which heavy rains in that district has derived from the readily dissolved clays, and which has been borne to the city reservoirs.

It is deplorable to observe how many pass

through life indifferent to the common aspects of nature, careless whether the present ever had a past, and unconscious that they are looking upon scenes whose origin may be found in operations that were in active play far back in the history of our planet, or even at its creation. Few, I apprehend, who traverse this interesting part of our State, pause to regard the ridges and conical eminences above referred to, as evidences of early overflows of lava, identical with much of that which is still thrown up from some living or active volcanoes. Many of these ridges are not apparently lava or dykes of basalt, but are simply the red sand-stone rock altered or baked by the core of basalt within it. The Gwynedd tunnel has been cut through one of these dykes. These ridges have been baked to various degrees of hardness, some merely rendered tough and the surrounding soil made difficult to drain from the surface, and forming extensive swamps, or inclined to form cloaks when plowed and partially dried in the sun, others have been hardened until they resemble brick, while some will ring, giving out a metallic sound when struck. This ancient lava, which is elsewhere more frequently found in full exposure, is perhaps of the same composition as the ancient surface of the earth, and certainly similar to the molten parts that lie deep beneath the crust. Lava experiments show that when this lava is cooled suddenly it is converted into a black glassy substance, but that when cooled slowly, it produces a stony rock similar to the basalt occasionally seen in the district we are describing.

(To be continued.)

Selected.

A Testimony of Bradford Monthly Wretling, concerning our beloved friend, Ebenezer Worth, deceased.

Ebenezer Worth was the son of Samuel and Sarah Worth; and was born in East-Bradford township, Chester county, Pennsylvania, the 28th of 8th mo. 1803.

He possessed naturally, a strong will, an active mind, and a resolute disposition; but under the careful training of his religiously concerned parents, and close attention and obedience on his part to the speaking voice of the Good Shepherd, with which, there is abundant reason to believe, he was acquainted in very early life, he became a mild, docile and amiable youth; and as he increased in years, he grew in grace, and in the knowledge of that salvation which comes by Jesus Christ. In after life he has often been heard to speak in terms of most affectionate remembrance, of the earnest, anxious solicitude of his beloved mother on his behalf; and his grateful sense of his preserving influence.

He was not by birth a member of our religious Society, but in early life became a diligent and concerned attendant of Friends' Meetings, both on First and week days; and on application was received into membership about the 21st year of his age. Having yielded his heart to the softening, regenerating influence of Divine Grace, he was mercifully favored to attain a meek and quiet spirit, and strengthened to exhibit the truth as professed by Friends in an eminent degree of its ancient simplicity and purity, both in his appearance and deportment among all classes of people with whom he mingled; being careful to bear a faithful testimony against wrong things.

He was appointed to the station of clerk in Bradford Monthly Meeting in the year 1841,

and was remarkably qualified by the leavening influence of Divine Grace, to perform in meekness and wisdom, the various duties devolving upon him in that station during the remainder of his useful life. He was also largely made use of in other important services in the Church, which he performed to the comfort and satisfaction of his Friends; and by watchfulness to the inspeaking voice of Israel's unslumbering Shepherd he became quick of understanding in the fear of the Lord, and gifted to administer counsel and encouragement to the humble, careful traveller; speaking a word in season to those who were weary, and faithfully discouraging forward, unruly spirits, that run into words or actions contrary to the life and power of Truth.

He labored earnestly for the building up and strengthening of the weak places in the walls of our Zion, and the promotion of truth and righteousness among men; the meek and unassuming manner in which he performed his religious and social duties, bearing ample evidence that he sought no selfish aggrandisement or the praise of men, and giving a savor and seal to his services hard to gainsay or resist.

In the year 1843, after a season of deep mental proving, he became assured that an impression which had for a considerable time rested weightily upon his mind, was a religious duty required of him by his Divine Master, whom he desired to obey and serve without any earthly reservation, to leave his pleasant and comfortable home and all its endearments, and go to the Alleghany Reservation in the State of New York, to assist in carrying out the concern which has long rested on Philadelphia Yearly Meeting, for the civilization and improvement of the Indians residing thereon. And his offer of service having received the approval and encouragement of the Indian Committee, with the approbation and unity of Friends at his home, he soon after entered upon that important engagement, in which he continued about seven years, faithfully laboring among those poor people, under a deep religious concern for the promotion of their best interests both temporal and spiritual; his unassuming manner, and firm, disinterested zeal on their behalf, ultimately inspiring a confidence, and giving him an influence with them which very few have obtained.

After ceasing to reside near them, his concern for and deep interest in all that pertained to their well being remained with him to the last; and often has he been heard to refer to the time spent among them, as affording in the retrospect some of the most satisfactory recollections of his life.

He was blessed with more than a competence of this world's goods, which he used without abuse; distributing thereof with a liberal hand and generous heart to suffering humanity in want, his mind being humbled under a sense of his accountability as a steward, and the awfulness of having to render a final account thereof.

While we desire to be preserved from ascribing anything to the man, irrespective of the operation of Divine Grace, we feel constrained to impress on the minds of survivors, and especially of the beloved youth, his regard to parental watchfulness and counsel, and his deeply instructive example of submission in early life to wear the yoke of Christ, being not ashamed thereof; thus acknowledging Him before men, by becoming a cross-

bearing Disciple of his crucified and risen Lord, from whom he received his gifts and qualifications for usefulness in the Church, and also in the world at large; practically illustrating the injunction "Let your light so shine before men that they may see your good works and glorify your Father which is in Heaven."

In his every day habits, and domestic concerns, he was cheerful, industrious, economical, hospitable, and benevolent; alorning the doctrine he had made profession of, being an example of the believers, in word, in conversation, in charity, in spirit, in faith and in purity.

For several of the last years of his life, it was evident his constitution was giving way; but he was not alarmed at the prospect of death, looking upon his afflictions as chastenings for good; exhibiting no impatience, but on the contrary a quiet resignation and steady hope; and when his end drew near there was abundant evidence that support was mercifully afforded; the good presence of his Divine Master being evidently round about him, as some who were privileged to be with him on the solemn occasion can testify; he being fully sensible thereof, though regarding himself as a poor unworthy creature and ascribing all to the mercy of God in Christ Jesus our Lord.

His death occurred on the 16th of 6th mo. 1877, in the 74th year of his age.

His funeral was attended by a great concourse of people of all classes, evincing the impression which had been made by his pious example of close attention and faithful obedience to the teaching of the grace of God that brings salvation and hath appeared unto all men.

Evolution, or the theory of the natural development of forms of organic life from lower or anterior forms or types.

From a work entitled "Present Conflict of Science with the Christian Religion," by Herbert W. Morris, A. M.

(Continued from page 25.)

Evolutionists have never adduced a single instance of any animal speaking, or trying to learn to speak; nor have they been able to explain in any consistent or sensible manner how the barrier of language, which divides man from all animals, might have been effectually crossed. And the hopelessness of any such attempt is sufficiently evident from Darwin's futile efforts. In one place,* this writer attributes the faculty of speech in Man to his having acquired a higher intellectual nature; while in another place,† he attributes his higher intellectual nature to his having attained the faculty of speech. Thus he argues like the door upon its hinges, going and coming, but making no progress. And his other attempts to bridge over the chasm which separates instinctive cries from rational speech are certainly among the most remarkable examples of groundless speculations that ever found their way into print. See Vol. I., p. 51, &c.

On the subject of Language no higher authority can be quoted than that of Professor Max Müller: "There is to my mind," says this distinguished scholar, "one difficulty which Darwin has not sufficiently appreciated. There is between the whole animal kingdom on one

side, and man, even in his lowest state, on the other, a barrier which no animal has ever crossed, and that barrier is—Language. By no effort of the understanding, by no stretch of the imagination, can I explain to myself how language could have grown out of anything which animals possess, even if we granted them millions of years for that purpose. If anything has a right to the name of *specific difference*, it is language as we find it in man, and in man only. I hold that nothing deserves the name of man except what is able to speak. Taking all that is called animal on one side, and man on the other, I must call it inconceivable that any known animal could ever develop language. Professor Schleicher, though an enthusiastic admirer of Darwin, observed once jokingly, but not without a deep meaning, 'If a pig were ever to say to me, I am a pig, it would *ipso facto* cease to be a pig.' This shows how strongly he felt that language was out of the reach of any animal, and the exclusive property of man."³

M. Figure, in his *L'Homme Primitif*, holds the same view: "Intelligence and speech are really the attributes which constitute Man; these are the qualities which make him the most complete being in creation, and the most privileged of God's creatures. Show me an ape who can speak, and then I will agree with you in recognizing it as a fact that man is nothing but an improved ape!"⁴

3. *Moral difference.*—To the mental furniture of Man belongs a Moral Sense, which is to be found in no other earthly creature. He is endowed with Conscience, a power or capacity by which he instantly and irresistibly feels the difference between right and wrong. This is his noblest and crowning faculty. Its peculiar office is to arbitrate and direct all his other powers and propensities according to rectitude, so far as that is apprehended by his understanding. To the last line and limit of its enlightenment, its voice is always and everywhere distinct and authoritative on the side of right, of truth and justice. "This sense," says Mackintosh, "has a rightful supremacy over every other principle of human action." Its authority is to the soul sacred and supreme. It is empowered to pronounce censure and applause, and to administer rewards and punishments. It follows up every act and exercise of man with instant approbation or condemnation; if it dictates are cheerfully and implicitly obeyed, it bestows in reward the pleasure of inward complacency and self-approbation; but if its impulses are resisted or disregarded, it inflicts the pain of a sense of guilt, or the feeling of remorse.

Of the existence of such a faculty in the breast of man there is no doubt. Now the question is, Whence this Moral Sense to man? Darwin does not hesitate to declare that it is the development of brutal instinct. "The first foundation or origin of moral sense," he says, "lies in the social instincts, including sympathy; and these instincts no doubt were primarily gained, as in the case of the lower animals, through Natural Selection."⁵ And he thus attempts to account for its growth and maturity into what we now call conscience: "The social instincts lead an animal to take pleasure in the society of its fellows, to feel a certain amount of sympathy with them, and to perform various services for them. . . . The social in-

instincts would give the impulse to act for the good of the community. . . . Habit in the individual would ultimately play a very important part in guiding the conduct of each member. . . . Each individual would have an inward sense of possessing certain stronger or more enduring instincts, and others less strong or enduring, so that there would often be a struggle, which impulse should be followed, and satisfaction or dissatisfaction would be felt, as past impressions were compared during their incessant passage through the mind. In this case an inward monitor would tell the animal that it would have been better to have followed the one impulse rather than the other. . . . Thus any animal whatever, endowed with well-marked social instincts, would inevitably acquire a moral sense or conscience, as soon as its intellectual powers had become as well developed, or nearly as well developed, as in man.†

(To be continued.)

Paul at the Tomb of Virgil.

There is something exceedingly touching, as well as beautiful, in the old tradition, that Paul on his way to Rome, when delayed at Puteoli, went up to the tomb of Virgil, and there wept at the thought that the great poet had died without the knowledge of Christ. Stanley, in his well known sermon on *Christian Missions*, after showing how christianity seeks to make men purer and nobler and better, alludes to Paul's deep sympathy with this aim, and then remarks:

"It was a fine touch in the ancient Latin hymn which describes how, when the Apostle landed at Puteoli, he turned aside to the hill Pausilipo to shed a tear over the tomb of Virgil, and thought how much he might have made of that noble soul if he had but found him still on earth.

Ad Maronis mausoleum
Ductus, fudit super eum,
Et lacrimas hinc: quæ
Quantum dixit, te fecisse,
Si te vivum invenissem,
Poetarum maxime!

The condensed phraseology of the verse, which reminds us of some of the most concise and striking of the odes of Horace, scarce admits a literal translation of its impressive and touching thought. But a free paraphrase may, to the English reader, give some idea of the original.

On his way to Nero's court,
When at Puteoli's port,
At the tomb where Virgil slept,
Paul, in thoughtful sadness wept,
Wept, that he of world-wide fame,
Should have died ere Jesus came!

In his moings, unexpressed,
This thought that swelled his breast:
Oh! that I had found thee living
In the light the cross is giving;
Could have seen thee, from above
Taught to know a Saviour's love
Then, with love to Christ supreme,
Thine had been a nobler theme;
And thy harp, in loftiest lays,
Down the ages rolled his praise!

Thoughtful and sad, Paul from the hill went down,
To Rome, to prison, to a Heavenly crown.

—*Nat. Baptist.*

Dare to be singular, when you see all around you to be wrong: "So did not I, because of the fear of God."

† *Id.* Vol. I, p. 68-70.

LITTLE THINGS.

One step and then another,
And the longest walk is ended;
One stich and then another,
And the largest rent is mended;
One brick upon another,
And the highest wall is made;
One flake upon another,
And the deepest snow is laid.

So the little coral workers,
By their slow but constant motion,
Have built those pretty islands,
In the distant dark blue ocean;
And the noblest undertakers,
Man's wisdom hath conceived,
By oft-repeated effort
Have been patiently achieved.

A little—'tis a little word,
But much may in it dwell;
Then let a warning voice be heard,
And learn the lesson well;
The way to ruin thus begins,
Down, down, like easy stairs;
If conscience suffers little sins,
Soon larger ones it bears.

A little theft, a small deceit,
Too often leads to more;
'Tis hard at first, but tempts the feet,
As through an open door.
Just as the broadest rivers run
From small and distant springs,
The greatest crimes that men have done
Have grown from little things.

—*Bible Banner.*

GOD KNOWETH BEST.

Sometimes, when all life's lessons have been learned,
And sun and stars forevermore have set,
The things which our weak judgments here have
sterned—
And things 'ere which we grieved with lashes wet—
Will flash before us, out of life's dark night,
As stars shine most in deeper times of blue;
And we shall see how all God's plans were right,
And how what seemed reproful was love most true.

And we shall see how, while we frown and sigh,
God's plans go on as best for you and me;
How, when we called, he heeded not our cry,
Because his ways are not as ours could see.
And even as prudent parents disallow
Too much of sweet to craving babyhood,
So God, perhaps, is keeping from us now
Life's sweetest things because it seemeth good.

And if, sometimes, commingling with life's wine,
We find the wormwood, and rebel and shrink,
Be sure a wiser hand than yours or mine
Pours out this portion for our lips to drink.
And if some friend we love is lying low,
Where human hands can reach, do not let his face,
Oh, do not blame the loving Father so,
But wear your sorrow with obedient grace!

And you shall shortly know that lengthened breath
Is not the sweetest gift God sends his friend,
And that, sometimes, the sabbal puff of death
Conceals the fairest boon his love can send.
If we could push ajar the gates of life,
And stand within, and all God's working see,
We could interpret all this doubt and strife,
And for each mystery could find a key!

But not to day. Then be content, poor heart!
God's plans, like lilacs, pure and white unfold.
We must not tear the chow, but leave it apart;
'Tis well, it will reveal the cityxes of gold.
And if, through patient toil, we reach the land
Where tired feet, with sandals loose, may rest,
When we shall clearly know and understand,
I think that we shall say, "God knew the best!"

Never give way to sadness. Put on your hat, and go to visit the poor and the sick in your neighborhood. Seek out the desolate and distressed; inquire into their wants, and minister to them. I have often tried it, and have always found it the best medicine for a heavy heart. —*John Howard.*

Selected.

Incidents and Reflections.—No. 16.

It is often a trial of faith to those who are but poorly supplied with this world's goods, to be called upon to sacrifice of their time and means to the Lord's cause. But they who are in earnest in seeking first the kingdom of Heaven and the righteousness thereof, will be strengthened to obey the Divine requisitions, and be enriched with the reward of peace; whether their outward possessions increase or not.

The record which Joseph Hoag has left of his experience in his younger years, is instructive. He says: "We were married when I was a little past twenty years of age, and the spring following commenced housekeeping; being poorly provided with things necessary for farming, which rendered my situation embarrassed. I often felt my mind drawn to visit neighboring meetings, and sometimes those more distant, which gave uneasiness to some who concluded that it could hardly be required of me to leave home so often, considering my limited circumstances; and that in so doing, instead of keeping more strictly to business, in order to provide for my family, room would be given for others to fix their stigma upon me of being a forward person, which might be injurious to my services. These reasonings brought a great exercise of mind, and bore me down exceedingly, until the Lord helped me, and enabled me to see with clearness, that there was no room to scruple the manifestations with which He had favored me; speaking thus intelligently to my spiritual ear: "The Lord, hold all the treasures of the creation in my hand, and I can blast all the endeavors, contrivances and wisdom of man, and give bread to the hungry, and water to the needy. When didst thou ever see the righteous forsaken, or his seed begging bread? O they thine voice, and not that of man, and thy bread and thy water shall be sure, thy family shall be fed of my bounty, and taken better care of than thou art able to take of them." * These openings in the Light revived me, and encouraged me to press forward with renewed confidence in the Lord.

When Joseph Hoag was journeying in Nova Scotia, he held a meeting, of which he says: "A number came to it, who had never been at a Friends' meeting before. It was a favored meeting; the minds of the people were tendered, and they appeared desirous to show their gratitude. I thought it best to retire from them as quietly as I could. In the evening it came into my mind, that when I departed I must give the mistress of the house where I lodged, a dollar. In the morning it came into my mind again, so that when we departed, I left a dollar in her hand.

"When we got on the road, John Cambridge told me he went out among the people after meeting, and they were gathering money for me, until he told them I would not take it. They then stopped. The husband of the woman I gave the dollar to, was the most earnest to raise something handsome for me. I then thought I could see clearly why my mind was impressed to leave money with them; to show them I could give, but not receive on the principle they gave; to confirm John's testimony."

His travels amongst this people opened the way, in several instances, for Joseph Hoag to explain to them the views of Friends as to a

the gospel ministry, and why it was they could not conscientiously receive pay for preaching. In one case, he says, "A short time after I left Halifax, a messenger came to me, earnestly desiring to know, if five hundred pounds, Halifax currency, a good sized use, well furnished, a cow kept for the year I brought to my door to be milked, with sufficient wood cut at the door, would be fully sufficient to satisfy me to come and settle with them. It brought a close trial on my mind—not that the offer was any temptation, any more than the dust I stood on—but how to get along with it, and not hurt the people nor the good cause. Beyond my expectation, way opened to give my reasons why I could not comply with their desires, in so plain a way, with pleasantness, as they took no offence, and we parted very easily."

In another case, "they offered me a farm five hundred acres of land, sixty acres under good improvement, with a good house and run on it, for £100, and furnish it with five oxen, a yoke of oxen, a span of horses, and farming utensils, which I should have at my own price, and from seven to ten years to try it in, without interest. They thought I might accept of this offer, as it would not be giving a reward (they said) for preaching, it a chance that would put me in a situation to attend to my duty, without being embarrassed, or my family suffering want. In this was more difficult to open the subject in all its bearings, so that they could clearly understand me, and to show them in what point I stood, and the difference between their views and mine. When they understood me, they acknowledged I could not accept it; so we parted very friendly and loving, which I viewed as a great favor."

When at Knoxville, Tennessee, during a time of hostilities with the Indians, he held a meeting, which was attended by many of the soldiers who were located there. It proved to be a favored season, in which the peaceable kingdom of the Messiah was contrasted with the horrors of warlike movements. "After meeting," he says, "I thought to get away on, but before I could start, there came a man to me with a number of silver pieces in his hand, to reward me for my services, and begged me to take them; and to stay three quarters of an hour, and they would raise something handsome for me, that this was not all enough; that the people wanted to do it, and I ought to receive it. I declined, and was assiduously to take up the subject at large, and give them my reasons why I could not take one piece of the money. They gathered round, and looked on me like people amazed; and when I got through, the man that had given me money said, 'I believe you are conscientious in it, but I think you are a little bigoted, and we are sorry, for we think you ought to take the money.' I acknowledged their respect and was glad to get away."

For "The Friend."

Western Yearly Meeting and the English Deputation.

In this day when the minds of Friends everywhere are deeply stirred on account of the "diversities of doctrine and practice" which we have obtained place amongst us; every thing that is said or written touching the questions at issue is closely scanned; and the probable effect of every movement in reference thereto,

is pondered over with more than common interest.

Some remarks of a Friend writing from Iowa, which have appeared in print, are worthy of note. After speaking of the English Deputation, and expressing the desire that "their labors may be directed and blessed by the Head of the Church to the healing, harmonizing and helping of our membership," he adds: "It will not help us to disguise the fact that diversities of doctrine and practice have run to such an extent, as to subject the unity of our membership to extreme tests. These separations here and there, are no light thing, when they withdraw from us some of our best members, and when, moreover, there is a widespread sympathy with them on the part of many who dare not seek relief from present personal suffering by dismemberment of the body. Changes have come over us in such rapid succession, as probably have never been witnessed in any other religious denomination. As these become more and more fundamental, can we wonder that there should be reaction and protest?" * * * "Unity is a thing not to be commanded or compelled. In a society it can be required only within the bounds of a constitutional basis. In the church it must grow out of a common life in one head."

It is much to be regretted that the attentions of a part of the deputation in London Yearly Meeting have been such as to prejudice the service to which they were appointed. It is a noticeable fact that the action of that meeting was chiefly based upon the sentiments promulgated by one member of said deputation. His words justify one body claiming to be Western Yearly Meeting, and criminate the other. "It seemed to him a great strain upon the truth that a body of Friends under those circumstances should assume the character and position of the Western Yearly Meeting." * * * "A character which does not belong to them." His great concern was to "bring back those who he believed had made a great mistake." He also said "let us not depart from the view that secession is a most disastrous thing;" without noting the fact that secession from principle is the cause of such disaster. If the cause is removed the desired object is gained.

In view of the action of London Yearly Meeting it may be asked: What can the deputation do in the matter? That meeting has fully decided the case, and issued an Epistle of greeting and unity to the one body, with the expressed desire that the correspondence may long continue unbroken, &c. The Epistle from the other body "was referred to the Meeting for Sufferings," for that meeting to send an acknowledgment of it, with an exhortation to the Friends who sent it "to reunite themselves in Christian fellowship with their brethren from whom they have separated."

Those friends therefore stand convicted by London Yearly Meeting as offenders against the discipline of Western Yearly Meeting. How can the deputation approach those members? or what more can they do than simply to reiterate the advice already proffered by the meeting deputing them?

The action of London Yearly Meeting is simply a rebuke upon the "reaction and protest" that is taking place against the changes in principle and practice which has been so rapid in progress and become so fundamental

in character; and virtually encourages such changes.

It is a serious thing just now to put forth the hand to stay the Ark, whether on the part of meetings or individuals. Faithful self-examination must precede and accompany such service if successful. "Lord is it I," is a fitting enquiry for each and all.

The Dangers of the Plains.

A letter from Winnipeg, Manitoba, to the *Chicago Times*, says: There was found upon the plains in the early spring, the body of a man who has been missing since February last. This unfortunate person was an officer of the company, and had started in the depth of winter, along with four others, to visit a distant post. Their means of conveyance were horse-sleds, instead of the ordinary winter vehicles of the country—snow-shoes and dog-sledges. The gentleman was a first-rate traveller, and accustomed from boyhood to such work. He knew the country well, and, for a man of his strong constitution, the severity of the winter's cold had, too, few terrors. At the crossing of the White Mud River he volunteered, as the party with which he travelled had run short of provisions, and their sleds, in consequence of deep snow, travelled heavily, to push onward alone, with the intention of sending back assistance from the fort. He followed the track correctly until nightfall, when he lost his way, probably in the attempt to find a shorter route. The following morning he resumed his journey, but in the wrong direction, and, after another night spent on the plain, ranning about in a circle to preserve warmth, the third day's travel brought him within 30 miles of the fort, and very far distant from the track. Here hope seems to have deserted him; and, after having hung a portion of his clothing on a tree to attract the attention of any passer-by, he lay down and was frozen to death. When his dead body was recovered, he lay with one hand on his heart, the other containing a compass.

The half-breeds who found his body read by his tracks in the snow the whole history of this fierce fight for life—read it with the same care that you read the account from the page before you. There was not a footprint or mark anywhere but formed a link in the chain of evidence. They knew from the varied hardness of the snow about the man's tracks just how long before they had been made; from the length of the stride when he was walking deliberately and when excitedly, and adduced therefrom the state of mind he was in at the time. They knew he had not taken proper precaution to sustain his failing strength, because the leather of his mittens and moccasins-tops, which he might have eaten, was untouched. It was easily comprehended by these experienced plain-dwellers, too, that the poor victim, in realizing himself as lost, must have grown so excited as to lose his presence of mind, or he would have known his necessary general position with reference to the river, and have acted otherwise than he did. With his practical knowledge of the use of a compass, and of the country over which he travelled, he could have brought himself to any point he chose. But the dread terror of being lost had deprived him of reason in three days.

The time required to produce this effect varies with different mental constitutions. I recall travelling across the prairie some years since with a highly educated German, but of extremely delicate physical organization, and unaccustomed to prairie travel. We journeyed by dog-sledge, and usually turned some distance off the main track into the timber to camp. After dinner one day, before the dogs were harnessed to the sledges, the German, saying he would walk ahead a short distance, started off alone. When he reached the main track, however, instead of going ahead, he unwittingly took the back track. Having lingered some time about the camp-fire before starting, I journeyed on for somewhat over an hour before deciding definitely that my companion had taken the wrong direction. I at once ordered the drivers to face about. After nearly two hours' travel, we espied our man at the distance of half a mile from the road, in the deep snow, standing still. He made no effort to approach us when motioned to do so. Not wishing to run the dogs into the deep snow, I remained on the trail with them, while one of the drivers went after him on snow shoes. He returned leading the unfortunate man by the hand, in a bewildered way, and I saw at once from the vacant expression of his face that his intellect was shaken. The experienced drivers shook their heads knowingly, with the remark that he would come around all right after a time. It was not until late next day, however, that he recovered the use of his faculties sufficiently to give any description of what had befallen him. He said that, on realizing he was lost, he had suffered alternate paroxysms of terror and despair, until at last reason had left him and he recoiled to no more.

Another incident, which occurred during the summer buffalo hunts may serve to illustrate more thoroughly the intensity of the terror which overtakes the lost. We had in our party a very intelligent young Englishman, a former midshipman in the Royal Navy, but totally ignorant of plain life. He was warned repeatedly, and perhaps unduly, of the danger of becoming separated from the party. During the progress of the chase, however, he wandered off by some means, and was unable to find his way back. This continued for two hours only. When we found him again he ran from us like a deer, and it was only after an exciting chase on horseback that we succeeded in catching him. He was clean daft; and, strangest of all, his hair, before a brown black, was bleached to an iron gray.

To any one not familiar with the plains, the danger of being left alone upon them is not to be underestimated. As well might he be left upon an uncharted sea. The old, old maps, framed from the discoveries of Cabot and Cartier, which represented the centre of America as a vast inland sea, erred only in the description of the ocean, which they placed in the central continent. The ocean is there; but it is one of grass and waves of sand, and its shores are the crests of mountain ranges and dark pine forests. Left alone upon the illimitable plain, passing by, in his ignorance of prairie craft, those numberless mile stones to safety which make to the plain-dweller a great public highway, the inexperienced traveller begins at length to realize that he is lost. It dawns upon him at first in a sense of absolute bewilderment—a bewilderment so

intense as to produce for the moment an almost perfect blank in the mind. He is incapable of summoning thought sufficient to realize anything—to consider his present situation or take measures for future action. It is an indefinable state, where all is chaotic, quickly succeeded, however, by that all pervading terror which chain thought and action in a manner nearly akin to death—a vague, shapeless terror, imagining all possible things, and painting mistily and hazily upon the numb faculties nameless miseries yet to be experienced: a slow death by starvation or thirst; exposure to the devouring elements or wild beasts; tortures of every imaginable description, always ending in a lingering death; and, above all, never more to look upon a human face, never more to share human sympathy—a going out in utter darkness, perfectly alone. Then despair joins terror, adding her tortures; and, lastly, comes that all-powerful, all-pervading desire for human companionship, which, blending with the former feelings, numbs the intellect and renders the man insane.

In winter the dangers of the prairie deepen and become manifold. The deep snows obliterate all landmarks. To the plain dweller, however, all the myriad features of the prairie are but so many guideboards pointing out his destination. He who runs may read. He has the sun by day, the moon and the stars by night. The turning of a blade of grass points him east or west; the bark of every tree north and south; the birds of the air forecast the weather for him. The minutest trail or track is visible to him. He sees a twig broken, and it tells the story of a passing animal; an upturned pebble on the beach tells him the hour when the animal drank. He will distinguish the trail of a wagon on the prairie years after it has passed. The grass, he says, never grows the same. There is not a sigh of the restless wind that is unintelligible to him. He will take a straight course in one direction over the plains, where no landmarks can be seen, on days when the sun is not visible, nor a breath of air stirring. The half-breed or Indian never gets lost. If he be caught in a storm upon the plain, his escape becomes simply a question of physical endurance. Of a lower order of culture, and of a solitary habit, he is scarcely susceptible to the mental torture that prostrates the white man. As an illustration of this fact, let me tell you the story of a half-breed of my acquaintance.

This hybrid individual was by occupation a *voyageur* in summer and a trapper and hunter in the winter season. His mental calibre was very ordinary, being unable to read or write, and his habit apathetic, living much alone. Some of his ponies having strayed off upon the prairie during the winter months, he went in quest of them. The prairie was the native heath to him, which he had trodden from infancy with the same assurance that ordinary mortals walk the pavement. He had no fear of being lost; every depression in the snow-clad earth, every stunted shrub, was a landmark to guide him on his way. Yet, after an absence of half a day, a storm arose, which obscured the landscape, and, despite his prairie craft, he found himself lost. He accepted the situation, and knowing that any efforts to extricate himself until after the subsidence of the storm would only prove fruitless, set about making pre-

parations for his safety from freezing. He attached himself to a clump of cotton-wood trees as a land-mark, and walked in a circle about it. Night came on, and he still walked. Day followed, and night again found him still walking and the storm unabated. At length his moccasins wore off his feet. He took a long "militaire" from his hands and tied the one in lieu of shoes. Then he walked on through the third, fourth and fifth days at nights, supporting life by chewing his leather hunting shirt. The sixth morning found him feet frozen, and striking the beaten path bits of wood; his hands were in a like condition, and his face but little better. During that day, however, some wandering Indian discovered him in an apparently dying condition. They took him to a neighboring fort, and after the surgeon had bereft him of portions of both hands and feet, and taken piece from his face, he got well.

When found by the Indians, it is worth of remark that, with the exception of exhaustion, the man was mentally more than when he was first lost. During all the fearful days and nights the combination of terror, despair, and, above all, longing for human companionship, had driven again that dull intellectuality and apathetic temperament in vain. There was an indifference and ignorance of the finer parts of the torture which effectually shielded him from danger. He simply did not know enough to experience any of the feelings which would have wrecked a higher order of intelligence.

Testimony of Aberdeen Monthly Meeting, (Scotland), concerning Lydia Ann Barclay, who died on the 31st of 1st month, 1855, aged 45 years, and whose remains were interred at Cokermonth, on the 7th of 2nd month, following—a minister about 20 years.

(Concluded from page 2.)

Lydia Ann Barclay was recorded a minister on the 24th of 12th month, 1835, with residence at Croydon, and in this capacity visited many of the counties of England, on the Yearly Meeting of Friends at Dublin, as twice the meetings of Scotland. In 1841 under an apprehension of duty, she removed from Reigate in Surrey, where she had resided nearly eight years, and settled in Aberdeen. Whilst living here she was liberated in the 2nd month, 1849, for religious service in the Quarterly Meeting of Cornwall; in the following year she visited the meetings as part of the families of Friends in Dorset and Hants, and attended the Yearly Meeting at Dublin; in the 1st month, 1852, she held meeting with a portion of young women employed in the factories at Aberdeen; and, in 1854, was engaged to visit, in Gospel love the meetings composing the Quarterly Meeting of Cumberland and Northumberland; besides other services at different times with the compass of this General Meeting.

It was her conscientious endeavor to occupy faithfully, as a good steward, with outward means with which she was abundantly blessed, being concerned to do good and communicate, and being herself in deportment, dress, and the furniture of her home an example of plainness and simplicity, which she believed the spirit of Christ led into. She removed to Cokermonth early in the 10th month, 1854, and had been there but little more than four weeks, when a paralytic seizure oc-

eed her of the use of her left side, and af-
fled her mind with frequent and protracted
herings.

about this time a relative bidding her fare-
well, and adding, "The Lord be with thee,"
said, "He has been with me; I have had
my favored times; they have been very
yet," and at another interval, "I have
in brought very low, but Divine aid has
ported me." She had been under much
trouble for the young females engaged at the
atories at Cockermonth; and on one occa-
sion, expressing this, and her desire that
— build visit them frequently, and assist in
thing them to read, &c. she added:—she
ent young Friends to be encouraged to
their talents, though it might be in a lit-
tle way: the little would be accepted that
s done in love to the Lord, for even a cup
cold water, if given in His name, would
give its reward; none should shrink from
se services because they could do but lit-
tle; little ability, little means, little talent,
ght not to hinder; it could do something;
if it omitted to do what was called for
our hands for our poor suffering fellow-
atures, how could we expect to have the
ssing of those who were ready to perish,
rest upon us. She thought we ought to be
thful in speaking our minds to others, not
erred by the fear of offending them, lest,
unfaithfulness, we should endanger the
it of our brother, and his blood should be
quered at our hand; also how sad it would
if owing to us, he should go to the place
perdition, "where their worm dieth not,
d the fire is not quenched."

It pleased Him who had afflicted her, gradu-
ly to restore her mental faculties; when
der a deep sense of the humiliating con-
dition of her earthly tabernacle, and of the
ounding mercy of her dear Lord and Mas-
ter, she wrote the following:—"My mind has
en so filled with these words that I believe
must try and write them down to the glory
of God.

"And now, O Lord! I desire to praise,
d to thank, and adore thy holy name, for
thy great goodness and mercy, to thy
or, weak, unworthy servant, who is truly
worthy the least of all thy tender mercies
ward her; especially making known and
vealing thy grace, in favoring her, with
hers of her family, with thy blessed day-
ring from on high; whereby thou hast
ought me forth out of darkness and the
adow of death, and hast in measure tran-
sted me into the kingdom of thy dear Son,
o hath abolished death, and brought life
d immortality to light through the Gospel,
ving us a lively hope through thy dear Son,
d favoring with a humble hope of accept-
ce, according to thy precious grace, through
im in whom we have redemption through
is blood, and forgiveness for the sins that
e repented of. And now, Lord, may it
ease thee so to work in and upon thy poor,
worthy child, as to bring me into an hum-
e resignation, a true resignation and real
jection to thy mighty power and holy will
all things, that I may by thy goodness, be
rified and prepared, through this humbling
sensation, for my awful time of translation,
h! so work in and upon me, as that thy life
ay reign and come into dominion over all,
d thus I may be permitted graciously to
tain a glorious victory over death, hell,
d the grave, through thy dear Son, my

Lord and Saviour. For when thy life comes
to reign over all, then thy peace and praise shall
fill my soul! peace with thee through Jesus
Christ, and thy peace and love to all man-
kind the world over (but not their sins.) Oh!
be pleased thus to fill me with thy peace and
praise, who art worthy, worthy of all praise
and thanksgiving, honor, adoration and re-
nown, and living, living praises, not only
now, but now, henceforth, and for ever more.
Amen."

After this, in a letter to a friend, she re-
marks, "I always had a feeling that my mov-
ing to this place would be like the end of my
career, but what a mercy to have been spared
and so favored during this painful time; yea,
favored with songs of praise in the night sea-
son, and heartfelt praise and thank-giving by
day, so as to be quite resigned to wait the
Lord's time!" Thus, with a heart overflow-
ing with gratitude for all her mercies,—the
sweet savor of her spirit evidencing that her
dwelling was in the secret place of the Most
High,—a second seizure, on the 25th of the
1st month, 1855, deprived her of the use of
the other side, also of speech and the power
of swallowing. In this prostrated state, ap-
parently with little or no pain, she lay until
the 31st of the same, when she quietly and
peacefully breathed her last.

THE FRIEND.

NINTH MONTH 14, 1875.

We have received a copy of a pamphlet
recently issued by our brethren of Ohio Yearly
Meeting, containing a short statement ex-
plaining the establishment of meetings in
subordination to their body in the distant
State of Iowa; the "Testimony" of the Amer-
ican Yearly Meetings, which was issued in
1830; and the "Appeal for Ancient Doctrines,"
issued by Philadelphia Yearly Meeting in 1847,
and adopted by Ohio Yearly Meeting soon
after.

The Testimony of 1830 was called forth by
the separation which had then recently been
caused by the dissemination of sentiments
regarding the divinity of our Saviour and the
atoning efficacy of His sacrifice, at variance
with the doctrines of our Society. While it
is full on these points, it also contains a brief
summary of various other doctrines and testi-
monies, which have ever been upheld by faith-
ful Friends.

The Appeal of 1847 was occasioned by the
introduction of writings among our members,
which, while fully recognizing our views on
the points which had been in dispute in the
controversies of 1827, and therefore free from
any taint of Unitarianism, manifested an er-
roneous tendency in other directions.

The re-issue at this time of these two pam-
phlets, is a fresh Testimony by Ohio Yearly
Meeting of its attachment to the original
principles of the Society of Friends. We
trust that it may prove useful to many in
other Yearly Meetings, in bringing to their
notice the ground occupied by this body of
Friends, who have been to a large extent
isolated of latter years from most of the pro-
fessors of Quakerism, excepting Philadelphia
Yearly Meeting, and the smaller division of
that in New England. In the lapse of time
since this isolation took place, children have
been born in other sections of the Society,

and have grown up to maturity, who are to
a large extent ignorant of the real position
and standing of our Ohio Friends.

A copy of the work of which we have been
speaking, was received by a valuable Friend
in a distant neighborhood, whose meeting is
not in official connection with our Friends in
Ohio; and the effect on his mind was to en-
courage him to believe that "as so many Friends
everywhere come to understand one another more
perfectly, there will be a getting more into one."

This sentiment is one that sometimes ad-
ministrators encourage to us amid the trials
and perplexities of the present day. We
cherish the hope, that those who are united
in doctrine and spirit will be drawn more
closely together; and that the obstacles which
now separate them from the full enjoyment
of gospel fellowship will melt away. How
this will be accomplished, we do not foresee;
but all power is in the Divine Hand, and the
Lord knows how to bring his purposes to
pass. We can at least labor to remove from
our own hearts, feelings of coldness and in-
difference, which prevent us from entering
into sympathy with and laboring for the help
of those who under many discouragements
are trying to uphold a testimony to the Chris-
tian religion as believed in, preached, and
lived up to by George Fox and his associates.

There are some evidences (such as the re-
mark already quoted), that enlightened views
on church fellowship are cherished, and we
hope increasing, among us as a people. As
an illustration of this, we give an extract from
a recent letter from a friend, whom circum-
stances have placed in such a position that
there is no mutual recognition by the bodies
to which we respectively belong.—"I very fully
does my heart respond to [the] desire that
the time may come when those who are seek-
ing to stand for the Law and Testimony, as
held by primitive Friends, may be united as
in one band. And nothing can so availingly
produce this much to be desired state, as for
us individually to grow into the unity of the
Spirit and the bond of peace with the Father
through His dear Son—the greatest of attain-
ments and yet attainable.

"Views of expediency do not so much rest
with me, as an earnest desire to be one of the
little ones who share in the dew dispensed to
those who wait for it. These, however tempt-
ed, proved or tried they may be at seasons,
so long as the faith given of God be kept, will
realize what the Apostle was made strong by,
—My Grace is sufficient for thee— to be
spoken at times when almost ready to faint;
and these can acknowledge as fellow travel-
ers, any who are pursuing the same path,
though some shadows may in one sense inter-
vene."

SUMMARY OF EVENTS.

UNITED STATES.—The average daily number of
deaths from yellow fever for the past week in New Or-
leans, has been about eighty. In Memphis the number
is nearly as great. The pestilence continues its ravages
in Vicksburg, Grenada, Greenville, and Canton, and
has become epidemic at Pleasantine, La., and Lake
Station and Bay Mills, Miss.

According to official reports, there are in New York
city 8759 places where malt and spirituous liquors can
be had at retail.
Fruit culture is making rapid progress in the United
States. According to recent statements, 4,000,000 acres
of land are appropriated to this industry. The total
value of the fruit crop is estimated at \$18,216,700, an
amount equal to half the value of the average wheat
crop of the country.

A statement has been prepared by the Loan Division of the Treasury Department, showing, in detail, the operations of the department, in refunding the national debt. From this statement it appears, that from 12th mo. 1st, 1871, to 9th mo. 1st, 1878, the aggregate amount paid on six per cent. bonds refunded into bond bearing a lower rate of interest was \$7,293,433,000, resulting in an aggregate saving of \$23,919,513, which is equal to over \$1,000,000 per annum in the matter of interest.

On and after the 16th inst., by direction of the Secretary of the Treasury, the sub-treasuries of the United States will exchange standard silver dollars for United States notes.

A cubic foot of standard gold is worth \$292,500. A cubic foot of standard silver is \$120,891.

Two inches of snow fell at Cheyenne, Wyoming Territory, on the morning of the 8th.

In this city during the past week 308 deaths are reported. Of consumption 44; convulsions 16; cholera infantum 16; scarlet fever 19; typhoid fever 3.

The receipts of flour and grain at the six lake ports of Chicago, Milwaukee, Toledo, Detroit, Cleveland and Duluth, for the eight months of this year, were 3,873,164 barrels. Reducing flour to its equivalent wheat, the aggregate receipts foot up to the enormous quantity of 10,443,883 bushels of grain of all kinds, showing an increase of \$3,590,016 bushels over 1877.

Markets, &c.—American gold 109 1/2. U. S. sixes, 1881, 105 1/2; 5-20 coupons, 1805, 102 1/2; do. 1867, 103 1/2; do. 1865, 107 1/2; new 5's, 109 1/2; new 10's, 104 1/2; new 4 per cent, 101; new 3 per cent, 101.

Cotton, 12 1/2 a 12 1/2 cts. per lb. for uplands and New Orleans.

Flour.—The market very dull, the demand being confined to the wants of the local consumers. Minnesota extra sold for \$4.75 for old stock, \$5.25 a \$5.50 for new wheat, and \$4 and \$6.25 for fresh ground old wheat; patent and other high grades, \$6.75 a \$8.50. Rye flour, \$3.25 a \$3.75.

Wheat is dull: red, 93 cts. a \$1.05; a white, \$1.05 a \$1.06; white, \$1.06 a \$1.10. Rye, 60 cts. a \$1.00; \$1.05 a \$1.06. Oats, new winter, 27 a 30 cts., and old, 32 a 31 cts. per bushel.

Hay and Straw.—Average price during the week—Prime timothy, 65 a 70 cts., per 100 pounds; mixed, 45 a 50; straw, 25 a 35 cts., per 100 pounds.

Best cattle were in fair demand at 53 a 55 cts. for extra Penna. and western steers, and 4 1/2 cts. for fair to good, and 3 1/2 a 4 1/2 cts. per pound gross for common. Sheep, 31 a 4 1/2 cts. per pound, as to condition. Hogs, 53 a 7 1/2 cts. per pound for common to choice.

All the collieries in the Schuylkill region, including many that were compelled to suspend last month on account of scarcity of water for the mine engines, resumed operations on the 9th inst.

The election in Maine, held on the 9th, indicates a large Democratic and Greenback gain. The election of Governor will devolve upon the Legislature, as neither candidate received a sufficient number of votes for election.

FOREIGN.—An excursion steamer returning from Gravesend to London, on the evening of the 2d inst., was run into by another steamer, and sunk almost immediately. It is estimated there were 700 persons on board, between 500 and 600 of whom were drowned—a large proportion being women and children.

During the last few months the emigrants in England and Wales, for the maintenance and relief of paupers, was £2,135,008, an increase of three per cent. over the preceding time of six months.

A sudden increase of fever in Cyprus, is reported, 307 men in the hospital out of a force of 2640.

The Emperor of Germany, in his speech read at the opening of the Reichstag on the 9th, expresses the hope "that the anti-socialist bill will be adopted, that the spread of the pernicious Socialist movement may be arrested, and that those who have been misled by it may be brought back to the right path." No reference is made in the Emperor's speech to foreign affairs.

Reports from Vienna, in the beginning of the month, of the army in Bosnia and Herzegovina, but have expressed that this year's campaign, which can only be continued three weeks longer, will not suffice to quell the insurrection.

It is reported from Constantinople, that Mehemet Ali Pasha, who has been in London, was called upon to organize an attack against the Porte, and, upon refusing to comply with the demand, was massacred, together with twenty members of his suite.

The Russians, it is said, have taken peaceable possession of Fatoum.

One hundred students, suspected of Nihilism, have been arrested and expelled from the Universities of St. Petersburg, and Kiev.

RECEIPTS.

Received from John C. Allen, City, \$2, vol. 52, and for Samuel L. Allen and John C. Allen, Jr., N. J., June B. Broadwell, D.C., and Sannel Leeds, Mich., \$2.10 each, vol. 52; from Amos Roberts, N. J., \$2.10, vol. 52; from William Smalley, City, \$2, vol. 52; from Charles Barry, E. J., \$2.10, No. 11, vol. 53, and from George A. Perry, N. J., \$2.10, from Geo. C. Foster, and Elizabeth Perry, \$2.10 each, vol. 52; from George Abbott, Jr., City, \$2, vol. 52, and for George Abbott, N. J., \$2.10, vol. 52; from Rebecca Hibberd, Pa., \$2.10, vol. 52; from James G. McCallin, City, \$2, vol. 52, and for Anne G. McCallin, City, \$2, and Ann N. J., \$2.10, vol. 52; from Clayton Hancock, N. J., \$2.10, vol. 52; from Ann Chapman, Pa., \$2, from George Sharpless, Agent, \$2.10, vol. 52; from Zuri Horner, Ja., \$2.10, vol. 52; from Charles A. Clewett, N. J., \$2.10, vol. 52; from Joseph Stanton, O., \$2.10, vol. 52; from Benjamin D. Stratton, Agent, O., for Alfred Brantingham, Josiah Cameron, Josiah Coppock, Mary Coppock, Christiana Kirk, and Lewis B. Walker, \$2.10 each, vol. 52, and for Charles W. Sutherland, \$2.10, to No. 19, vol. 53; from Jacob Mauld, O., \$2.10, vol. 52, and for Israel Sidwell, Asenath Raley, and Joseph P. Lupton, \$2.10 each, vol. 52; from Samuel J. Eves, N. J., \$2.10, vol. 52; from David J. Boyer, City, \$2, vol. 52; from Lewis Johnson, O., per Lydia, \$2.10, vol. 52; from Ann Chapman, E. J., \$2.10, vol. 52; from Lydia T. King, Pa., \$2, and for Joseph E. Mickle, \$2, vol. 52; from Mary Ann Baldwin, Pa., \$2.10, vol. 52; from Elizabeth Burton, City, \$2, vol. 52; from Frances S. Williams, City, \$2, vol. 52; from Mark Balderson, City, \$2, vol. 52; from Cory Kirkbride, Pa., \$2.10, vol. 52; from William Balderson, \$2.10, vol. 52; from William B. Hines, N. J., \$2.10, vol. 52; from Rebecca W. Sutherland, \$2, vol. 52; from Maldon Moon, Pa., \$2.10, vol. 52, and for Charles Moon and William H. Moon, Pa., and William Tutuall, D.C., \$2.10 each, vol. 52; from Uriah Burton, \$2.10, vol. 52; from Clement Owen, Joseph Douda, Joseph W. Douda, and Joseph Charles L. Warner, Thomas R. Warner, and Joseph Warner, W. Warner, Pa., \$2.10 each, vol. 52; from Britram Kaighn, N. J., \$2.10, vol. 52; from Joseph E. Hoopes, Pa., \$2.10, vol. 52; from Seneca Lincoln, Mass., \$2.10, vol. 52; from Joseph Nicholson, N. J., \$2.10, vol. 52; from Dr. S. J. D. D., \$2.10, vol. 52; from Francis D. Smith, Ill., \$2.10, vol. 52; from John A. son, \$2.10, vol. 52; from Martha Mickle, N. J., \$2.10, vol. 52; from Asa Garretson, Agent, O., \$2.10, vol. 52, and for Jesse Bailey, Jesse K. Livezey, Rachel Green, Aaron Frazer, Robert Plummer, George Tatam, Lydia Doolley, John Dandy, Sarah S. Bandy, Elizabeth Bailey, Joseph Douda, Joseph W. Douda, Francis Davis, Eliza Douda, Charles D. Dawson, John S. Davis, Matilda Parker, William Stanton, Esther Sears, Jonathan T. Scofield, Barclay Smith, John Thomasson, Dr. Ephraim Williams, Rebecca W. Bandy, Samuel Walton, Bulah Roberts, and Eli Stanton, \$2.10 each, vol. 52; from Benjamin Smith, Ill., \$2.10, vol. 52, and for James Davis, Westown, per Benjamin W. Hoopes, \$2, vol. 52; from Benjamin Lippinott, N. J., \$2.10, vol. 52; from John Scarlett, Pa., \$2.10, vol. 52; from Charles Walton, City, \$2, vol. 52; from Thomas Lippinott, City, \$2, vol. 52; from Josse W. Taylor, \$2.10, vol. 52; from Mark Balderson, Md., \$2.10, vol. 52; from Oliver Miller, \$2.10, vol. 52; from William Carpenter, Agent, N. J., \$2.10, vol. 52, and for Aehsh Reeve and Ann D. Simmekson, \$2.10 each, vol. 52; from Charles Stokes, Agent, N. J., for Elizabeth L. Evens, Lydia Saunders, Deborah S. Evans, Mary S. Ely, and Richard Hines, \$2.10 each, vol. 52; from Mary Ely, \$2.10, vol. 52; for Robert Coppe, Lane Coppe, Ems P. Eldridge, Susan P. Eldridge, John Worth and Sarah C. Paine, Jr., Pa., and Abiah G. Hoopes, Colorado, \$2.10 each, vol. 52; from Mary Thistlethwaite, N. Y., \$2.10, vol. 52; from Samuel F. Elderton, City, \$2, vol. 52; from William H. Brown, \$2.10, vol. 52; from Dr. William H. Ballou, Del., \$2.10, vol. 52; from Dr. H. H. Brown, \$2.10, vol. 52; from Samuel Woodman, City, \$2, vol. 52, and for Eliza W. Reeves, \$2, to No. 10, vol. 53; from Elijah Haworth, O., \$2.10, vol. 52; from Dr. Isaac Huestis, Agent, O., \$2.10, vol. 52, and for Ann Smith, David J. Boyer, and Ann John, \$2.10 each, vol. 52; from John H. H. H., \$2.10, vol. 52, and for Joseph Lynch, David Ellyson, Mary W. Wright, Joseph Ellston, Edwin Holloway, James A. Cape, Robert Ellston, Eliza Ann Fogg, John H. Stanley, Jane Woodman, Abner Woodman, Henry P. Fallick, Margery Crag, Anna W. Cobb, Sarah Woodman, F. Edwin Fogg, and Isaac Coppe, \$2.10 each, vol. 52, and for Lydia

Warrington, \$2.10, to No. 18, vol. 53; and for Richard H. H. H., \$2.10, vol. 53, and for Sarah Williams, Sarah Peterson, Alfred Smith, Thomas W. Hanson, Robert Bigland, William Walker, Josiah Thompson, Jane Meade, George M. Gounley, Josie Hall, William Wigham, John Little, John H. Walke Martin, Lilbether, Nancy Ritson, Richard B. Brockbank, and Josiah Hall, 105, 93, each, vol. 52, and for Sarah M. H. H., \$2.10, vol. 51, each, vol. 53; for Phoebe Jacobs, Pa., \$2.10, vol. 53; from George W. Thorp, Fkfld., \$2.10, vol. 52; for Edward Bonsall, O., \$2.10, vol. 52; from Jane S. Confort and Charles Jones, Gtn., \$2.10 each, vol. 52.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

WESTTOWN BOARDING SCHOOL.

The Winter Session opens on Second-day, the 23d of Tenth month. Parents and others intending to send pupils to the Institution, will please make early application to BENJAMIN W. PASSMORE, *Super.*, (address *Street Road P. O., Chester Co., Pa.*) or to CHARLES ALLEN, Teacher, No. 304 Arch St., Philadelphia. Philadelphia, 9th mo. 11th, 1878.

WANTED

A well qualified woman Friend as Matron at Friend Asylum, on the 1st of Insane, near Frankford, Philadelphia Applied to
 Samuel Morris, Olney, Philada.
 John E. Carter, Fisher's Lane, Germantown

FRIENDS' SCHOOL AT GERMANTOWN.

This School, under the care of Germantown Preparing Meeting, will reopen on Second-day, Ninth month 9th. The school is divided into Primary, Intermediate and Higher Departments, each supplied with good teachers. A new course of study has been prepared embracing the usual English branches, and French, Latin, Greek, French and Drawing. Special facilities are afforded for instruction in Chemistry, Physics and Physiology by a suitable laboratory, philosophical apparatus and models in anatomy.

For terms, &c., apply to Henry N. Hoax, Princip., Germantown, or Samuel Emben, 631 Market St., Philadelphia.

WESTTOWN BOARDING SCHOOL.

A well qualified woman is wanted to take the situation of Nurse in the Boys' Department.

Application may be made to
 Anna V. Elge, Downingtown, Chester Co., Pa.
 or to Susan F. Sharpless, Street Road, " do."
 Deborah Rhoads, H. J. J. J., New Jersey.
 Elizabeth R. Evans, 222 S. Front St., Philada.

DIED, at the residence of her brother, Caleb Hoopes, in Tougenkamen, Chester Co., Pa., on the 1st of Fifth mo. 1878, ANNE HOOPES, in the 71st year of her age, member of New Garden Monthly Meeting.

She was born on the 2nd of August month, 1787, ISAAC F. GIFFORDS, in the 92nd year of his age, a member and elder of Dartmouth Monthly Meeting, Mass. His recollection of the things that belong to the heavenly kingdom seemed to be quickened as he neared the haven of eternal rest. He desired it might be published far and wide, that in the consciousness of the near approach of his departure, he might have entrance through the love and mercy of God in Christ Jesus, a abundant entrance into the heavenly kingdom be granted; saying he had found no need of change in the religion he had made profession of through a long life—a religion embracing sound faith in the doctrine of the Atonement, the Unity of Friends. Yet, with such a humble opinion of his own wisdom, he endeavored to present claims to goodness beyond what would correspond with his daily walk in life. Firm in support of the principles of Truth as adhered to and pronounced by George Fox and the early Friends, he was careful with regard to individuals to heal the injurious effects of his own words. His sufferings were great at times, but with a spirit cheerful, his prayer on one occasion was, "Oh, gracious Father if thou seest it needful to purify my spirit through suffering, 'Thy will be done, only make complete the work which will fit me for thy pure and holy kingdom." Another time he would remark, "my sufferings will be compared with what my dear Saviour suffered for the sins of the world and for me—with emotions of deep regret at one time adding, "How strange; that that sands should seem to live contentedly without bearing the language of 'Glory to God in the highest, peace on earth, good will to men!'"

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. LII.

SEVENTH-DAY, NINTH MONTH 21, 1878.

NO. 6.

PUBLISHED WEEKLY.

Price, if paid in advance, \$2.00 per annum; if not paid in advance \$2.50; 10 cents extra is charged for Postage on those sent by mail.

Subscriptions and Payments received by

PHILADELPHIA.

For "The Friend"

Epistle of Ambrose Bierce.

I have just read an epistle of Ambrose Bierce in Friends' Library, which struck me as a suitable selection for publication in "The Friend," and I would like to have it circulated among the members of our Society, by being placed in its columns. It may be refreshing to some hungry, thirsting souls, and it may also arouse some easy, careless ones. What he writes concerning our department under the governments we are subjects of, seems to me instructive, and will be good counsel to many in our Society at present.

I have a desire that his cation to you; people to have a care how they are taken by it with the glory of the world may be pondered over by some who suffer the lusts of the eye and of the flesh, to prevail.

Columan, Ohio, 6th mo. 1878.

general epistle to all Friends and brethren, everywhere; to be read among them in the fear of God, &c.

My dearly beloved friends, brethren and sisters, who are made partakers of that precious faith and word of it, which was once delivered to the saints, and true gospel-believers and witnesses; by and in which they were sanctified, justified and glorified.

My heart and soul do earnestly breathe to the Lord, that grace, mercy, truth and love, may be daily increased, and abundantly multiplied, in and among you all; and that you may be preserved a peculiar people, and royal priesthood, daily increasing in fruits of righteousness, as trees of the Lord's own right hand planting. So shall his worthy name, by which you have been called, be glorified by you, and his high praises be in your mouths, and a two-edged sword in your hands, to wound the dragon and power of darkness, in all his appearances and transformations, which are and have been many and various in our day; so that some stars of heaven have been drawn down to the earth by his power, and have made great noises as they fell. But the foundation of God stands sure, and all who have continued upon it, have been preserved unmovable not only through all storms which have arisen in the sea, but have escaped the saits and snares which have been laid covertly in the earth: glory and renown ascend to that worthy name, which hath been our tower and safe habitation to this day; Amen, Amen ever.

And now, my dear friends, my life salutes you all, in the love of my heavenly Father, which daily abounds and flows towards you, from the least to the greatest, who retain your first love and integrity towards the Lord, as witnesses for his name upon earth, in testimony and conversation. You, hath the Lord chosen to be the first fruits to the glory of his eternal and honorable name; keep your vessels sound and clean, that He, who is the fountain of all fulness and goodness, may daily fill your cups, to hand forth to the thirsty, as He hath filled ours, who went before you.

Oh! my dear brethren and sisters, abile in Him, your heavenly vine; so shall every spring of life and virtue, that opens in and through you, water those plants, which the Lord by the right hand of his power hath planted into his likeness, that they might grow in grace, and in the knowledge of our Lord and Saviour Jesus Christ, and may be built up together in Him a holy habitation, and spiritual household, to dwell together in unity, as children of one Father: so shall peace possess your habitations, and prosperity attend your undertakings. This I have learned in my day, through many tribulations, which have attended my pilgrimage in this world: in all which, I have been preserved, by the mighty hand of God, through faith, to this day.

This I write for your encouragement, who are coming up in the same life and gift of God, which He hath ordained to open life, and the fountain of it, to all nations and kindreds of the earth; that his church may be restored to her ancient glory and beauty, which have been eclipsed and marred, in this long night of darkness and apostacy that hath overspread the nations, for many generations. But now she is returning out of the wilderness, clothed with the sun; and her lovers are gathering to her from many corners of the earth; and her glory hath eclipsed the wandering stars, and will enrich the world with righteousness; so that peace on earth, and good will to men, shall be perfectly restored in all them who are made living members of her. For so hath Christ, her great prince, husband and lawgiver ordained, that all her members should be holy and without blame before Him, as becomes his household and family. So walk in Him, and follow that path of life, and holy conversation, which your feet have been turned into, by your ancestors and elders; many of whom are already gone to their rest, where the wicked cease to trouble, and where the weary are at rest, and the voice of the oppressor is heard no more; and the rest are following after, clothed with spiritual armor, the helmet of salvation, and shield of faith; by which we have all along been able to quench the fiery darts of the devil, which have been many and great.

And you that are coming after, keep within your armor of light; so shall the same power sustain you, and carry you, as on eagles' wings,

through all difficulties which the Lord will yet suffer to be set before you, and will be your rock in the time of storm, and your shadow in the time of heat; for He is become the rock of our age, as He was to ages and generations before us; to all who have heard and obeyed his word, against whom no weapon hitherto hath prospered. For God will establish Zion, and build up Jerusalem of living stones, upon the one foundation stone, and many shall flock to her gates with songs of praise in their mouths: for the gathering of the people shall be to Shiloh, the peaceable Saviour, that his kingdom of righteousness may be established again in the earth, whereby she shall again enjoy her sabbaths.

For the Lord is arisen to awaken the nation, and is putting trumpets in the mouths of many, to sound an alarm in his holy mountain; and many are awakened, and rising out of beds of ease and carnal security, where they have long laid polluted in their blood, and are now putting off their night garments, which have been stained and spotted with the flesh. And He is now fitting many to be clothed with the garment of praise for the spirit of heaviness, that they may be called trees of righteousness, the planting of the Lord. And many are made to run to and fro, that divine knowledge and spiritual understanding of the divine mysteries of God's eternal kingdom, may again be restored; which have been long hid from the wise and prudent of this world, but are now revealing and revealed to babes and sucklings; out of whose mouths the Lord will perfect his praise and glory in the earth, which, in due time, He will replenish with the knowledge of his glory, as the waters do the sea.

And now, my dearly beloved in the Lord, great and small, male and female, my heart and soul daily breathe to the Lord for you all, in the bowels of Jesus Christ, that you may walk worthy of that high and honorable calling, whereunto you are called, in all humility and godly sincerity, as lights in the world; so will you be daily baptized into the death of Christ, and be made partakers of his resurrection; which none can have a part in, but they who are first baptized into his death. Such are arisen with Him to newness of life, and are earnestly seeking those things which are above; though they walk on earth, yet their conversation is in heaven, having an eye to the recompense of reward; which no mortal eye hath seen, nor can see, neither have entered into the heart of man, the things which God hath prepared for them who love Him; but He hath revealed, and is revealing them by his Spirit, to all who walk in it; for the Spirit searcheth all things, yea, the deep things of God.

But believe not every spirit, but try the spirits, whether they be of God; for some false spirits are already gone out, and have embraced this present world. They went out from us, because they were not of us: for if

they had been of us, no doubt they would have continued with us; their end will be answerable to their works. But be ye watchful and circumspect, whose eyes the Lord hath opened, that you may discern the enemy in all his cunning devices, both within and without; and tried armor hath been given you to resist him, if ye keep it about you; without which you cannot be safe from the jaws of him, who goes about as a roaring lion, seeking continually whom he may devour. Therefore dwell within that munition of rocks, with which you are surrounded, and go no more forth; but keep your habitations in the light, where God dwells, that you may enjoy his presence, which will daily be an open fountain of life to your souls. There your bread will be sure, and your water will never fail; and the Lord will spread your tables in the midst of your enemies, and bear up your heads through all difficulties.

For "The Friend."

A Trip to Murrey, by J. S. L.

(Continued from page 31.)

This outpouring of ancient lava has taken place through several great crevices in the crust of the earth, and is more abundant in this red-sandstone than elsewhere in Pennsylvania. This red-sandstone deposit was laid down after all the other formations found in the State were made, even up to that which contains the coal. It is not however to be supposed that all the great deposits found in Pennsylvania lie beneath the red-sandstone, for this would require an outburst of the lava through seven miles of rock, which are known to have been laid down before the coal. The coal having been formed at the level of the sea, has been lifted to a vast height; but the shrinking and crumpling of the crust have flexed those beds of coal and the many sand and clay and limestone beds beneath them, while frost and rains have broken them down, and the waves of the ancient sea have repeatedly rolled over them as they have subsided many times, to be again raised and again acted upon by agencies above the water. A small part of the great masses of rocks and coal beds that once towered to vast heights remain, and the destruction has been greatest where the elevation has been highest, and our beds of anthracite are now found only where the subsidence was very great, in troughs caught in foldings of the underlying rocks, and often occur nearly vertical and doubled and re-doubled upon each other. These older rocks were worn down after the deposits once horizontal had been made to stand on edge at various angles with the horizon, and the soft clays and limestones and sands were then washed into the ocean, or gathered into the deeper depressions in the contorted strata.

After the era of extensive coal deposition, and the subsequent plication and contorting of the underlying rocks above referred to, a very deep depression appeared between the two irregular bands of azoic or primary rocks which occur in South-eastern Pennsylvania. This depression formed the bed of a river or series of lagoons, which rose in the mountains in the north of Georgia, and flowing north-eastward through the heart of Virginia and Maryland, entered Pennsylvania and passed through what are now designated the counties of Adams, York, Lancaster, Lebanon, Berks, Montgomery and Bucks, and crossing

New Jersey, reached the ancient ocean between two capes at Trenton and New York respectively. The absence of marine animals from the clays, &c., of this deposit, prove that this was fresh water, or that the ocean had but imperfect access to this region, and this opinion is confirmed by the presence of vegetable remains, and the coal beds of the upper portions. On the south-east side of this long series of lagoons, ran a lofty hill country, described by the present State Geologist as the Philadelphia-Baltimore-Raleigh gold bearing rocks, and on the other side rose the loftier range of the South Mountain and Blue Ridge. Into this gulf or deep depression, which continued to sink at intervals, were drained vast quantities of the red mud abounding in iron, borne from the broken down rocks before referred to, and which now constitute the new red-sandstone of the country we are passing over, and represented to many who have not visited this region, by the brown building stone of Newark, Trenton and Norristown. These beds of sandstone were destined to further mutations, and were elevated to a great height above the sea. How high they rose we can never know, but some of these rounded hill-tops now stand upwards of 600 feet above the present tide-level. The original height of the entire region is believed to have been from 1500 to 2000 feet higher than at present appears.

The waste of this red-sandstone has assisted in forming the cretaceous and tertiary beds, of which lower New Jersey is composed. A microscopic examination of the colored sands at Atlantic City and elsewhere upon the coast, will demonstrate that the hard rocks of the northern parts of New Jersey and Pennsylvania have contributed to the formation of New Jersey soils and its underlying beds. Thus the beautiful green emerald-like sand has evidently been derived from the comminuted serpentine; the rose-red quartzose particles and the hornblende or tourmaline which occurs in black crystals, and the ruby garnets, all originated in the primary mountains which once towered aloft, but have been in gloriously sunken or worn down almost to the level of the sea.

How shall we account for the appearance of so many trap dykes in this red-sandstone region, while they are almost unknown elsewhere in Pennsylvania. These dykes are direct proof of fracture in the earth's crust, and of more fractures in the part of the crust immediately beneath this formation than outside of the region. This is clear. Therefore they indicate a continued sinking into the old depression, in which the strata of sands and clays were gathered by the flowing of water. This subsidence has increased the strain upon the rocks below, and after a complicated system of cracks and upsetting of the strata had continued for some time and the lower parts had been melted off by immersion in the hot fluid lakes beneath, a free passage was perhaps suddenly found for the upward propulsion of the compressed and heated liquid which has formed, when cooled, the dykes we have described.

The new views respecting the conservation of force, have enlarged our knowledge of the true character of heat, and led to a reconsideration of opinions long prevailing as to the internal condition of the earth. It was formerly taught that the nucleus of the earth is in an incandescent state, the surface only

having cooled down from the original universally heated condition. That it was originally a molten globe is not denied, but a vanishing knowledge respecting the chemical changes that have been long going on upon and within the crust, throws new light upon the question. The nucleus of the earth is no regarded as solid and anhydrous, or entirely free from water, and the theory of igneous agencies has been reconstructed upon that basis. The deeply buried and water impregnated strata between the superficial crust of the earth and the solid nucleus, constitute a region of "plastic material adequate to explain all the phenomena hitherto ascribed to a fluid nucleus." Under the influence of the elevated temperature and the great pressure which prevail at considerable depths, sedimentary rocks which have been long accumulating and have reached enormous thickness, would acquire a certain degree of fluidity and approach a temperature nearly equal to that of redness which is sufficient to give to a granite mass a liquidity partaking at once of the character of an igneous and aqueous fusion. The mechanical pressure of these great accumulations is to be regarded as co-operating, and being indeed one of the efficient causes of the liquefaction of deeply buried sedimentary rocks. Beneath every great line of sedimentary rock, there will therefore occur a reservoir of material in a state of more or less complete fusion, in which volcanic phenomena have their seat, and the numerous trap dykes occurring in the red-sandstone region we are traversing may be pointed to in proof of the justness of this conclusion.

For "The Friend."

Letters, &c., of Margaret Morris.

(Continued from page 27.)

The following letter and memorandum giving an account of the death, and some of the last expressions of Hannah Moore, the sister who had been as a mother to Margaret Morris it is thought is of sufficient interest to include in this correspondence.

Milcah Martha Moore to Sarah Dilthey.

First mo. 28th, 1799.

My Beloved Sister,—Before this will reach thee, you will in all probability have received the account of the late affecting changes in our family; and your affectionate hearts, I know, will share in the sympathy which the removal of a beloved brother (Henry Hill) and sister (Hannah Moore) have excited in the minds of the few of the surviving relatives. Time will not admit of my giving you a particular account of the awful and affecting scenes we have lately passed through. By the good Providence of the Almighty we escaped the dreadful fever, though some in the country took the infection and died. It was very distressing to me that I could not be more with my dear sister Morris at the time our beloved sister Moore began to change, for the worse; the river and roads were almost impassable; as soon as ever it was thought safe to cross, and I was well enough to leave home, I went to Burlington, but the dear creature had breathed her last the night before I got there, and, after sleeping easy five several days, awaked, I hope to better prospects; there remained on her countenance an angelic smile and sweetness, that began to take place before the change. What a comfort thought it must be to us, that she ex-

ressed, before her close, that she felt a gleam of hope and seemed happy. * * *

Your unalterably affectionate

M. M. Moore.

The following memorandum, in the handwriting of Margaret Morris, is labelled, "Expressions of my dear sister, Hannah Moore, the latter part of her confinement, and a short time before her departure."

1796.—Having perceived a little change in my dear afflicted patient, and that her mind seemed to be growing more calm than it had been for a long time past, I thought it would be a satisfaction to our dear absent sisters to read in my own handwriting some comfortable expressions that dropped from her lips at such times. She called me to her bedside every morning very early, and addressing herself to me said, "My dear sister, what shall I order to my gracious God for his goodness (favoring me with such a fine quiet night, slept finely, and am now perfectly easy and free from pain; but, above all, for removing from me those distressing thoughts, they are all gone now."

1797.—At another time she said, "I heard voice which said, thy name should no longer be Hannah, but thy name shall be called Iepzibah, and thy land Benah; a new name ball be given to thee, which shall be 'not spoken—not cast off.'" Again; at another time she thus broke out in a kind of ecstasy: "I never felt any thing in my life so precious a resignation to my Creator's will," often repeating, "Perfect love and perfect resignation. Bread cast on the waters has been found after many days; the dear little babe that I took care of, was given me at eight months old by my mother, and she has been raised up to take care of me—she has been a mother to me, and returned an hundred fold to me since I came under her roof, all that I did for her, and I hope she will be made an instrument of good to others, particularly to my dear brother." And then named some others for whose welfare she had often expressed a tender concern. Seeing my grandson in the room one day, she said: "How glad shall I be if thy dear little Will should be raised up to be 'a preacher of righteousness.'" At another time she spoke as follows: "I have been thinking of the poor gentles, what goodness was extended to them. And the thief upon the cross, 'Lord, remember me when thou comest into thy kingdom; and the gracious answer vouchsafed to him: 'This day thou shalt be with me in paradise.' Oh how sweet is the spirit of prayer. I once bought a book of scripture promises, and the first that I opened upon was this, 'Thy Maker is thy husband the Holy One of Israel, the God of the whole earth shall He be called.'" She several times broke out in a kind of melodious voice, saying: "Sweet is the Redeemer's love. Oh! how sweet, how precious, sweet redeeming love." Yet she had some sharp conflicts afterwards. Sitting one evening in my usual seat, near the fire, I heard her voice very low, and listening found she was in prayer, but could not distinctly gather all she said. "My gracious Father, suffer me not to be tempted beyond what I am able to bear;" these few words were all that I was able to gather. About two or three weeks before the final close she called me to her and said: "My dear sister, I begin now to have some hopes that all will be well with me, and that I shall find favor at last." I encouraged

her the best way I could, to keep fast hold of that comfortable hope, &c.; yet she had one sharp conflict after this, and was sorely buffeted. On the 20th of 1st mo. last, she was seized with a general palsy, lost her speech, and laid still without moving a limb or opening her eyes; her countenance was sweetly serene, not the least expression of pain on her visage, and on the 27th of 1st mo. 1799, she quietly breathed her last, without a sigh, groan or struggle. Such and so peaceful was the closing scene of the kind guardian of my youth, and the endeared companion of my mournful years! MARGARET MORRIS.

From the "National Baptist."

"Cast Thy Bread Upon The Waters."

BY FRANK E. ROSE, CHAPLAIN U. S. N.

No one that has visited Oahu (Sandwich Islands), but will remember the genial face and cordial manner of Dr. Damon, now, and for nearly forty years past, the beloved Chaplain of the Seamen's Bethel at Honolulu. Father Damon, as he is affectionately called, came here in 1833, under the auspices of the Boston Seamen's Friend Society; and if ever years have been pregnant with incidents of absorbing interest, surely those have been which comprise his labors in the Pacific. Midway in the path from China and Japan to Europe and America, the Hawaiian group has been visited by thousands of vessels, representing almost every existing nationality; and Father Damon has been brought into contact with men and incidents that have more than passing importance.

It has been my privilege, within the past few months, to enjoy fellowship with this able and loving minister, and to listen to a recital of facts that put romance to the blush. A Japanese sailor, named John Mangero, in company with two of his countrymen, named Denzu and Goeman, was wrecked off the island of Nippon, about 1840. For six months they managed to sustain life on a barren island. They were rescued by Capt. Whitfield, (commanding a new Bedford ship), and carried to Honolulu. Here Mangero's two companions remained; but John was taken by Capt. Whitfield to the United States, where he was taught the trade of a cooper; and, evidencing a laudable desire for an education, was placed in a school at Fairhaven, Mass., where he quickly attained proficiency in our language; and, among other studies, gave special attention to navigation. The expenses of his schooling, &c., were borne by the captain who had originally rescued him, and who felt a strange interest in his protégé.

In 1849, Mangero, then about twenty-five, sailed for California. His success at the mines was not great; and, very soon, he took passage for the Sandwich Islands, where, for the second time, he met my friend, Father Damon.

His first act was to deposit with the Chaplain all his money—sixty dollars. After a few days of wandering about the town, he visited the Chaplain again; who, observing a peculiar depression in his look and manner, inquired its cause. Mangero then told him that he was home-sick; that he had an insupportable desire to see his native land. In vain did his good friend urge the dangers of such a venture. To the remark, "Why, John, your people will take your head off, if you go back;" he only replied, "I am anxious to go." The Chaplain asked him if he had matured

any plans; when the young Japanese said, "I have. If I can get a good whale boat, a sextant, Bowditch's Navigation, and a barrel of bread; and some captain will take me near to any of the islands of my country, and put me over the ship's side, with my boat, I will take the chances."

Chaplain Damon started out with a subscription paper, explaining to his friends the desire of this poor foreign boy to go with his two countrymen upon this strange expedition. In a little while he had secured \$150, which, with the \$60, was deemed sufficient. This money the Chaplain invested in a good whale-boat, a copy of Bowditch's Navigation, a sextant, and a barrel of hard bread; and thus far the scheme of the anxious Mangero progressed.

Just this time, there stopped at Honolulu, the American brig "Sarah Boyd," Captain Whitmore, master, bound from Mazatlan to Shanghai. His route would be naturally in the direction Mangero desired to take. Chaplain Damon went aboard, told the captain that he had three passengers for him, explained the particulars of the case, and urged him to accommodate himself with the party and their luggage; and the result was the warm-hearted sailor consented; and on the 17th of December, 1850, John Mangero and his companions left Honolulu in the "Sarah Boyd."

I have before me a copy of *The Friend*, of January, 1851, (a paper published here by the Chaplain, in which reference is made to the departure of Mangero, and the belief expressed that there is a future for the young shipwrecked Japanese.

Two years rolled by. These circumstances were not forgotten, but in vain were inquiries made of various ship-masters and others that visited Honolulu, concerning John Mangero. Meantime Commodore Perry had with his fleet visited Japan, and made the famous treaty, by which the ports of that country were opened to the nations; and as a result Japan emerged from a condition of medieval stagnation, to that of magnificent enterprise she now exhibits. Once again, upon the return of Perry's fleet, its officers were questioned as to any tidings from Mangero, but none had heard of him.

In May 1850, the Japanese corvette "Candimarrak," which had been commissioned to carry presents from the Government of Japan to the Government of the United States, on her way to San Francisco, touched at the port of Honolulu. Imagine the surprise of Father Damon, when, in an imperial office, with the rank of Captain in the Japanese Navy, and acting interpreter of the government, wearing his two swords to designate his official status, he recognized his young friend of the whale-boat, John Mangero.

John (now Captain) Mangero related, that the passage toward Japan was uneventful until they reached the vicinity of the Great Loochoo Islands. At this point, in fulfillment of the agreement, the whale-boat was launched, and he and his companions parted company with the "Sarah Boyd" and her kind master. Land was in sight, about five miles distant, and after ten hours of hard rowing, the shore was now unable to be inhabited. They were unable to understand the language spoken, the natives were suspicious of them, and endeavored in various ways to ascertain their nationality, until their

Japanese origin was made out satisfactorily, by the manner in which they used their chopsticks in eating the rice furnished to them.

They were carried before the King of Lo-choo, who detained them in his service for six months, treating them kindly. At the expiration of this time they were placed in a junk and taken to the Island of Kinsin. Here they were kept for forty-eight days, being carried before the Prince of the island, who made intelligent inquiries of them about America, Americans and the manner in which they had been treated while sojourning in the United States.

From this island they were conveyed to Nangasaki, all this time and subsequently being under surveillance, on account of having been out of the country.

Thirty months were spent here; not in prison, but deprived of the liberty of free locomotion, but at length permission was accorded Mangero to visit his home for three days and three nights. Upon his return, he was removed to Yeddo, and there was invested with the dignity of an official with two swords. His whale-boat had been carried to Yeddo, and his first commission was to build for his government a number of these boats. For this purpose he was furnished with all the workmen required, and laboriously taking the whale-boat apart, rivet by rivet, and plank by plank, these skillful Oriental imitators made duplicates of them, and successfully simulated the American model. The old whale-boat is now in the Japanese workshop in Yeddo.

This work completed, Mangero was next ordered to make a translation in Japanese of Bowditch's Navigation, Logarithms, &c. Again he was furnished with assistants, copyists, &c., and was some years employed in this tedious but important work. Altogether twenty copies were prepared; the original of which by Mangero is in the possession of the Japanese Government.

Such, in substance, was the story volunteered by Captain Mangero, and received with unspeakable interest by Father Damon. At length the latter said: "Captain pray tell me where you were, and what you were doing when Commodore Perry was in Japan." He replied, "I was in a room adjoining that in which the interview took place between Perry and the Imperial Commissioners; I was not allowed to see or to communicate with any of the Americans; but each document sent by Commodore Perry was passed to me to be translated into the Japanese before it was sent to the imperial authorities; and the replies thereto were likewise submitted to me to be translated into English before they were sent to Commodore Perry."

Thus we have the surprising information, that this lad, shipwrecked and rescued by Captain Whitfield, in his youth, succeeded and befriended, and at length launched forth upon the deep through the assistance of Father Damon, was the needed and efficient interpreter; not of a dream of Pharaoh, but of matters of far vaster import; matters that have affected and must continue to affect millions of our race; justifying, as I think, the caption, I have given this article, "Cast thy bread upon the waters."

In gratitude to Father Damon, Captain Mangero insisted upon presenting to him two articles which he said he most valued of all of his possessions, namely, one of his swords

of office (a blade over four hundred years old), and the only copy in Japanese of "Bowditch's Navigation" which he had retained for himself. These articles I have personally inspected, and I pronounce the copy of "Bowditch" to be one of the most beautiful specimens of hand printing I have ever seen. It was on exhibition at our Centennial, and was admired by thousands, few of whom guessed its notable history.

With a word further, I leave the subject of this sketch. In the year 1870 one of three Commissioners appointed by Japan to observe the conduct of the war between Germany and France, was Captain John Mangero, n. s. On his homeward journey he stopped at Fairhaven to visit and thank his early friend, Captain Whitfield, for his kindness to him. The last news of him was brought in 1876 by the corvette "Tskuban-Kaw." Captain T. Y. Ito, who reports him as still living in Japan. Who can prove that truth is not stranger than fiction?

Some queries concerning Christ, &c.

(Continued from page 34.)

Query 19. What is that, wherein they that are in the Spirit, behold as in a glass, with open face, the glory of the Lord? Is it not Christ? And how is Christ so? Is it not as he is made manifest in Spirit? Doth he know Christ aright, or believe in him aright, that knoweth him according to his bodily appearance (that can relate, and firmly believe, what he did therein), or he that knoweth and believeth in his Spirit and power? Henceforth know we no man after the flesh; no, not Christ, saith the apostle, though we have known him so. What meaneth that? The same thing may be known several ways: outwardly, inwardly; according to the *flesh*, according to the *Spirit*. Now, if ye are of the Spirit, live in the Spirit; if ye live in the Spirit, know in the Spirit the things of God after the Spirit, as the Spirit reveals, as that which is born of God receives; and not as the wisdom, understanding, reason, and flesh of man can receive; and then ye will come into fellowship with Christ, both in his death and resurrection, and know indeed the resurrection both of the life and of the body: which to know, and be able to acknowledge in Jesus, is very precious.

Query 20. Hath not Christ made us kings and priests to God, even his Father? What is it that is the king and priest in us? And if we be priests, must we not have somewhat to offer? What have we to offer? And what makes our sacrifices savory and acceptable? Is it not that of his Spirit, that of his life, which is in them? Is it not the faith, the love, the obedience, which are all of him, wherein they are offered? If we should give our bodies to be burned (in the way of testifying to truth), without this would they be accepted? If we give but a cup of cold water in this, is it not accepted?

Now, is the life, the faith, the obedience of the Son, the thing which is of value in us? And was it not the same which was of value in him? What did the Father require of the Son, for satisfaction for Adam's disobedience? Was it not the obedience of the second Adam, which weighed down the transgression and disobedience of the first? Doth not this make all righteous (who are of him, and found in his nature), as the trans-

gression of the first made all unrighteous Rom. v. 19. Sacrifice and offering thou wouldst not, Lo, I come to do thy will, O God! (H takeh away the first, that he may establish the second.) By the which will we are sanctified, through the offering of the body of Jesus Christ, once for all. Heb. x. 9, 10. What can be plainer to that which hath truth's ear? So by truth manifested in the heart, there is nothing denied of what is said concerning Christ in scripture, but every thing owned believed, and received in its proper place.

Query 21. Who is the Captain of our salvation? Who is it that girdeth himself with might, riding on conquering and to conquer all the enemies of the soul? Is it not the Lamb? Is it not Christ? Is it not he whose name is called the *Word of God*? And yet how can it be he? Is not he to sit at God's right hand, until his enemies be made his footstool?

Query 22. What is the water and Spirit whereof a man must be born again, or he can not see the kingdom of God? Is it Christ's flesh and blood, or no? His flesh saw no corruption; and incorruptible flesh and blood may enter the kingdom, though corruptible cannot.

Query 23. What did all the types, veils and shadows under the law signify? Did they signify another veil? Did they signify or shadow out that which was outward? Or did they shadow out and signify that inward life, virtue, and saving power, which was the substance of all?

Query 24. Is not the substance, the life, the anointing, called Christ, wherever it is found? Doth not the name belong to the whole body (and every member in the body) as well as to the head? Are they not all of one; yea, all one in the anointing? Was not this the great desire of his heart to the Father, that they all might be one, even as the Father and Christ were one. John xvii. 21, 23. And so being one in the same Spirit (one in the same life, even partakers of God's holiness. Heb. xii. 10.) Christ is not ashamed to call them brethren. Heb. ii. 11, nor is the apostle ashamed to give them the name *Christ* together with him. I Cor. xii. 12. The body is the same with the head; one and the same in nature; and doth not the name belong to the nature in the whole? So that the name is not given to the vessel, but to the nature, to the heavenly treasure, to that which is of him in the vessel, to that which the Lord from heaven begets in his own image and likeness, of his own substance, of his own seed, of his own Spirit and pure life.

Query 25. What was that live coal from the altar, whereby the prophet Isaiah's iniquity was taken away, and his sin purged? Isa. vi. 7. Can any thing purge away sin, but the blood of Christ?

Query 26. What are the leaves of the tree of life, which are for the healing of the nations? Is not Christ the tree of life? Is there any other tree of life besides him? Is there any other healer? And what do these leaves of the tree of life heal the nations of? Do they not heal them of their sins, and of the sicknesses and distempers of their souls because of their sins? And have these leaves any of the blood of Christ in them, or no?

Query 27. Is not Christ the true vine, the true olive-tree; the living vine, the living olive-tree; the spiritual vine, the spiritual

ve-tree; into which all the spiritually-living are ingrafted? As the Father is the husband and so is not the Son the vine? And hath it this spiritual, this eternal vine in it juice and sap of an eternal nature? And is not its sap its blood?

Query 28. Is there not a choice vine, to which the foal and ass's colt of the seed of Judah is tied? And are not the garments and robes of the true Jews washed in the wine, and in the blood of the grapes of this vine? An. xlix. 11.

(Concluded next week.)

BE TRUE!

Thou must be true thyself,
If thou the truth would teach,
Thy soul must overflow, if thou
Another's soul wouldst reach:
It needs the overflow of heart
To give the lips full speech.

Tobacco.—The great increase of smoking among boys, especially of "cigarettes," promises to be attended with most serious consequences as a source of physical disease, and an increase of morbid appetite for strong drink, if effectual measures to arrest the great evil be not adopted. The *British Medical Journal* mentions a certain doctor who, struck with the large number of boys under fifteen years of age whom he observed smoking, was led to enquire into the effect the habit had upon the general health. He took for his purpose thirty-eight boys, aged from nine to fifteen, and carefully examined them; in twenty-seven of them he discovered injurious traces of the habit. In twenty-two there were various disorders of the circulation and digestion, and palpitation of the heart, and more or less marked taste for strong drink. In twelve there was frequent bleeding of the nose, ten had disturbed sleep, and twelve had slight ulceration of the mucous membrane of the mouth, which appeared on ceasing from the use of tobacco for some days. The doctor treated them all for weakness, but with little effect, until the smoking was discontinued, when health and strength were soon restored. Smoking has not only become a well-known universal vice, but also a great peril to the public health. It paves the way for many a drunkard's downward to irretrievable ruin.—*Lute Paper.*

Prayer.—Prayer arises from the feeling of want; we must be sensible of want. Until his sense is felt the first step toward prayer, prayer is wanting. It is a happy thing to know this feeling. If we want, if we see our want, we must understand that there is one to whom we must look—to whom we must go as the only one that can help us, his is God. He saith, "Look unto me all ye ends of the earth, and be ye saved." He sees and knows us in this condition. No framing of a set arrangement in sentences need be attempted. If we aim in our own skill to do as his, the wings of prayer will be plipt. We shall fall to the earth. Lord help me, Lord help me, is all we need cry. Every time when we feel our need, let us say, "Lord help!" I believe I have seen it reported that this was celebrated Rowland Hill's constant aspiration as he walked, or in connexion with religious engagements. He called it "his *arbor prayer.*"

J. B. A.

RETURNING.

Lord, where thy many mansions be
Hast thou a little room for me,
Whose restless feet these many days
By and forbidden paths have trod,
And wandering in uncertain ways
Have missed the way that leads to God?
Lord, is there any room for me
Who, sorrowing, would return to thee?

Far have I strayed, still tossed about
On fears that would not be cast out
For all the subtle theories
That men have framed, wherein to find
For troubled hearts a doubtful ease,
And freedom for a willful mind;
Thy word, once hidden in my breast,
Forever robbed the night of rest.

I heard thy still, small voice above
All other voices—not in love,
As in the old sweet days of peace,
But in a tone of sad complaint:
"Why art thou thus swift to seek release
From easy yoke and safe restraint?
Why hast thou taken for thy guide
False lights that lure thee from my side?"

Lord, if I heard, and in despite
Of warning chose the fair, false light,
If, heedless, I thy Spirit grieved,
And sinned as in an idle tale
Love such as no man hath conceived,
What late repentance can avail?
How shall I dare to lift my face
Once more within thy holy place?

I know not, verily; and yet
With doubts perplexed and fears beset,
And the sad heart unsatisfied,
Lord, I remember what sweet rest
I did discover at thy side:
With yearnings not to be expressed
I long to walk once more with thee;
Lord, hast thou any room for me?

Mary E. Bradley.

Selected.

TO THE FRINGED GENIUS.

Thou blossom bright with autumn dew,
And colored with the Heaven's own blue,
That openest when the quiet light,
Succeeds the keen and frosty night.

Thou comest not when violets lean
O'er wandering brooks and springs unsewn,
Or columbines, in purple dressed,
Nod o'er the ground-bird's hidden nest.

Thou waitest late, and com'st alone,
When woods are bare, and birds are flown,
And frosts and shortening days portend
The aged year is near its end.

Then doth thy sweet and quiet eye,
Look through its fringes to the sky;
Blue, blue as if that sky let fall
A flower from its cerulean wall.

I would that this, when I shall see
The hour of death draw near to me,
Hope, blossoming within my heart,
May look to Heaven as I depart.

Speculative Science.

The recent visit of the president of the Royal Society (Sir Joseph Hooker) to the United States of America lent a special interest to the address which he delivered at the society's anniversary meeting held on St. Andrew's Day, in accordance with the terms of the charter granted by Charles II. Referring to the results of the recent Polar expedition, he expressed his surprise at the fact that no fewer than seventy kinds of flowering plants had been gathered, during the brief Arctic summer, between the 80th and 83rd degree of north latitude. With the exception of two species, these had all migrated from "Greenland's icy mountains" and their

Selected.

existence in such an inclement region was attributed to the indraft of currents of warm air, or to the influx of streams of warm oceanic water. Our present object, however, is not to attempt an abstract of the presidential address, but rather to deduce from it certain lessons of caution, which the physical philosophers of our day are too apt to overlook. From the confident tone assumed by certain professors, one would have supposed that science had already adjusted the new creed which should supersede the Bible, and solved to its own satisfaction the riddle of the world. But when we turn to the calm and careful statements of Sir Joseph Hooker what do we find? *The existence of great doubts and difficulties freely admitted, hasty generalizations condemned, and the necessity of further research rigidly inculcated?* Take, for example, the case of geology in connection with which the most marvelous "finds," if we may use so familiar a term, have been recently announced. These are thus described:—

"Over an area of many hundred thousand square miles in North America there have been found, within the last very few years, beds of great extent and thickness, of all ages from the Trias onward, containing the well-preserved remains of so great a multitude of flying, creeping and walking things, referable to so many orders of plants and animals, and often of such gigantic proportions, that the paleontologists of the States, with museums vastly larger than our own, are at a loss for space to exhibit them. So common, indeed, are some of these remains, and so beautifully preserved, that numbers of them, especially insects, plants and fishes, are exposed for sale, with confectionery and fruit, at the stalls of railway stations, from the eastern base of the Rocky Mountains all the way to California, and are eagerly purchased by travellers."

But what was the result of these amazing discoveries? Did they clear up the long and hotly disputed problem of the true age and relative position of the American chalk-beds? *Far from it!* Professor Marsh, one of the highest authorities in America, "has not found that fossil animals afford a satisfactory solution of the difficulty," while as to "fossil plants," he and the president agree that "they afford none but unsatisfactory measures of geological time." And so it is candidly admitted that "it is most probable that the testimony of paleontologists will always be as conflicting as it is at present." Again, this newly-discovered geological wealth of the United States has already led some to suppose that the main migration of animals was from the American to the Asiatic continent (the exact reverse of what the Bible teaches), but before accepting the notion, Sir Joseph warns these enthusiasts to reflect that there are indications in the narratives of travellers, and the reports of natives, of the "existence in Central Asia of accumulations of vertebrate fossils, in comparison with which those of the Rocky Mountains may sink into insignificance," and which "may entirely revolutionize our present ideas." Professor Huxley, indeed, would compose the feud by suggesting the former existence of a submerged continent from which both Asia and America derived their animals and plants, but this, as the president remarked with a suppressed smile, is tantamount to an opinion that the subject is not yet sufficiently advanced to do more than speculate upon." So we should think.—*The Rock.*

From the "Chattanooga Farmer," New York.

The Six Nations in Council—Protest against Transferring Indian Bureau to War Department.

On the 28th and 29th ult., we attended the Council of the Indians of the Six Nations held at the Council House on the Cattaraugus Reservation, where we came into contact with the dignitaries of the Red Men. We were delighted with what we saw and heard, and we frankly confess that we gave a good large place in our hearts to the manly sons of the primitive forest, whom we met at the Council.

As will be seen from the accompanying document, there were present chiefs of the Onondagas, Tuscaroras, Senecas of Tonawanda band, Cayugas, the president and counselors of the Seneca nation, and a delegate of the Corn Planter Senecas. The Oneidas were not represented, which we regret.

The Council had been convened upon a request to the Six Nations from D. Sherman, Indian Agent, in obedience to an order from the U. S. Commissioner of Indian Affairs, the object of which Council was to afford the Indians an opportunity of discussing the proposed action of Congress in the transfer of the management of the Indians to the War Department of Government. This act on the part of Government was due the Indians, who expressed themselves very grateful for the opportunity offered to signify their views on the matter. As to them there was only one side to the question. The conclusions agreed upon were embodied in their address to the Commissioner, which we print below.

The agent, D. Sherman, was so careful to avoid influencing the opinions of the Council that he was unwilling to give any reasons for or against the proposed transfer. They desired information from him on the subject, and inasmuch as they could not obtain it, they were forced to discuss the question with what light they had.

The venerable counselor, Isaac Halfmoon, of the Allegheny Reservation, was chosen chairman of the council. John Kennedy acted as interpreter, and displayed a good deal of good sense in the execution of his task. Henry Silverheels, native missionary, also acted as interpreter, and opened council with prayer.

In council all were grave. They seemed to feel that a solemn crisis was upon them. They seemed to think the proposed change portended evil to them. The black aspect of the War Department cast a deep and melancholy shadow upon their souls. And they spoke like men arguing vital issues. Their speeches were noble specimens of oratory. The speakers were calm, argumentative, pathetic and irresistible. Only one sentiment was in them, and that was disapprobation of the measure. The strong orators were Shanks, Doctor Poodry, of the Tonawandas, and Laforte, of the Onondagas. A number of young men spoke well. In fact, we were astonished at the ease and facility with which they all could command language, and the dignity with which they could argue in public.

Edward M. Poodry, of the Tonawanda band, spoke with genuine eloquence and power, paying a deserved compliment to the friends of the so-called Peace Policy toward the Indian race, commending the Quakers, teachers and missionaries who had labored with good results to educate and civilize his people. He said he believed the presence of soldiers at the western agencies would be a perpetual menace to the red men, who were yet ignor-

ant, wild and uncivilized, and needed teachers rather than soldiers, and farming implements rather than grape and canister. He thought that the presence of soldiers at those agencies would tend to demoralize the Indian women, and stir up bitter feelings in the Indian breast, culminating in bloodshed and war, which would wipe them from the face of the earth. That the United States could not afford to be so unjust to the Indian race and thus incur the just displeasure of Almighty God, who had made of one blood all the nations of the earth.

The discussion closed, the sentiments expressed in the different speeches were embodied in the below protest, signed by all the chiefs and counselors.

PROTEST.

We, the President and Counsellors of the Seneca Nation of Indians, numbering 2,335 Senecas; chiefs of the Tonawanda band of Senecas, numbering 579 Senecas; chiefs of the 491 Onondagas; chiefs of the 411 Tuscaroras, and chiefs of the 182 Cayugas in the New York Indian Agency, convened in general council, at the Council House on the Cattaraugus Reservation, on the 28th and 29th days of August, 1878, by request of the Commissioner of Indian Affairs in his letter to our agent, dated July 18th, 1878, for the purpose of frankly and freely expressing our opinions and desires upon the question of the proposed transfer of the Indian Bureau to the War Department, beg leave very respectfully to thank the officers of the Interior Department in consulting the wishes of the Indians upon such questions, which we deem of vital importance to them, as connected with their protection, encouragement and advancement in civilization.

We have discussed the subject at length in open council, and carefully deliberated thereon, and have unanimously arrived at a conclusion in relation thereto, which we believe coincides with the views of all the Indians in such agency.

We unanimously, and most respectfully and earnestly remonstrate against such proposed transfer, and our reasons therefor as expressed in such discussion by different members of the council, are as follows:

We have no fault to find with the Indian Bureau in the management of our affairs in the past. Our treaties with the United States have been faithfully kept; our annuities have been honestly paid; our people have been encouraged and aided by our agents in the education of our children, as well as in farming, and general advancement in civilization.

We think that the charge of the Indians of the United States should continue to be vested in a separate Bureau; that their rights would be better protected and their improvement better promoted thereby, than by the proposed transfer to the War Department. We most greatly need encouragement in farming, and instruction in the arts of peace—not those of war. We want a separate Indian Department, having exclusive jurisdiction over Indian affairs, willing in the future as in the past, to listen to our grievances and represent our desires to other departments of the government.

We wish the Indian Bureau to stand between us and the War Department, so that if unjust complaints are made against Indians for any cause, such complaints may be carefully investigated and peaceably adjusted, be-

fore the services of the army of the United States shall be called into requisition. Especially do we desire the continuance of the Indian Bureau, for the reason that we have found its officers accessible and willing to listen to our complaints and aid us in redressing our wrongs.

Our people more especially need friend encouragement in agricultural pursuits, habits of temperance, economy and industry. For these purposes we believe that the judicious selection of superintendents and agents from civilians would be better and more satisfactory to our people than from army officers.

We do not believe that the presence of soldiers at the Indian agencies would improve the Indians in habits of morality, temperance and industry, or advance their civilization, but the contrary.

The Indians desire the continuance of the labors aid and encouragement of good and benevolent white people in the education of their children, and in the formation of the best habits of civilized life which have hitherto aided the Indians of New York in the past, and we believe that such assistance can be better secured through the judicious action of the Indian Bureau than the War Department. We speak not for ourselves alone, but for our less favored brothers in the western States and Territories.

We very much fear that the proposed change would prove disastrous to the red man—that as a step in the dark it would be a hazardous and dangerous experiment. We are unable to see that any good to our race would be likely to result from it. We regard it with intense aversion as fraught with evil, injustice and cruelty.

We therefore most respectfully and earnestly pray that the Hon. members of Congress representatives of the great and powerful nation now occupying nearly all the lands between the two oceans, but recently owned and in possession of the red men, will carefully consider the subject in all of its bearings before taking final action upon it, to the end that no injustice be done.

In this frank expression of our opinion and desires, we have not been advised or influenced by any officer or person in the Indian service.

Witness our hands at the Council House of the Cattaraugus Reservation, the 29th day of August, 1878.

[Here follows the signatures of the Chiefs.]

[We have received a pamphlet of 46 pages entitled "An Essay on the anti-scriptural doctrine of the Resurrection of the Body," by James Bowden, London 1878. We understand that the proximate cause influencing the author to write and publish this dissertation at the present time, was that the doctrine of the resurrection of the body has been preached by one or more of the ministers from this country, now in Great Britain, and he felt bound to put before the public a correct view of the doctrine as held by Friends.

The idea of the resurrection of the body traced to Zoroaster, and the differing opinion on it held by various sects among the Jews are given, as also the differing views of the early Christians on the subject. There is critical examination of the texts in the old and new Testaments usually brought forward to support the doctrine, to show that they literally translated, and cleared of the wor-

per-added by the translators, for which there is no counterpart in the original, they really fail to sustain the theory raised upon them.

The views of the early Friends on the doctrine are shown by extracts from the writings of G. Fox, W. Penn, R. Barclay and Wm. Sewal, to these is added a testimony of James Tuke contained in his "Principles of Friends." From pages 33-37 we take the following extracts.—Ebs.]

"Thus, for a period of two centuries, the Society of Friends had borne a united and decided testimony against the commonly received notion of the resurrection of the body; or, indeed, does it appear that any other view respecting it was advocated by any of its members, at least in print, until the publication, in 1825, of the "Essays on Christianity," by our late friend Joseph John Gurney.* The work has been extensively read by Friends in this country, and in 1829 was published in one of the largest cities in North America.† In an issue there, just at the time when the ickite heresy had culminated in a division among Friends in that land, doubtless caused to be read with more than ordinary interest by them, inasmuch as the work treated largely on those points of Christian doctrine on which Elias Hicks, and those who separated from him, were defective. Whilst, however, the "Essays" contained much that commended to the attention of the Christian reader, the views expressed in it on the resurrection of the dead, evidently favored the Episcopalian view on the subject. Since the circulation of the work those views have been accepted by a large number of Friends in America; and the rising of the dead body of man at the day of final judgment, is now preached among them [many of] its approved ministers, as founded on Scripture authority. The principal passages quoted by them and by J. J. Gurney in support of the doctrine, we will now proceed to examine, of which there are five from the Hebrew or Old Testament scriptures, and six from the New Testament.

The First is that very remarkable passage in the 19th chapter of Job, which, in the authorized version, runs thus: "I know that my Redeemer liveth, and that He shall stand at the latter day upon the earth," v. 25. "And though after my skin worms destroy this body, yet in my flesh shall I see God," v. 26. This is the translation given by the forty-seven learned men appointed by James I. for the work, but it is very remarkable that these learned men should give, in their marginal notes, a translation of the 26th verse, in exactly adverse meaning, and which runs thus: "After I shall awake, though this body be destroyed, yet out of my flesh shall I see God." Purver's translation omits the words "worms" and "body," as italicised in the authorized version, as not being in the original. He has it, "And when after my skin they have destroyed this, out of my flesh shall I behold God." It may be very reasonably asked why, if the marginal translation be the correct one, the body of the text should be its opposite. The explanation of this may, perhaps, be found in the fact that the Prayer-book of the Church of England had been,

after a small controversy among the learned divines, agreed upon, and containing, as it did, and that, too, in a very prominent manner, the doctrine of the resurrection of the body, and which doctrine, from its being read from the Apostles' Creed on every Sabbath, and also at all burials, was thus brought constantly into notice, it was important it should have the support of scripture authority; and, as there were but very few passages in the Old Testament which could, by any possibility, be mis-translated for the purpose, this one in Job was taken for that unworthy design. If every printed Bible contained the marginal notes and references, the mischief of this mis-translation would be greatly neutralized; but this not being so, the Prayer-book doctrine of the resurrection was more safe. Purver's note on the verse is, "The Hebrew is 'out of,' and not 'in,' and where was this but in heaven, when his soul was gone out of his body." The learned Hebrew Rabbi, Dr. Adler, with whom we have had the privilege of conferring upon the translation of this and some other passages of the Old Testament, gives the rendering, "And after my skin is destroyed, then out of my flesh shall I see God."

With the evidence of this mis-translation before us—a mis translation which at once disposes of the passage as affording any support whatever to the doctrine of the rising of the dead body of man—it would seem needless to add more on the subject; as, however, we are dealing with a doctrine so generally believed in by Christians, and believed in very mainly in consequence of the glosses and deductions of writers, by which the true meaning of sacred passages have been obscured, we shall give a very interesting and important extract from a work entitled "Short Studies on Great Subjects," by our English historian J. A. Froude. One of his "Great Subjects" is the Book of Job. "It is," he says, "the most difficult of all the Hebrew compositions—many words occurring in it, and many thoughts, not to be found elsewhere in the Bible. How difficult our translators found it may be seen by the number of words which they were obliged to insert in italics, and the doubtful rendering of which they have suggested in the margin. One instance of this, in passing, we will notice in this place; it will be familiar to every one, as the passage quoted at the opening of the English burial service, and adduced as one of the doctrinal proofs of the resurrection of the body: 'I know that my Redeemer liveth, and that He shall stand at the latter day upon the earth; and though after my skin worms destroy this body, yet in my flesh shall I see God.'" So this passage stands in the ordinary version. But the words in italics have nothing answering to them in the original. They were all added by the translators to fill out their interpretation, and for in my flesh they tell us themselves in the margin that we may read (and, in fact, we ought to read, and must read) 'out of,' or 'without my flesh.' It is but to write out the verses, omitting the conjectural additions, and making that one small but vital correction, to see how frail a support is there for so large a conclusion: 'I know that my Redeemer liveth, and shall stand at the latter upon the earth; and after my skin I destroy this; yet without my flesh shall I see God.' If there is any doctrine of a resurrection here, it is a resurrection precisely not of the body, but of the spirit."

The misapplication of this passage in Job, in support of the doctrine in question has been commented upon by learned men for centuries past. Of these may be mentioned Dr. Henry More, a lecturer on Philosophy at Cambridge University, about two hundred years ago, who was greatly distinguished by his profound erudition and philosophy. He wrote several theological and metaphysical works, one of which was on the "Immortality of the Soul," and another, the "Conjectura Cabalistica," at it is said, the request of "Lady Conway, a Quaker lady, with whom he had formed an intimate friendship." In his "Mystery of Godliness," he says, in confuting a controversialist, "I dare challenge him to produce any place of Scripture, out of which he can make it appear that the mystery of the resurrection implies resuscitation (or raising up) of the same numerical body. The most pregnant of all is Job xix, which late interpreters are now so wise as not to understand at all of the resurrection."

It is much to be regretted that J. J. Gurney in his chapter "On the Resurrection of the Dead," as contained in his "Essays on Christianity," in quoting the passage in question in support of his arguments, a passage which of all others in the Old Testament has been most relied upon for that purpose, should have made no reference to the mis translation itself, but also takes no notice whatever of its marginal correction, and in fact italicises the words "in my flesh," in order to give the passage with more emphasis. This is more to be deplored inasmuch as in his "Essays" he so frequently introduces the original Hebrew or Greek text, which he points out are open to a more correct rendering than that given in the authorized version; and, indeed, two instances of this occur in his essay on this very subject. If a mere oversight, it were most reprehensible in an author of his standing writing upon divine things, and we turn from the thought that the error could have been of a more serious character."

THE FRIEND.

NINTH MONTH 21, 1878.

We have abstracted from a New York paper an account of a council held by the Six Indian Nations of that State, on the subject of the proposed transfer of the government of all the aboriginal tribes in the United States from the Interior department to that of War. At the last session of Congress a Law was enacted appointing a commission of members of that body to enquire into and take testimony on the question of the expediency of this important change in the administration of Indian affairs. We are gratified to find that the commission are consulting the Indians themselves on the subject. Their sentiments seem to be unanimous against it. "We most greatly need encouragement in farming, and instruction in the arts of peace—not in those of war," say they; and the experience of those who have had charge of their agencies for many years abundantly confirms the truth of this. A pamphlet published by the Associated Executive Committee of Friends on Indian affairs, last spring, on the "Need of law on the Indian Reservations," enters into an investigation of the preferability of civil oversight to military, and shows the pernicious

* This work was not submitted to the usual censorship of the Society, and is distinct from his "Observations" on its principles, which received its sanction. † These cities were Boston, New York, Philadelphia and Baltimore.

influence of the presence of camps of soldiers in accessible contiguity to the Indians in strong colors: "I should strongly oppose," says Agent Chim, of the San Carlos Reservation, Arizona, in his report for 1874, "a nearer residence than five miles from an Indian camp, as the association of the soldiers with the Indians is very demoralizing."

The Commissioner of Indian Affairs, in his report of 1868, emphatically says: "If you wish to see some of the results of establishing military posts in the Indian country, I call your attention to the 600 or 800 half breeds, till recently loafing around Fort Laramie, to the posts along the Missouri, to Fort Sumner in New Mexico, before the Navajoe exodus, and to all our military posts in the Indian country, with no known exception. If you wish to exterminate the race, pursue them with the ball and blade; or, to make it cheap, call them to a peaceful feast, and feed them on beef salted with wolf'sbane; but for humanity's sake save them from the lingering poisons, so sure to be contracted about military posts."

We sincerely hope the present Congressional Commission of Inquiry may heed the evidence which has been so cumulative of the inexpediency of resorting to military government instead of civil, for these "wards of the nation;" and in harmony therewith remember the abhorrence with which our revolutionary ancestors regarded the "quartering large bodies of armed troops among us," keeping "among us in times of peace standing armies without the consent of our legislature, and rendering the military independent of, and superior to the civil power." That these grievances were made special subjects of indictment against the king of England in the preamble to the American declaration of independence; which document asserts among the self-evident truths of humanity, that "all men are created equal," and that "governments derive their just powers from the consent of the governed." Let us accord to our red brethren the benefit of these axioms in our political faith, and at least in this particular, fulfil the Christian and golden rule of doing as we would be done by.

SUMMARY OF EVENTS.

UNITED STATES.—The severe storm of last week appears to have been heaviest in Western Pennsylvania, West Virginia, Ohio, and portions of Canada. The rainfall at Steubenville, Ohio, was eight inches in 24 hours, and at Youngstown, in the same State, seven inches. The latter of Youngstown and the county, is estimated at \$109,000. Travel on the different lines of railroads has been much interrupted by the destruction of bridges, culverts, &c. On some lines, serious accidents have occurred by trains running into wash-outs; eight lives are reported lost by these accidents.

The reports from several of the towns stricken by yellow fever, encourage us to hope that the epidemic may have passed its worst stage, and be about to break up. Previous visitations of the same disease, have continued from fifty to sixty days, and in some cases have disappeared without frost. Up to the 14th inst., the deaths in New Orleans number 1295. In Memphis, 1589. To give an idea of the terrible situation at Memphis, it is stated that a similar death rate in this city would represent 14,000 deaths weekly. Liberal contributions throughout the country continue to be forwarded to the districts thus desolated by sickness and death.

The steam-ship Colorado, now loading at New York, has on board three powerful locomotives for Sydney, New South Wales, where they will be used on the railroads owned by the Australian Government. These are of the largest and most powerful freight locomotives constructed. They weigh in working-order, exclusive of tender, 102,900 pounds each.

There landed at Castle Garden, N. Y., during the 8th month, 7414 immigrants—6073 of whom were aliens, and 1341 citizens returning from foreign lands.

A nitro-glycerine magazine, two miles south of Bradford, Pa., containing 90 pounds of nitro-glycerine, and 100 pounds of dynamite, exploded on the 15th inst.—four men are reported killed.

A telegram from Portland, Oregon, reports extensive forest fires in the country north of the Columbia river, causing the loss of one life, and property estimated at \$50,000.

The public schools of St. Louis show an increased enrollment of 3,000 pupils over last year, in a total of 52,000. There are nine colored schools, which exhibit an increase of 200 in a total of 576.

The registration of third-class mail matter commences on the 1st proximo. It is expected to be a benefit to the people, but the Post-office Department. The revenue derived from the registration of domestic letters for the fiscal year, amounted to over \$307,000. The proposed change, it is hoped, may eventually add much toward making the department self-sustaining.

The number of deaths in this city, during the week ending on the 14th, was 270—140 being adults and 130 minors—66 being under one year of age.

The Secretary of the Treasury has rescinded his order of the 31st inst., directing that the standard silver dollars be given in exchange for greenbacks and national bank notes, at the sub-treasury offices. The reason given is that it would be violating the conditions of the Resumption act.

Markets, &c.—American gold 100 U. S. sixes 1881, 108; 5-20 coupons, 1865, 102½; do. 1867, 105½; do. 1868, 107½; new 5's, 104½; new 4½ per cents, 103½; new 4 per cents, 100½.

Cotton.—Small sales are reported at 11½ a 12 cts. per pound.

Petroleum.—Crude, 7½ cts in barrels, and standard white, 9½ a 10 cts. for export, and 13 a 13½ cts. per gallon for home use.

Flour.—Minnesota extra, \$5.75 a \$6 for fresh ground old wheat; Penna. and western, \$5.25 a \$5.37½; patent \$7.75 a \$8.50. Rye flour, \$3.12 a \$3.25.

Grain.—Wheat is in demand, red, \$1 a \$1.06½; amber, \$1.05 a \$1.07; white, \$1.08 a \$1.10. Rye, 58 a 60 cts. Corn, 48 a 52 cts. Oats, mixed, 25 a 28 cts.; white, 30 a 32 cts.

Hay and Straw.—Prime timothy, 60 a 70 cts., per 100 pounds; mixed, 45 a 60 cts.; straw, 45 a 55 cts., per 100 pounds.

Beef cattle, 3¼ a 5½ cts. per lb., as to quality. Sheep, 3¼ a 4½ cts. per lb. Hogs, 4¼ a 6½ cts. per lb. as to condition.

FOREIGN.—A frightful coal-fire explosion occurred on the 11th inst. at Abercrombie, South Wales, from which it is estimated that 100 lives were lost. The scenes of distress were indescribable. It was thought expedient to flood the mine to extinguish the fire, after all hope of there being any more alive should be relinquished.

The receipts of the Paris Exposition for entrances, up to the 4th inst., amounted to 74,212,216 francs.

How wise those French soldiers are, who fear from the political agitation, and stagnation of trade, as appears from the reports of the Mont de Piete, of Paris, which in 1877 made loans of \$7,036,976, or 1,789,500 objects. The average loan was \$2.13, as against \$3.98, in 1876, and \$4.01, in 1875, and there was such a general paving of mattresses and heavy articles of furniture, that it was thought expedient to be erected there to store these bulky pledges. There was an unusual increase in the number of renewals, and of articles abandoned. In 1877 there were abandoned 172,451 articles, on which \$562,028 had been advanced; they brought when sold \$761,561.

News which from Berlin states, the Emperor William is desirous of resuming the reins of government next month. The assassin Nobiling, died on the 10th from the effect of his wounds.

The mission of Moukhtar Pasha, who was sent to Crete to endeavor to pacify the island, has failed. Cretan rebels reject all the proposals made by the Porte, and refused to enter into any arrangement with Moukhtar Pasha, looking to the establishment of reforms in the administration.

The Mussulmans of the surrounding country threaten a descent on Erzeroum, and to plunder the Christians, when the Russian troops leave the city. The Armenian Archbishop has telegraphed to the British and French ambassadors at Constantinople, asking that steps be taken for protection of the Christian population.

The East Indian Budget, of Holland, shows a deficit of 10,000,000 florins, whereas the sum of 1,000,000 florins was expended in the Archenhove war. The budget

estimates the coffee crop at \$30,000 piens, and the sale price at 18 cents (dutch) per half kilogramme.

The first successful attempt to ascend Mont Blanc the Italian side, was recently made by four members of the Italian Alpine Club.

RECEIPTS.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

THE CORPORATION OF HAVERFORD COLLEGE.

A Stated Annual meeting of "The Corporation of Haverford College," will be held at the Committee room of Arch St., Meeting-house, Philadelphia, on Third-day, Tenth month, 1878, at 3 o'clock, P. M. EDWARD BETTLE, Jr., Secretary.

A young woman of experience, desires a situation teacher of small children in the family of a Friend. Refer to S. A. R., 414 North Fifth St., Philada.

WESTWON BOARDING SCHOOL.

The Winter Session opens on Second-day, the 28 of Tenth month. Parents and others intending to see pupils to the Institution, will please make early application to BENJAMIN W. PASSMORE, *Supt.*, (address Street Road P. O., (Aster Co., Pa.), or to CHARLES ALLEN, Treasurer, No. 201 Arch St., Philadelphia. Philadelphia, 9th mo. 11th, 1878.

WANTED

A well qualified woman Friend as Matron at Friend Asylum for the Insane, near Frankford, Philadelphia. Apply to Samuel Morris, Olney, Philada.

John E. Carter, Fisher's Lane, Germantown.

EVENING SCHOOLS FOR COLORED ADULTS.

These Schools will be opened about the first of Twelfth month. Teachers are wanted. Apply to Thomas Elkinton, 9 North Front street. James Bromley, 611 Franklin street. Joseph W. Lippincott, 291 Walnut Place. Ephraim Smith, 1110 Pine street.

DIED, at her residence near Barnesville, Ohio, on the 21st of Seventh mo. 1878, CATHERINE WILSON, relict of the late Israel Wilson, an esteemed member Stillwater Monthly and Particular Meetings. She was strongly attached to the ancient doctrines of Friend and left much comforting evidence that her end was peace.

WILLIAM H. PAPE, PRINTER,
No. 422 WALNUT STREET.

THE FRIEND.

For "The Friend."

A Trip to Maney, by J. S. L.

(Continued from page 42.)

Let us not permit ourselves to be whirled so rapidly over this fair scene, and become regardless of the lessons taught by the mines of iron and zinc that occur along our path. Many valuable mines of iron occur on the north-western border of Bucks county and in the district that traverses the heart of Berks. They are generally in the strata termed by Prof. Rogers, of the Pennsylvania Survey, the Primals, because the first deposit worn from the old primitive rocks. These primitive rocks recently known as Azotic, are now termed Protozoic, Laurentian and Hunian; advancing knowledge having given deeper insight into their history and origin, and forced the geologist to modify his terms of accordance therewith. They are all now believed to have once contained animal remains, hence the term protozoic. They were not only once sandstones, mud-rocks and limestones, though they are all now more or less converted by pressure, moisture, and chemical action, into gneiss, granite, slate and marble. Everywhere these rocks are characterized by the presence of immense beds of magnetic and specular iron ore. Many other deposits of ore are near the surface, and are known as red and brown hematite. These occupy hollows and basins, and are evidently due to the dissolving and transporting action of percolating water, and often take on the appearance of stalactites, and are drawn into underground pipes, known as pipe-ore. Several of these openings are exposed to our gaze from the windows of the cars.

Science will enable us to see that which our eyes alone could never perceive. But science, alas! is a sealed book to many travelers, "to them her ample page, rich with the spoils of knowledge of nature in her thousand aspects, has never been unrolled." The intellectual craving of their children [in some cases] has been stunted by being told "not to ask foolish questions," and their training at school has repressed the desire to make an acquaintance with the phenomena around them, until indifference becomes the characteristic of the once ardent enquirer.

To the eye of the scientist the present can call up the past, and in the dead before him he sees the life of the early world. The new red-sandstone we have traversed is known to

geologists as the Trias, in allusion to its three-fold division, as presented in Germany. In this deposit are found, near Richmond, Virginia, beds of bituminous coal, thirty feet thick, and good iron ore in the coal regions of North Carolina. But little iron ore is mined in this formation in the portion of Pennsylvania through which we are passing. As we enter Lehigh and Northampton counties, and approach the Lehigh river, we may see extensive diggings for ore, and vast accumulations around the furnaces which now occur. Though iron is disseminated through the red sandstone rocks and soil around us, it does not appear to have become aggregated in masses worthy the attention of avaricious man; some necessary conditions appear to have been absent. Why is this? What processes were needful to its valuable accumulation or segregation from the rock and earth in which it abounds?

There are no accidents in nature. The same principles that rule in chemistry have always held sway, and the processes the chemist performs in his laboratory are but puny imitations of the Creator in the vast laboratory of the world. What is the history of every mine of iron? Curious indeed and worthy of especial attention as indicating how, by means the most contemptible to many human eyes, the Allwise has brought about stupendous changes, and has made the minutest life of the past contribute to the progress of the present.

The first act of nature after the appearance of iron upon the earth, was to burn it,—that is, convert it into per-oxide of iron, the rich red iron rust, which contains the largest proportion of oxygen. This compound is insoluble in water, and if the earth were early covered by water, destitute of plant life, this would occur spread upon its surface or forming a large proportion of most of the earth's rocks. But let plants appear, even the humble mosses, which were with sea weeds among the earliest of vegetable forms, and death and decay set in, and a change in the condition of the iron begins. The red iron rust which was insoluble in the rain and river waters, is now brought into contact with a new element. The carbon of the decaying mosses is taken up by the rain, which penetrating the surface of the soil and meeting the iron therein, robs it of a portion of its oxygen and converting the iron into protoxide renders it soluble. The waters therewith carry the soluble iron with them, and convey it into the larger streams or into pools in stagnant bogs. It is here destined to undergo another change by the absorption of another portion of oxygen from the air above it, and during this process it becomes apparent to us in the iridescent pellicle often seen upon the surface of the stagnant waters of swamps, and thus again rendered insoluble in water, it sinks to the bottom where it forms beds of bog ore. Every iron mine was thus transformed, and every

such mine thus becomes a massive evidence of the existence of vegetation upon the surface of land raised above the water, and evidence of rains and of the various processes at the dawn of plant life, similar to those we now see going on around us.

There are two localities in Pennsylvania at which zinc is mined. One of these lies near to our route, in the valley of the Saucon Creek, about six miles south of Bethlehem. At South Bethlehem, Joseph Wharton of Philadelphia, in 1860, successfully introduced the manufacture of spelter sheet zinc, which has attained large dimensions. Large quantities of zinc white paint are also made by the Lehigh Zinc Company. This ore is principally a silicious oxide, and occurs in limestone.

Many suppose that metallic veins are evidence of the intrusion of melted matter from the interior of the earth. Prof. Whitney prepared the way for an important reform in geology, when he called attention to the fact that metals were introduced into the rocks of Wisconsin and Illinois at the very time when life appeared upon a grand scale in the oceans of the globe. From the primeval ocean came the lead, the zinc, the copper, the silver, &c., and not from an imaginary ocean of lava at the earth's core. In this primeval all-dissolving sea, the metals were held in solution in the form of sulphates, and so remained until polyps, mollusks and medusae abounded in the waters, and died there. Their life did not help the lead out of the sea, but at their death the carbon of their bodies seized upon the oxygen of the sulphuric acid in the sulphate of lead, or zinc, or of silver, and converted the compound into a sulphide, which being insoluble, sank and crystallized upon the floor of the sea. Currents may then have swept these crystals into fissures in the limestone rocks, or during the subsequent metamorphism of the strata, they may have been taken into solution by alkaline carbonates, or sulphides, and redeposited in crevices in the metalliferous strata, and there formed veins of galena or sulphide of lead, calamine or carbonate and silicate of zinc, blende or sulphide of zinc, and sulphide of silver.

Copper occurs occasionally in the red sandstone, but rarely in remunerating quantities, and has led to much fruitless expenditure. This metal was also once held in solution in the primeval ocean, and has been extracted from the ancient waters, not however by dead matter, but by living mollusks. These mollusks, analogous to clams and oysters, broke up the molecules of sulphate of copper, took the metal and made it a part of their blood, as iron forms an indispensable part of ours. English oysters have been known to contain so much copper as to acquire a decidedly disagreeable taste, and recent experiments with oysters from Portugal, showed metallic copper deposited upon a clean iron plate placed in contact with them. Fish have the power of taking up copper, and their bones are some-

times colored a rich blue by the carbonate of this metal. The power of absorbing copper belongs to all mollusks, who at their death deposit it upon the floor of the ocean, to be transferred to veins in the fissures, into which thermal waters may convey it. The thermal waters of Nevada are seen to rise through fissures and to throw down minerals and metallic ores along their walls.

Thus it appears that the aggregate labors of myriads of workers in the long ages of the past, have left their legacies of usefulness, and proved themselves indispensable factors in the advancement of the crown of creation, enlightened and progressive man, aptly illustrating in connection with our recently acquired knowledge of the rationale of the processes, the thought of the poet, when he sings,—

"Yet I doubt not through creation one incessant purpose runs,
And the thoughts of men are widened with the process of the suns."

For "The Friend"

Epistle of Ambrose Bierce.

(Continued from page 42.)

"This I have known, and many years experienced in my day; by which I was abilitated to give my naked back to the rod of the wicked, and my head to them who tore off my hair, and my body to bonds, and close confinement, with other additional sufferings, which many years were my lot in the world; in and through all which, the Lord carried me with cheerfulness and contentedness, without the least murmuring. But the longer I suffered, the easier it was made to me by the Lord. I was freely given up to suffer all my days, as my enemies said I should; who said, Ah, aha! Thus we would have it. But the Lord disappointed them, and set my feet at liberty over all their heads, when I least looked for it. Glory, honor, and everlasting praises be to his honorable name for evermore; who never faileth them, whose dependence is upon him for preservation and deliverance.

And now my dear friends and brethren, seeing this stormy winter is in a great measure over, and the Lord in mercy hath influenced the heart of this present government, under which we live, to calmness and tenderness towards us; let us be humbly thankful to him for it, and further engage the government by our peaceable behavior and deportment, in exercising ourselves, and as much as in us lies, by all honest and lawful means, to provoke others to the like acts of piety, justice and righteousness, which will establish and exalt a nation, and be the greatest glory of the government. Thus shall our thankfulness and service be manifested to them, beyond all the flatteries of wicked and ungodly men, among whom the government is not safe; for such were called, many ages ago, the plague and pests of human society; and entailed vengeance upon the places of their residence; and the greatest enemies the government could have in their bowels. For if righteousness exalts a nation, as the wise king said, then unrighteousness must debase it, and bring contempt and reproach upon it.

So, dear friends, love the government under which God hath placed us, and seek the safety of it, by walking uprightly in it. And let prayers, supplications and intercessions be made to God for all men, especially for all who are in authority over us; that under them we may live quiet and peaceable lives, in all god-

liness and honesty; for this is good and acceptable in the sight of God our Saviour, who will have all men to be saved, and come to the knowledge of the Truth.

For our Saviour is not come to destroy men's lives, but to save them; not to influence his followers to be unfaithful to whatsoever government he is pleased to set over them; but on the contrary, to be subject to every ordinance of man for his sake; being for the punishment of evil doers, and for the praise of them who do well. To this end, purpose and intent, was government the ordinance of God.

And now, brethren, seeing the Lord hath made us members of one body, and of one household of faith, let us walk in love one towards another, and be content, whatsoever station our great Father and Master hath placed us in; that he may delight to dwell with us, and give us our daily bread, and nourish our souls with the milk of his word, up to eternal life: this is our interest, this is our all; that righteousness may be established in the earth, and in every house and family; the fruits whereof are peace, and the effects thereof quietness and assurance for ever.

So shall the true Christian sabbath be restored in the earth again, which hath been lost, in this long and dark night of apostasy, which hath been over the nations and families of the earth, whereon the false church hath sat as a queen, and seen no sorrow; being decked on the outside with fine ornaments, pleading to the fleshly eye, whereby thousands have been enticed into her embraces, because of the beauty and riches of her golden cup; having not that eye opened which could see her inside, as it is full of abomination and filthiness; but the day and hour of her judgment is come, and more abundantly coming, when the nations shall buy her merchandise no more; for she hath traded in slaves and souls of men, &c. Rev. xviii. But the day is sprung, which hath discovered her skirts, and may see her nakedness, and will trade with her no more.

The true church is returning out of her wilderness condition, whose clothing is the Sun of righteousness, white as snow; she is travelling in pain, for the deliverance of her sons and daughters into the glorious liberty of the sons of God; all changeable elements are under her feet; you that can read, may. She is the true mother of all the faithful, and all her children are free, walking in white linen, which is the saints righteousness; and are inwardly adorned with the ornament of a quiet spirit, which in the sight of God is of great price. Her dwelling is within the munition of that rock, which the gates of hell cannot prevail against. The streets of her city are pleasant; in the midst of which is the river of life, and all her flocks drink at it, which can never be drawn dry.

The bread of her city is of the finest of the wheat; and her wine is well refined from the lees; which all partake of, who dwell within her gates; and none can enter therein, who work abomination, or love and make a lie, though her gates stand open by day. Oh! ye my dear friends, who are situated within her walls, you have a sure and quiet habitation, out of the reach of the dragon's power: keep your habitation, and walk in the light of the Lamb; by which every trap and snare which the enemy lays in your way, will be seen, and power given to escape.

Go forward in the name and power of the Lord, and keep your station in the holy order of life, which God hath placed you in; and

with zeal and fervency of spirit, keep your assemblies, both first and week-days, till renewed acquaintance you may have with the Lord, and the operation of his divine power through which we have been often renewed the spirit of our minds, and preserved through all storms that rose in the winter.

And now many being come to the sabbath day, there is as much need to watch, and frequently to pray for the preserving hand, the Lord of the sabbath to sustain and uphold us, as ever. For the crown is at the end of the race; which none can obtain, but who continue to the end, in faith, patience, and working. Oh! look not back at the glory of the world, and covet not the friendship of it, which is enmity with God; and whosoever will be friend of the world, is an enemy of God.

But endure their hatred with a quiet mind, and have a special care it be for well doing, and then their reproaches will be of more worth than all their treasures, and as so many seals and witnesses of the day of your redemption: for it is the suffering seed that must inherit glory and immortality with the Son when days in this world are ended.

And walk inoffensively among the sons of daughters of men, in all gravity and humility, sobriety and temperance; that it may be known that you are taught by the grace of God, and saved by its virtue and power, from the pollutions of the world, and all the defilements of the flesh: for to this end did it appear unto you, in an acceptable day.

(Concluded next week.)

Evolution, or the theory of the natural development of forms of organic life from lower or anterior forms or types.

From a work entitled "Present Conflict of Science with the Christian Religion," by Herbert W. Morris, A. M.

(Continued from page 36.)

It is obvious from these and other similar passages, as also from the examples and illustrations employed by Darwin, that he has never duly weighed what is involved in moral perception and judgment—in the idea of right and wrong, obligation and duty. His conception of the moral sense, briefly expressed seems to be—the prevalence of more enduring instincts over less persistent ones, the former being social instincts, the latter personal one. But social instincts and social feelings are of one thing, and a sense of right and wrong another thing, and quite as different as color is from shape, or sound from substance. No instinct, and no amount of kindly habits proceeding from instincts tend even in the remotest degree to account for conscience. Such habits may make the doing of such beneficial acts pleasant, and their omission painful; but such feelings have essentially nothing whatever to do with the perception of right and wrong, nor will the faintest incipient stage of the perception be accounted for by the strongest development of such sympathetic feelings. Likened to do acts which happen to be good, is one thing; seeing that actions are good, whether we like them or not, is quite another.

Again: If the "social instinct" were the real basis of the moral sense, the fact that society approved of anything would be recognized as the supreme sanction of that thing. But so far is this from being the case, that conscience pronounces its judgment on the doings of society itself, often condemns its proceedings, and sometimes chooses death rather

an submit to his demands.—Altogether, as Mr. McCosh has justly pronounced, "Darwin's theory of the origin of our moral ideas is one of the loosest and most unsatisfactory—in fact, the one of the weakest ever propounded." This author, in the words before quoted, says that it is possible for "any animal to acquire a moral sense or conscience"—it would have been much more to the point, and infinitely more satisfactory, than all his ineffectual reasoning, had he referred to any species of animals that are passing through the process he describes, that are now acquiring in some faint or slow degree a moral sense or conscience. But this he has not pretended to do, for all sufficient reason we suppose, as no such animals are in existence.

"It may safely be affirmed," says St. George Jvart, "that there is no trace in any brutes of any action simulating morality which are explicable by the fear of punishment, by the hope of pleasure, or by personal affection. A sign of moral reprobation is given by any vice; and yet had such existed in germ through Darwinian abysses of past time, some evidence of its existence must surely have been rendered perceptible through 'survival of the fittest' in other forms besides man, if that 'survival' has alone and exclusively proceeded to it in him."[†]

The moral faculty is entirely wanting in all species and all other brutes; they possess nothing resembling a sense of right and wrong, of justice and injustice, of truth and falsehood. There is in them no inward monitor to approve or condemn their actions or conduct. No dog was ever seen compelled by inward feelings to return the meat he had stolen from the butcher's stand, or ever known to lose his appetite and sleep through remorse or lacerating the playful infant that chanced to touch his ear. To all such feelings animals are utter strangers; they are in their nature incapable of the faintest idea of the morality or immorality of their doings. Virtue and vice, honesty and fraud, justice and mercy, are conceptions as far above them as are the starry heavens above the earth.

Man only is a moral being. Man only acts from a sense of duty. "Duty!" exclaims Immanuel Kant, "Wondrous thought, that worketh never by fond insinuation, flattery, or by any threat, but merely by holding up by naked laws in the soul, and so extorting by itself always reverence, if not always obedience; before whom all appetites are dumb, however secretly they rebel; whence by original? We answer, From God, and from God direct. Conscience is a revelation of the Supreme Will in the human soul, and is designed to bring man not only into converse with goodness, but to relate him to it, as the power that should govern him in his daily conduct, and guide him to daily happiness. It is conscience that bestows upon human life all its sacredness and moral beauty; and it is destitution of conscience that leaves the whole brute creation irresponsible, ignoble, and doomed to death to final extinction.

If, now, we review what has been said of Man in comparison with the Gorilla, and bring together all the differences enumerated and described under the five foregoing heads—the difference in aspect and habits and expres-

sion, in the structure of the body and the formation of the brains and muscles, in intellectual endowments and progress and achievements, in the use and advantages of articulate language, and in the high distinctions of a moral sense—we shall at once clearly see, and feel abundantly convinced that the gulf—the ocean—which separates them is truly "enormous," "immeasurable," and "practically infinite," and consequently practically impassable. And yet, in the face of all this, we are asked, and that unsupported by a single well-established fact as to *time* or *locality* or *means* or *method*, to believe that some "hairy quadruped," some "ape-like creature," with no other guide than "chance," no other aid than "fortuitous variation," has conducted successfully a voyage occupying millions of years across this immense waste, and at length landed triumphantly on the elevated and sunny plain of Intellect and Morality, from whence he now exercises dominion and authority over all that live or move or breathe in all the earth! We are asked, we say, to believe all this—the demand, we must confess, utterly bankrupts all the credulity at our command. With all deference to authorities, we must beg leave to say, that the feat seems to us as incredible, as Baron Munchausen-like, as if we had been told that toward the close of the Miocene period, a Baboon set out to undertake the flight of crossing the space which divides the Earth from the planet Saturn, and having accomplished the exploit, now sits complacently on the resplendent arch of its inner ring, surveying the wonders of the planetary landscape spread out beneath him. If we can receive the former, there is nothing to forbid us to believe the latter.

Let us, however, devote a moment to glance at the *style of reasoning* or the character of the argument by which this extraordinary theory is recommended to our acceptance and belief. Thus it runs—"There must have been a series of forms graduating insensibly from some ape-like creature to man as he now exists, and it would be impossible to fix any definite point when the term Man ought to be used. But this is a matter of very little importance."

This certainly is what may be called "free and easy" science, and equally "free and easy" theology.

"'Tisn't easy to settle when Man became Man; When the Monkey-type stopped and the Human began, As some very queer things were involved in the plan." "But this is a matter of very little importance!"

(To be continued.)

For "The Friend."

INCIDENTS AND REFLECTIONS.—No. 17.

MEETINGS FOR WORSHIP.

Though our Saviour has promised to be in the midst of those who are gathered in his name, yet it is not always that He manifests his presence in religious assemblies by the outpouring of comfort and sensible refreshment. For wise purposes, and no doubt, He sometimes permits even those who sincerely desire to worship Him, to wrestle long for a blessing; and the careless and indifferent are often "sent empty away." Thomas Story says of a meeting he had in Virginia, that it was "very small, hard, dark and dull," and he attributes it to the fact, that "the people were busy plauting tobacco, and those that came

to the meeting left their minds behind them in that business."

In the course of his American journey, he was at Salem, Massachusetts, in the year 1699, where, he says, "part of my testimony was against a sleepy state in some, and a wandering spirit in others; which I perceived infested and hurt that meeting, and hindered the growth of several. It was a tender, comfortable meeting; and I was told afterwards, there was great need of such a testimony; and one ancient Friend confessed, with tears, that he had received great hurt in meetings by a wandering spirit; which draws away the mind from a true and sincere waiting upon God, by insensible degrees, and hinders the progress of the mind in the Truth, and the true worship."

How many there are of us at the present day, who could (if we were so disposed) make the same confession as this aged Friend, and acknowledge, that our minds were often drawn away "from a true and sincere waiting upon God," by a wandering spirit! May we all heed the exhortation which T. S. was concerned to give at Hampton Meeting, where (as at Salem,) he bore testimony against a drowsy, lukewarm, and indifferent spirit. Here he exhorted, "The old convinced not to rest in that condition, lest they might lose their crowns, and become stumbling blocks in the way of the weak, then under conviction: And to the young, that they should mind the Lord alone; and that if they should enjoy anything in any one, who had for a long or short time professed the truth, either in conversation or in meetings; whether in the vanity of the one, or indifference of the other; or in coming to meetings, or negligence when in them, they should not look out at the failings of others, but to the Lord for help; to whom we must all stand or fall, and answer for ourselves, and not for another."

In a meeting at Greenwich, the same Friend says, "I was concerned to speak against divers enormities, and especially whispering, backbiting, traducing and vilifying, as works of the evil one, and of the flesh; and, after the meeting, several persons went to Ebenezer Slocumb, an honorable and able minister of Truth, and made confession of things they had unjustly reported against him, asking him forgiveness."

The object of religious meetings is the performance of Divine worship, which, as our Saviour told the woman of Samaria, must be in spirit and in truth. It is not therefore at all essential that there should be anything uttered on such occasions; but the duty of those assembled is to turn their minds inward, and endeavor to feel the solemnizing presence of the Lord. In this way meetings may be profitably held, whether any ministers are present or not. Indeed, it has been a frequent experience, that where the expectation of people is much turned to those who sometimes speak in the congregations, it has a tendency to close up the spring of true Gospel ministry. Joseph Hoag mentions attending a meeting at Sandwich, in Massachusetts, of which he says: "It being known that I was expected to be there, the meeting was full. I felt my mind unconsciously shut up, and much composed in stillness. Querying why it was so, it opened to me thus:—There are a number who would not have been present, had they not expected thee here; they are looking to thee, and not to Me, the Giver of all good. I be-

* *Christianity and Paganism*, p. 359.

† *Genesis of Species*, p. 211.

‡ *Metaphysics of Ethics*, p. 136.

* *Descent of Man*, Vol. I. p. 226.

came satisfied, and passed the meeting silently, with peace of mind in so doing.* It is right to put ourselves in the way of receiving good impressions; but if we depend for our nourishment on the ministrations of the servants, instead of looking to the inexhaustible fountain of good, we are not likely to grow in grace, and to become strong men and women in the Lord's army.

The observation has sometimes been made, that meetings which contained a body of sound and religiously concerned members but none in the station of minister more frequently retained their place as vigorous branches of the Church; than those meetings which were favored with a lively gospel ministry. The reason given for this is, the tendency in the minds of the people to depend upon the labors of the minister for their spiritual comfort and refreshment, and thus gradually to slide away from a state of wrestling for the Heavenly blessing. The inevitable result of this is a dwindling in the life of religion. Gospel ministry is undoubtedly a great blessing to the Church, and is designed to instruct, edify and comfort the flock of Christ; but, like other blessings, we may fail to use it to the best advantage.

Joseph Hoag, in his journal, several times refers to this subject. On one occasion, when travelling in Canada, he says, "We attended the little meeting at William Showels's, who had been our pilot. I was shut up in silence, and at the close of the meeting I felt it best to remark, that those, and those only, who wait upon the Lord, renew their strength; and that it appeared to me, that if the people then gathered had waited as intently on the Lord as they had on an inferior object, without doubt we should have had a precious meeting."

Of a meeting held at Sandwich, New Hampshire, which he attended in the year 1802, he observes, "My mind was tried in a singular way. After sitting a considerable time, it was made known to me, that the people were waiting on me, and not on the Most High. This closed my way, and I believed I must tell it to the people, but the singularity of it tried my mind; yet not feeling easy without doing so, I simply told them my feelings, and then sat down; but soon felt like a vessel pressed full, that wanted vent, and could not have it in this condition. I sat as long as meetings commonly hold, until the people gave up the expectation of having preaching, and became quiet; then way opened in a lengthy, searching testimony, that reached the witness for God in the minds of the people, and broke them down to a tender feeling and an acknowledgment to the Truth."

His experience in another part of the same journey is instructive. He remarks, "We next went to Falmouth, and attended their Preparative Meeting—shut up in silence. To Windham the day following, also silent. We left an appointment for Seventh-day, hoping way might open to get some relief, as my mind seemed loaded and my heart greatly distressed, though I knew not why. There was also a meeting appointed at Gorham on Sixth-day. We attended to the appointment,—still my mouth was sealed, and the people appeared much disappointed.

We returned to Windham, where the meeting was large. Here again my lips seemed sealed, and my heart shut up. I passed the meeting in silence, but not without deep

searching of heart, questioning the rectitude of my movements; for the people were not only disappointed, but some of them dissatisfied, and thought themselves not well-used. This, in addition to my broodings, increased my distress, so that I wist not what to do nor what to think, until my Lord and Master gave me clearly to see, that the appointments were not wrong; it being right for me to go in resignation to his will; and better for me and the people, as I became a sign to them in the will and wisdom of the Lord, rather than to speak without it; and that it was as right for me, when the Lord directed, to go from meeting to meeting, and feel and see the states of meetings and people silently, as it was for Nehemiah to view Jerusalem throughout, before he put his hand to the work. This opening fully relieved and quieted my mind, and I said, 'Good is the will of the Lord, let it be done.' The next day we attended Falmouth Meeting; in it I had to lift up my voice like a trumpet, to show to many their transgressions, and to high, superficial professors, their sins. The word went forth in its own authority; the Truth prevailed over all opposition."

For "The Friend."

THE OLD MEETING HOUSE, Of Stillwater, Ohio.

Our dear old meeting-house is gone;

We've torn it all away:

The walls, which stood its stormy years,

Were levelled in a day;

We've built a new one in its place,

'Tis nicer, well we know,

With longer aisles, and easier seats,

And ceiling white as snow.

We do not doubt but it is best,

The new was built, and yet

We think upon our dear old house

With feelings of regret;

For there, in childhood's early years

Were many family bands

Into the house of God's best led

By loving mothers' hands.

While more than three-score years rolled by,

Through man and womanhood,

To this same house, their steps were bent

To seek the Fount of good.

And when gray hairs had silvered o'er

Each once fair, youthful brow,

Some laid them down in peace to sleep;

Some seek our new house now.

And holy influence there was cast

Upon the hearts around.

Until it seemed, we almost deemed

That spot was hallowed ground.

Oh! could those walls a record give

Of all the truths there heard,

How would "our hearts within us burn"

At holy memories stirred.

But let us leave our treasured house,

And trust that in the new

Will fall upon our waiting hearts

Refreshing Heavenly dew.

THE NEW HOUSE.

I am thinking of the new one,

Now as from the old I part;

And with longings for our welfare,

I have questioned in my heart:

Will we be more true and faithful,

When within the new we meet?

Will we be as meek disciples,

Sitting at the Saviour's feet?

Will our needs of praise rise sweeter

Than they did within the old?

Will each heart, in deep contrition

Seek the depths of Love united?

* ["The house of God," not, properly, the building in which His people meet; but, as the Apostle Paul declared, "The Church of the Living God, the pillar and ground of the Truth."—Eus.]

Can we yield earth's dearest treasures?
Will its "weights and burdens down?"
Lay we count no cross too heavy
For the gaining of a crown?
Can we yield our all, in reverence,
To the Holy Spirit's power?
Will the sleepers learn to waken?
Can we "watch with Him one hour?"

Will we imitate more closely
Quakers of the olden time?
"Sons and daughters of the morning,"
Children of a faith sublime;
And, should God see meet to prove us,
Could the aged and the youth
Suffer cruel persecution,
To promote the cause of Truth?

Will we know, the new house nearer,
One stained heart can make more pure,
And God's mercy is not greater
Just because our house is newer,
But I would, oh Heavenly Father,
That we might more faithful be;
That "this house which we have builded"
We might dedicate to Thee.

Not with formal words and phrases;
Not with worldly pride and show;
But that, from each heart, sweet praises
Daily to Thy throne might flow;
That we might, when there assembled,
Bow more meekly "Aeth Thy rod";
Strive to be more humble followers;
More a people serving God.

Barnesville, Ohio, 9th mo. 17th, 1878.

For "The Friend."

Letters, &c., of Margaret Morris.

(Continued from page 43.)

Margaret Morris to Mlleca Martha Moore.

3d mo. 22d, 1799.

I should like to know if brother C. M. had read our friend Robert Proud's history, and how he likes it? I have heard it supposed, that the compiler will not be much profited by his labors; he refused to let it undergo the usual examination of Friends' publications and as they are the only people that would be likely to become purchasers, it is thought he will receive only the subscription money. For the sake of the honorable mention I heard he intended to make of the Dolobron family I subscribed, but have not yet read it.†

To the same.

7th mo. 4th, 1799.

We have been much affected for some days past by very alarming accounts from Philadelphia of the yellow fever having again made its appearance in the lower part of the city all the empty houses here are taken, and several families come up. To-day the accounts are more favorable, and I hope there is not much reason for their fears. Yesterday our valuable friend Daniel Smith, my Debby's father, was buried; he has left a sweet savor and I think it may be said of him that his life was hid; being, indeed, a man of blameless conduct in all respects. He has left six sons, all valuable young men, and one amiable

* 1st Kings viii. 43.

† From references to this subject, contained in some of the records, it appears that Robert Proud's History was inspected by a Committee of the Meeting for sufferings in 1785, who in reporting upon it, stated that they "judged it might be informing and really useful, but that it would be most proper when published to appear as his own performance." Robert Proud appears to have engaged in compiling this history at the instance of Friends, and on this account, in 1801, the Meeting for Sufferings agreed to give him upon its application, the sum of \$500, although it was not such a work in all respects as the Representatives of the Society could sanction.

lighter, who has tenderly rocked the cradle of his "reposing age."

I am, my beloved sister, ever thine,
M. M.

the same.

I shall hardly go to Philadelphia; indeed, Patty, I am such a poor worn-out body, that I am only fit to stay at home; and here, reviewing the past scenes of my chequered life, and endeavoring to be prepared for the future, of which there cannot now be much more to look forward to on earth, I find it a relief to employ myself in "shattered tabernacle." I hear in my sweet H. H. grows finely; it is very clear; it is very true; it is not what his father was, for I used to say of him, when an infant, he gave no more trouble to his nurse than a young kitten. The dried peaches are very nice, and I feel loth to deprive thee of many; but if we should live to be near neighbors, I will try to repay thee, my own sweet sister, if not in the same kind, yet by every tender and affectionate attention in my power, for I do love thee, my dear sister, more than I can express; and as our domestic circle lessens from year to year, I feel as though I wanted to engross to myself the few individuals that yet remain of our once large and happy family; and I am willing to cherish the hope that Providence will be pleased to permit our spending the dregs of life together, and dropping off like "fall ripe corn," when our tour of duty is performed; indeed, it is pleasant sometimes to look forward to the closing scene of life, for with the patriarchal age of our can say: "Few and evil have been the days of our pilgrimage."

To the same after the death of Dr. C. Moore.

I take up my pen to inform thee we had an easy journey home, crossed the ferry about five o'clock, and reached our door before five. I left thee, my most beloved sister, and while I was with thee, and a witness of thy endeavors to get thy mind into a state of resignation, I have been comforted in the hope that under the calming influence of this calm of life, thy bitter cup will be sweetened, and in some happy moments give, not a glimpse, but an assurance of that bright persuasion which will greatly compensate for all the sorrows of this life. It is thus I think, when my anxious mind is anticipating future joyful events, and I wish I may be able to rail myself of the precepts which a long series of years have impressed on my mind; and in the needful time practice what I know to be right. My love to all our kind relations, whose affectionate deportment on the late evening occasion, shows the value they had for their departed uncle and thyself.

Thy own affectionate sister,
M. M.

(To be continued.)

Home and Its Queen.—Home, based upon Christian marriage, is so evident an institution of God, that a man must become profane before he can deny it. Wherever it is preserved true to the Christian idea, there lives an institution conservative of all the nobler instincts of society.

Of this realm woman is the queen. It takes her care and hue from her. If she is in the best sense womanly—If she is true and tender, loving and heroic, patient and self-devoted—she is consciously and unconsciously organized and puts in operation a set of influences that to more to mould the destiny of the nation than any man, uncrowned by power of elo-

quence, can possibly effect. The men of the nation are what mothers make them, as a rule; and the voice that those men speak in the expression of power, is the voice of the woman who bore and bred them. There is no other possible way in which the women of the nation can organize their influence and power that will tell so beneficially upon society and the State.—*Scribner's Monthly.*

Heat in the Nevada Mines.

Those who have not recently explored the lower levels of the leading mines of Comstock can have but a very faint conception of the heat prevailing therein at the present time. The heat is terrible even in the winter; it is like the breath of a furnace, and in most places where men are obliged to work it is deficient in oxygen, that life-supporting ingredient having been burnt out by the many candles used, and in various ways absorbed and exhausted. It can be felt piercing through the little clothing worn, drying the saliva in the mouth and almost shriveling the eyeballs. A temperature of 120 to 130 degrees is so much above blood heat that the process of cooking begins in the human frame. But for the floods of perspiration covering the body, the flesh would really be cooked to a certain extent. A famous English philosopher has given an account of his going into an oven hot enough to cook a beefsteak, and remaining there till one lying near him was actually cooked. Had it been the dead instead of the living body of the philosopher that accompanied the beefsteak, it would undoubtedly have been "done to a turn." All that saved the experimenter, as he himself says, was the fact that he was constantly in a state of profuse perspiration. A temperature above the natural heat of the body undoubtedly attacks it and causes the flesh to undergo the first stages of cooking. This happens to a miner the moment perspiration ceases to flow from the pores of his skin. The stomach is first affected, then the brain. It is probably through disorder of and sickness at the stomach that perspiration ceases. As soon as the perspiration ceases to flow, the body begins to cook, and first of all, apparently, the brain, as a man at once becomes delirious—as wildly insane as any patient in a lunatic asylum. Cases of this kind occur much more frequently than is supposed or generally known. Of late they have been very frequent in the California and Consolidated Virginia mines. When a miner suddenly begins to rave or talk incoherently, his companions "doctor" him. It is rough treatment they give him, but it is found to be very effective. The man attacked is seized and carried to the coolest place in the vicinity, when he is bound hand and foot and put through a process of rubbing. The friction is applied to the stomach, which is found to be the seat of the trouble, and in which knots nearly of the size of a man's fists are found to have formed. These must be rubbed out, and as soon as they disappear perspiration again starts and the man regains his senses. The rubbing is sometimes done with a piece of gunny sack, but as this is liable to cause useless abrasion of the skin, a pick-handle is preferred. To be rubbed down with a pick-handle in the hands of a muscular miner is not such treatment as any man in his senses would be likely to greatly desire, nor does the miner, even in his delirium, desire it, therefore he is tied in such a way that he cannot resist. The miners say

that they can bring a man out all right by their method of treatment in less than half the time that it would be done by the physicians. A day or two since at the Consolidated Virginia, the men took one of their companions who became deranged from the heat, tied him at the end of a rope, and lowered him about one hundred feet to a place where he could be conveniently "doctored," then went at him with their pick-handles and soon brought him out all right.

Although the men who work there are a species of human salamander—like the philosopher who got into the oven along with the beefsteak—still they cannot work but about ten minutes at a time. They then fall back and let other men come to the front. In this way of working it is asserted that there are places in the bonanza mines where it is now costing \$16 per day to do the work of one man. The men could do nothing at all but for the liberal supply of ice and ice-water allowed them. They swallow ice water by the gallon, and frequently pour the same over each other. In these hot places they use about ninety-five pounds of ice per day to the man! Without ice none of our leading mines could be worked. Men cannot live in the lower levels without an ample supply of ice-water, and even with it they are, as we have seen, almost cooked alive and frequently rendered delirious—would die indeed were they not promptly taken in hand and "doctored."
—*Virginia (Nevada) Enterprise.*

[The following communication was accidentally mislaid, or it would have been in our columns more immediately after its reception.]

For "The Friend."

"The choice of a war opposed alike to the spirit and course of this world, will most likely draw upon you the ridicule and it may be the hatred of that mis-judging world which lieth in wickedness."

The above sentence occurs in a forcible article addressed to "the junior members of the Society of Friends," in a former number of "The Friend." It is no new thing to hear the idea expressed, that those who publicly avow a submission to the restraints of the cross, become subject to the derision of their former companions, and others who are indulging in the world's pleasures. And in the face of history it were perhaps futile to deny that it has often been so. But it is presumed there are and have been clouds of witnesses to the scripture Truth, that "when a man's ways please the Lord, He maketh even his enemies to be at peace with him."

It is one of the blessed fruits of a thorough dedication of heart, to be found doing the will of God, that it is more or less respected, even by those who are strangers to its influence. Perhaps, however, there are few who have not, at some period, had visitations of Divine love which they remember. Perhaps many of them contemplate with regret the fact, where such was the case, that these tender visitations were neglected; and while thus reproaching themselves for unfaithfulness to manifested duty, they are in no disposition to treat those with levity of the wisdom of whose course they stand convinced. This is no mere theory. The writer can remember no incident in the course of a protracted life, in which a close attention to the scruples of conscience has brought upon him the scorn of

any one. He has met with respect, even where in the weakness of nature the contrary treatment had been anticipated, and this experience runs alike through the whole history of frivolous youthful acquaintance; strangers to Friends' testimonies, and men of the world's refinement, who were close observers of its etiquette.

It does indeed seem, that in His all embracing love, our heavenly Shepherd is ever ready to "carry the lambs in his bosom;" and often causes to be felt in the hearts of those who are opposed to the restraints of the cross, a wholesome dread of that woe which was declared by our Saviour to those "by whom an offence cometh" to one of the little ones which beloveth in Him.

I apprehend that the eases of ridicule that are sometimes experienced, are where there is but a partial surrender of the heart, and but a halting submission to manifested duty. Religious consistency may meet with respect and encouragement where they who "put their hands to the plow and look back," would find themselves paralyzed by the scorn of beholders.

I would that our youth should not have held up to their view any groundless difficulties. The narrow way has ever been found a path of trial; but let them be assured that our Heavenly Guide is equal to all our emergencies, and especially that when a man's ways please the Lord, he maketh even his enemies to be at peace with him.

Colora, 1878.

Initiation of Buddhist Priests.

BY S. L. BALDWIN.

The monastery at Koo-shan is the headquarters of Buddhism for the province of Fokien. Here on the night preceding the birthday of Sakyammuni, priests are yearly initiated. The birthday of Sakyammuni occurs on the eighth day of the fourth month, in which this year is the 9th of May. In company with two friends I ascended the sacred mountain last night (May 8). We reached the monastery about 7 P. M., and found it crowded with visitors who had come to witness the ceremony. We spread our lunch on a table in the main guest-room, and were surrounded by a very undesirable "cloud of witnesses" while eating. Our inquisitive friends made very shrewd guesses as to our food. Canned peaches were pronounced to be duck's eggs; butter was confidently affirmed to be lard; a bottle of pure water was pronounced wine; white sugar was salt, and the quantity of "salt" used on our strawberries astonished them, while the strawberries were themselves an insoluble conundrum. About 9 o'clock one of the leading priests took us to a side room, where the novitiates were engaged in a preliminary service. There were twenty-eight of them, of various ages from fifteen to forty years. Suddenly, about 10 o'clock, they were taken to the main temple. Each candidate was attended by two priests. While the candidates knelt before the tables, which were placed in the room for this occasion, the attending priests first made from three to twelve rings upon their heads with a sort of stamp. These circular spots were then covered with a substance having the appearance of ointment, or soft, sticking salve. To these sticky surfaces conical pastilles of mugwort-incense were attached, which were then set on fire, and allowed to burn down into the

closely-shaven heads of the candidates. While these pastilles were burning, the attending priests were assiduously rubbing the surrounding surface of the head, apparently to obviate or lessen the sensation of pain from the burning, on the principle of counter-irritation. During all this time both the priests and the novitiates were constantly repeating some ritual form. It was altogether a very curious sight. Immense red candles over two feet high, and from four to six inches in diameter at the top, were burning. I believe they are really cups of oils made in the form and semblance of candles. All over the room were men kneeling, with from three to a dozen of these pastilles sticking up on their heads, and slowly burning down to the flesh. In about twenty minutes the work was done, and the candidates were taken back to the room from which they came, and allowed to go bed, and keep quiet. The ashes of the pastilles remained on the burned spots, and it is said that the sores are not dressed in any way. The candidates affirm that they experience no pain in the operation.—*Christian Advocate*.

For "The Friend"

Some Queries concerning Christ, &c.

(Concluded from page 45.)

Query 29. What is that which the earthly nature slays? And what is the blood which the earthly nature shall disclose, and the slain which it shall no more cover?

Query 30. What are the robes which are washed and made white in the blood of the Lamb? And how are they washed and made white therein? And what is the blood (of what nature, earthly or spiritual?) wherein they are washed and made white?

Query 31. What is it to have, or how come we to have, fellowship with Christ in his death, and to suffer and be crucified with Him? Is it by having our natural bodies crucified on the same cross of wood (or some such like one) as his body was crucified on, or by having the fleshly nature crucified, subdued, and worn out of our souls, minds, spirits, &c., by the power of the Spirit? Rom. viii. 13. Now if the flesh we are to put off be of such a nature and kind; to wit, inwardly and spiritually corrupt; must not the flesh of Christ, which we are to put on instead thereof, be of as deep, inward, and spiritual a nature? What is the flesh whereof we are to be unclothed, before we can be clothed with Christ? is it outward or bodily? And what is Christ's flesh we are to put on? is that any more outward or bodily than that which we are to put off?

Query 32. Is not the flesh and blood, which they that have eternal life feed on, and which nourisheth them up to life eternal (they continuing to feed thereon, and not feeding afterwards on strange flesh, and strange blood),—I say, is not this flesh and blood Spirit and life? For that is it which profiteth. John vi. 63. Is it not the flesh and blood of the Word? Was not the Word made flesh? And did not the Word, who was made flesh, dwell and appear in a tabernacle of flesh, and cause the glory of his own divine flesh to shine through that earthly flesh? Oh! read and consider, that ye who have stumbled and murmured against the truth may stumble or murmur no more, but now at length receive the pure and precious doctrine thereof (and so come to witness the fulfilling of that pro-

mise, Isa. xxix. 18—24.) and praise Him who giveth understanding.

Query 33. Is not the true church flesh Christ's flesh, and bone of his bone? Is not the false, or antichristian church, flesh antichrist's flesh, and bone of antichrist's bone? What is the flesh of the spirit, where, which is to be stripped naked and burned with fire? Shall ever the church which is of Christ's flesh be stripped naked and burned with fire? Nay, doth not the flesh make able to abide the devouring fire and to dwell with the everlasting burnings?

Query 34. What is the pure milk of the word, which is milked out to the babes from the pure breast? And what is the bread from which it is milked out? Is it of the flesh of Christ, or no?

Query 35. Are not the wicked of the seed and flesh of the serpent? Is not that the body of flesh, of sin, of death, which is to be put off? And are not they who are renewed in spirit, of the seed and flesh of Christ? Is not that the body or garment of holiness, of righteousness, of life, which is to be put on?

Query 36. Is it not as necessary that the eternal word be made flesh inwardly, that the children may feed on Him, as it was for Him to take on Him an outward body of flesh, to suffer and die for them, and to fulfil all righteousness, both of the law of the letter, and of the law of the Spirit in?

Query 37. Is there not that which spiritually is called Sodom and Egypt? And do not they which dwell there, instead of eating Christ's flesh, and drinking his blood, put his flesh to pain, crucifying it in and to themselves, trampling under foot the Son of God, and counting the blood of the covenant an unholy thing? Read the figure. Did not outward Israel suffer in outward Egypt? Did not just Lot suffer in Sodom? Doth not the spiritual seed suffer in and by spiritual Egypt? Doth not the flesh of the holy and just One suffer in and by spiritual Sodom?

Query 38. What is that which the Gentile Christians, who are not Jews inward, circumsised in heart and spirit, who know not the inward temple (the place of the true Jewish worship, where they worship the Father in Spirit and truth), but only worship in the outward court, which God hath cast off, and left out of his measure, Rev. xi. 2. I say, what is that holy city which these Gentiles tread under foot forty-two months? Is it the church which is of the flesh and bones of Christ, or no?

He that knoweth the substance, the seed of the kingdom, the birth of the Spirit, knoweth the flesh and blood which is of the seed. An flesh is flesh indeed, this blood is blood indeed, even the flesh and blood of the seed nature; but the other was but the flesh and blood of our nature, which He honored in taking upon Him, in which He did the will in which He offered up the acceptable sacrifice; but yet did not give the honor from flesh and blood to it. For the flesh and blood of our nature was not his own naturally, but only as He pleased to take it upon Him and make it his. But that whereof He forgets us, and which He giveth us to eat and drink is the flesh and blood of his own nature; and this was it wherein was the virtue, and wherein is the virtue, life, and power for ever. Happy, oh happy is he who is of it, who taken out of and formed of Him, (as Eve was of Adam), and so becomes flesh of his flesh

d bone of his bone! Then will he know a mystery of life, feed on the thing itself, did not stumble about appearances and expressions, as those that are out of and from their itself do, through the darkness of their mind, and because of their ignorance of the thing spoken of in the Scriptures.

The Poor, Poorer.

It is constantly said by those who make a trade of awakening the discontent of the working man, of arraying one class against the other, that the whole tendency of modern civilization is to make the rich richer and the poor poorer. The assertion has no doubt so much of a basis as this; the rich are probably richer; that is to say, their wealth enables them to purchase more than it would have done two hundred, three hundred years ago. The rich man of to-day travels more safely and rapidly, has more comforts in his house, and has better care when he is sick, and had the king of England or Spain or France in the 17th century.

But on the other hand, we believe it to be, and to be susceptible of proof, that the poor man is not poorer, but richer than he was any previous period. We mean taking it on a large scale; of course during the present depression the working men, in common with everybody else, are poorer than they were during the flush times which preceded 1873. But we believe that during the first three quarters of the 19th century the working man has been better off than he was during the 18th, or the 17th century; and that the difference in comfort between the working man and the capitalist is less than it was.

We can hardly do better than refer to a few of the facts gathered by Macaulay and cited in the celebrated 31 chapter of his history. He arrives at the conclusion that during the reign of Charles the Second, the ordinary wages of the peasant did not exceed four shillings a week; but in some parts of the kingdom, five shillings, six shillings, and, during the summer months, even seven shillings were paid. At present a district where a laboring man earns only seven shillings a week is thought to be in a state shocking to humanity. The average is very much higher; and, in prosperous counties, the weekly wages of husbandmen amount to twelve, fourteen, and even sixteen shillings.

Again, as to another class of laborers: In the course of a hundred and twenty years, the daily earnings of the bricklayer have risen from half a crown to four and tenpence, those of the mason from half a crown to five and threepence, those of the carpenter from half a crown to five and sixpence, and those of the plumber from three shillings to five and sixpence.

And further: It seems clear, therefore, that the wages of labor, estimated in money, were, in 1655, more than half of what they now are; and there are few articles important to the working man of which the price was not, in 1655, more than half what it now is. Beer was undoubtedly much cheaper in that age than at present. Meat was also cheaper, but it was still to be said that there were hundreds of thousands of families who scarcely knew the taste of it. In the cost of wheat there has been very little change. The average price of the quarter, during the last twelve years of Charles the Second, was fifty shillings. Bread, there-

fore, such as is now given to the inmates of a workhouse, was then seldom seen, even on the trencher of a yeoman or of a shopkeeper. The great majority of the nation lived almost entirely on rye, barley, and oats.

The produce of tropical countries, the produce of the mines, the produce of machinery, was positively dearer than at present. Among the commodities for which the laborer would have had to pay higher in 1685 than his posterity pay in 1878, were sugar, salt, coals, candles, soap, shoes, stockings, (two might add tea and coffee,) and generally all articles of clothing and all articles of bedding. It may be added, that the old coats and blankets would have been, not only more costly, but less serviceable than the modern fabrics.

And again, as to the comforts of life: The street which now affords to the artisan during the whole night, a secure, a convenient, a brilliantly lighted walk, was a hundred and sixty years ago, so dark after sunset that he would not have been able to see his hand, so ill paved that he would have run constant risk of breaking his neck, and so ill watched that he would have been in imminent danger of being knocked down and plundered of his small earnings. Every bricklayer who falls from a scaffold, every sweeper of a crossing who is run over by a carriage, now may have his wounds dressed and his limbs set with a skill such as a hundred and sixty years ago, all the wealth of a great lord like Ormond, or of a merchant prince like Clayton, could not have purchased.

The rich and the poor are more nearly on a level as to all the comforts of life than ever before. Queen Mary of England died less than two centuries ago of the small pox; as also did Louis XV of France, a century later. The poorest artisan now has an absolute safeguard from this disease. Charles II of England was tortured as he lay dying by the ignorant physician of his day. The hod-carrier of to-day, sick of the same disease, enjoys a degree of care and skill for which that worthless monarch might have longed in vain. If the poor man is sick, his family can be summoned as quickly as the rich man's, if he wishes to travel, he can travel as speedily and as safely as the rich man, if he wishes to write to his son who has emigrated to Nebraska, his letter goes in the same mail with that to the rich man's son. The newspaper, the book, the ten thousand sources of enlargement of the mind and the soul, which were, hopelessly beyond the reach of the laborer of two hundred years ago, are enjoyed daily by the humblest artisan.

The poor are not growing poorer; the advance of civilization is in their favor; and we thank God for it.—*National Baptist.*

The enemy, as he hath ever done, seeketh to cast down when he cannot set people up; he trieth every way, so far as he is permitted, (for his power is limited,) to disturb, to discourage, and any way he can to hinder the Lord's work, the work of salvation, from going forward; but our gracious and Almighty Helper, He is the Prince of Peace, and He delighteth to encourage, to strengthen, to lift up the hands that hang down, and to "confirm the feeble knees." He will give peace to those who love Him, and the victory to all who follow Him. O! saith my soul, that all those who know and love Him, who is the true Shepherd, who offered up himself a pro-

pituitary sacrifice for their complete redemption, that all who believe in Him might be strengthened, at all times to put their whole trust in Him, for they who trust in Him shall never be confounded, and to all these He is saying again and again, for their encouragement, "Fear not, little flock, for it is your Father's good pleasure to give you the kingdom." JOHN THORP.

THE FRIEND.

NINTH MONTH 28, 1878.

William Penn speaks of the doctrine of the Light of Christ in the heart as God's gift for man's salvation, as being the root of the goodly tree of doctrines which the Society of Friends professed and published to the world.

That man should be taught his duties by Divine illumination, without the necessity of outward instruction, was foretold in the prophetic declarations of ancient time, as one of the glories of the Christian dispensation: "It shall come to pass afterward, that I will pour out my spirit upon all flesh." "All thy children shall be taught of the Lord, and great shall be the peace of thy children." "Behold the days come, saith the Lord, that I will make a new covenant with the house of Israel and with the house of Judah. . . I will put my law in their inward parts, and write it in their hearts. . . And they shall teach no more every man his neighbor, and every man his brother, saying, Know the Lord; for they shall all know me from the least of them unto the greatest of them, saith the Lord."

Our Saviour, when personally on earth, told his disciples, that the Father would send unto them in His name, the Comforter, even the Spirit of Truth, which should teach them all things. "He will guide you into all truth."

The Apostle John declares the same doctrine in explicit language, when he tells the Church,—The anointing which ye have received of Him, abideth in you, and ye need not that any man teach you; but as the same anointing teacheth you of all things, and is truth and no lie." And again, "Ye have an unction from the Holy One, and ye know all things."

This doctrine of the Light of Christ, thus foretold by the prophets, and proclaimed by Christ and his apostles, was prominently held up to view in the writings and teachings of the early members of this Society. It was not, with them, a mere theoretical belief. They had known Christ by his Spirit to shine into their hearts, showing them their fallen state and making them feel that the Divine displeasure rested on all unrighteousness. By embracing this heavenly visitation and yielding to its influence, they had been enabled to forsake their sins, to repent of them, and to seek that forgiveness of God, which is freely extended to the penitent through the atoning sacrifice of the Redeemer of men. They knew by experience, that true faith in the Saviour is not an ordinary mental operation which can be exercised at our own pleasure, but that it is wrought in us by the operation of the Holy Spirit, as we submit thereto; agreeably to the declaration of Christ himself, "No man can come unto me, except the Father which sent me draw him."

Hence it was that they were led so earnestly and persistently to exhort and plead with

their hearers, not to slight the visitations of Divine grace to their souls; but to heed the Light of Christ which, shining in their hearts, would show them the way of salvation, and would give them strength to walk therein. And they were bold in declaring that there was no other way, in which they could come to be redeemed from sin, and made partakers of God's salvation—even as the Apostle John testified—*"If we walk in the Light, as God is in the Light, we have fellowship one with another, and the blood of Jesus Christ, his Son, cleanseth us from all sin."*

From this doctrine, proceeded their manner of worship. For, when they were met together for Divine worship, which our Saviour declared must be in Spirit, they were convinced that they could not offer acceptable praise to the Almighty without His assistance. So they sat together in silence with their minds turned inwards to the Spirit of Christ, waiting to feel his power warming their hearts, and preparing an offering that would be accepted by the Most High.

The exercise of Gospel Ministry among them was regulated by the same doctrine. For, as they believed Christ to be the ever-present Leader and Teacher of his people, they recognized as true ministers those only who were empowered and commissioned by Him, and who spoke in the ability which He gave.

As they came to experience the saving efficacy of the work of the Spirit—the true baptism of Christ—they were enabled to see that John's water baptism, which was to decrease and pass away, is no longer essential to be observed. And being favored to partake of true spiritual communion with the Saviour, they had no need of the outward symbols of bread and wine, which are but a shadow of the true substance.

SUMMARY OF EVENTS.

UNITED STATES—Latest reports from the South confirm the hope that the epidemic is abating, and several towns have given information that they will need no further aid. Thus far about sixty per cent. of the cases have resulted in death.

The Department of State is in receipt of information from the U. S. consul at Port Spain, which states, that during the year ending 9th mo 30th, 1878, 30,610 emigrants have passed through that port, seeking homes in the United States. Of this number, 16,183 were Canadians from the province of Ontario and Quebec. These Canadians were principally agriculturists, carrying with them to their new homes their household effects, agricultural implements, and in many cases sufficient money to enable them to travel to the country and consider they may be regarded as a valuable addition to the ranks of American industry.

The reports of the supervisors of steam vessels show a marked improvement in that branch of the service during the past year. The losses by disaster on the water, reported for this year, are increased by the dreadful sacrifice of life on the wreck of the *Metropolis*. Exclusive of this, the losses will not reach one hundred. On the waters of the Mississippi, there is marked improvement; which is largely attributable to the vigorous action of the New Orleans Supervisor, in refusing to grant licenses to men addicted to drunkenness, and also to the vigorous enforcement of the law of 1871 in the testing of boiler plates. The service on the Delaware has also improved. At New York the number of boiler explosions has been exceptionally large, owing chiefly to carelessness.

It is stated that on the 10th inst., the first train on the Michigan, Tampa and Santa Fe railroad, reached the terminus at Tampa, Fla. This is the first train to reach Los Vegas by 4th mo, 1879. No train will be made at the tunnel through the Paton Mountains, but the road will be carried by a system of switch-back over the tops of the mountains, the grade of which will be 300 feet to the mile, and will be worked by mountain engines especially designed for the purpose.

Over 2,000 acres of corn were destroyed in the Scioto valley by the recent floods.

During the recent rise in the rivers, 7,000,000 bushels of coal were shipped from Pittsburg.

The cotton crop of America, for the years 1877-78, is reported by the National Cotton Exchange at 4,775,865 bales.

Indiana has a school fund larger than that of any other State in the Union. It has increased \$4,000,000 within a year, and now amounts to \$8,007,065.

The Chinese Embassy has arrived in Washington and will be presented to the President upon his return to the capital. The embassy consists of Chin Lun Pio, first Plenipotentiary; Yung Wing, second Plenipotentiary; M. Yeh, and M. Yung, Secretaries of Legation; D. W. Bartlett, American Secretary, and attaches and servants. The chief ambassador, with part of his suite, will soon go to Spain and Peru to organize the Chinese diplomatic service in those countries. He will then return to Washington, to remain there as Minister Plenipotentiary.

There were 273 deaths in this city during the past week—130 adults and 143 children.

Seven steamships sailed from New York for Europe on the 21st. Live stock continues to be a prominent feature of the freight—of which there were 583 horded cattle, 380 sheep, and 27 horses.

Flour—Choice American good 1003, U. S. sixes 1881, 1081; 1-20 composit, 1865, 103; do, 1867, 105; do, 1868, 107; new 5's, 106; new 4's per cent, 103; new 4 per cent, 101.

Cotton—Middlings sold in lots at 11½ cts; per pound.

Petrolens.—Crude, 7½ cts. in barrels, and standard white, at 10 cts. for export, and 13 a 13½ cts. per gallon for home use.

Flour—Minnesota extra, \$5 a \$5.50; Penna. and western, do. 5 a \$5.25; patent, 86.75 a \$8.50.

Grain.—Choice red wheat, 98 cts. a \$1.00; amber, \$1.07, and white, \$1.10. Rye, 58 a 63 cts. Corn, 50 a 55 cts. Oats, 40 cts. white, 32 a 35 cts.; mixed, 26 a 28 cts. per bushel.

Hay and Straw.—Prime timothy, 60 a 70 cts., per 100 pounds; mixed, 45 a 60 cts.; straw, 45 a 55 cts.

Beef cattle, 3 a 5½ cts. per lb. Sheep, 4½ a 5 cts. per lb. Hogs, 5½ a 6½ cts. per lb.

FOREIGN—The first instalment of the French contribution for relief of the yellow fever sufferers in the United States, amounting to \$6,000, was remitted on the 16th inst.

The influx of visitors to Paris is reported very large, all the hotels and lodging houses being full. The arrival of strangers registered during the past fortnight number upwards of 60,000.

Abundant rain in the northern provinces of China, have ended the fears of a continuance of the famine. Hostile demonstrations have been made against the English missionaries in the interior of the province of Tokien. The Viceroys of Nankin has ordered the confiscation of houses devoted to opium smoking. The Viceroys of Chihli provinces has arranged for the construction of a railway between Pien-sin and Kika, and a telegraph is projected.

The last census in Japan shows a steady increase, the total being 34,338,404. According to the last report of the Postmaster-General of Japan, the postal correspondence of the islands, for 1877, included 22,052,000 letters, and 606,554 registered letters, 6,764,272 postal cards, and 7,829,836 newspapers. The increase in the number of newspapers, over 1876, was 46 per cent., and 100 per cent. over 1875.

Advices from Senegal state that the yellow fever has almost ceased there and in Goree, where it has been epidemic since midsummer. The Asiatic cholera has appeared in the cities of Mecca and Fez, Morocco, and causes 20 to 30 deaths daily in the former place.

WESTTOWN BOARDING SCHOOL.

The Winter Session opens on Sunday, the 28th of Fourth month. Parents and others intending to send pupils to the Institution, will please make early application to BENJAMIN W. PASSMORE, *Super.*, (address *Street Road P. O., Chester Co., Pa.*), or to CHARLES J. ALLEN, *Treasurer*, No. 301 Arch St., Philadelphia. Philadelphia, 9th mo 11th, 1878.

THE CORPORATION OF HAVERFORD COLLEGE.

A Special Annual meeting of "The Corporation of Haverford College," will be held at the Committee-room of Arch St. Meeting-houses, Philadelphia, on Third-day, Fourth month 8th, 1878, at 3 o'clock, P. M.

EDWARD BEYLER, *Jr.*, Secretary.

RECEIPTS.

Received from James W. Haines and George Hair, Jr. \$2.10 each, vol. 52; from John H. Van N., \$2.10, vol. 52; from Margaret Robinson, Ginn, \$2. vol. 52; from Enoch S. Zelle, N. J., \$2.10, vol. 4 from David Stephen, O., \$2.10, vol. 52; for Martha Scott, Pa., \$2.10, vol. 52; from John Aikins, Pa., \$2. vol. 52, and for Rachel McClain, \$2.10, to No. 13, 5; from Thomas Woolman, Ginn, \$2. vol. 52; for James B. Kite, Agent, O., for David Hill, \$2.10, for Penrose, Thomas Dewelwyn, Jason Penrose, Sam Fawcett, Jesse Dewees, Joseph Masters, Samuel Ki, Richard Penrose, David Masters, William Pi, Robert Milhous, and Mary Wilson, \$2.10 each, v. 52; from Dr. Isaac Huestis, Agent, O., for Fleming C. Kite, Agent, O., and Joseph Dodna, \$2.10 each, vol. 52; from Mark Ballinger, N. J., \$2.10, vol. 52, for Charles Ballinger, \$2.10, vol. 52; from James Cooper, Pa., \$2.10, vol. 52, and for Thomas B. Hoop Lettice Thompson, Deborah P. Chambers, and Celi T. Pratt, \$2.10 each, vol. 52; from Elhanan Zook, P., \$2.10, vol. 52; from William Wickersham and Sam Hoopes, Pa., per Thomas M. Harvey, Agent, \$2. each, vol. 52; from Henry Newton, England, 10 shillings, vol. 52; for Thomas Kite, O., \$2.10, vol. 52; for Parker Hall, Agent, O., for Joseph P. Binns, Jonah Binns, and Joseph Hall, \$2.10 each, vol. 52; for Benjamin Hayes, Pa., \$2.10, vol. 52; from George Bencklyn, Agent, O., for Daniel Boulton, John F. French, Sarah B. Kite, \$2.10 each, vol. 52; from Miriam French, and Frederick M. Kite, \$2.10 each, vol. 52; from Mary Randolph, City, \$2. vol. 52; for Dr. George Martin, Pa., \$2.10, vol. 52; for Sarah Matak, Ginn, and Joseph Matak, Pa., \$2.10 each, vol. 52; from Abner Eldridge, Agent, Io., \$2.10, vol. 52, and for Alexander L. McGrew, \$2.10, vol. 52, M. T. Kite, \$2.10, vol. 52; from James B. Kite, \$2.10, vol. 52; from Thompson 25 cts., to No. 6, vol. 52; from Joseph H. Agent, Io., for Thomas Penrose, Aaron Roberts, Job Thomas, Thomas Heald, Isaac Heald, John Oliphant and Samuel S. Cowgill, \$2.10 each, vol. 52; from J. Hodgson, Ginn, \$2.10, vol. 52; from Elijah Kester, Md., \$2.10, vol. 52; from Samuel Wilson, Io., \$2. vol. 52; from Susan S. Haines, N. J., \$2.10, vol. 52; and Rebecca H. Wells, \$2.10, vol. 52; from John S. Low, City, \$2. vol. 52, and for John C. Lowry, \$2. vol. 52, from John Bull, N. J., \$2.10, vol. 52; from Benjamin Ellyson, Io., \$2.10, vol. 52; from Benjamin D. Strato Agent, O., for Cyrus Brantingham, Joseph Strato Nathan Whinery, and Benjamin H. Coppock, \$2.10 each, vol. 52; for Anna B. N. J., \$2.10, vol. 52; from Moses Caldwell, Pa., \$2.10, vol. 52; for Isaac S. Heston, Pa., \$2.10, to No. 14, vol. 52; for Hannah Flanagan, City, \$2. vol. 52.

FOR SALE.

On reasonable terms, fifty volumes of "The Friend," Embrace of John S. Stokes, at the Office of "The Friend."

WANTED IMMEDIATELY.

A woman Friend of experience in school teaching at the "Shelter for Colored Orphans." Apply to Mary Wood, 524 North Second St. Mary Leeds, North 17th St., above Allegheny St. Hannah B. Newbold, 415 Franklin St.

A young woman of experience, desires a situation as teacher of small children in the family of a Friend. Refer to S. A. R., 411 North Fifth St., Philada.

WANTED

A well-qualified woman Friend as Matron at Friend Asylum for the Insane, near Frankford, Philadelphia. Apply to Samuel Morris, Office, Philada.

John E. Carter, Fisher's Lane, Germantown.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty-third Ward), Philadelphia. Physician and Superintendent—JOHN C. HALL, M. D. Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board of Managers.

Death, at her residence, near Muscatine, Iowa, on the 25th of 8th mo, 1878, Elizabeth Cairns, widow of the late James Carr, in the 76th year of her age, a member of Hickory Grove Monthly Meeting of Friends. Throughout her illness she was favored with calmness and consciousness, and previous to her close expressed that the prospect of release was peaceful.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. LII.

SEVENTH-DAY, TENTH MONTH 5, 1875.

NO. 8.

PUBLISHED WEEKLY.

Price, if paid in advance, \$2.00 per annum; if not paid in advance \$2.50; 10 cents extra is charged for Postage on those sent by mail.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

For "The Friend."

Incidents and Reflections.—No. 18.

CALMNESS IN DANGER.

There are many anecdotes on record, showing the quiet calmness with which the Lord often favors His servants in times of apparent danger. Though outward peril seems very great, yet He often enables them to adopt the language of the Psalmist, "The Lord is my God, and my salvation; whom shall I fear? The Lord is the strength of my life; of whom shall I be afraid?" He who can truly say, "One thing have I desired of the Lord, that I will seek after; that I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord and to inquire in His temple;" will have ground to hope for the fulfillment of the declaration, "In the time of trouble He shall hide me in His pavilion; in the secret of His tabernacle, shall He hide me."

When Nicholas Wain and David Bacon, of Philadelphia, were crossing the ocean to England on a religious visit, a violent storm arose, so that the captain thought they must inevitably perish. After exerting himself to the best of his ability to save the ship, he thought it best to inform the passengers of their perilous situation, and of the fate which he thought awaited them. On entering the cabin, he found David Bacon enjoying his pipe, and the two Friends engaged in pleasant converse. When he had communicated his message, his passengers remained composed and placid; and Nicholas remarked, that he supposed it was as easy to travel to Heaven by water as by land.

The vessel weathered the storm, the visit was paid, and they returned in safety to their native land; but the quiet resignation to the Divine will of these good men made a strong impression on the mind of the captain.

After Nicholas Wain had returned from his visit to England, he did not speak in the way of ministry in meetings for worship for some time. One day, when this had been the case, as Friends were walking homeward from the house, Sarah Millin remarked to a companion, that she wondered why Nicholas Wain was so silent. He happened to be near her and heard the remark; and quickly stepping to her side, said, "I can tell thee why. My Master has given me a holy-day."

Thomas Story mentions in his journal that when travelling on a religious visit in the

Southern States of America,—"The company was taken with the greatest storm of lightning, thunder and rain, that ever I remember I had been in before; inasmuch that the fire and water seemed to be commixed in their descending upon us; and the thunder so sharp and sonorous, and so near, as if it had been bombs splitting among us; so that I, being the second in the company, looked back several times to see if any were slain behind; and it was attended with a stifling smell of sulphur. The storm abating a little, it was quickly renewed with equal show of terror; so that we had it along for the space of about eight miles in the first, and three in the latter, in a very dreadful manner; but the Lord preserved us from all harm. And though I was a little concerned at the first approaches of so terrible threatenings by an irresistible power, though from natural causes; yet feeling the Creator near, who ordains it, and that His all-ruling authority was above and over it and all things, I was much comforted in Him, in the time of the most apparent danger: For which I was greatly thankful to the Lord, and for our preservation; for we observed that several great trees had been shattered to pieces by it; and so we got safe to Robert Jordan's that evening. But another storm, with much thunder and rain, coming on in the night, awakened the family, and some of them were much terrified, the thunder breaking out near the house; but upon my retiring inward, I had great peace in the good presence of the Lord, and His holy love ejected all fears."

John Richardson, in the course of his many travels by sea and land, was several times exposed to great danger; but preserved his presence of mind in a remarkable degree. He thus relates one peril which he encountered when crossing the James' River in Virginia:

"Now we came to ferry over the river, being, as I remember, five horses and nine people; there was Jane Pleasant a public Friend, and her man servant who rid before her upon a great horse, and high in flesh; and about the mid of the river, it being two miles over, he rose upon his hind feet, and flung himself upon the edge or funnel of the boat, half into the river; the fall of the horse, and the motion of the other horses thereupon, caused the boat to make such sallies that it took in water, and was very likely to sink; But before he could have time to rise again, or to make any more springs, I took several young men by the shoulders, and flung them upon his neck to keep him down, and told them, as fast as I could, why I did so. Now I had to deal with the ferryman, who was about to strip for swimming, and said we should all be drowned; but for his part he could swim; and was about to leap into the river, for, he said, the boat would either break or sink. I told him, it was soon enough for him to swim, when he saw the boat either

break or sink, and if he would not row, then I would. With much entreaty he took the oar again, and rowed us to the shore. But in our imminent danger, I looked over my tender friends (for so they appeared to me), and thought in my heart, what a pity it would be, if all these were drowned! Yet the thought of my own drowning never entered my mind, until I was got over the river, which was a mercy to me, and a great means to keep out disorder and confusion, which commonly attend sudden surprises and frights, or else they make people dead-hearted and almost senseless." On this occurrence, he makes these judicious comments: "As I had now an occasion to observe, as well as in some imminent dangers I had seen before, where I happened to be, I find it an excellent thing to be, as much as we can, always ready; and by being frequently thinking upon death, it is not so surprising when it does come."

In 1791 Thomas Story visited New England, at a time of great distress from the Indian war then raging. He says, "It was a dismal time indeed in those parts; for no man knew in an ordinary way, when the sun set that ever it should arise upon him any more; or, lying down to sleep, but his first waking might be in eternity, by a salutation in the face with a hatchet, or a bullet from the gun of a merciless savage; who, from wrongs received, as they too justly say, from the professors of Christ in New England, are to this day enraged, as bears bereaved of their cubs, sparing neither age nor sex." Yet the faithful members of the Society of Friends, "trusting in the Lord, neither used gun nor garrison, sword, buckler nor spears; the Lord alone being their strong tower and place of refuge and defence; and great was their peace, safety and comfort in Him."

After a meeting at Salisbury, he lodged at Henry Dow's, on the edge of a great swamp or thicket, "where," he says, "there was neither gun, nor sword, nor any weapon of war, but truth, faith, the fear of God, and love, in a humble and resigned mind; and there I rested with consolation."

This family had recently met with a severe affliction, which is thus related. "The mother of Henry Dow's wife, being a Friend of a blameless life, and living in this same house with them, let in reasonings against their continuing in a place of so much apparent danger, and frequently urged them to remove into the town, where the garrison was, that they might lodge there in the night for safety, as many others, and some Friends did; which her daughter could never be free to do, believing, that if they let in any slavish fear, or distrust in the arm and protection of the Lord, some very hard thing would befall them; till at length her mother said to her, that if she could say she had the mind of the Lord against it, (being a minister, though young), she would rest satisfied; but nothing less than that could balance so rational fears in so

obvious danger. But the young woman being modest, cautious and prudent, durst not assume positively to place her aversion to their removal so high; but at length she and her husband complied with the mother, and they removed to the town to a house near the garrison: where the young woman was constantly troubled with frightful surprising fears of the Indians; though, while at the house by the swamp, she was free from it and quiet.

"But the mother, having left some small things in the house by the swamp, was going early in the morning to fetch them, and, by some Indians in ambush near the town in her way, was killed. And the same morning a young man, a Friend, and tanner by trade, going from the town to his work, with a gun in his hand, and another with him without any, the Indians shot him who had the gun, but hurt not the other; and when they knew the young man they had killed was a Friend, they seemed to be sorry for it, but blamed him for carrying a gun: For they knew the Quakers would not fight, nor do them any harm; and therefore by carrying a gun, they took him for an enemy.

"When the town was alarmed, the young woman concluded her mother was slain, (but it was not by shot, but a blow on the head), but did not go into the garrison, but took one of her children in each hand, and went with them into swamp or thicket, full of reeds, near the place; where all her tormenting fear left her, and she was then greatly comforted and strengthened in the presence of the Lord, and confirmed in her thoughts, that they should not have left their house for her mother's fears, though reasonable in human view.

"The loss of the mother was much lamented by the son and daughter, and others; but as soon as her body was interred, they went back with their little children to the same place by the swamp; where I lodged with them and they gave me this relation."

Evolution, or the theory of the natural development of forms of organic life from lower or anterior forms or types.

From a work entitled "Present Conflict of Science with the Christian Religion," by Herbert W. Morris, A. M.

(Continued from page 51.)

Again: the qualifying term of the process—"insensibly." The reader will not fail to notice that *this word* begs the whole question. If we may be allowed this insensible-graduation argument, we can prove whatsoever we please. Two beings, or two objects, cannot be conceived so distinct, or so dissimilar, or so heterogeneous, but give us "a few millions of years," and plenty of "environment," we can, with the use of this kind of logic, prove the one to have been developed from the other; we can prove that the ant is a descendant of the rhinoceros, and that the butterfly is the offspring of the whale—let us but "imagine" a descending series of sufficient length having existed between them, and the demonstration is complete; in short, we can prove that the circle has been developed from the triangle, that two parallels can meet, and that a straight line may return upon itself and enclose a space.

"This old fallacy," observes Max Müller, "of first imagining a continuous scale, and then pointing out its indivisibility, affects more or less all systems of philosophy which wish to get rid of specific distinctions." The ad-

mission of this insensible graduation would eliminate, not only the difference between ape and man, but likewise between black and white, hot and cold, a high and low note in music; in fact, it would do away with the possibility of all exact and definite knowledge, by removing those wonderful lines and laws of nature, which change the Chaos into a Kosmos, the Infinite into the Finite, and which enable us to count, to tell, and to know."

Leaving the argument, let us now inquire after the "Series." This began, we are told, with an offshoot of the "Old World Monkeys." This ape-like creature had its offspring, more or less; these, in like manner, had their offsprings; and these again had theirs; and so on. Now, we wish to ask, did the successive generations forming these lines of desc^t all travel gradually toward the goal of humanity, or only one of them?

If all made upward progress, then, their progress being by "fortuitous variation," some would advance slower and some faster than others; so that, at length, as the foremost emerged into distinct manhood, others would be short of that point, some, one-tenth, some two-tenths, some three-tenths, and so on all the way down to those which had made no perceptible progress. Hence man should have found co-existing with him a regular gradation of beings, descending on every side from himself down to the ape. But no such gradation exists; between man and his nearest living ally is an "immeasurable gulf."

If it be said that only one series ascended toward manhood; then, in this case, that one in the course of its upward progress must have thrown out branches that were continually in advance of the previous ones, and others in advance of these, and so on all the way to pure manhood; we should, therefore, even from a single series, still have among us at the present day a gradation of animals down to the ape-like creature. But by common consent no such graduated series is to be found.

If, to escape from this difficulty, it be said, as Darwin does, that all the branches of this series together with their offsprings have perished, except the single one that ripened into manhood—then we would ask, Since each generation in the series of man's progenitors, must have been in advance and better fitted to maintain its position in the world, than any which preceded it, how perished *all these*, while mere monkeys, which had made no progress at all, still survive and flourish? Here, Darwin in his efforts to escape from Scylla falls into Charybdis—according to his theory, the fittest should have survived; but according to his facts, the fittest have perished.

The intermediate series of animal forms between the man and the ape have perished and become extinct, we are told—here the very thing to be proved is gratuitously assumed; we must have evidence that the series ever existed, before we can believe that it has perished. But admitting for the moment, that they have all perished, we ask, how is this accounted for? We demand that some reason be assigned for such a remarkable occurrence. The number of forms in that series must have been exceeding great—the more "insensible" the process, the greater the number of forms. Now we ask Darwinians to ac-

count for this fact, for fact it must be, if the hypothesis be true, that all these myriads of intermediate forms, without a single exception, have become extinct, while the first of the last links, the ape and the man, still survive. Why have we no species of living creature half way, or some other part of the way between these? Why is not the vast gap occupied by more or less of these supposed numerous intermediate forms, seeing that man feeblest animals, that must have been contemporary with every one of these links, still live and multiply on the earth? To this question they can return no satisfactory answer whatever—here their theory breaks down—R^e the assumption they make to support it, they can offer no reason, nor the shadow of reason.

If it is still insisted that they have perished and become extinct, then we ask for the bones, or at least for their fossils. Can they be produced? None of them. What reply then is made to the demand for them? No other than this evasive one, "The discover of fossil remains has always been an extremely slow and fortuitous process." Have a fossil remains, then, of any kind been found which can be produced, in support of the theory, either of the immediate or remote progenitors of man? Let Darwin answer—"The great chasm between Man and his nearest allies cannot be bridged over by an extinct or living species."* Thus the supporters of the development hypothesis fail not only to produce the organic chain, which they say connects man with the ape, but the cannot produce even a fossil link of that chain.

It is entirely obvious, hence, that we are warranted to conclude, that this "intermediate series of animal forms between Man and the ape" never existed, save in the imagination of those who hold to it; and that the whole train of reasoning by which it is attempted to support this theory is illogical, inconclusive and unsatisfactory to the last degree.

There are absolutely no facts either among the developments of Geology, or in the written History of the past, or in the actual Experience of the present, that can be referred to in proof of the descent of man from an ape-like creature. There is nothing within the compass of human observation or research, indicate that man, as we travel backward into the past, will be found to descend toward the ape in mind or body. We of the present with all our boasted advantages, do not possess any native mental powers superior to those of the earliest periods of human history. Neither Darwin nor Professor Huxley; we presume, would venture to affirm that Seneca, Marcus Antonius, Cleantines, Aristotle, Plato, Homer, and many others, were not in this respect fully abreast of ourselves. And if we recede far beyond the utmost limit of the historic period, and examine the most ancient human remains that have thus far been discovered, we shall find no material diminution in the size of the cranium or brain case of man. A Swiss skull of what is called the "Stone Age," found in the lake dwellings of Meilen, corresponds exactly to that of Swiss youth of the present day. The celebrated Neanderthal skull exhibits a fair circumference and capacity, fully equal to those given by Morton to the Polyo-ian races of the

* Man's Place in Nature, p. 181.

resent day; and Professor Huxley* makes his candid acknowledgment in regard to it, that, "in no sense can the Neanderthal bones be regarded as the remains of a human being intermediate between Men and Apes." The English skull, doubtless the very oldest known, and which according to Sir John Lubbock here seems no doubt was really contemporary with the Mammoth and the Cave Bears, is yet perfectly human in all its proportions. Its measurements," says Huxley, "agree well with those of some European skulls. And assuredly there is no mark of degradation about any part of its structure. It is, in fact, a fair average human skull, which might have belonged to a philosopher. In conclusion, I may say, that the fossil remains of man hitherto discovered do not seem to me to take us appreciably nearer to the ape form."

(To be continued.)

For "The Friend"

Epistle of Ambrose Rigge.

(Concluded from page 56.)

And let young men and women have a care who they look out at the glory of the world, where is the lust of the eye and the pride of life, which are not of God, lest they be ensnared with them; as were the young men of the Hebrews, with the daughters of Moah, which brought a plague upon Israel of old, by which twenty-four thousand fell. These things were written for our learning, that we should not tempt God, as some of them tempted him, and were destroyed.

And wait upon the Lord in faith and patience, and he will give you whatsoever is needful for you, in his own due time; and that with a blessing added. This I have learned by long and good experience, and recommend to you as a brotherly caution, not to seek lawful things by unlawful means; for that is not good in the sight of God. But let the lamp of righteousness go before you, in all outward undertakings, by which all snares which may be laid in the way, may be avoided, and you preserved in the dominion of that life and power, which subdueth all things which are not of God. And be not lifted up into high-mindedness, if the world's riches increase upon you; for it is not always a sign of the favor of God. And be not cast down when they are taken away; for it is not always a sign of his displeasure, but may be for the trial of your faith, patience and constancy in him, whose hand giveth and taketh away, according to the good pleasure of his heavenly will; unto which all his true-born children truly and patiently submit, and say, "Thy will be done in earth, as it is done in heaven."

And walk in Him, your heavenly head, you who are elders, fathers and mothers of families, as examples of gravity, temperance and modesty; and be careful and watchful over your children, in their young and tender years; and beware of letting them alone, without due and loving reproof, for the least appearance of evil, in word or deed; for so is the will of God concerning you, to whom he hath given power in their younger years, to restrain every appearance of evil in them. For they are of your loins, and you must be accountable for their evils, till they know, and be made sensible of the Spirit of Truth in themselves; which, when they come to the

knowledge of, and by you are recommended thereunto, if they turn aside therefrom, either to the right or left hand, you are so far clear, and their miscarriages will lie at their own door; and their reward will be, as those who know the Truth and do it not, to be beaten with many stripes.

There is a great obligation on parents, to bring up their children in the nurture and admonition of the Lord, the next to thankfulness for the gift of them; for they are blessings to parents, when they grow up in the fear and wisdom of God, and a crown of rejoicing to their gray hairs. This I know by experience: glory to God on high! who hath not left me destitute of his mercy in my old age, and hath given me to see, in a large measure, the travail of my soul in my young years. He called me by his grace, near the first dawning of the gospel day in our age, from my father's house, and inclined my heart to inquire after and first seek the kingdom of God and his righteousness, with a promise to add all other things necessary. This I have witnessed to be fulfilled to this day; having neither poverty nor riches, but enough to sustain me, according to my soul's desire; that I might not make my testimony for the Lord chargeable to any; which hath been fully answered to this day; praises to his worthy and honorable name for evermore.

And you, brethren, who are called and chosen of God to minister his living word, and made stewards in his house, of his manifold gifts; let your conversation in every respect, be as becomes the gospel of peace; that it be not blamed, nor its glory eclipsed, through any uncomely behavior, either in the sight of friends or enemies; this will crown your ministry with many jewels. And be not chargeable, or difficult, nor more than needs be troublesome to them to whom you minister. So shall your ministry have room in the hearts of many; and you be instruments in the hand of our great Master, to turn many to righteousness; having the promise of God for your reward, to shine as the stars for ever and ever. The consideration of this hath overbalanced all my sufferings, and made them sweet and pleasant to me, in my long pilgrimage in this world, from the beginning.

And let none be lifted up with their gifts, or appear in any lordliness over the flock and heritage of God; but in love, charity, and brotherly kindness, you who are strong, bear the infirmities of the weak; considering that our great Lord bare all our infirmities, and took upon him the form of a servant; and his servants are not greater than their Lord.

My dear brethren, a word to the wise is enough: my brotherly love flows, as a fountain, towards you all at this time; earnestly desiring, that our ancient love and unity may be daily increased and renewed among us: so shall we be firm and strong against all opposition, both by the world and false brethren. "For, from among ourselves have men arisen, speaking perverse things, to draw disciples after them;" but they shall not proceed much farther, nor their weapons prosper; but their folly shall appear to all whose eyes are kept single.

For God will prosper his work and spread his name in the earth; and many shall yet come to behold the rising of the Sun of righteousness in their hearts; for so shall the gospel day spring to all nations, and the ministration of the spirit of life in Christ Jesus,

shall exceed in glory all that ever went before it, and shall enrich the gentiles with righteousness, and be the last and greatest that mankind shall be visited withal; by which the knowledge of the power and glory of God, in due time, shall cover the earth, as the waters do the sea.

Therefore, my beloved friends and brethren, press forward up to your holy city, without fainting and weariness; and so run, that ye may obtain; and you will always find the Lord an open fountain in the way, who will daily refresh your souls, and make you as a watered garden. The Lord God of all our mercies be with us all, and bless and prosper his work in our hands, to his eternal praise, and our mutual joy and comfort for ever. With the renewed salutation of my true love to you all, I am

Your ancient friend and brother,

AMBROSE RIGGE.

Regate in Surrey, the 4th of the Fifth mo. 1792.

For "The Friend,"

Letters, &c. of Margaret Morris.

(Continued from page 53.)

The following, from the pen of her grandson, John Jay Smith, introduces us to the interesting correspondence and memoranda of the latter years of Margaret Morris.

"The foregoing pages trace the career of this pious and greatly beloved lady to a period when age and weakness confined her almost to her bed and chair; but the Comforter to whom, during her life of trials, she had looked with unflinching faith, was still her consolation.

Her name-sake, Margaret, the youngest daughter of Dr. Jno. Morris, whom she had tenderly brought up from infancy, was her companion and friend; placed in her arms when her parents were called away in the dreadful visitation of the yellow fever in 1793, she was happy in calling one so every way lovely, daughter, and the endearing title of mother was bestowed on the grandmother, in lieu of the natural title which neither of them had ever learned to pronounce to their own parent. A most touching picture of love on the part of both, might daily be witnessed in this her comfortable residence," of the old lady, now in the possession of pecuniary independence, who was remarkably cheerful, amidst pain that would have spoiled the temper of a less religious and guarded mind. Her house was the resort of young relatives who never entered it without a welcome, and who were sure, not only of a cheering reception, but of liberal hospitality. Many preferred her society to that of younger persons. My brother, cousin and myself, carried her to Friends' meeting, but a few doors from her dwelling, in the sedan chair mentioned in the following correspondence. Though bent with age and infirmity, she never failed to greet us with a cheerful eye, and would exclaim, "Ah! here are my faithful ponies!" or "Don't upset the coach, boys!" We sat her carefully in her seat, at the head of the second gallery, supplying her, in winter, with a little footstool with charcoal in it, on which to place her small and delicate velvet slippers. Every day her many friends and neighbors, called to inquire after her health, or to do something for the sinking pilgrim. All left her presence better for the intercourse, having learned a

* In Burlington, Main street, one door below Broad, on the site still occupied by her grand-daughter M. M. S., (1854.)

* *Descent of Man*, Vol. I., p. 200.

† *Man's Place in Nature*, pp. 181-183.

lesson of patience and fortitude, and most probably of great cheerfulness under extreme suffering. The ensuing letters tell her state of mind and body at this closing period of her life, in the most natural and agreeable manner. They are addressed to the wife of Isaac Collins, Jr., then of New York, for whose home the youthful grandchild had left the 'mother.'

The post beside the aged invalid, thus vacated, was most acceptably filled by another grand-daughter, M. M. S., who continued to be the faithful attendant and friend, for the remaining period of bodily helplessness, but, as the letters show, of mental vigor, passed in a review of the scenes of a well-spent life, with her Bible mostly in her hands. * * * It is remarkable how complete these letters make her history; they come down to the period of her own announcement to her beloved grandchild, of her own paralytic attack, which she tells without alarm, and doubtless lest it should be exaggerated by others.

Three years elapsed before the final messenger threw his last dart at the affectionate daughter, the faithful sister, the devoted mother, and grandmother, the unflinching friend, and deeply favored follower of her Redeemer. Her children, grand children, friends and neighbors, were near sympathizers around the bed of helpless age; where the prayers of the righteous comforted not only the sick but the mourners, who never heard a peevish whisper, and never saw the face of the sufferer ruffled by complaint. It was a season sanctified to all; hope in this life had fled, but there was a reliance on the future; and when time was no more, all who had enjoyed her society knew, as certainly as man can know, that she who had always loved her Lord, and humbly washed the feet of His disciples, was at peace, having rejoined in heaven those whom earthly ties and kindred sympathies had united on earth.

Her sister's husband, George Dillwyn,* the well beloved brother of her heart, her consolator and spiritual guide, his wife, and her sister M. M. Moore, resided in Burlington near by, and were her stay during her declining years, as they had been her dearest friends in early life. The three survived Margaret Morris for many years. Sarah Dillwyn died in 1826, and M. M. Moore in 1829, each likewise tenderly cared for by their younger relative M. M. S., and each in the full hope of a blissful eternity." (To be continued.)

Coal in China.—The coal production of China is reckoned at 3,000,000 tons annually. The anthracite beds of Shansi represent 1,000,000 tons, the bituminous coal of that province, 700,000. All the eighteen provinces contain coal; and, although the extent of the coal fields and the age and quality of the coal vary, yet China may now be regarded as one of the first coal countries in the world. The area of her coal fields exceed even that of North America, and with the greatest of

them, that of Shansi, no other coal region can be compared in the union of the most fortunate conditions as regards position, quality and quantity. Along with the coal, brown iron ore is also found in great quantity. With a yearly production of 300,000,000 tons, it is estimated that this extensive bed of anthracite alone could cover the whole present demand of the world for 2400 years. But the working of the Chinese coal fields is yet so much in its infancy that the production at present, in spite of the most favorable circumstances, is only equal to about one-fifteenth of the coal production of Germany or the United States.—*Philadelphia Ledger.*

THE WAITING ONES.

There are some among the blessed,
Waiting, watching every day,
Peering through the misty shadows

To the clear and lighted way;
Listening in the twilight,
Waiting even in the night,

'Mid the toil and heat of noon-day,
Bending forward to the light.

And they speak in eager whispers
"Can we see His chariot yet?"

"Will the Master come this evening?"
"Will the heavenly Friend forget?"

So they stand these earnest servants,
Waiting, watching evermore,
For the clouds to part asunder,
And reveal the open door.

But they take their daily duties,
And perform them as for Him:
And they read his loving message

When their eyes are tired and dim.
They are living lives of blessing—
Lives of love—for his dear sake,
While they wait with eager longing
For the morn of joy to break.

There are aged pilgrims longing
For the Master's spoken word;
There are some in every country
Waiting, watching for the Lord.

He will come and will not tarry;
He will fold them to his breast;
He will make his watchers happy,
In a calm and holy rest.

Selected.

MY LITTLE WIFE AND I.

We are travelling o'er life's road together,
My little wife and I;

We are happy in fair and stormy weather,
My little wife and I;

The reason why is very plain—
There's nothing queer about it;
We never give each other pain
When we can do without it.

We have toiled o'er many a road most dreary,
My little wife and I;

But our hearts were light when our feet were weary
My little wife and I;

The reason why is very plain—
Since hand in hand we started,
We've never had the battle won
By those who were faint-hearted.

Though our home be plain, that never teases
My little wife and I;

Though an humble cot, right well it pleases
My little wife and I;

The reason why is very plain—
We do not fear to labor;
And though in toil our time is spent,
We envy not our neighbor.

We never dream of ill to-morrow,
My little wife and I;

But take what comes, be it joy or sorrow,
My little wife and I;

The reason why we do not fret;
And you'd do well to try it;
We've never had our person yet
That was a gainer by it.

Selected.

Isaac Penington on the Divinity and Offices of Jesus Christ.

"Now this we have often found, that tho' our testimony hath not been received in that same spirit and love, wherein it hath gone forth; but the enemy, by his subtlety, hat raised up jealousies concerning us, and prejudices against us, as if we denied the Scriptures and ordinances of God, and that Christ that died at Jerusalem; professing Him only in words, to win upon others by, but denying Him in reality and substance.

"To clear this latter, (for my heart is only at this present, drawn out concerning that, we have solemnly professed in the sight of the Lord God, who hath given us the knowledge of His Son in life and power, these two things—

"First, That we do really, in our hearts own that Christ who came, in the fulness of time, in that prepared body, to do the Father's will; his coming into the world, doctrines, miracles, sufferings, death, resurrection, &c. in plainness and simplicity of heart, according as it is expressed in the letter of the Scriptures.

"Secondly, That we own no other Christ than that, nor hold forth no other thing for Christ, but Him who then appeared and was made manifest in flesh." Vol. iii, p. 59.—1667.

In replying to the charge that the Society of Friends denied that Christ who died at Jerusalem; as well as the benefits of his sufferings and death, "and set up a natural principle within instead thereof," Isaac Penington says:—

"First—We do own that the Word of God the only begotten of the Father, did take up a body of the flesh of the Virgin Mary, who was of the seed of David, according to the Scriptures; and did the will of the Father therein, in holy obedience unto Him, both in life and death.

"Secondly—That He did offer up the flesh and blood of that body, though not only so for He poured out his soul. He poured out his life a sacrifice or offering for sins, (do not, oh do not stumble at it; but rather wait on the Lord to understand it; for we speak in this matter what we know;) a sacrifice unto the Father, and in it, tasted death for every man; and that it is upon consideration, and through God's acceptance of this sacrifice for sin, that the sins of believers are pardoned, that God might be just, and the Justifier of him which believeth in Jesus, or who is of the faith of Jesus." Vol. iii, p. 33.—1667.

In his "Observations concerning the Priesthood of Jesus Christ," he says:—

"Observation 1.—Who is the Apostle, and High Priest of our profession? It is Jesus Christ the Son of God, whom God hath appointed Heir of all things; by whom He made the worlds, and who is the express Image of his Father's substance, &c. Heb. i, and iii. 1.

"Observation 2.—Why this High Priest was to suffer death? which was that He might taste death for every man; and so, through suffering, become a perfect Saviour, or perfect Captain of salvation, to all the sons that were to be brought by Him to glory. Heb. ii, 9, 10." Vol. iv, p. 121.

"Mark; Christ was not only to die, and so offer up a sacrifice of atonement, but He was also to make reconciliation by it, ever afterwards for his children, in case of transgression, whenever occasion should be. So saith John: 'If any man sin, we have an Advocate with the Father,' to plead for the forgiving

* George Dillwyn, brother to William Dillwyn of London, and to Ann Cox, second wife of John Cox, of Burlington, was long an eminent minister of the Society of Friends, well known and much esteemed at home and abroad, about whose gift and services much might have been said in this volume if it had not been found necessary to confine our narrative to the descendants of Richard Hill.

† The former in the dwelling now (1854) occupied by her friend Stephen Grellet, and the latter in Wood street.

blotting out of the sin, 'and He is the propitiation, (or reconciliation,) for our sins; the old translation renders it, 1 John ii. 1. Page 122.

Observation 16.—That this High Priest hath not to offer many sacrifices to atone as the priests under the law need: to do so: for He was a perfect Priest, and offered one perfect, spotless, sacrifice; and 'is a propitiation for the sins of the whole world,' John ii. 2." Page 124.

Observation 23.—For what cause, Christ the Mediator of the New Testament? which, that by means of death, for the redemption of the transgressors under the first testament, they which are called might receive the promise of eternal inheritance, verse 15. For I hath made Christ, a Propitiation for all men, both Jews and gentiles; that through His in His blood, his righteousness might be imputed, for remission of sins that are past, through the forbearance of God, that He might be just, and a Justifier of him who is of the faith of Jesus. Rom. iii. 26. So that they were under the first covenant, hearkened unto Him, and believing in Him, were justified from all things, from which they had not been justified by the law of Moses, Gal. xiii. 39.

Observation 24.—The necessity of Christ's death; which was, because He was to make up by his own blood into the holiest, to appear before God for us, and to sprinkle the heavenly things with the blood of a Sacrifice, an higher and better nature, than the blood of bulls and goats was; for that was the blood of the covenant which was to pass away, but He was to sprinkle his, with the blood of the everlasting Covenant; and by this His death blood, sprinkled upon the hearts of His. Covenant comes to be of force. Heb. x. 16 & 25, and xiii. 20, 21." Page 127.

Observation 25.—That we are sanctified by the same will by which Christ was sanctified, or sanctified Himself. In subjection to the same will which the Head obeyed, (even denying themselves, taking up the cross to their own wills, and submitting to God's,) are we members sanctified. The Spirit of God works them into holiness, by this will of God, and through the offering of the blood of Jesus Christ once, verse 10. John xvii. 19.

"So mark: there is the will of God, the offering up [of] the body of Jesus, the pouring out [of] the Spirit of Grace, the New Covenant, and faith in Christ, &c. All these are to work out one and the same thing; and they all concur thereto in their several orders and places." Vol. iv. p. 128.—1671.

In a work, entitled, "The Holy Truth and Charge Defended," &c., he thus answers the charge of denying redemption by the blood of our Lord Jesus Christ, viz:—

"And as for denying redemption by the blood of Christ, oh! how will he answer this charge to God, when none upon the earth, as the Lord God knoweth, are so taught, and do so rightly and fully own redemption by the blood of Christ, as the Lord hath taught us to do! For we own the blood of the Lord Jesus Christ, both outwardly and inwardly; both as it was shed on the cross, and as it is sprinkled on our consciences; and know the cleansing virtue thereof in the Everlasting Covenant, and in the Light which is eternal; out of which Light, men have but a notion thereof, ut do not truly know nor own it. Works, ol. iii. p. 234.—1672.

In reply to Thomas Hicks, who accused him of esteeming the blood of Christ no more than a common thing, he says:—

"Herein he represents me wicked, and makes me speak, by his changing and a-biding, that which never was in my heart; and the contrary whereof, I have several times affirmed in that very book, where those several queries were put, out of which he forms this his own query, giving it forth in my name. For in the tenth page of that book, beginning at line third, I positively affirm thus: That Christ did offer up the flesh and blood of that body, though not only so, for He poured out his soul, He poured out his life, a sacrifice or offering for sin, a sacrifice unto the Father, and in it tasted death for every man; and that it is upon consideration, and through God's acceptance of this sacrifice for sin, that the sins of believers are pardoned, that God might be just, and the Justifier of him who believeth in Jesus, or who is of the faith of Jesus. Is this common flesh and blood. Can this be affirmed of common flesh and blood? Ought not he to have considered this, and other passages in my book, of the same tendency, and not thus have misrepresented me, and misrepresented me to the world? Is this a Christian spirit, or according to the law or prophets, or Christ's doctrine? Doth he herein do as he would be done by? Oh! that he had a heart to consider it!" Vol. iii. p. 497.—1675.

"I have had experience of that despised people (the Quakers) for many years; and I have often heard them, even the ancient ones of them, own Christ both inwardly and outwardly. Yea, I have heard one of the ancients of them thus testify in a public meeting, many years since: that if Christ had not come in the flesh, in the fulness of time, to bear our sins, in his own body on the tree, and to offer Himself up a sacrifice for mankind, all mankind had utterly perished. What cause then have we to praise the Lord God for sending his Son in the likeness of sinful flesh, and for what his Son did therein?" Vol. iii. p. 403.—1675.

In his treatise, entitled "The flesh and blood of Christ," &c., after speaking largely of that mystical body and blood of Christ, which the saints feed upon, and asserting the necessity of a participation in it, he adds:—

"Now as touching the outward which ye say we deny, because of our testimony to the inward, I have frequently given a most solemn testimony thereto; and God knoweth it to be the truth of my heart; and that the testifying to the inward, (from which the outward came,) doth not make the outward void, but rather establish it, in its place and service. God Himself, who knew what virtue was in the inward, yet hath pleased to make use of the outward; and who may contradict or slight his wisdom and counsel thereto? Glorious was the appearance and manifestation of his Son in the flesh, precious his subjection and holy obedience to his Father; his giving Himself up to death for sinners, was of great esteem in His eye! It was a spotless Sacrifice of great value, and effectual for the remission of sins; and I do acknowledge humbly unto the Lord the remission of my sins thereby, and bless the Lord for it; even for giving up his Son to death for us all, and giving all that believe in his Name and power, to partake of remission through Him." Vol. iii. p. 415.—1675.

In the postscript to a work, entitled "Re-

marks upon some passages in a book, entitled "Antichrist's Transformation within," &c., we find the following, viz:—

"First, as to his [Jeffery Bullock's] main controversy with Friends about the Christ that died at Jerusalem, the affirmation is, that neither justification nor condemnation is by Him, and re-proaching Friends as having gone back to the profession of Christ and Saviour, who died without the gates of Jerusalem; this is in my heart to say:—

"Is Christ divided?" Is there one Christ that died without the gates of Jerusalem, and another that did not die? Or is it not the same Lord Jesus Christ who died without the gates of Jerusalem, according to the flesh, and yet was then alive in the Spirit? Do we affirm that the Godhead died? No—we do not so affirm that his soul died, as he (J. B.) doth, page 19, but according to the flesh He died; that is, He who was the Resurrection and the Life, laid down his life, and took it up again according to the commandment of his Father.

"Thus we have been taught of God to believe, and thus to hold it forth. And we have no other Justifier, Condemner, Saviour, or Intercessor, than He that laid down the life of the body, offering it up a sacrifice to his Father without the gates of Jerusalem. 'Who is He that justifieth?' Is it not God, in and through him? 'And who is he that condemneth?' Is it not Christ that died? 'And where did he die?' Was it not within the gates of Jerusalem? 'Yea, rather that is risen again,' &c. Rom. viii. 33, 34." Vol. iv. p. 370.—1675.

"And now there are two or three things in my heart to open to you, how it is with me in reference to them; for indeed I have not been taught to deny any testimony the Scriptures hold forth concerning the Lord Jesus, or any of his appearances; but am taught by the Lord more certainly and fully to own and acknowledge them." Page 150.

"The first is concerning the Godhead."—"The second is concerning the offering of the Lord Jesus Christ, without the gates of Jerusalem. I do exceedingly honor and esteem that offering, believing it had relation to the sins of the whole world, and was a propitiatory sacrifice to the Father therefore. And surely he that is redeemed out of the world, up to God, by Christ, cannot deny that Christ was his ransom, and that he was bought with a price, and therefore is to glorify God, by his body and Spirit, which are God's. 1 Cor. vi. 20. And saith the apostle Peter: 'Ye know that ye were not redeemed with corruptible things, as silver and gold, from your vain conversation, &c., but with the precious blood of Christ, as of a Lamb without blemish and without spot,' &c. 1 Pet. i. 18, 19; 'who so offered Himself up to God, through the Eternal Spirit.' Heb. ix. 14. Thus we do own singly and nakedly, as in the sight of the Lord; though I must confess we do not lay the sole stress upon that which is outward and visible, though we truly and fully acknowledge it in its place; but upon that which is inward and invisible; upon the inward Life, the inward Power, the Spirit within; knowing and experiencing daily, that that is it, which doth the work." Vol. iv. p. 451.

In the dark cloud of a trying dispensation, the beautiful bow of God's promise is often seen with peculiar effect.

Chinese Merchants.

When the Chinese ports were first opened the foreign trade went into English and American hands, but in a few years the Germans came in and took a large share of it. They could live and work cheaper than their competitors, and for a considerable while they flourished. But when the Chinese came to the front all others suffered alike, as the new competitor could beat each and every one of them in the ability to get along with small profits. A Chinese official said one day to a friend of mine: "Englishman and Melian man come here makee big pigeon; bimbe long come German man eatee up Englishman and Melian man; Chinaman come now, he makee eat up German man; some time you makee see Chinaman eatee every ting." There is every reason to believe that his prediction will be fulfilled in the main; that the "eat up" is going on pretty rapidly a great many persons can testify.

In Hong-Kong the Chinese houses are increasing annually, while the English and other foreign ones are decreasing. Rows of stores formerly occupied by English merchants have been given up to Chinese, and the number grows and grows with each recurring season. Nineteen-twentieths of the population of Hong-Kong are Chinese, and there is not a branch of business into which they have not entered. They have shipping and commercial houses, steamship, banking and insurance companies, as I have already mentioned, and you can buy in their shops nearly every article of foreign manufacture that you can buy in the English stores, and almost invariably at a lower price. The complete free trade established at Hong-Kong has been good for the English manufacturer, but not so for the English merchant who established himself in the colony.

In all the open ports of Japan the Chinese are thickly established. Their competition is more with Europeans than with the Japanese, and they have succeeded in making a very large inroad into the profits of the foreigner, though less so than at Hong-Kong, Shanghai or the other Chinese ports. Going west from Hong-Kong, we come to Cochin China, the French possession, of which Saigon is the capital. There the Chinese have been steadily cutting into the trade, until they have by far the best of it, and have driven some foreign houses out of business. During 1876 the Chinese shipped nine-tenths of the rice crop, amounting to nearly 6,000,000 piculs (133 lbs. to the picul). All other articles of export were shipped by them, with a very few exceptions, and they have at least five-sixths of the import trade. Much of the shipment is to Hong-Kong, and a great portion of it is in Chinese vessels, while many of the English ships find it expedient to employ Chinese agents. The Hong-Kong agency of the only line of steamers running to Bang-kok, Siam, is Chinese, and when I purchased my ticket by one of the company's ships, I was obliged to apply to the head of the Yuen Fat Hong, and make my negotiations with him. The captain told me that all the rice carried by him or his companion vessels was on Chinese account, and I found on reaching Bang-kok a Chinese line of steamers running to Singapore. Foreign business at Bang-kok grows smaller each year, while Chinese business increases.

At Singapore there are more than 100,000

Chinese, one-fourth as many Malays, and about 1000 Europeans. The Chinese have gained in numbers, while the Europeans have lost, in spite of the steadily increasing importance of Singapore. While I was there a quarrel arose between the Chinese and foreign merchants—or rather it was in progress when I arrived—concerning the delivery of pepper, gambier, and other articles of merchandise which the former sell to the latter. The disputed point was on a matter of delivery, the latter demanding and the former refusing to make delivery at the foreign go-downs (warehouses). The foreigners united, and agreed not to buy until the point was yielded to them; the Chinese united, and refused to sell except at their own go-downs. See the advantage of a Chinese combination over a foreign one; when I left Singapore two of the foreign houses had broken from the combination, and were buying pepper and gambier on the terms of the Chinese, while the latter were as firm as the rock of Gibraltar. —*Thomas Knox, in Harper's Magazine.*

Selected.

"Riches, surely, are not certain marks of Divine favor, nor prosperity an evidence that our ways please God." Doth He not sometimes give men their hearts' desire, and withhold send leanness into their souls? We are apt to call providences by wrong names. Afflictions, "more precious than gold which perisheth," we call curses; and riches we call blessings, when, for once they are so, it is to be feared they are sent of God a thousand times for judgments. The distresses and troubles of Israel of old were often administered in mercy, when the people had, in falshood and prosperity, revolted from God, to bring them back again to Him, to trust and depend upon Him, and have their expectation from Him; and if this be the gracious design of the Almighty now, in the administration of distress and adversity, as I fully believe it often is, I am sure that such trials deserve to be considered as evidences of His merciful regard, who in this, though severe, yet more intelligible language to earthly hearts, is seeking to convince us of our dependence on Him, relation to Him, and that it is He who can bless or blast all our endeavors.

I have often thought, and it hath been confirmed in my mind, that if we were more attentive, and disposed to obey the secret intimations of the "Wonderful Counsellor," who speaks from heaven in our hearts, we should happily make it less necessary for the Lord to speak to us so frequently in the language of affliction. Oh! if this were but enough the case, (and I am sure it is above all things to be desired,) we should thereby avoid every snare, and be enabled happily, in the line of duty, to go forward in the lot of our appointment; and then, though our dwellings might be with the lowly, and we should have to labor for daily bread, yet, divested of anxious care, we should rest secure in His providence, who numbereth the hairs of our heads; clothes the lilies with transcendent beauty, and hears the young lions when they cry.

* * * Oh that, through the medium of Divine Light, we might look up to God! therein we should discover the secret turnings of His holy hand in all these things; for I am fully persuaded, that, whatever is permitted to try us, whatever dispensations, inwardly or outwardly, we may be under, it is the dispensation of unerring Wisdom and

Goodness; and the very best for us, the greatest blessing we are capable of receiving in our present state of mind, consistent with our chiefest good. Oh! what cause have we therefore, to commit ourselves wholly to Him to bless His name in every dispensation, who is the sole Arbitrer of heaven and earth, who superintends the universe, whose goodness and power are equal; who knows all situations, and is ever graciously administered to every one of us, in uniform mercy and goodness, what is most convenient for us, and all for this most desirable, most glorious purpose, to redeem, to gather us to Himself who is the fulness of blessing and life.

JOHN THORP.

A Marvellous Sunset on Mount Washington.—"The heavens declared the glory of God, and the firmament showed his handiwork" the sunset glories of Saturday evening last. Such a sight is rarely had here, and never elsewhere. Those who have been here before last season, for pleasure and sight-seeing, admit that they never saw anything equal to it before, and — Aiken, of the Mount Washington Railroad, who has been here all seasons of the year for ten or twelve years and — Murphy, of the Signal Station, who has been here in the summer's calm and winter's storm, conceded the scene of Saturday evening to be the finest and most wonderful magnificent that they had ever seen.

Just before the hour for its setting the sun was entirely obscured by a heavy cloud, which deluged the mountain top with a drizzling shower of rain, but the cloud lifted instantly just at the moment of setting, and the sun bathed the mountain-top in a golden glow, softened and shaded by the reflection of the dark clouds which still hung about the horizon over against the summit of the mountain. So sharply and clearly were the rays of the sun thrown upon the mountain, through rift in the clouds, that the blades of grass, what is known as "Bigelow's Lawn," at the head of Tuckerman's Ravine, could be accurately counted from the mountain-top, more than thousand feet above them. Instantly, and by its magic, the most brilliant rainbow ever seen commenced forming, one end of its gold and crimson showers resting in Tuckerman's Ravine and the other directly over the Gl House. A complete arch soon formed, high in the heavens, so soft and sharp as it represented two thirds or three-fourths of a circle instead of the flat-arch usually seen in rainbows, and the colors at the lower extremity were so brilliant that a second, third, a even fourth reflection could be seen against the mountain sides where they rested. A striking feature of the occasion was a luncheon of white clouds hanging low beneath the very centre of the arch, the upper end of which took a golden hue from the setting sun, and gave to the fortunate spectators cloud with a golden instead of a silver lining. Another remarkable sight was the shadow the mountain-top thrown against the sky a mountain ranges to the eastward, direct beneath the centre of the arch, and so distinctly that the shape and formation of Mount Washington was as clearly defined as is the mountain itself, while the form of the Summit House could be distinctly seen on the crest of the shadow. The glow of the setting sun was so brilliant and so clear that the Great Mountains against the western sky were clear

arked, and Camel's Hump, Mount Mansfield and Jay Peak could be distinctly recognized from the top of Mount Washington, as well as all the other mountains to the north and south. It was a gloriously gorgeous and magnificent sight, and one that will hang on the hills of memory forever.—*Among Clouds, Mount Washington, August 19.*

The writer of the article which follows, states that he has been induced to prepare it after having received several letters of inquiry which betray much want of knowledge as to the state of affairs among Canada Friends, and to publish it as matter of information.—[s.]

For "The Friend."

A brief account of the troubles which have troubled the meetings of Friends in Canada, appeared in "The Friend" of Eighth mo. 3d. Some additional information may be acceptable to its readers. The "diversity of opinion" spoken of in the article, may be better described by saying, that a portion of the members remained firmly attached to the principles and practices of the Society of Friends; whilst another portion adopted and advocated the theory of the Plymouth Brethren. The "divergence" in paths was shown in one part endeavoring to maintain both the principles and practices of Friends on their original ground. The other part seemed to do so not only to adopt and propagate the new theory, but to open a wide door to new practices. The natural result was, a ceasing "to walk together." But when the issue took place, it rested upon one particular point, that "artificial music."

In Sixth month, 1877, the "bisected Quarterly Meeting" (composed of the members of Pelham Monthly Meeting) managed to hold a subject under their care for three months longer, thereby preventing the case from going before the Yearly Meeting, and also presenting Norwich Friends from having a representation in that meeting. In the Eighth month following, the committee of the bisected meeting advised one portion of Norwich Friends to act independently of the other portion; by which act a new meeting was set up, and which was approved of by the Quarterly Meeting in its bisected capacity. The result was a separation in the Quarterly Meeting, and consequently two reports were presented to the Yearly Meeting in Sixth month. One of those reports complained of certain acts of Pelham Quarterly Meeting, whilst the capacity above described, as being out of order and detrimental to the best interests of the meeting; and asked the Yearly Meeting to hold those acts in abeyance until such an investigation could be made as to enable that meeting to come to a right decision in the matter.

The committee that was appointed by the early Meeting on the subject, did not have any differing parties face to face, nor give their representatives a hearing; but were disunited among themselves in judgment. The larger portion favored recommending the reception of one of the reports at once. The other portion preferred to recommend the Yearly Meeting to accept neither report at that time, but to appoint a committee to enquire into, and labor for the healing of differences before a decision was made. But the larger portion did report "that it was the prevailing judgment of the committee that the minutes signed

by John Richard Harris be received," without the other portion of the committee submitting to it. The meeting was informed that the committee was not united in making this report; and decided objections were made in the meeting to accepting it, yet a minute was made stating that it was the prevailing judgment of the meeting to adopt it. It is a noteworthy fact, that although the differences above referred to have to a less or greater extent existed for some years, and at length become so developed that the members of Norwich Monthly Meeting were not represented in the Yearly Meeting in 1877, and finally, in 1878, two reports were presented to that meeting; it did not at any stage of the difficulty exercise care in the correction of wrong, or the healing of differences, but summarily disposed of the matter without proper investigation. A. S.

Ontario.

A Story for Students.

In 1831-32 some of the law and order students of Bowdoin College undertook to stop all hazing and other like irregularities. Some circumstances made one of the leaders of the anti-hazing party especially obnoxious, and he was warned that some terrible vengeance would be executed upon him by a league formed for that purpose. He was not easily frightened; and he did not think it even necessary to take special precautions. One night, about midnight, seven of the hazers broke into his room and seized him in his sleep. It did not take him long to wake up sufficiently to comprehend the situation. Resistance was useless. He instantly decided to play "possum" and feign death. He was borne down two flights of stairs, with a rush, in no gentle hands, and with many a wrench and bruise, to the pump. But he never moved; he lay perfectly limp in their hands. The device succeeded; when they reached the pump one of the assailants exclaimed, "He is dead;" the frightened students dropped him on the ground and fled. The sight of the pump and the wet platform revived the dead and he rose and pursued the fleeing students. Fear added wings to their flight; they were all masked, and they all made good their escape. He went back to bed, and, being unexcitable and cool, he went to sleep, woke later than usual, ate his breakfast, and went about his usual business, taking no notice of the affair. The students held a college meeting and passed strong resolutions commendatory of his course and character, and condemning the perpetrators of the act as unworthy of college fellowship. But they were unknown, and the college faculty was unable to take any action in the premises, even if it had been minded so to do. What were his inclinations, or whether it had any, we do not know.

The student however, had decided what course he would pursue before he went to sleep that eventful night, and he was well satisfied with his decision. He has shown, in after life, in many a critical emergency, the same coolness and the same resoluteness of purpose which served him then. For six weeks he was absolutely refused to talk about the affair, even with his most intimate friends. Every one thought it buried forever. In consequence the actors became communicative. They "leaked." The student waited and watched till his evidence was accumu-

lated and convincing. Then one morning he waited on a lawyer in the town and desired to retain him for a criminal prosecution for assault and battery. The lawyer was at first inclined to pooh-pooh at him. The student pressed the question: Is it an assault and battery to break into a man's room at night and carry him forcibly downstairs to pump on him? Is it an offence against the laws of the state? Is there any punishment provided for such an offence? Will you take the retainer? Or shall it go to the lawyer over the way? The case was taken, the warrants were issued, the seven perpetrators were all arrested—if we were not mistaken, were marched out of their recitation room—on morning by the constable; and seventeen colleagues were summoned as witnesses to prove the facts. The whole college was in an uproar; the excitement extended throughout the town, and we venture to say that the office of the Justice of the Peace was never thronged, before or since, by a more interested and excited crowd.

The justice adjourned the case for two weeks to give time for the employment of able counsel. Lawyers were retained for the defence from Portland. But when they knew the facts, they advised their clients that there was no defence. They were guilty; they would be convicted; they must be sentenced. The court would have no option. There was no escape except in the mercy of the prosecutor. They offered to pay him for the damage done. He replied that he wanted no money; he simply wanted to punish a great wrong and to prevent its repetition upon others. At length, thoroughly frightened, the hazers signed a confession, which was publicly read in the college chapel, and paid all the costs of the prosecution. The case was discontinued; so was hazing in that college, and for that period of its history.—*Christian Union.*

If you think you can trust in Christ's sacrifice for salvation, without obeying His precepts as a rule of sanctification, you are greatly mistaken; trust in Christ, will lead you to take the yoke of Christ.

The Lord takes up none but the forsaken; seeks none but the lost; makes none healthy but the sick; gives sight to none but the blind; makes alive none but the dead; sanctifies none but sinners; and to all these he is precious.—*Luther.*

THE FRIEND.

TENTH MONTH 5, 1878.

In compliance with the request of a Friend at a distance, we have given place to the monograph by Isaac Penington, entitled "Some Queries concerning Christ and his appearances," in our last four numbers.

I. Penington was a man long taught in the school of Christ, deeply versed in the mysteries of salvation, and earnestly concerned for the spread of a true understanding of the spiritual nature of the gospel dispensation. Deeply impressed with the fearful danger attending the opinion prevalent among christian professors in his day, that belief of the truths recorded in the New Testament respecting the coming, life, death and resurrection of Jesus Christ, the atonement He made

for sin, and the reconciliation with the Father, thereby purchased by him, was all that was requisite to make a true Christian, he was concerned to endeavor to awaken them to a sense of the necessity of going deeper, of experiencing salvation wrought out through the immediate operation of the Holy Spirit upon the soul; whereby they might know indeed the work and things of Christ brought to their individual knowledge, and applied to their redemption and sanctification: hence the putting forth those queries.

Sound as Isaac Pennington was in the Christian faith, and much as he strove to convey the truths he desired to promulgate clearly and unequivocally, yet many whose spiritual faculties had never been rightly developed or strengthened by reason of use, and who were content to rest in their carnal conceptions of Christ's "finished work," were unable or unwilling to comprehend those truths he was anxious to press upon his readers, and both he and Friends generally, at that time were misjudged and misrepresented, as though they did not believe in nor expect salvation through Jesus Christ, who died upon the cross at Jerusalem.

This calumny was promptly met, denied and disproved, but the same misrepresentation of I. Pennington and others of the early Friends has been made in the present day, and we therefore think it advisable to lay before our readers some further extracts from his works, touching upon this subject, given in "Evans' Exposition," clearly showing his and Friends' faith in Christ, both in his outward and his inward appearance. See extracts on page 60.

SUMMARY OF EVENTS.

UNITED STATES.—During the past week there has been an increased mortality in those sections visited by yellow fever. The disease has spread through the country, and many of the people have gone into the towns hoping to receive more attention. In some sections of country the cotton crop is said to be wasting—there not being sufficient available force to gather it.

The entire contributions to the yellow fever fund in this city to 24th ult., amounts to \$115,910.56. The books of the Post-office Department show that the money order business during the year ending 4th mo. 30th, amounted to \$83,000,000, an increase of \$9,000,000 since 1876.

A destructive storm raged throughout Michigan on the night of the 25th ult. Two persons were killed, and another seriously injured by lightning. A severe storm also raged at Lebanon, Indiana, on the night of the 23d.

The temperature on the top of Mt. Washington, on the morning of the 29th, was 14 deg. above zero. So clear was the atmosphere, that vessels on the Atlantic Ocean could be seen from the summit by the naked eye. Colonel Miles reports to General Sheridan that Sitting Bull has sent six Sioux envoys to Fort Keogh, Montana, to ascertain upon what terms his people would be permitted to surrender to the United States military authorities; the Sioux who have taken refuge in Canada being anxious to return to the United States. The reply states, that if they return it must be on terms of unconditional surrender.

Several weeks having elapsed since the War Department have received advices from the Rio Grande, is regarded as indicating a peaceable condition. The Mexican authorities along the border evince a growing disposition to cultivate friendly feelings with the United States, and aid in repressing lawlessness and disorder. The President returned to Washington on the 29th ult., and expressed satisfaction with his trip through the West, and with the evidences of returning prosperity, and of the popular feeling in favor of a sound currency.

It is stated that the difficulties between France, England and the United States, relative to the Newfoundland fisheries, have been arranged. The three cabinets are now drawing up a convention which, it is believed, will obviate future disagreements.

Several persons who accompanied the Collins expedition to Brazil, have recently returned, and report the Madeira and Mauore enterprise in a flourishing condition, although the work has been impeded by the inability of the men to endure the climate. About ten miles of the road have been graded, and three of these completed. The completion of this road, it is thought, will open a valuable trade with Bolivia, especially in tin and rubber.

There were 276 deaths reported in this city during last week—153 adults and 123 children.

The local weather report for Ninth month, gives the average temperature 67.9 degrees—which is 5 degrees above the average for the past eight years. The highest temperature was 88 deg., and the lowest, 41 degrees. The total rainfall has been the smallest for eight years, being only .96 of an inch.

Markets.—*Am.*—American gold 100J. U. S. sixes 1881, 108; 5-20 coupons, 1865, 103; do. 1867, 1054; do. 1868, 107; new 5's, 106; new 4J per cents, 103; new 4 per cents, 101.

London.—Small sales of middlings at 11½ a 11½ cts. per pound.

Petroleum.—Crude, 73 cts. in barrels, and standard white, at 94 a 10J cts. per gallon.

Flour is in demand and prices steady. Minnesota extra, \$5 a \$6.75; Penna. and western, 4.50 a \$5.25; patent and other high grades, \$6.75 a \$8.50. Eye flour, 3.25. Corn meal, \$2.75 per barrel.

Grain.—Red wheat, \$1.18, 98c; amber, \$1.07 a \$1.10. Rye, 57 a 60 cts. Corn, 49 a 52 cts. Oats, 29 a 33 cts. per bushel.

Hay and Straw.—Prime timothy, 60 a 70 cts., per 100 pounds; mixed, 45 a 60 cts.; straw, 55 a 70 cts., per 100 pounds.

Beef cattle, 3J a 5J cts. per lb., as to quality. Sheep are in fair demand and sell at 3J a 4J cts. per pound as to condition. Hogs, 5J a 6J cts. per pound.

FOREIGN.—To date of Ninth mo. 23d, the subscriptions in Paris for the yellow fever sufferers in the United States, amounted to \$12,000.

An unfriendly feeling has lately arisen between the Viceroy of India and the Amer. of Afghanistan, which it is feared may result in a war between the two countries. The origin of the trouble appears to have been, the refusal of the Amer. to allow a mission from the Government of India to pass through his possessions.

Military preparations are now being made, but it is thought England will not hasten to invade Afghanistan. Advices from Vienna indicate that the occupation of Bosnia and Herzegovina is almost completed; and it is stated that a large number of Austrian forces will soon return home.

On the north side of the St. Gothard tunnel, one thousand men are employed underground, and four hundred in the open air. Three hundred wagon loads of earth are excavated every day, and in the daily blastings 600 pounds of dynamite are used. The energy shown on the Italian side is said to be equally great.

The volcanic activity of Vesuvius continues to increase. The crest of the cone has given way, and a new cone is forming.

The Spanish American Commission for the settlement of claims of citizens of the United States, growing out of the insurrections in Cuba, have allowed claims to the amount of more than \$1,000,000, which have been promptly paid by Spain. Claims aggregating as much more await the action of the umpire.

Information received from Athens, states that England is in communication with the Powers, with a view to settling the Greek question, by giving to Greece the island of Crete, but a third less territory on the mainland than proposed by the Congress.

Information has been received at Madrid, that numbers of Moors are dying from starvation at Fez and Marquinez, Morocco.

FOR SALE,

On reasonable terms, fifty volumes of "The Friend," Empire of John S. Stokes, at the Office of "The Friend."

A young woman of experience, desires a situation as teacher of small children in the family of a Friend.

Refer to S. A. R., 411 North Fifth St., Philada.

WANTED

A well-qualified woman Friend as Matron at Friends' Asylum for the Insane, near Frankford, Philadelphia.

Apply to Samuel Morris, Olney, Philada.
John H. Carter, Fisher's Lane, Germantown.

J., \$2.10, vol. 5; from John Tuttle, City, \$2.10, vol. 5; from Sarah McDonald, Ill., \$2.10, vol. 5.

WESTTOWN BOARDING SCHOOL.

The Winter Session opens on Second-day, the 23 of this month. Parents and others intending to send pupils to the Institution, will please make early application to BENJAMIN W. PASSMORE, *Super.*, (address Street Road P. O., Chester Co., Pa.), or to CHARLES ALLEN, *Treasurer*, No. 304 Arch St., Philadelphia, Philada., 9th mo. 11th, 1878.

THE CORPORATION OF HAVERFORD COLLEGE.

A Stated Annual meeting of "The Corporation Haverford College" will be held at the Committee room of Arch St., Monday, the 23rd of Philadelphia, P. Third-day, Tenth month 18th, 1878, at 3 o'clock, P. M. EDWARD BETTLE, Jr., *Secretary*.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty-third Ward), Philadelphia Physician and Superintendent.—JOHN C. HALL, M. Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, at his residence, near Bloomfield, Province Ontario, the 20th of 31st mo. 1878, GEORGE G. LEAKE, aged 76, his wife, number 44, member of the elder aid of W. Lake Monthly Meeting of Friends. Strongly attached to the Society, of which he was an exemplary member he endeavored to adorn the doctrine of his profession by faithfully walking in obedience to that "Light which lighteth every man that cometh into the world and thereby secured the respect and esteem of a large circle of acquaintance. Mark the peculiar care he beheld the upright, for the end of that man is peace.

—, on Seventh-day, the 21st of 9th mo. 1878, at I residence in this city, GEORGE M. ELKINTON, aged years, a beloved member of the Monthly Meeting Friends of Philadelphia for the Northern District. It was diligent in the attendance of meetings; a true sympathizer in troubles; careful to visit the sick and afflicted, and was often enabled to speak words of comfort and encouragement to those that were weary and cast down. He bore a short but sufficient illness with Christian patience, and was favored, I trust, to have his house set in order, and passed quiet away, leaving a comfortable assurance that our loss is his eternal gain.

An Appeal to our Fellow Christians on War.
Issued by the Society of Friends at their Annual Meeting, held in London, 1878.

The late dreadful conflict in the East, and the lamentable extent to which a warlike spirit has prevailed in this country, have fired us up to present to our fellow-professors of the religion of Jesus Christ the following appeal:

We submit that the deliverance of the world from the curse of war is to be effected mainly by the force of Christian principle. It is this that would make war impossible, by removing the causes, pretexts and practices which perpetuate the system.

Commercial interests and other temporal considerations, however important, can never eradicate the evil, because they do not reach the corrupt passions which engender strife. Christianity alone goes to the root of the matter. Much, therefore, as we value all the agencies which contribute to the maintenance of peace, we confine our present remarks to the religious aspects of the question. The war system will die when all Christian people are willing to accept in their fullest teachings of the New Testament, and to act them out. It is thus within the power of Christians to make war impossible amongst the nations of Europe.

But it is a question of individual conviction and faithfulness; and we are not at liberty to link personal convictions in any supposed requirements of worldly policy or political expediency. The authority of Christ's kingdom to be established in the earth by the practical adoption, *now*, on the part of Christians, of its holy and beneficent laws. The Christian must not postpone his obedience to any requirement of his most holy faith, under the plea that the time has not come for the full realization of the reign of the Messiah; by such an idea all faithfulness is paralyzed.

We are bound to obey the commands of Christ without reference to consequences. He is our Master, not merely our adviser. He is our friends, said He, "if ye do whatsoever I command you." Why call me, Lord! Lord! and do not the things which I say? "Teach all nations,"—"to perseve all things whatsoever I have commanded you."

We are sometimes taunted with pleading for "peace at any price." It is true that we bid all war to be forbidden to the Christian,

not as a matter of policy merely, but as an important principle of our religion; and thus we hold the doctrine of "peace at any price!" in the same way as we hold the faith of Christ, "at any price," or as an honest man is honest, "at any price." If need be, we must be prepared to suffer in the maintenance of God's truth, "committing the keeping of our souls," and our lives and property too, "into Him, in well doing, as unto a faithful Creator." Yet we are persuaded that His immediate power, and the laws of His spiritual and moral government, often interpose a shield between His faithful servants and their enemies. "When a man's ways (or a nation's) please the Lord, He maketh even his enemies to be at peace with Him."

We are bound, under all circumstances, to follow the example of our Master, who was meek and lowly in heart; "who, when He was reviled, reviled not again; when He suffered He threatened not, but committed Himself to Him that judgeth righteously."

The leading principles exemplified in the personal work of Christ are love and forgiveness. It is not possible to reconcile His example with the spirit and practices of war. We recall His rebuke to His disciples, "Ye know not what manner of spirit ye are of;" and again, "Put up again thy sword into its place; for all they that take the sword shall perish with the sword."

Christians dishonor their Lord in doubting the wisdom and practicability of His counsel. Christ understood human nature perfectly, and we accept His plan of dealing with evil as divinely wise.

Evil can never be finally overcome by evil; it is, rather, thereby nourished and perpetuated. "We are to overcome evil with good."

The world as yet knows little of the disarming power of Christian love and forbearance. The evil passions of men are often wonderfully restrained and subdued, and their hearts attracted towards the religion of "the Prince of Peace," by the faithful exhibition on the part of His followers, of "the meekness and gentleness of Christ."

The upholders of the war system seem to us habitually to neglect the command to do unto others as we would they should do unto us.

Personal combat, as a means of settling disputes between individuals, has long been abolished in this country, as barbarous and criminal. Her is substantially international lawless. There is no sound reason why nations, equally with individuals, should not arrange to submit their differences to peaceful settlement on Christian principles. If our statesmen were willing always to put themselves into the place of those from whom they differ, and honestly to examine the question in dispute from their standpoint, we should often be able to gain the love and esteem of our enemies,—a far greater triumph than we could win by the sword!

The arguments from Holy Scripture, by which it is frequently sought to justify defensive war, are drawn either from Old Testament precept and practice, or from a few isolated texts and facts in the New Testament.

But the Jewish traditions upon this matter, which were supposed to be based upon Mosaic precept, were distinctly abrogated by Christ. He put His New Commandment, in emphatic contrast with the Old, and in clear substitution for it. We hold it, therefore, to be neither allowable nor reasonable to seek for the Christian standpoint, upon this question, in Old Testament history. And our assumptions based upon the case of Cornelius, the Roman convert, or upon the employment of the sword by Peter in the moment of sudden trial, have any weight against the clear and emphatic commands of the Saviour Himself?

Whatever may be asserted as to the non-literal character of such commands as that we are not to resist evil, and are to turn the other cheek to the smiter, they cannot possibly be explained so as to cover the spirit and the exigencies of war.

As a matter of fact, can War be conducted upon Christian principles? It cannot, we think, in any shape or with any conceivable modifications, be made consistent with such commands as these:—"Love your enemies;" "Do good to them that hate you, and pray for them which despitefully use you and persecute you."

We do not willingly recall those horrible details of carnage and suffering which lately saddened our hearts from day to day; but is not war from beginning to end and always, a repetition, more or less, of such revolting incidents? Who will say that the religion which is "first pure, then peaceable, gentle and easy to be entreated, full of mercy and good fruits," permits such deeds? Consider, too, the awful probability that many of those who fall in battle are hurried into eternity unprepared!

The wars and war establishments of Christian nations are amongst the greatest obstacles to the spread of the gospel amongst the heathen.

Missionaries present the text of the gospel of peace and good-will; and soldiers from professedly Christian hands give the comment and the illustration. The nations of India and China, who probably constitute half the population of the globe, are races peculiarly quick to detect such a contradiction, and to reject and resent the inconsistency. The Churches of Christ—many of them so earnest in missionary effort—should lay this subject to heart, and altogether withdraw their sanction and influence from a system which upholds so much that is evil, and which so seriously obstructs the spread of the gospel.

We respect the difficulties which prevent some sincere Christians from arriving at our

standpoint, especially in relation to the duties of magistrates and citizens.

But we are conscious of a specific difference between a civil and a military force. The former, rightly administered, is used, under strict legal restraint and within very definite limits, to preserve life and property. It is directed solely towards evil-doers, and includes in its aims their reclamation and benefit. We deprecate the introduction of the military element into the police system, of which it forms no necessary part. The citizens themselves, leagued together in a peaceable civil compact, are the legitimate upholders of the good order of society; and if there were no standing army, satisfactory permanent arrangements would certainly be adopted for this end.

War, on the other hand, is the embodiment of lawlessness and violence. All the worst passions and dispositions,—hatred, revenge, carelessness of the value of human life and property, and a disregard of the most sacred personal rights,—are directly fostered, not only by a state of actual warfare, but even by the war system in time of peace.

In conclusion, we would respectfully, but earnestly, impress upon the churches of Christ, everywhere, our conviction that the time is come fearlessly to adopt and to declare to the nations the whole counsel of God in this matter. The true standard of Christian morality in relation to it has hitherto been but feebly upheld. Christians generally have been content to remain "in bondage under the elements of the world."

God has given to this nation a position of high trust in the interests of Christianity and of human advancement.

Upon us, fellow Christians, rests a great and solemn responsibility!

"Blessed are the peacemakers; for they shall be called the children of God."

Selected for "The Friend,"

Richard Shackleton to ———,

Baltimore, 12th of 7th mo. 1785.

Dear Friend,—Having mentioned to thee that I did not know but I should take the liberty of writing a few lines to thee on a subject which there was not then time to discuss, and thou having repeated thy desire that I would, I attempt it (I think I may truly say) in humility, in diffidence, and in a consciousness of my own comparative weakness and inferiority. We were speaking about thy not having had a certificate to the meeting of discipline at —, and consequently not being regularly a member of it. In my opinion, several inconveniences and confusion attend such a situation, and it is incompatible with the good order of Society, a precedent of dangerous tendency: a Friend thus circumstanced may hold himself loose and disengaged, may think he may attend the meeting of discipline or not, as it suits his convenience and inclination, and when he does attend may excuse himself from meddling with any part of the business which he does not like to touch, as not being authenticated a member of the meeting. This I apprehend to be a great hurt to the party, as well as a loss to Society; those who wish well to the cause should wish to be both qualified and authorized to support it, in their several lots and degrees. It is a cause which admits of no neutral professors. The Head of the Church expressly declares,

"He that is not with me is against me; and he that gathereth not with me scattereth abroad." And indeed, my friend, as the cause is the most noble that was ever introduced upon the earth, being no less than the cause of Christ and the salvation of the souls of all men, whoever will become qualified rightly to support it, must be made willing to stoop exceedingly low, they must pass through many baptisms and undergo various operations and dispensations, before they become fit to be honored with a portion of the Lord's service, which dignifies beyond all human honors, and is rewarded with eternal glory. Our great Pattern, when he graciously condescended to leave the bosom of his Father, to descend to this earth and take our own nature upon him, left us an example how we should demean ourselves in fulfilling our duties in the church. In the washing of the disciple's feet, which I think bears a strong analogy to the transacting of the discipline (being cleansed by Christ, and cleansing the feet, that is, the goings of one another,) he did not go about it in an ordinary, cursory, light, indifferent manner, he addressed himself to the business officially, as a servant. He riseth from supper, and laid aside his garment; and took a towel, and girded himself; and after that, he poureth water into a basin, and began to wash the disciples' feet, and to wipe them with the towel wherewith he was girded. And to this memorable example, replete with instruction, he adds this instructive document: "Ye call me Master and Lord: and ye say well; for so I am. If I then, your Lord and Master, have washed your feet, ye also ought to wash one another's feet; for I have given you an example, that ye should do as I have done to you." And as one, that knew how absolutely, how essentially necessary a thorough humiliation of self was to a right qualification, he makes use of his strongest asseveration to impress it on our minds: "Verily, verily, I say unto you, The servant is not greater than his Lord; neither he that is sent greater than he that sent him." I have no doubt, dear friend, of thy attachment to the welfare of the religious Society of which thou art a member; and if thou hast followed on to know the Lord in all his manifestations to thee, if thou hast been faithful to the discoveries of his will in all things, if he has the uppermost room in thy heart, and thou hast dedicated to him all thy faculties, no doubt but our poor Society will reap the benefit of the good fruits brought forth; thy life will be happy and honorable, and thy end (if thou perseverest to the end) will be peace. But if there be a consciousness that something is still lacking, that notwithstanding the filling up the moral duties of life with a good degree of propriety, there has not been a selling all, in the will and affections, a distributing to (those who are poor in religious poverty, and a following Christ in the way and manner of his leadings, in the path of the cross and self-denial, let us remember that time, and what we may term a "more convenient season," are not at our command, that the consummation of all things approaches with inconceivable rapidity, and for aught we know may be just at the door; that there is no work nor device in the long repose of the grave, and that an irreversible decree seals all up forever.

I am, with sincere attachment,

Thy affectionate friend,

Evolution, or the theory of the natural development of forms of organic life from lower or antecedent forms or types.

From a work entitled "Present Conflict of Science with the Christian Religion," by Herbert H. Morris, A. M.

(Continued from page 55.)

The following passage occurs in the valuable and interesting paper read by Principle Dawson before the *Evangelical Alliance* at recent meeting in the city of New York:

"The physical characters of the known specimens of primitive men are unfavorable to the doctrine of evolution. Theories of derivation would lead us to regard the most degraded races of men as those nearest akin to the primitive stock; and the oldest remains of man should present decided approximations to his simian ancestors. But the fact is quite otherwise. The skulls of the most ancient European men known to us are comparable with those of existing races, and further, the great stature and grand development of the limbs in those of the most ancient skeleton which are entire or nearly so, testify to a race of men more finely constituted physically than the majority of existing Europeans. The skull found by Schmerling in the cave of Engis, associated with the bones of the mammoth and other extinct animals, is of good form and large capacity, and presents characters which, though recalling those of some European races, also resemble those of the native races of America. The bones described by Christ and Sartet, from the cave of Cro-Magnon, in France, represent a race of great stature, strength and agility, and with a development of brain above the European average; but the lines of the face show a tendency to the Mongolian and American visage, and the skeleton present peculiarities in the bones of the limbs found also in American races, and indicating probably, addition to hunting and a migratory and active life. These Cro-Magnon people lived at an epoch when France was overgrown with dense forests, when the mammoth probably lingered in its higher districts, and when a large part of the food of its people was furnished by the reindeer. Still more remarkable, perhaps, is the fossil man, as he has been called, of Mentone, recently found in a cave in the South of France, buried under eocene accumulations which bespeak a great antiquity, and associated with bones of extinct mammalia and with rudely-fashioned implements of flint. It appears from the careful descriptions of Dr. Kuerer that this man must have been six feet high and of vast muscular power, more especially in the legs, which present the same American peculiarities already referred to in the Cro-Magnon skeletons. The skull is of great capacity, the forehead full, and the face, though broad as Mongolian and large-boned, is not prognathous, and has a high facial angle. The perfect condition of the teeth, along with their being worn perfectly flat on the crowns, would imply a healthy and vigorous constitution, a great longevity, with ample supplies of food probably vegetable, while the fact that the left arm had been broken and the bone healed shows active and possibly warlike habits. Such a man, if he were to rise up again among us, might perhaps be a savage, but a noble savage, with all our capacity for culture, and presenting no more affinity to apes than we do.

"I have referred to European facts only

R. S.

It is remarkable that in America the oldest race known to us is that of the ancient Alleghans and Tothens and their allies, and that these, too, were men of large stature and great mental development, and agricultural and civilized, their actual position being not dissimilar from that attributed to the earliest cultivators of the soil in the times of Adam Noah.

"So far the facts bearing on the physical and mental condition of primitive man are favorable to evolution, and are more in accordance with the theory of Divine Creation, and with the statements of the sacred word.

"With reference to these pre-historic men, known to us only by their bones and implements, it may not be possible to discover their belief as to the unity of God; but we have distinct evidence on the other points. On the best bone implements—some of them made of the ivory of the now extinct mammoth—we find engraved the tokens or Manitou marks of their owners, and in some cases scratches punctures indicating the offerings made or recesses and delimitations experienced under their auspices. With regard to the belief in immortality, perhaps also in a resurrection, the Mentone man—whose burial is perhaps the oldest known to us—was interred with its fur robes and his hair dressed as in life, with his ornaments of shell wampum on his head and limbs, and with a little deposit of lead of iron, wherewith to paint and decorate himself with his appropriate emblems. Nor is he alone in this matter. Similar provision for the dead appears at Cro-Magnon and the cave of Bruaunig. Thus the earliest so-called palaeolithic men entertained belief in God and in immortality, perhaps the dim remains of primitive theism, perhaps the result of their perception of the invisible things of God in the works that He had made."

"So far, then, as any discoveries of this nature have yet been made, they plainly indicate that *what man now is man always has been*; and that he has ever been separated from all brutes by a gulf practically infinite.

"Upon what, then, it may be asked, do Darwin and his followers ground their arguments in support of their theory of Man's descent? Mainly on *resemblances* between certain parts and functions of the human body to corresponding ones in animal bodies. These resemblances are for the most part distant, often faint or doubtful, and not infrequently merely fanciful; while the inferences drawn from them are altogether unwarranted. This will be sufficiently evident from the following examples.

"Every kind of beast originates in an ovule. Man also is developed from an ovule; these two kinds of ovules are so diminutive (man's not exceeding the one hundred and twenty-fifth part of an inch in diameter,) and so similar in their composition, that the eye cannot distinguish them: from this the astounding leap is made at once to the conclusion that "the human ovule differs in no respect from the ovules of other animals."* This inference will be observed, is based, not on the *proved identity* of the ovules, but on man's *ignorance*, or his inability to detect the difference, and is, therefore, worthless. Here, indeed, is similarity, but not identity; for, if such ovules differed "in no respect," then that of a donkey

under certain conditions might turn out an ape, or an elephant. But such a thing has never been known: throughout the animal kingdom every ovule develops into a creature after its own kind; and this *unfailing uniformity* is a demonstration that the human ovule does differ, and differ essentially from those of all other animals.

"So trivial, so uncertain, so fanciful, are the instances of resemblance which Darwin introduces, and so unwarrantable are his inferences from them, that one is amazed they could aid him in justifying, even to his own mind, the astounding conclusion that *Ape is father to the Man!* His fondness for his favorite theory seems to have enervated his natural power of reasoning, and to have rendered him blind and insensible to everything that tells against it. "He has allowed himself," says an anonymous writer, "to become so enamored of the venerable pair of hairy quadrupeds, with tails and pointed ears, from whom he thinks himself descended, that he skips over mountains more impassable than the Himalayas, and flies on the wings of imagination across separating and unfathomable abysses, that he may embrace them."

(To be continued.)

For "The Friend."

Letters, &c. of Margaret Morris.

(Continued from page 66.)

Margaret Morris to her grand daughter Margaret Morris.

"My beloved child,—In looking toward the time when I shall probably be separated from thee, and the change of scene that will ensue on thy entering into the married life, I have felt my mind tenderly concerned for thy best welfare; and when favored with access to the place of prayer, have besought the Father of mercies to look kindly down upon and bless and preserve thee in the new station of life to which thou wilt be introduced, when removed from my fostering bosom. Let it be thy care, my love, to second by thy own endeavors, the wishes and hopes of thy fond, anxious parent, and by daily and humble application to the Fountain of all good, ask of Him, wisdom to direct thee in all thy ways. As the man who has chosen thee for the companion of his life, has given the best proof of his regard that a man can give, and as thou hast accepted his offers, I find no objection to a connection with him; but keep in mind, that it will depend much on thyself to secure his esteem and confidence, by prudent and circumspect behavior both to *him* and his friends and relations, who are worthy of thy regard; study his temper, and do not suffer thyself to dispute with him on trivial matters: rather give up thy own will than provoke him to make harsh replies; scrupulously avoid every occasion that may arise or tend toward wrangling; be not only so descending, but obedient; it is the duty of a wife so to be. In expressing thy love to him, let it be chastened by the delicate manner which so remarkably distinguished our admired friend and cousin, Susan Emilen, who is a pattern for her sex in all that is worthy of imitation. I think my daughters in their wedded life were much like her. In regard to the article of expense, I trust prudence will direct thee not to go beyond thy husband's means of supplying thee. Practice frugality, which is a virtue, and avoid parsimony, which is as far from a virtue as extravagance is from economy. As neither thyself nor I. C. are

what the world calls rich, though you have enough to begin with, and if carefully managed, I hope, under the blessings of Heaven, it will enable you to live comfortably, and that you will have something for the poor, who I hope will not be forgotten by you, remembering it is more blessed to give than to receive. I entreat thee, my dear, not to aim at living in a high style, be content to live in a plain frugal manner, agreeable to the way in which thou hast been brought up.

"In regard to thy conduct to servants, treat them kindly, rather as humble friends dependent on thee, than as menials who have no ties of love or gratitude to bind them. Maintain thy own dignity as head of a family, without becoming too familiar with thy servants: this may be done without haughtiness, pride or indecorous language. * * * I do entreat thee not to launch out into extravagance in dress: it shows a weak and vain mind; to be continually changing one's dress as the fashions change. Keep steadily to meetings, which, though they may be sometimes silent, the attentive mind often receives strength to perform acceptable worship. I wish thee to refine thy acquaintance chiefly amongst friends of our own Society; this is not an uncharitable wish, but springs from a fear lest thy young and tender mind should be drawn into a snare and tempted to imitate the vain and foolish fashions of the world; "such as our company is, such shall we be." I have good reason to hope I. C. is an improving young man, and that he will become a useful member of our religious Society; endeavor, my love, to cherish in him and thyself a serious turn of mind, and avoid all light conversation: guard against repeating evil reports, and carefully avoid detraction; never speak against the absent; if thou art in company with those who take the liberty of so doing, show thy disapprobation by keeping silence; this will afford satisfaction to thy own mind on reflection; this will be doing to others as we would have them do unto us; a chaste and virtuous wife should be very delicate and reserved in the expression of her conjugal love before witnesses. * * * I am writing just as I should talk to thee on these subjects, but as I do not expect to be much with thee after thy marriage takes place, I commit my thoughts to paper, that when separated, and this seraglio falls in thy way, the hints contained in it may dwell on thy mind and serve to convince thee how desirous I am that thy future conduct in every station of life should be marked by a blameless deportment. I have noticed with pleasure thy readiness to contribute to the comfort of the sick and poor, and though thy means of continuing the practice may not be large, yet be not discouraged; remember who it was pronounced a blessing on the "widow's mite" formerly; if we can't do all we wish to do, let us at least do what we can.

Written by thy tenderly affectionate and anxious grandmother, M. M.

(To be continued.)

For "The Friend."

The Tract Repository.

Since the commencement of its publication there have been printed about 170,000 copies of The Tract Repository, or an average edition of 10,000 copies of each of the seventeen numbers issued. These have been circulated gratuitously, chiefly in Virginia, North and South Carolina, Georgia, Alabama, Missis-

sippi, Louisiana, Texas and Missouri, with a few in Tennessee, Kentucky, Maryland, and some other States.

A large number of letters have come to hand from teachers and others to whom it has been sent, expressive of much thankfulness for it, and some of them have been accompanied with assurances that beneficial results from its circulation among them are quite apparent in some localities. This has been particularly encouraging, and induces a desire that the necessary means may still be had to enable the publisher to continue it awhile longer. There has already been contributed for the purpose, since the first number was printed, the sum of \$811.88. The cost of issuing the seven numbers has been \$820.31, or an average of about \$18.25 per number. This is exclusive of considerable labor gratuitously performed in printing, of which no account has been kept.

There is, perhaps, no other way in which a corresponding amount of reading matter could be placed before these people at so small a cost, as that adopted in issuing The Repository; and though not in so permanent a shape as if in a bound form; yet letters frequently allude to the care used in preserving the numbers, from the value with which they are regarded. Each succeeding issue appears to be looked forward to with interest by many, both old and young; and its appearance among them is hailed with real delight. It is believed that this plan of sending at regular monthly intervals, small instalments of carefully selected reading matter, is the best one that could be devised, and much more likely to confer substantial and permanent benefits upon these poor, ignorant, and long oppressed people, than by sending an occasional, uncertain supply of ordinary tracts, however good and desirable these in themselves may be.

It has afforded me much solid satisfaction to superintend the preparation and publication of The Tract Repository, and I will gladly continue to bestow the necessary care and labor upon it, while the requisite funds for defraying the expense involved are placed at my disposal. A much larger edition than 10,000 copies would be very desirable, could the means for the purpose be obtained, as it is impossible to supply all with more than a part of the quantity they often appear very desirous of receiving.

Friends who may incline to contribute, but who have not seen The Repository, can have some numbers mailed to them if they request it.

Contributions can be handed to Jacob Smedley, at Friends' Bookstore, 304 Arch St., or sent direct to the publisher, David Weston, Frankford, Philadelphia.

About French Farming.

An English expert, — Richardson, has recently published an elaborate account of farming in France, which gives a great deal of useful information on the rural life, industry and production of that rich country. Curiously enough, no Englishman has written on the subject since Arthur Young, a famous authority in his day, published an account of his travels in 1757, 8 and 9. There are many suggestions in Richardson's book that point to new markets and new industries for our farmers; thus French butter is largely sent to Brazil, where it brings fifty cents a pound and finds a rival only in that from Denmark,

and, while it only brings twenty-five cents in Paris, the producers complain that women are leaving the dairies to go to town, and butter-makers are giving up that business to turn their fields to grazing and fattening cattle as a safer business. There are seventy kinds of cheese made in France, and each district has its specialty, that makes its name famous, while the largest makers rarely rent over five hundred acres or pay over eighteen dollars an acre for the land used by them.

Many small farms in France pay their rent with the produce of their poultry yards. A million dollars' worth of poultry produce more than half their value yearly in eggs, favorite breeds laying a hundred eggs a year for over five years. England alone imported eight hundred millions of eggs, at a cost of twelve millions and a half of dollars, and Paris alone buys six millions of eggs weekly. Vineyards, chestnuts, olives, almonds, mulberry plantations, ozier beds, are only a few of the special productions that swell the agricultural wealth of France, and are part of the so-called small industries that aggregate a very large sum, which we, too, in this country, ought to be adding to our national products. The excellence of the French fruits is incontestable; and yet a large portion of the yield is from trees planted around fields, instead of in orchards, and only careful and close management makes the result almost uniformly successful. The farming population in France is not well educated; an average of thirty per cent. of the inhabitants over six cannot read or write, while the decrease in numbers and the diminution in stature, as shown in the rejections for military service, even with the low standard of five feet four, are matters of serious comment. The government statistics of agriculture are notoriously unreliable, but luckily there are agricultural societies, national and local, of the best sort, many members of a high scientific order applying their knowledge to the actual requirements of the farmer, and securing the best advantages to producers of every kind. The skill and patience with which the ravages of time and wars have been overcome now make France prominent in many things that only a few years ago were almost neglected. In spite of the losses of the great Napoleonic wars and of the recent German invasion, France has six millions of horses and supplies the foreign as well as domestic demand, while yielding a handsome profit by carefully improving the race and largely economizing the cost; feeding on parsnips instead of grain, for instance, is a means of very great saving. Then, throughout France, there are many occupations carried on, such as cloth workers, watchmakers and other lucrative industries, by small farmers, who till their little patches of ground, and out of their double earnings save enough to invest a comfortable sum in Governments or in good local securities. The careful extension of railroad facilities and the thorough system of good country roads have revolutionized France, and many districts that were poor a few years ago are now sharing and adding to that prosperity which distinguishes France to-day.

The beet root sugar industry is characteristic of the way in which France has added to its agricultural wealth and its national resources. Invented in Germany in 1799, it was introduced in France in 1810, when its ports were closed by the British fleets and

the supply of foreign sugar was cut off. The beet sugar was introduced into one district after another after years of patient trial and steady Government encouragement and protection, until now France produces five hundred thousand tons of sugar, about a fourth of the total sugar yield of the world, and two thirds of the spirits distilled in France are produced from the residue after the sugar obtained, while the cattle are largely fed from what would otherwise be a waste product. A thousand million gallons of wine produce two hundred millions of dollars. The railroads have doubled the money realized from wine and milk. Scientific farming, draining, irrigation, experimental farms, agricultural colleges, have overcome the evils of ignorance, war, and other drawbacks in French agriculture, but there are still a few outlying districts in which there are bad roads, wretched horses, food of the poorest kind, bread of buckwheat and rye, porridge of chestnuts and potatoes, if they can be spared from the pigs farming backward, education neglected, river running to waste, cattle degenerating, over million of acres in chestnut timber, the chestnuts used to fatten the pigs; the land farmed on shares, but in such a way that all the profit is taken out of the soil and put away in hard coin in hiding. A hundredth part of the farinaceous food of France is derived from chestnuts, and an acre fully planted is said to contain seventy full grown trees, whose yield would support a man for over a year; but it would be a weakly fellow, sure to be rejected for the army; while the horses fed in these chestnut forests are as wild as those of our western prairies, and only serve to supply rough stock for the regular breeders. A large source of saving in France is found in the custom of working the cattle, and oxen are used for draught in all the great French iron and other industries.

Then the timber of the country is carefully managed and economized; the largest forests in France is one of a hundred thousand acres belonging to the Government, but the private owners, too, are regulated by law as to cutting and planting again their trees. The same strict police supervision is applied to every article of food. The seventy-five thousand gallons of milk used daily in Paris, and yielding an average price of five cents a pint undergo regular inspection, although the severe penalties of the law do not always prevent its being greatly "sophisticated." The contrast between France and England in the matter of landed estates is very striking. The greatest landlord in France has an income of two hundred thousand dollars from his property, and Rothschild is satisfied with an estate of eight thousand acres not far from Paris.

Of course the special industries of France yield large profits, for instance the champagne wines, that take their name from a district of country, are produced on only one hundred thousand acres out of two and a half millions in Champagne; but they give the farmers a profit of five millions of dollars, and the manufacturers and dealers make as much more. Many French agricultural districts have their local trades, carried on by farmers living together in villages, and able to economize and compete even with labor-saving machinery. Thus a French farmer often makes on an average forty watches a year, all his family working at some part of the machinery in

ir winter leisure, while in America one is using special patents in a great factory grossing every appliance, turns out a hundred and fifty. It is largely due to this union industries and to the minute subdivision of labor as well as of land, and the multimillioneries by which every product of the soil is carefully economized, that France adds yearly to its national wealth. The population increases only at the rate of a hundred thousand a year, while over a hundred and fifty thousand infants under one year die annually, so that the risk of diminution of our supply is a problem that requires the most careful study of the authorities civil and military. The care of human life in France is therefore, a matter of policy as well as philanthropy, and, as an evidence of this, the Government points with emphasis to its provision of nearly two hundred thousand beds in hospitals, and to its large and liberal endowment of asylums for children, and schools for their technical education and physical development. On the other hand France is necessarily dependent on foreign countries for many of its staples, its wheat supply in 1870 only produced twenty-five millions of bushels, and its meat doubled in value, although it only slightly increased in yield, through the demand made by new markets opened by additional railroad facilities. All these are matters that come close home to us, for, with our boundless resources, we must always watch closely the markets of the world to ascertain where our products find the best buyers, and, with the stagnation of many of our great industries, it is important for us to see how far we can apply our own fields and farms the lessons and the examples of French agricultural economy. Here everything is cultivated to profit, and thousands of ways are found for turning into wealth those natural products that are here so often wasted from ignorance, as well as from carelessness, the besetting sin of our farmers, resulting from the natural wealth of the soil, the cheapness of land, and general prosperity.—*Phila. Ledger.*

While it is true that no one can escape temptation entirely, there is no doubt that we can largely modify its influence. The temptations which inhere in a man's moral make-up, he can not wholly run away from, how much soever he may desire it, because the evil is in him, as disease is in the tainted food. But he can largely modify its actions, and lessen its virulence. One way to do this is to keep himself from sights and sounds and surroundings which inflame his passions and sharpen the edges of his appetites. If his temptation is in the direction of stimulants, then let him avoid the sight and smell of liquor and the companionship of those who drink. So whatever his weakness, let him keep beyond the reach of whatever can penetrate him at that point. The Indian method of fighting is an excellent one in spiritual warfare. The soldier of Christ should keep himself under cover as much as he can. A good deal of dodging is allowable in a contest with Satan. Discretion is the better part of valor, at times, and it is better to beat a masterly retreat, than to have your soul captured bodily. A man who is morally weak at any point, and who, nevertheless, persistently exposes that point to attack, commits the gravest of sins. When the great adversary was striv-

ing to tempt Jesus to expose himself, needlessly, to peril, he said, "It is written thou shalt not tempt the Lord thy God."—*Golden Rule.*

A SONG IN THE NIGHT.

"When I awake, I am still with Thee."—Psalm cxxxix. 18.

In silence of the middle night,
I wake to be with Thee;
And through the shadows as the light
Thy mercy smiles on me.

I talk with Thee upon my bed,
In meditation blest,
And sweetly pillow there my head,
Upon my Saviour's breast.

I think of Him who knelt and prayed
At midnight on the hill;
Then walked the sea, His friends to aid,
And bid the storm be still.

I think of Him who took the cup,
In dark Gethsemane;
And gathering strength from prayer rose up
To die for such as me.

I think of heaven, where never more
The weary age for night,
But ever freshening glories pour
New raptures on the sight.

So lo! I learn a parable
That in my darkest day,
When waves of sorrow round me swell,
The storm will pass away.

Nor will I turn my head aside,
Though bitter griefs be mine;
But say with Him, the Crucified—
Father, my will is Thine.

Thus shall I praise Thee while I've breath,
To sing Thy love to me,
And welcome e'en on the night of death,
To wake and be with Thee.

G. W. Bethune.

From "The Trust Repository—
Conversion at Sea.

Sometime about the year 1840, a young man named Cresson, left a comfortable home in Philadelphia for a career of adventure. His father, without whose knowledge or consent he had gone, followed him to New Bedford. Here he found him intent on going to sea. As he deemed it more wise to direct the future course of his son than preposterously to stop it, he obtained for him a situation on a whale ship about starting for a cruise in the South Pacific. The captain, Wm. P. Howland, was in connection with the Society of Friends, and on this account he felt better satisfied to entrust his son under his care. But, alas! how little can profession do for us! How little do the virtues of ancestry avail! The captain, notwithstanding his religious connection, was a profane and wicked man. The mates were in this respect, perhaps, his equals; so that in the enforcement of the discipline thought necessary on ship-board, the crew were subjected to much abuse. A large share of this abuse fell to the lot of Cresson. It had been in the indulgence of a proud, indomitable spirit that he had absconded from home; and with this disposition still rife in his bosom, he was required to submit to the subordination of seafaring life. His superior mind and education made him a leader among the crew, and thus he became an object of jealousy to the officers of the ship. This spirit of mistrust was especially nursed by the captain, as upon him devolved the responsibility of preserving discipline. In the event of any misconduct, or

assumed misconduct among the crew, the charge was likely to be made out against Cresson.

On one occasion the captain had been arranging some timber for the carpenter to work at, and while doing so, missed the rule he had been using. A careful search failed to discover it. While thus baffled in his endeavors, he commenced questioning Cresson about having hidden or stolen it. The questions soon grew into charges, and these became more and more pointed and furious, until he even threatened that the victim of his suspicion should be "skinned alive" if the rule was not at once produced. But he was restrained from further violence. The conscious innocence of Cresson rose superior to his unfeigned malice. The rule was afterwards found behind a sliding panel of the cabin, where it had dropped from the position in which the captain laid it.

In another instance, when Cresson was at the helm, the captain was on the lookout for whales. Wishing to change the course of the ship, he called out, "Keep here close to." Although his order was obeyed, it was repeated, and again repeated, until the helmsman was induced, in his efforts at strict obedience, to turn so much as to "bring down the sails." This brought upon him the enraged captain in a storm of profane words and physical violence, so that his still unsubdued spirit, was roused to resistance. For this offence, thus brought on, he was tied to the mast and lashed, and his bleeding stripes washed with brine.

As this continuous cruelty seemed unendurable, the crew concluded to petition the consul at one of the South American ports for a redress of grievances. Accordingly, a paper drawn up on their behalf by Cresson, was sent to that officer on arriving at the place. He responded by calling on the captain with the document in his hand. The latter called the crew before him and demanded the author of the offensive paper. Cresson acknowledged having written it, but stated that it was the united act of the crew. This measure was so far from affording the desired redress that it but added to the fury and abuse of the captain. The spirit of Cresson was now broken. Henceforth his conduct was that of abject submission. He hated the officers but dared not on any occasion act so as to incur their resentment.

These incidents have been narrated that we may in some measure comprehend the depth of that Divine Love that yearns for the salvation of all, and the power of that Grace by which man may be rescued from a "pit so horrible."

Sometime after this, Cresson was one day again at the helm, the captain staid out on the davits, and the rest of the ship's company below or out of sight. At a sudden lurch of the ship, the captain lost his hold. No one but Cresson saw him fall into the sea, and whatever were his latent feelings of resentment, he obeyed the better impulse of his nature. He called out, "Man overboard!" and as soon as possible "brought the ship to." The captain was again taken on board. It might be supposed that on being thus rescued from a watery grave, the men at least have expressed thanks to the vessel concerned in his escape. But no; so far was he debased below the common courtesies of humanity, that he paced the deck in wrath,

vainly assuming that the crew or some of them were chargeable with an attempt to "get rid of h. m."

The vessel had now rounded Cape Horn on the homeward voyage. The captain, released from the excitement of the whaling ground, had an opportunity for reflection. Just what those reflections were we know not. He is no longer in this state of existence to tell us. But within a few weeks from the time of his being thrown aboard, the crew noticed a change in his demeanor. Nothing like a profane oath was any longer heard from his lips. No act of violence was committed by his hand. That voice once dreaded for its sternness was now mellowed by a different spirit. The change of character appeared complete. The kindness breathed by his words and actions astonished a crew to whom this conduct was a strange exhibition. He became the object of their frequent remarks; but it does not appear that any one spoke or thought lightly of his motives or procedure. They no longer dreaded him. The more they contemplated the changed captain, the more they respected—the more they loved him.

In the development of his altered behavior, he one day had the crew together and said to them, "Men, I do not wish you hereafter on meeting me to take off your hats; and in addressing me you need not say 'Sir,' but simply call me 'Captain Howland.'"

The idea however was started among the men that if the captain was sincere, he must make an acknowledgment to Cresson, towards whom his conduct had been especially unjust and cruel. The convictions of Divine Grace, the faithful monitor in the heart, did not long permit the captain to neglect the discharge of this humiliating duty. He one day sent for Cresson to come to the cabin. There, with no one else present, and with the open bible before him, he confessed the injustice of his treatment, and asked his forgiveness.

During the rest of the voyage he not only maintained a tone of uniform kindness towards the crew, but also endeavored to restrain the violence of the mates.

Cresson's feelings towards the captain had been wrought to such a pitch of resentment that he promised himself that as soon as released from the discipline of the ship, he would retaliate with personal violence. Even when the captain had with such feeling asked his forgiveness, he felt no disposition to grant it. As had been the case with the captain, he, too, for a time, held out against conviction. The hard heart of the unregenerate man is not commonly changed in a moment. But before they landed, the same convicting influence that had overcome the heart of the stern master of the ship, wrought a happy change in his own feelings. He then could forgive. He could respect and love the man who had so deeply wronged him.

Wm. P. Howland, after his return, lived in New Bedford, and carried out the principles he had espoused at sea. He thus proved that it was no vagary of the imagination that had led him to forsake the ways of evil, but the living, eternal truth of God.

May the circumstances here narrated encourage others to close in with convictions for sin whenever met with. The Grace of God, which bringeth salvation, still appears unto all men. Its visitations are meted out

in Infinite Wisdom, as best adapted to our necessities. The call to repentance and amendment of life, may come at the third, the sixth, the ninth, or the eleventh hour. It may speak to us in thunder tones, amid the perils of the ocean, or in the gentle whispers of conscience when no danger is near. But in all cases it is the same spirit of our compassionate Redeemer; and whoever will submit, shall make his peace with God and experience the record of his sins to be blotted out.

For "The Friend."

Incidents and Reflections.—No. 19.

PROPHETIC VISIONS.

It is an opinion prevalent in the Christian world, that the prophetic visions with which holy men were favored in former ages are no longer vouchsafed; and that in these days we are not to expect manifestations of Divine power, such as the healing of the sick, which was practised by the Apostles, and which no doubt aided them in convincing the people of the Divine origin of the religion they preached to the world. The testimony of scripture does not seem to sanction this opinion, for it was foretold by the prophet Joel, as one of the features of the Christian dispensation, that the Lord would pour out his Spirit upon all flesh, and the sons and daughters should prophesy, the old men should dream dreams, and the young men should see visions. There are many proofs that the spirit of prophecy, in the sense of foretelling future events, as well as of preaching the gospel to the people, is not wholly withdrawn from the Church.

John Richardson mentions that as he was walking in a field with his soul in deep concern, meditating on the things of God, and fervently praying to Him for preservation, his mind was brought into an heavenly frame as in the presence of the Lord, and covered with fear and reverence before the Majesty of heaven. In this condition the language was presented to his mind, "The people are too many, I will thin them, I will thin them, I will thin them." In a religious visit, which he paid soon after, this prophetic vision was published, at such places as he felt called upon to do so. At Kilmone, in Scotland, he was concerned to tell Friends, "that the Lord would take many of them away; which in a short time came to pass, for many died before that time twelve month, it being the time of scarcity of corn; and it was thought many died for want of bread the year ensuing my being there."

John Richardson, in his account of this matter, gives a wise caution to all who may apprehend that they have received similar openings, to be careful, that "nothing of the warmth of their own spirits be stirred up," but that the mind may be purged from its own workings and be fitted to receive the gift.

When the same Friend was about to embark for America, he went aboard a ship in the river Thames. He says: "We had not been long there, and having considered our freedom about going in the ship, it opened clearly in my mind, in the light, that I must not go in that vessel; and I said to the Friends, I could not go in her, for I saw nothing but death and darkness there. The account of what afterwards happened to the ship I had from two particular friends, in two several letters from London into America, wherein they expressed a thankfulness for our deliver-

ance, and magnified that Hand which wrought it, and preserved us from going in that ship which was lost near the islands of either Jersey or Guernsey, and, as it was said, abt seventy people were drowned."

When Thomas Story was in Ireland, at the castle of Shanmagary, on William Penn's estate, he met with a gentlewoman of good sense a character who related to him the following incident:

"That she being in the City of Cork when it was invested by King William's army, as having a little daughter of hers with her they were sitting together on a squab; as being much concerned in mind about the danger and circumstances they were under she was seized with a sudden fear, and strong impulse to arise from that seat, which she did in a precipitant manner, and hasted to another part of the room; and then was in ill concern for her child, to whom she called with uncommon earnestness to come to her, which she did; immediately after which came a cannon ball and struck the seat all in pieces, and drove the parts of it about the room, without any hurt to either of them.

"From this relation," T. S. says, "I took occasion to reason with her thus: 'That intelligence which gave her notice, by fear, the danger they were in, must be a spirit being, having access to her mind (which likewise of a spiritual nature) when in a state of humiliation, under those circumstances; and must also be a good and beneficent Intelligence, willing to preserve them, and furnished also with knowledge and foresight more than human. He must have known that such a piece would be fired at that time and that the ball would hit that seat, and infallibly destroy you both, if not prevented in due time by a reasonable admonition; which He suggested by the passion fear, (the passions being useful when duly subjected), and by that means saved your lives. And seeing that the passions of the mind can be wrought upon for our good, by an invisible, beneficent intelligence in the mind, in a state of humiliation and stillness, without any exterior medium, is it not reasonable to conclude that a evil intelligence may have access likewise to the mind, in a state of unwatchfulness, when the passions are moving, and the imagination at liberty to form ideas destructive to the mind, being thereby depraved and wounded. And when so, is it not likewise reasonable to think, that the Almighty himself, who is thus pure, merciful and beneficent spirit, knowing all events and things, doth some times, at his pleasure, visit the minds of mankind, through Christ, as through or under-vail, so as to communicate of his goodness to a humble and silent mind, to heal and instruct him in things pleasing to himself, and proper for the conduct of man in his pilgrimage through this present world, and lead him to the next in safety?'"

There are many instances on record of persons being brought under exercise of mind and impressed with a sense of impending evil or of a trial of their faith, designed, no doubt by our Heavenly Father, to prepare them for that which was about to overtake them. When Thomas Story visited the West India in 1709, the vessel in which he sailed was captured by a French privateer. In his narrative of their treatment, there occurs an illustration of this experience; which is interesting also in showing how the Lord support

faithful servants in their distress. Heirs:

"On the 19th we were sent for on shore by officers aforesaid, [the Judge, the King's attorney and the Secretary,] and very kindly attended by them; but Jonathan Dickinson and I were under great exercise in spirit, not yetting the particular cause; which afterwards appeared to be this:

"It seems the laws of France require an oath of the owners and masters of vessels in such cases, the better to discover the value of vessels and things; which they administering holding up their hands, then administering to their loss of their part in Him, in case of falsehood, but true answer to make to every question.

"The master, being no Friend, was sworn, there being a man among themselves, understanding English, by whom they acted, and they examined him strictly; and, when they had finished with him, proposed it next to Jonathan Dickinson, but he refused; which was a great surprise upon them, and some of them began to be a little heated and zealous; on I told them in Latin, 'That we were a people differing from all Protestants in several points of religion: that we had suffered great hardships in former times in England, refusing to swear; and many of us had been in prison for that cause: that king James had given us some more favor than any before him; and that king William in his time had passed an Act of Parliament in our favor, the case of oaths; and that I believed king James (to whom we were well known) had given the king of France an account of us in particular, when in his court, in the time of his exile.

"They replied, it was a difficult case, their views being very express in the king's books; and looked into a printed book often on this occasion. My spirit being under great exercise all this time, (especially while they were striving with Jonathan Dickinson, who stood firm against swearing,) at last I found great ease and comfort in that holy, blessed and over-ruling Truth, whose testimony we were thus called to bear against so great a power as the French, then an enemy, and we their prisoners; and very soon after they took his testimony, without swearing or any other reservation, save only a bare and sober relation, by promise only to answer truly.

"After they had begun their examination of him, the comfort of our blessed Lord, whose presence and shield was with us, so increased in my heart, that my spirit was taken in a consideration of his goodness and faithfulness to us, though I had a full recompense for all I had suffered; and, some tears running down as I sat by, one of them observed it; and, being in a surprise and admiration of it, they inquired the reason by me interpreter; but I made them a sign of lence, which they all took, and were still a short time, and then proceeded in their examination. Then I told them, when that was over, I would relate the cause of those fears.

"The examination being over, which was one both with all gentleness and strictness, when they inquired the cause of my weakness; to which I answered:

"That though it had pleased God to permit us to fall into the hands of these men, and bring us under so great a power, under many dangers; yet perceiving He had been

pleased to inspire them with so much gentleness and favor towards us, my spirit was so broken, as they observed, in humble thankfulness to the Lord, who was thus kind to us in a time so needful; and for their favor we were likewise grateful." All which they heard with great attention, and bowed themselves, when they understood it, with gravity and a serene and gracious respect."

For "The Friend."

Circular of the Bible Association of Friends in America.

In again calling the attention of Auxiliaries to the Annual Queries to be answered previous to the general meeting of the Association on the 6th of Eleventh month, the Corresponding Committee would press upon Friends, who have been engaged in the distribution of the Holy Scriptures, the importance of furnishing full and accurate answers to all the Queries, and of forwarding their report seasonably to the Depository.

It may be recollected, that in making donations to Auxiliaries, the Board are guided in deciding what number of Bibles and Testaments shall be sent to each, by the information given in its report. Hence those Auxiliaries that do not report in time, are liable to be left out in the distribution.

Specific directions should be given in every case, how boxes should be marked and forwarded; and their receipt should always be promptly acknowledged.

Address John S. Stokes, No. 116 N. Fourth Street, Philadelphia.

SAMUEL BIDDLE,
CHARLES RHODES,
JAMES WHITALL,
Committee of Correspondence.

Phila., Ninth mo. 1878.

QUERIES.

1. What number of families or individuals have been gratuitously furnished with the Holy Scriptures by the Auxiliaries during the past year?
2. What number of Bibles and Testaments have been sold by the Auxiliary within the past year?
3. How many members, male and female, are there belonging to the Auxiliary?
4. What number of families of Friends reside within its limits?
5. Are there any families of Friends within your limits not supplied with a copy of the Holy Scriptures in good clear type, and on fair paper; if so, how many?
6. How many members of our Society, capable of reading the Bible, do not own such a copy of the Holy Scriptures?
7. How many Bibles and Testaments may probably be disposed of by sale within your limits?
8. Is the income of the Auxiliary sufficient to supply those within its limits who are not duly furnished with the Holy Scriptures?
9. What number of Bibles and Testaments would it be necessary for the Bible Association to furnish gratuitously, to enable the Auxiliary to supply each family?
10. What number would be required in order to furnish each member of our religious Society, capable of reading, who is destitute of a copy, and unable to purchase?
11. How many Bibles and Testaments are now on hand?

Communism is substantially a demand that property shall be divided equally among all men, and that there shall be no more rich or poor. But if one man on the frontier can cut down twice as many trees or clear twice as large a field in a day as another, yet at the end of the day the result is to be divided equally between them, what will happen?

The next day the first man will take care to cut only half as many trees, and to clear no larger space than the other. The second evening there will be nothing to divide. That is

to say, the result in society at large would be that each man would do just what was needed to keep him alive, and no more. This is the lowest form of barbarism. It is the end of civilization, of progress, of intelligence, of art and science and invention and literature. It is universal poverty of the most squalid kind. It is sheer savagery, but it is Communism.—*Harper's Magazine.*

THE FRIEND.

TENTH MONTH 12, 1878.

Owing to the finite capacity of the human mind, and its liability to bias from incidental prepossessions, those who write or speak on any given subject, are prone to lay special stress on those phrases which have particularly engaged their attention, perhaps rather to the neglect of other and equally important points of view. This may occur indeed where there is no design to do so, nor any real lack of belief in the truth thus apparently ignored; but rather because of a desire to aim directly at the mark in the mind of the writer or speaker, without needless incumbrance by collateral issues, which may be assumed as granted by all.

It has been, we think, largely for want of allowance for these considerations, that many have unfairly criticised the exponents of the views of Friends, and charged them with denying some of the cardinal doctrines of Christianity. Thomas Evans, in his Exposition of the Faith of Friends, says: "The peculiar views which the Society entertained of the spiritual nature of the gospel dispensation, rendered its members obnoxious to much opposition from high professors who were little acquainted with the practical and renovating influence of true religion. Many and serious were the accusations which their enemies exhibited against them." He then enumerates among these charges the denial of the scripture doctrine of the Holy Three that bear record in heaven, because they rejected the use of the word "Trinity" as one of human invention. That they denied the Divine authority and authenticity of the Holy Scriptures, because they refused to apply to them the title of the "Word of God." That "notwithstanding repeated declarations of the soundness of their faith, the enemies of the Society greatly misrepresented and perverted the doctrine of the light of Christ in the soul of man. They pretended to infer from it that the Quakers denied Jesus Christ as he appeared at Jerusalem, to be the Saviour of men. That they believed the Godhead, or whole Christ to be in them, thereby equaling themselves with Him, and rejecting all belief in Jesus Christ, except as the Spirit in man. They likewise charged Friends with allegorizing away the sufferings and blood of Jesus, by making them only typical of the inward operations of the Light—and with holding the erroneous notion that He was nothing more than a great prophet, supereminently endowed with the Spirit of God which dwelt in Him no otherwise than in us. These unfounded charges were met on the part of the Society with the most solemn and unequivocal denial. Nor did Friends rest satisfied with a mere negative assertion of what they did not believe. In a subject of such high concernment they deemed it an incumbent duty to declare,

in the most explicit and positive manner, what they *did* believe, in order that the world might know they really were what they professed to be—sincere and humble believers in all the doctrines of the Christian religion. To satisfy every doubt, and silence every cavil, they published repeated declarations of their faith, drawn up in language that can neither be misunderstood nor equivocal; and although these are not called Creeds, nor proposed for subscription to those who apply for membership among them, yet they are essentially and properly the articles of faith and the outward bond of union of the religious Society of Friends.

Thomas Evans' Exposition then enumerates these declarations of faith, and gives extracts from them, to show the unjust nature of the aspersions cast upon the Society and its real belief. Among them there are sixty-two testimonies from prominent ministers and other members of the Society in its early stages, and twelve extracts from Epistles issued by the Yearly Meeting of Great Britain respecting the "Divinity and Offices of Jesus Christ," which fully refute the charges of unsoundness on these important doctrines. The work alluded to received the sanction and endorsement of Philadelphia Yearly Meeting in 1827, and has ever since been accepted by that body as a Declaration of its faith; and a new edition has lately been published under its authority. We would commend its perusal to our readers, and especially to the young and those not conversant with the doctrines of the Society.* It is of vital importance that a professing church should give due proportion and emphasis to every branch of Christian doctrine, and in holding forth any which may be esteemed *peculiar views*, that they should by no means be allowed, even seemingly, to overshadow that great and chief corner stone which lies at the very foundation of all Christian profession—the incarnation of God and atonement made by the Son of God for the redemption of mankind. "Other foundation can no man lay than that is laid, which is Jesus Christ;" and, "He is the head of the body the Church; who is the beginning, the first born from the dead; that in all things He might have the pre-eminence." Christ declared that when the Spirit of Truth should come into the hearts of His disciples, "he shall not speak of himself; as he shall glorify me; for he shall receive of mine, and show it unto you."

Thus all who truly receive the Holy Spirit in his blessed offices, and who are favored with the knowledge of the history of Christ's outward appearance and work among men, will be surely led to glorify the adorable Son of God, for His meritorious sacrifice for the sins of mankind in that prepared body of flesh, by which (in the language of Barclay,) "we that were lost in Adam, plunged into the bitter and corrupt seed, unable of ourselves to do any good thing, but naturally joined and united to evil, forward and propense to all iniquity, servants and slaves to the spirit and power of darkness, are, notwithstanding all this, so far reconciled to God by the death of His Son, *while enemies*, that we are put into a capacity of salvation, having the glad tidings of the gospel of peace offered unto us, God is reconciled unto us in Christ, and calls and in-

vites us unto himself." These, as they in living faith take Christ's yoke upon them, and learn of Him in the school of repentance and humiliation for their past sins, realize the further truth, that "it pleased the Father that in Him should all fulness dwell. And having made peace through the blood of his cross, by Him to reconcile all things unto himself," they "have redemption through His blood, even the forgiveness of sins."

There is no incongruity or clashing in the various offices and manifestations of the Three that bear record in heaven; but as declared by the apostle John, "He that abideth in the doctrine of Christ, he hath both the Father and the Son." Says Isaac Pennington: "So now to us there is but one God and Father, of whom are all things, and we in Him; and one Lord Jesus Christ, by whom are all things, and we by Him; and but one Spirit and one power of life, which we have received of the Son and Father, through which we believe, and lay hold on the pure eternal strength and power of the Almighty, which redeems and saves the soul; and so believing on Him who raised up our Lord Jesus Christ from the dead, here we meet with justification, and are at peace with our God."

SUMMARY OF EVENTS.

UNITED STATES.—Forty-seven years ago, the forty-five acres of farm land upon which Stephen Girard had directed the college to be built, was purchased by him for \$25,000. In the next following year (1832) it was still on the tax-books of Old Penn Township, assessed as farm land at \$200 an acre. At that time it was probably a full mile "out of town." Now the same tract is valued at a million of dollars, without the costly buildings—nearly \$25,000 an acre. The adjacent properties are valued at about the same rate.

During the Ninth month, 187 vessels arrived at the port of Philadelphia from foreign ports. The steamship "Lord Clive" recently left this port with 800 cattle; a few days before the "City of Bristol" cleared with 300 horned cattle and 1400 sheep. The English ship "Dorchester Bay," the largest sailing vessel which ever entered our port, will take out about 600,000 gallons of petroleum.

The total amount of anthracite coal mined during the year ending 9th mo. 28th, is 11,633,487 tons; for the same period last year 14,161,762 tons. Of bituminous coal there were 2,451,904 tons, against 2,439,970 tons last year. The total tonnage for the year 14,884,491, for the coal year just closed, and for previous year 16,601,732 tons.

The public debt statement for Ninth month shows a decrease of \$6,196,534.

The coinage of the United States mints for last month was \$3,343,600; including 2,704,000 standard dollars.

About 100,000 pounds of stereotype metal have been purchased for the Government Printing Office at Washington, to replace that which has been in use for more than ten years, and is worn out. The old material will be sent to the stereotype foundry connected with the Government Printing Office, to be melted and used in the manufacture of stereotype plates.

A shock of an earthquake, lasting about 20 seconds, is stated to have been felt on the Hudson river, from West Point to Peekskill, early on the morning of the 4th inst.

An approximate total of deaths from yellow fever, since it first appeared this year to close of 9th month, is stated to be 729.

Secretary McCarty, on information of the deplorable destitution existing in New Orleans, has renewed his order for the issue of 40,000 rations in that city. Similar misery exists in most of the fever-stricken cities and towns of the South.

The thirteen new life saving stations on the coasts of Virginia and North Carolina, are expected to be finished by the middle of next month.

The removal of the Red Cloud and Spotted Tail Indians to their new reservations, is reported as being effected in a quiet and satisfactory manner.

From the monthly statement of the chief of the Bureau of Statistics to the Secretary of the Treasury, the excess of exports over imports of merchandise, for the eight months ending 8th mo. 31st, 1877, is \$5,558,

951,995; for the corresponding period of present year \$188,501,057. The excess of exports over imports gold and silver coin and bullion, for eight months 1877, \$25,468,554; of 1878, \$621,283. These figures show an increasing flow of specie and American securities toward this country.

From a statement of the export of provisions for the principal Atlantic ports, during the 8th month, it appears there were shipped 44,937,693 pounds of beef and lams, 4,541,699 of pork, \$3,733,341 of beef, 16,922,725 of lard, 4,491,277 butter, 6,452,493 cheese, at 3,590 dozen eggs.

The number of deaths in this city during the week was 243. In New York 516.

Markets, &c.—American gold 100 $\frac{1}{2}$. Government bonds nearly steady.

Flour.—Extra family, \$5 a \$5.50; patent, \$6.50 \$8.50. Rye flour, \$3.25.

Grain.—Amber wheat, \$1.04 a \$1.05; white, \$1.06 \$1.10. Corn, 48 a 51 cts. Oats, 29 a 31 cts.

Seeds.—Clover, 6 a 7 cts. per lb.; Timothy, \$1.40 \$1.45 per bushel.

Hay and Straw.—Prime timothy, 60 a 70 cts., p. 100 pounds; mixed, 45 a 60 cts.; straw, 55 a 70 cts., p. 100 pounds.

FOREIGN.—The liabilities of the City of Glasgow Bank, which closed its doors on the 2nd inst., are reported to amount to \$5,000,000, and is the heaviest failure in Scotland since 1857, when this concern was suspended. The liability of the shareholders is unlimited, and this may perhaps secure the depositor. The bank has paid a progressively increasing dividend for several years past, until it reached 12 per cent. Its affairs have caused great excitement throughout Scotland. The disaster is generally attributed to its resources being locked up in bills, shares and debentures of various kinds that were not readily convertible.

The Amerer of Afghanistan is said to be preparing for war, and the India papers state that it has already begun, but this is said to need confirmation.

Three hundred Icelanders emigrated last month to Canada. In the last three years, 1800 Icelanders had repaired thither.

The foreign goods imported into China during 1877 amounted to over \$10,000,000. The value of the opium imported was about \$45,000,000; of cotton goods \$28,000,000.

The latest census shows the population of Japan to be 34,338,404, a steady and large increase since 1875.

RECEIPTS.

Received from Reuben Batin, Agent, Pa., \$210, 1 No. 10, vol. 53, and for Joseph McCarty, John I. McCarty, Abel McCarty, John McCarty, John S. Brown and George Schill, \$210 each, vol. 52, and for Jess McCarty, \$210, 10 No. 12, vol. 53; from Lavina B. Wright, Mich., per David Williams, Agent, \$210, vol. 52; from Mary M. Applegate, N. Y., \$210, vol. 52; from John T. Moorman, 10, \$210, to No. 13, vol. 53 for Thomas Evans, Pa., \$2, vol. 52; for Hannah Taylor Pa., \$210, vol. 52; from Earl Hallock, N. Y., per Aaron McKee, \$210, vol. 52; from Stephen R. Smith, Miss., \$210, vol. 52; from Mercy Herron, Miss., \$210, vol. 52; from Julia M. Powell, N. Y., \$210, vol. 52.

FOR SALE.

On reasonable terms, fifty volumes of "The Friend," Empire of John S. Stokes, at the Office of "The Friend."

A young woman of experience, desires a situation as teacher of small children in the family of a Friend.

PHILADELPHIA.

olution, or the theory of the natural development of forms of organic life from lower or anterior forms or types.

on a work entitled "Present Conflict of Science with the Christian Religion," by Herbert W. Morris, A. M.

(Continued from page 67.)

Darwin, indeed, speaks of "the Creator and ruler of the universe," but his theory does not recognize Him as such—gods of his own creation are made to usurp and occupy His throne. Darwin's theory," as Dr. Vogt says, "ignores personal Creator, and his direct interference—the transformation and creation of species, *are being no sphere of action for such a being*, even the first starting-point, a first organism, existing organisms are subsequently by natural selection developed from it in a continuous manner through all geological periods, the simple laws of transmission. There are no new species by any creative interference. Even man is *neither a distinct creation, formed in a special manner, and different from all other animals, nor provided with a special soul, nor endowed with a divine breath of life*; he is only the highest product of a *progressive natural selection*, and descends from the simian group standing next to man." Darwin employs such words as "contrivance," "purpose," "adaptation," and "design;" but he uses them, as Mivart truly observes, in a mere figurative sense—as metaphors, and nothing more." He talks also of "laws"—the "law of variation," and the "law of natural selection;" but all that he can mean by the term is the merest chance or accident, though he disclaims this; for what are the main causes of "variations?" These—the character of the mate with which an animal may happen to consort, the soil or climate to which it may happen to lead it, or its enemies appear to drive it. And "natural selection"—what is the naked fact covered by this phrase? The chance issues of chance encounters among beasts, or birds, or other animals—we say *chance issues*, for among brutes among men, "the battle is not always to the strong, nor the race always to the swift." How can anything be well imagined more purely accidental or fortuitous than such matings, whins, wanderings and fightings among irrational creatures? And yet these are "the laws" by which the world has been named!

Indeed, the very existence of the human

race itself, according to this theory, is but an accident. That the Ascidian Tadpoles, after passing through the revolutions of millions on millions of years, at last developed into monkeys and monkeys into men, depended upon as many millions of contingencies. "We have given to man a pedigree of prodigious length," says the great Seer of Development; "if a single link in this chain had never existed, man would not have been exactly what he now is." * To go no further back—if the bodily structure of some member of the Old World monkey family had not happened to be more plastic than the rest—if that member had not chanced to meet with a like plastic mate—if these had produced no posterity, or posterity not inheriting their own qualities, or had their posterity been cut off—if there had not occurred a change in the physical conditions of the region they inhabited, rendering necessary a change in their manner of procuring food—if they had not become less arboreal in their habits—if when they forsook the trees they had not begun to walk on their hind limbs instead of going on all fours—if any one of these contingencies had not occurred, the human race had never existed; there would still have been in the world nothing higher or better than the hairy quadruped, with tail and pointed ears, climbing and living in the trees of the forest; man, "the wonder and glory of the universe," had not come forth to subdue the earth, or to fill it with monuments of his skill and industry, or to adorn it with altars and temples erected to the glory of his Divine Builder.

Hence, according to Darwin, mankind are a fortuitous race, living in a fortuitous world. And what is this but practical Atheism, and Atheism of the most dreary and hopeless kind? If this theory does not expressly deny God, it effectually ignores God. Its tendency is to remove the Divine Being entirely from the view of man, and to lead to disbelief in His providence, in His having any connection with or interest in human affairs. The whole living world is given up by this hypothesis to the blind power of "fortuitous variation," and to the hard, unsympathetic, and relentless rule of "natural selection." The system admits not of the regard or the notice of a loving Father in heaven; of no beneficent providence over man or brute. For anything that it allows the Creator to do in the realm of material nature, or in the kingdom of animalized beings, it might as well have been written, "God has nothing to do with the world." On this hypothesis, Divine benevolence has never been exercised toward man; Divine revelation is a fable; salvation from sin and misery is a myth; and the hope of immortality but the illusion of a dream.

To call in the agency of the Creator to account for any of the phenomena, or for the existence of any of the organized beings

we find in the world, is very distasteful to the advocates of Development; they openly and strenuously object to it; it is put down as unscientific, and deemed derogatory to the standing of a true Student of Nature. Professor Huxley, speaking of the succession of animals upon the earth, says, "When we look at this wonderful history, and ask what it means, it is only a paltering with words if you are offered the reply—'They were so created.' Notwithstanding all this, we discover that Darwin himself has committed, in one instance at least, this very 'unscientific' sin. In order to obtain a starting-point for his system of animal development, he is constrained to resort to Divine agency; for he speaks in one place of 'life having been originally breathed by the Creator into a few forms, or one'; and in another place of 'animals having descended from at most four or five progenitors.'"* If, therefore, it be thus admitted that the immediate agency of the Creator has been concerned in the production of four or five different kinds of animals, why not in four or five hundred, or even in as many as there are of distinct species in existence? There is nothing more unscientific or improbable in the latter admission than in the former. And if it be confessed that the Creator condescended to put forth his power directly and immediately for the production of the first and lowest and simplest of the earth's living tenants, what ground is there to deny, or even to doubt, that He exercised his power in a similar manner for the creation of Man, the highest and noblest of all terrestrial creatures? On Darwin's own admission, therefore, there is nothing incredible, nothing improbable in the Scripture statement that God himself formed man, and breathed into his nostrils the breath of life, and made him a living soul.

Alfred Wallace, one of the authors of the theory of development, makes concessions still more explicit and decisive. He acknowledges even in regard to man's *body*, that Natural Selection "alone" could not have produced it—that an action took place in its formation "different" from that by which brute forms were evolved—and that there is evidence of the action of an "overruling Intelligence" in the evolution of the human form Divine. And to the idea that the human *mind* has been derived from that of the brute, he urges objections drawn from the origin of some of man's mental faculties, such as "the capacity to form ideal conceptions of space and time, of eternity and infinity—the capacity for intense artistic feelings of pleasure, in form, color and composition—and for those abstract notions of form and number which render geometry and arithmetic possible;" he also urges similar objections grounded on the origin of the moral sense or conscience. This writer farther states, that in his opinion, man

* *Descent of Man*, Vol. I. p. 205.

* *Origin of Species*, pp. 424, 429.

is to be placed "apart," as not only the head and culminating point of the grand series of organic nature, but as in some degree a *new and distinct order of being.** And what is all this but a virtual admission that Man, after all, both as to his Body and Mind, is, as the Bible declares, a creation of God—the product of a distinct and immediate act of infinite power and wisdom?

St. George Mirvart, also an evolutionist, but of a somewhat different school from Darwin, while he holds that "the body of man was not an absolute creation, but evolved from pre-existing material, symbolized by the term 'dust of the earth,' by the operation of secondary laws"—affirms that "his soul, on the other hand, was created in quite a different way, not by any pre-existing means, external to God Himself, but by the direct action of the Almighty, symbolized by the term 'breathing,' the very form adopted by Christ when conferring the supernatural powers and graces of the Christian dispensation."† Here, again, this evolutionist like the two preceding, after a whole volume of discussions and illustrations of his special views of Development, finds himself at the close of it constrained to admit the sum and substance of the whole Scripture account of man's creation.

From the Darwinian Hypothesis, then, the Christian has nothing to fear—nothing, indeed, to give him one anxious or uneasy thought as to the ground of his faith. The theory is powerless to affect the Sacred Record—its author has utterly failed to make out the descent of Man from the Ape. The Scripture history of man—of his creation in holiness, of his fall through disobedience, and of his redemption through grace—remains un-moved, unshaken. This daring and desperate assault, like a hundred others before it, to undermine the Holy Book, has been made but to share the fate of the wave that madly rushes on the rock-bound coast—to be dashed into spray and forced to retire, leaving behind it not a trace of its violence. The foundation of God standeth sure as ever and in this additional discomfiture of the enemies of the Word, the believer may find another confirmation of the assurance given, THE GATES OF HELL SHALL NOT PREVAIL AGAINST IT.

Birds among the Mustard Trees.

"The birds . . . lodge in the branches thereof"—Matt. xiii. 31, 32.

As I was riding across the plain of Akka on the way to Carmel, I perceived at some distance from the path what seemed to be a little forest, or nursery of trees. I turned aside to examine them. On coming nearer they proved to be an extensive field of the plant which I was so anxious to see. It was then in blossom, full grown, in some cases six, seven, and nine feet high, with a stem or trunk an inch or more in thickness, throwing out branches on every side. I was satisfied in part. I felt that such a plant might well be called "a tree," and in comparison with the seed producing it, a great tree. But still the branches, or stems of the branches were not very large, or, apparently, very strong. Can the birds, I said to myself, rest upon them? Are they not too slight and flexible? Will they not bend or break beneath the superadded weight?

At that very instant, as I stood and revolved the thought, lo! one of the fowls of heaven stopped in its flight through the air, alighted down on one of the branches, which hardly moved beneath the shock, and then began, perched there before my eyes, to warble forth a strain of the richest music. All my doubts were now charmed away. I was delighted at the incident. It seemed to me at the moment as if I enjoyed enough to repay me for all the trouble of the whole journey.—*Dr. H. B. Hackett.*

For "The Friend."

Letters, &c., of Margaret Norris.

(Continued from page 67.)

10th mo. 10th, 1810.

The time is now come that I am to resign my beloved child, the last dear pledge committed to my care by her dying parents! And though I claim no merit to myself for seventeen years of unremitting solicitude for the best welfare of my precious orphans, and have good reason to hope my dear girls are worthily bestowed, yet, as the moment of parting is just at hand, my maternal bosom feels all a mother's pangs, in the midst of which I rejoice, in remembering thy affectionate attentions and condescending love in submitting to bear with, and sympathize in the many infirmities of *old age*. Should it please Providence to permit thee to see many days, I hope the love thou hast shown me, will be returned an hundred fold on thy own head, and it is my wish, my prayer, that every blessing which the goodness of Providence may permit his bounty to bestow, may be the portion of my endeared I. C. and his wife, in time and in eternity. With this "wish" and the humble hope that the accompanying "prayer" will be regarded by Him whose gracious ear has oftentimes listened to the petitions of his poor unworthy handmaid, I conclude and remain

Your truly affectionate parent,

M. M.

To the same.

11th mo. 3d, 1811.

* * * I felt my jewel, it was hard to part with thee, but felt thankful that I had been favored to see thee and thy dear child, and that if I never saw you again I was willing to resign you into the same hand which gave thee into my arms at the time He pleased to take thy angel-mother from a world of sorrow, and who has marvelously fulfilled his gracious promise left on record in the Holy Scriptures, "Leave thy fatherless children, I will preserve them, and let the widow trust in me." I have lived to experience the fulfillment of that promise, and now, late in life, can set up my Ebenezer and say, hitherto He has helped me, and shall I now presume to dispute his right to take me hence when He sees my time of duty is nearly accomplished, and I am bending under a weight of years; rather let me hail the approach of the king of terrors as the messenger of peace to conduct me to that happy land where long separated friends shall meet to part no more; and, my dear M., I tenderly counsel thee not to give way to any anxious thoughts about me. I know thou lovest me, and it has been a pleasure to me to feel that my love has met a most grateful return from thee; and now my dear, let it be thy care to look up to Him who can give a blessing, and ask of Him to qualify thee to perform a mother's part to thy dear child. *Begin in time; it is never too soon to in-*

struct him in the important lesson of obedience and this may be done by mildness and condescension. I have often had to remember who once boasted of, that my children, from a time they knew right from wrong, never obeyed my known will. This truly was owing more to the goodness of Providence, than a merit in their poor unworthy mother. I whither am I running. My pen has committed a theft, and ere I was aware of it, I stolen from me the thoughts that have lumbered in my bosom; but let it pass; perhaps thy son may in future time, reap some benefit from them, when the hand that now writes may be forgotten.

Love to all my kind relations. * * *
I am ever thy own,
M. M.

For "The Friend."

Ebensburg, Cambria Co., Pa.

This town, located on the western slope and near the summit of the Allegheny mountains, at an altitude of something over 200 feet, was laid out in the latter part of the last century. It was originally settled by Welsh people, which element still prevails in the town and neighborhood—religious service being regularly held in that peculiar language. This people have generally well marked features, expressive of honesty and integrity of character; meeting them on the road they look us fully in the face, speak, and appear willing to enter into conversation, which, as far as we have met with, is of an intelligent character. The grandfather of the proprietor of the Loyd House, at which we lodge (Ree Loyd), was one of, if not the original proprietor of the town; he gave the ground for two or three of the places of public worship also ground for a cemetery a short distance out of town, which still bears his name. Being a Welsh preacher, and perhaps feeling the force and truth of the scripture declaration connected with the name of Ebenezer: "Hitherto the Lord has helped me," he called it Ebenezer, his grandson says, in remembrance of, and in a sense of the feeling of the declaration; he also on the voyage over from Wales, lost a son called Ebenezer. From the centre of the main street of the town, the horizon sinks away in all directions. The view from the south end of Centre street, near the Academy, east, south, and west, is extensive, embracing a wide field of vision; that of the east, extending down to the "Summit, Cresson and Galtzitz or Tunnel Hill, some ten or twelve miles off, on the Pennsylvania Railroad; on the south, it is said, into Bedford and Somerset counties, distant some twenty to twenty-five miles, whilst the sun sets in the west behind distant hills. Several industries are carried on in and around the village. Steam saw mills for preparing both hard and soft lumber; some tanneries, and one or two manufactories of oak staves for hogheads which are here prepared and put up into "shooks," each containing the staves for one thousand, then shipped to Cuba and perhaps elsewhere for making sugar hogheads, the heads being supplied from other localities. The name of the county is an ancient name of Wales.

One coming from the east is surprised at the amount of land under cultivation on these table lands of the mountains. Clear springs of cool water issue from the sides of the hills in abundance, forming rivulets in the low lands, and the Conemaugh river has its principal source just north of the town. The

† *Genesis of Species*, p. 300.

several elevations near, from which quite diverse and varied views are obtained, and the rides in other directions, through what we like primeval forests, are attended with great interest, and in many places impressive. Great logs of hemlock lie upon the ground in various stages of decay, some covered with plentiful, fine green moss from end to end, with an occasional fern springing out of it; sugar maples, with trunks of large dimensions, and extending up 60 and 70 feet without a limb; beeches, and the fragrant birch, are the principal forest productions, whilst the ground is covered in many places with large ferns. Driving through the woods, we stopped to admire the effect of the surrounding one, heightened just there by the top of a tall hemlock which had been broken off by the wind, lodged in the upper branches of another tree across the road, forming a natural gate some 60 or 70 feet up in the air. A ride near, seeing us stop, told us we might drive on, it had been there some time."

One of the most attractive drives through the woods is to the remains of what was once a flourishing town, about two and a half miles off, called "Beulah." It had in its day its usual use of entertainment, shops of industry, private dwellings—from which no doubt went forth funerals as well as bridal companies—a library, its newspaper (printed in Philadelphia) but published here, and presenting, at the period of its existence, a rivalry for the seat of justice for the county, with Ebensburg. Now silence reigns profound, not a trace of any description remains standing, nothing left to mark the site of this once a rowing hamlet, but a few inequalities in the surface, some heaps of stone, where houses once stood, an old orchard and a grave-yard, trees and grass are now growing where busy once stood, "showing how rapidly the work of man yields to the forces of nature when the battle of the former ceases," reminding us of the words of the poet:

"Earth speaks of man.

Her level'd mountains, and her cultured vales,
Town, tower and temple, and triumphal arch,
All speak of him and moulder while they speak."

But we may also remember with feelings of encouragement, "That there is a city which hath foundations," which the tooth of time cannot destroy, "whose builder and maker is God."

Quite an interesting feature in the country is the number of water troughs placed along the road sides, where both man and beast can lay their thirst without having to resort to the places where ardent spirits are sold.

In connection with the sale of ardent spirits, we were informed of the history of the rapidly growing of a prominent family of the place, of which the following is the substance. On one occasion we passed a large commanding looking dwelling, now rented by a family from Philadelphia, but not long since owned and occupied by a very wealthy man, who had accumulated a large estate by the sale of liquor, receiving from the workingman his hard earnings, that should have gone to the support of his family. In one, and perhaps more than one instance, he went so far as to demand of a poor woman whose husband worked for him, and who was to be paid in liquor, and had herself and children to support, the amount of a bill that the poor deluded man would him for excess of drink. She declined paying it, and added in substance, that rich

as he then was she thought that he and his wife would live to see the time when they would want the common necessities of life. A few short years rolled away, and the liquor seller, owing to dissolute children and losses of various kinds, became reduced in circumstances, and the anticipations of the poor woman were literally fulfilled; they both died in great want, and their son became an idle, dissipated man. The children of the poor woman receiving good instruction and brought up no doubt to habits of industry, are now filling useful stations in society. Surely "the way of the transgressor is hard."

For "The Friend."

Incidents and Reflections.—No. 20.

BALAAAN.

The account of Balaam, who was sent for by Balak, King of Moab, to come and curse the children of Israel, is one that is full of interest and instruction. There can be no doubt that he was divinely visited and instructed, and enabled to foretell to others the Lord's purposes. But he loved the wages of unrighteousness; and though, while the holy influence was upon him, he could utter the petition, "Let me die the death of the righteous," yet he was at last slain among the enemies of the Lord's people. Those who have known the Divine command to preach unto others, are by no means exempted from obedience to our Saviour's injunction, "Watch and pray lest ye enter into temptation;" if they neglect this they will assuredly fall away.

Balaam's experience shows also, that the Lord, in his wisdom, sometimes uses as his instruments, to accomplish particular purposes, those who are not fully brought into subjection to his government. Joseph Hoag relates an incident of this kind in his own experience, which occurred when he was 17 or 18 years of age. He was then visiting a relative, in company with a cousin. He says: "It was a time of life when, at times, I indulged myself in such conversation as promoted merriment. In this way I entertained my cousin most of the way going; but on my return, we had not travelled far, before we were overtaken by a man, who soon fell upon me, cursing the Quakers in strong terms, because they would not fight. It was during the revolutionary war, and critical times in that part of the country. I heard him pretty much through, by which time I felt my mind closely arrested with an uneasy feeling, that the principles of Truth, and the people that I believed were faithful to them, should be so censured, though I felt conscious that I was not one of the faithful, which at times I forcibly felt; yet, notwithstanding my embarrassed state of mind, the Lord, I believed for the sake of his own name, and the tender regard He had for his faithful ones, touched my mind, though I was hardly sensible what it was that required me to speak, let the consequence be what it would. As I commenced, all fear departed, words flowed rapidly, and I was enabled to show the difference between the law and the gospel—to open to him our principles, give him our reasons for them, and to prove them by many Scripture passages; and finally, to show him it was impossible for a true Quaker, to be either whig or tory, for they implied opposite parties, and both believed in war, but Friends did not. The man became tender, and with tears running down

his cheeks, acknowledged our reasons were good, and that our principles were right, and wished that Friends would keep to them; if they did, it would be a blessing to the world. This remark came home to my feelings. He added that he was fifty-five years of age, and never saw these things before, and that it was marvellous to him to believe. He said there must be great wisdom amongst the Quakers for so young a man to know so much. He urged me to go home with him; I informed him I could not. When we parted with him, he gave me his hand, wished me well, desiring me to remember him, and to pray for him. This thought went through me like a sword; "How can I pray for thee, when I neglect to pray for myself?"

"As I turned from this man, I discovered a man that had been riding behind us several miles unperceived by me. He suddenly rode up and said, 'I was glad to hear you bang off that old whig, for he is an old rebel, an enemy to his king, and it is good enough for him.' I turned and looked him full in the face; it came forcibly into my mind, 'Thou art one of the vilest of men.' I soon replied, 'I believe thou art mistaken in me, for I can no more be a tory than I can be a whig.' He said, 'Whig?' I replied, that before the war our country got much filled up with a sort of men that hung about the taverns, practiced card-playing, cock fighting, horse racing, and getting drunk, and then would go home and abuse their families; they were in the service of the devil and of course were his children. The Lord had suffered an evil spirit to divide them; for they corrupted the land—one part had taken side for the king, and the other for the country. Both parties were still in the same practices. For these reasons I cannot be tory nor whig.' He went off whistling and left us. My cousin then rode up, and with a serious look, said in substance: 'Joseph, all the way going to uncle's, thou kept me laughing with thy nonsense, and now thou canst talk like an angel;—set the first man a crying, and the last one thou hast pictured out as correctly as I could, that have lived by him all my days. He is a neighbor to father, and is called many things but good, and thou hast been talking to him like a minister; what can I think of thee?' Her-simile remarks went through me like an arrow thrown at venture. It ent me so close that I had to sink down, reasoning with myself, 'Sure enough, what am I?' And as I sank down in my mind, I felt the weight of my folly; then after a while it was opened to me in the Light, and with such clearness that I had no power to disbelieve, that the Lord put a word in Balaam's mouth to deliver to the Midianites and Moabites, though his heart was not right before the Lord; and though he was highly favored, yet he did not give up to cleave to the Lord with all his heart, and keep to the word he had spoken to the people, therefore the Lord cut him off. And now the Lord had put a word in my mouth for those men, and for the upholding of the Truth in the earth, though my heart was not right before Him, and if I did not cleave to the Lord with my whole heart, and keep to the word spoken, the time was coming that I should be cut off as Balaam was.

"The force of this solemn subject turned my justing into heaviness of heart: I marvelled at the wisdom, goodness and tender mercy of the Almighty towards me, in awakening

and instructing me in such a wonderful manner. Adored and praised forever be His holy name!"

For "The Friend."

(Circular of the Bible Association of Friends in America.)

In again calling the attention of Auxiliaries to the Annual Queries to be answered previous to the general meeting of the Association on the 6th of Eleventh month, the Corresponding Committee would press upon Friends, who have been engaged in the distribution of the Holy Scriptures, the importance of furnishing full and accurate answers to *all* the queries, and of forwarding their report *seasonably* to the Depository.

It may be recollected, that in making donations to Auxiliaries, the Board are guided in deciding what number of Bibles and Testaments shall be sent to each, by the information given in its report. Hence those Auxiliaries that do not report in time, are liable to be left out in the distribution.

Specific directions should be given in every case, how boxes should be marked and forwarded; and their receipt should always be promptly acknowledged.

Address John S. Stokes, No. 116 N. Fourth Street, Philadelphia.

SAMUEL BETTLE,
CHARLES RHOADS,
JAMES WHITALL,

Committee of Correspondence,

Phila.,a, Ninth mo. 1858.

QUERIES.

1. What number of families or individuals have been gratuitously furnished with the Holy Scriptures by the Auxiliary during the past year?
2. What number of Bibles and Testaments have been sold by the Auxiliary within the past year?
3. How many members, male and female, are there belonging to the Auxiliary?
4. What number of families of Friends reside within its limits?
5. Are there any families of Friends within your limits not supplied with a copy of the Holy Scriptures in good clear type, and on fair paper; if so, how many?
6. How many members of our Society, capable of reading the Bible, do not own such a copy of the Holy Scriptures?
7. How many Bibles and Testaments may probably be disposed of by sale within your limits?
8. Is the income of the Auxiliary sufficient to supply those within its limits who are not duly furnished with the Holy Scriptures?
9. What number of Bibles and Testaments would be necessary for the Bible Association to furnish gratuitously, to enable the Auxiliary to supply each family?
10. What number would be required in order to furnish each member of our religious Society, capable of reading, who is destitute of a copy, and unable to purchase?
11. How many Bibles and Testaments are now on hand?

Professor Edison's Tasimeter.

Hitherto the most delicate instrument known to science for determining the heat in the different parts of the solar spectrum has been the thermopile. The great improvement of the tasimeter over the thermopile is illustrated in a simple manner by Professor Edison. A few inches from the former he placed a hot iron. It deflected the needle of an ordinary galvanometer one degree; then he held his little finger four inches from the tasimeter with the same galvanometer, and it swung the needle around six degrees. In explaining the workings of his new invention to a *Herald* reporter, in his laboratory at Menlo Park, the inventor made a number of curious experiments. "See here," said he, taking up a thin strip of vulcanized rubber and placing it between two small upright iron posts in his tas-

imeter; "this is highly sensitive to heat; a little causes it to expand. At this end I place my carbon. I found out that silk coated with conducting lamp black pressed in the form of a button, was wonderfully sensitive to the passage of the electric current. Put upon it the pressure of one half millionth of an inch and it will allow a passage of current strong enough to deflect Sir William Thompson's galvanometer one degree. Of course greater pressure deflects the needle more." Professor Edison then took an ordinary galvanometer and put it in electric circuit with his tasimeter and held his hand four inches away from the vulcanite strip. Instantly the needle of the galvanometer moved five degrees. Next he lighted a gas jet five feet away, and the needle moved four degrees. Then he held a match a distance of six inches and the heat indicated eleven degrees in the galvanometer. Breathing slightly on the rubber, expanded it sufficiently to mark thirty degrees. These results the Professor produced without the improved galvanometer, which he explained was infinitely more sensitive.

Professor Edison next introduced between the posts a slip of gelatine, in order to measure moisture. Moistening a piece of paper slightly with his tongue, he held it three inches away. The deflection was eight degrees. A breath on the gelatine moved the pointer thirty-five degrees. A drop of water on the end of his finger, held five inches away, indicated a moisture of eleven degrees.

The Professor next explained the method proposed to be adopted in the astronomical experiments to be made with his tasimeter. Instead of vulcanized rubber, platina will be used, the latter having been found to gain and lose heat much more readily than the former. The tasimeter, unlike the one experimented on as above, is to be smaller and of different material, brass being used throughout. It will be inclosed in a receptacle of tin, which in turn is placed in a second receptacle of the same metal. Between the two will be kept boiling water for the purpose of preserving evenness of temperature, as boiling water attains no higher temperature than 212 degrees Fahrenheit. The spectroscope will then be made to concentrate the heat into a small opening in the tasimeter, where, falling on the platina, it will cause expansion and corresponding pressure of the small carbon button allowing the passage of the electric current in a degree commensurate with the pressure. Attached to and forming part of the tasimeter is an appliance for measuring the degrees of expansion or contraction of different metals under similar temperatures. Professor Edison found the heat of his hand expanded the platina one five thousandth part of an inch.

The great inventor has already taken steps to use his new discovery for the protection of vessels at sea. He stated to the writer his method as follows: "I arrange the carbon button as a highly sensitive barometer, and inclosing it in a case, connect it with the keel of a ship. I then run a wire to the captain's room into an ordinary galvanometer. Any change of temperature, as you see, is at once indicated. Coldness of the water will contract, and warmth expand, and the corresponding deflections be placed at once before the eye of the captain. The approach of an iceberg will, therefore, be known long before there is danger of collision. It may also be used to indi-

cate any abnormal heat in any part of the ship's hold, thus giving timely notice to breaking out of fire."

In experimenting on his tasimeter Professor Edison made a highly valuable discovery telegraph. Ever since the first line was successfully worked by Professor Morse, the great and apparently insurmountable obstacle to constant and uninterrupted communication was the effect produced on the electric current by changes in the atmosphere. It always made the lines work with difficulty and frequently in heavy storms the escape of the subtle fluid into the moist air made the wires practically useless.

The Professor's discovery is what he calls an "electric governor," acting on the telegraph line as a steam governor does on an engine. It obviates the necessity of "adjusting" the magnet armatures along the line. One placed in the circuit regulates the electric line, preserving an evenness of current throughout. The loss of fifty per cent. of the battery power is felt no more than a corresponding gain. Diminution in the strength of the battery from any cause, atmospheric or otherwise, is prevented by the "governor" from having any perceptible effect on the instrument or any part of the line. The Professor desired it to be understood that this discovery was based on a suggestion by a practical telegrapher.

Professor Edison has also found by his experiments with the tasimeter that it weighs infinitesimal articles as well as their moisture. For instance, he took a fibre of paper, and by placing it in his new apparatus found it to be quite heavy. Then he experimented on a quail, connecting the instrument at the same time with this most sensitive telegraph. The result was the deflection of the galvanometer to indicate the weight of the diminutive insect, while the telephone echoed the sound made by the insect's feet on the disk.

By arranging it with an anemometer arm and cap and causing the lever to press on the tasimeter it recorded the pressure of a faint gust of wind.

Notwithstanding the heavy drains on his intellect by the numerous wonders in process of construction in his laboratory the Professor continues daily at work perfecting his megaphone. He placed the field megaphone in front of his laboratory and gave the rubber tubes to the writer so that he might personally test its strange power. Then he hurried across lots nearly a mile, and standing on the brow of a hill whispered, "Do you hear this?" The words came distinctly notwithstanding quite a breeze was blowing at the time. When he spoke in his ordinary tone, the words reached their destination as distinctly as if the distance intervening were a foot instead of a mile. Again he whispered, giving the legend of Mary and her little lamb. Every word was heard by the writer with perfect distinctness.—*Albany Journal*.

Talk to no Practical Purpose.—There is a very suggestive story about the explanation a little girl gave to her mother as to how she had been disappointed by the lecturer who spoke to her school class one afternoon. She said that "he got up, and he talked, and talked—ever so long—and all the time we thought he was going to tell us something, and at last he sat down, and didn't tell us anything."

For "The Friend"

My Salvation is Secure!

Oh! how many religious professors of the present day are resting their faith upon this slippery and insecure foundation. "Let him at thinketh he standeth take heed lest he fall." Having experienced a change of heart, they say, "my salvation is now sure, I am safe," though I may fall into sin again, and having been born into the kingdom—being "passed from death unto life," I am the elect of God and certain for the kingdom. They do not say they are free from sinning, but acknowledge a liability to sin, and to wander far from the Father's house, yet being a child of His, they feel sure by the mighty power of a living Saviour, they will be reinstated and brought back to the fold before their death. Though their punishment may be severe for their departure from the path of rectitude, yet will they be saved, though *as by fire*.

All ye! my dear hearts, who are treading this path, be ye assured that your hope is a certain one, and steer clear I pray you of the uncertain foundation of which I speak. See that you establish your hope on the unchangeable Rock against which the artifices of Satan never can prevail; see that your footing is secure and your hold firm, so that you slip not.

"Nor think the victor won,
Nor lay thine armor down,
The fight of faith is never done
Till thou obtain the crown."

See it to that your faith is built on the Rock set forth by Holy Writ, and "Be ye steadfast, unmovable, always abounding in the work of the Lord;" think not you may safely leave the fold, but keep in it if you are there. We must know, that "as ye sow, so shall ye reap." If after having "sown to the Spirit," ye being led astray, suffer yourselves to be "sown to the flesh," ye *must* "of the flesh reap corruption;" "ye cannot serve both God and mammon." And if we die in this state, no matter what our former life has been, "As he tree falls, so must it lie." "As death saves so judgment finds." It is an awful certainty certain gospel truth, that "there is no repentance in the grave." I fully acknowledge that if we are in Christ and He in us, having experienced the change wrought by the purifying operations of the Holy Spirit, and realized a coming out "from under the bondage of sin and Satan into the glorious liberty of the children of God," that we are indeed children of His, sons and daughters of a once crucified but now risen and forever glorified Lord, (as we continue faithful). "And if children, then heirs, heirs of God," of salvation, and "joint-heirs with Christ," "if Christ be in us," and we obey Him who is "the hope of glory," to our never dying souls.

But if we are His children we must show our love and faith by submitting to whatever cross He may put upon us; we must obey His commands, be willing to work for His cause with those around us, and if need be submit to trials and suffering for His sake, that He may be glorified in and by us. His commandments are not grievous, and the reward is sweet for faithful obedience. Oh, that our very countenances may testify to our having been with Him and tasted of the manna and living water of life, just as He alone can give it fresh, pure and perfect, from the altar of holiness. But all this present hope does not by any experience we have had,

secure a *certainty* of acceptance in the end. As long as we have the *grace* of God in us it saves us from the committal of sin, if we look to and obey it unreservedly, renouncing all strength of our own, asking and praying for this grace to enable us to overcome, for we are saved by grace alone; "this is our only plea, and this salvation must be recognized as a present saving from sin day by day, which if guided by, we will in the end be landed safely on the farther shore, sheltered from all harm, safe on a gentle Saviour's breast. And there, encircled by those loving arms and clasped to His bosom, we shall find what we long have sought, perfect rest and peace. Oh! "shall not we walk in the light as He is in the light" while we have it, for we know not when the night may overtake us, and we "must be faithful unto death" in order "to receive the crown of life." We may "know the blood of Jesus to cleanse us from all *past* sin," but this does not prevent us from "turning again to the weak and beggarly elements wherunto we may desire again to be in bondage." And so, "after we know the truth and the way of life," we turn our backs upon the Master's call, we *most positively* deserve the *greater condemnation*.

Again, we are told by Him that cannot lie, "the son of him that smeth it shall die." And "if ye die in your sins, whither I go ye can not come." Awful warnings for us to keep in the right way, turning neither to the right hand nor to the left, but with a single eye on the Author of our hopes, press forward and we shall obtain the prize.

It is only by keeping close to the feet of Jesus that we are safe, leaning upon His supporting arm and drawing never failing supplies daily, fresh from the fountain head. "Firmly by holding firmly to this Rock and a firm trust in Him that we are sure of refuge from the storm. And ever blessed be our Father in Heaven, if we do keep our eye constantly on Him with unwavering faith and pure trust in His love and care, He will always deliver us from the snare of the fowler and from the noisome pestilence.

"We shall not come into condemnation," but "having passed from death unto life," as "we abide in Him," "the Living Vine," we shall be enabled in unmerited mercy, to gain an entrance through the pearl gates of that "glorious city," "eternal in the heavens," "whose maker and builder the Lord alone is," "whose walls are salvation, and her gates praise."

Philad'a, 9th mo. 19th, 1878.

Selected for "The Friend."

Richard Shackleton to S. R. G.

Baltimore, 8th mo. 22nd, 1879.

My dear Cousin,—I have been writing to some great folk, and dispatched my yearly epistle to thy mother, I now turn to one of the little ones, whom I am glad to be enabled to salute with renewed affection, and to whom, I would, with all willingness, hand "a cup of cold water, in the name of a disciple," if I had it to give. We are, very emphatically called "Friends;" and friends we should be to one another, not sparing friendly advice and reproof, and taking a willing oversight of one another, and so profitably conjoined in laborious labor. If then we should not withstand reproof and correction in proper season, why should we withhold encouragement, and the expression of strengthening unity. If I

have anything to write to thee at this time, my dear friend, it is in this line, the line of encouragement, to hold on thy way. Continue in the littleness of self, and thou wilt continue to witness an enlargement in the service of thy great Master. And be not weary of well-doing; consider whose cause it is, which thou art engaged in, of infinite importance and consequence, and how much depends on every one who is sent on any expedition, or who has any part to maintain, faithfully and firmly discharging their duty. To give way in a little, is to weaken in the general; but every one doing his own part, the whole is strengthened, and the work completely and uniformly carried on. Farewell, my beloved friend; mayest thou take deeper and deeper root in humility, and in the experience of the Divine life, for thy own preservation and nourishment, the more thou advancest in religious stature, and spreadest wide thy fruit bearing branches.

R. Shackleton.

Weariness of Etiquette.

I believe there are many minds among the votaries of fashion which are chafed and irritated by the restraints imposed upon them by the conventional society in which they are born, and such minds would often emancipate themselves, were it not that any attempt to do so is frowned down as ill-breeding, or laughed at as eccentricity.

I know the daughter of an English earl who was so wearied by her training for high life that she eloped with her father's gardener, conformed entirely to her new position, and was very happy in it. She was never noticed by her family. They seemed to ignore her existence. Her husband was intelligent and industrious; he became the owner of a valuable nursery garden near London, exhibited his plants at the horticultural shows, and attended the dinners given on such occasions.

In visiting the retreat of the celebrated ladies of Llangollen, I learned enough about them to convince me that it was a weariness of the ceremonies and restraints of a high life, with a painful sense of the hollowness of worldly profession, that drove them to cut their connection with the society in which they were born, and lead a rural life among the Welsh mountains. Their disappearance from the fashionable world made a great sensation at the time, and it was generally supposed that some love affair was at the bottom of it. It was difficult to make the public renounce that idea, and the newspapers were for years circulating fictions to favor it. There was nothing remarkable in the lives they led, except the privilege of doing as they pleased, but they were kind to their poor neighbors. They abridged the trouble which attends a lady's dress, by wearing all the time cloth riding habits and beaver hats. When young they rode much on horseback, when old they indulged in a carriage, and occasionally dined with a friend, at a distance of twenty miles, but always returned home at night. They were never known to sleep out of their own house, and so it was supposed that they had made a vow to that effect.

The daughters of George III. were often weary of court etiquette, and used to get rid of it by spending their mornings at Frogmore, near Windsor, a small establishment, where they enjoyed rural pleasures, and were never

intruded on by company. There they had their dumb posts, and fed their own chickens, ran out and in, unattended, and were entirely free from the trammels of royalty. I have been there just after they had left the place, and found their work and their books lying about, and everything looking like the home of a private family.

The wife of an officer in the army, who had apartments in Windsor Castle, said that the princesses would escape into her room sometimes, and beg for a glass of beer to quench their thirst, alleging as a reason for their doing so, that if they asked for it in their own home, they must wait for a barrel to be tapped, and that would cause a new office to be created, for serving beer to them between meals, and that barrel would become the perquisite of some one of the household, and a fresh barrel would be tapped every time a glass of beer was called for. So great was the discomfort of a royal household in those days. The great good sense of Queen Victoria has altered many of these things for the better.

A baron of high degree in South Wales, chose a novel way of ridding himself of the form and etiquette which belonged to his rank. He determined so to ally himself in marriage that none of his aristocratic friends should be willing to visit his wife. He married a pretty and amiable milliner in the country town near his estates, had a fine family of children, and led a very happy life, as a farmer. He has been seen, on a market day, with the leaves of a fine large turpin hanging out of his coat pocket. It was one he had been exhibiting to his brother farmers.—*Farrar's Recollections of Seventy Years.*

[We have received from J. P. Wood, of Indianapolis, the following epistle issued last year, (1877,) by the Friends claiming to be Western Yearly Meeting, who withdrew from the larger body also claiming to be that meeting. Neither of these bodies have been officially recognized at any time as a Yearly Meeting by Philadelphia Yearly Meeting.

In a note accompanying the document, the writer says: "Some Friends on both sides of the ocean having expressed a desire to see the Epistle issued by Western Yearly Meeting of Friends in 1877, it was concluded to offer it for publication in 'The Friend,' provided thou thinks proper to print it."

He adds, "I attach the names of the correspondents of Western Yearly Meeting, giving it just as it was forwarded to the several Yearly Meetings, for the reason that I have been informed, that in some of the Yearly Meetings it was stated that the epistle was not signed by the regular correspondents, and this was made the turning point to reject it, without its being read in the open meeting."

As these transactions are of exceeding interest to Friends everywhere, we freely give the epistle a place in our columns.—Eps.]

An Epistle given forth by Western Yearly Meeting of Friends in 1877. Addressed to the different Yearly Meetings.

Dear Friends,—We humbly acknowledge the goodness and mercy of our Heavenly Father in thus permitting us again to assemble in the capacity of a Yearly Meeting, for the purpose of transacting the important concerns of the Church.

In that love which knows no bounds we salute you as brethren of the same household of faith: with earnest desires, that we, with you, may be established on that foundation, on which the Prophets and Apostles stood, Christ Jesus the Rock, where all may experimentally know by the washing of regeneration and renewing of the Holy Ghost, that union and sweet communion with the Father, Son and Holy Spirit, which unites and cements together in one all the children of God.

We deeply mourn over the many innovations introduced into our religious Society, in doctrine and practice, which we cannot conscientiously participate in, nor partake of; hence the harmony and unity of feeling in the Society is so far broken up, that at times the business of meetings for discipline cannot be conducted consistent with our profession, and many of our meetings for worship are so much occupied with a wordy, lifeless ministry, as well as unsound in its teaching, reading, singing, &c., that there is no comfort or edification, to many, in them.

On account of those changes in teaching and practice, and a disposition manifested to press down those who could not unite with them, we believe it to be our duty to stand firm for the law and the testimony of our God, and retired quietly to another room to transact the business of the Yearly Meeting, where we disposed of the various subjects which came before us, in harmony and love.

May you be favored, when you approach the throne of Grace, to intercede for us, that we may be preserved, as in the hollow of His holy hand, and that He will sustain his church in its primitive purity and beauty.

In love we remain your friends and brethren. On behalf of the Meeting.

ALBERT MAXWELL, Clerk.

For "The Friend."

Our Lord Jesus Christ is often near us when we are not sensible of it, waiting to do us good. Happy is he who when he heareth the gentle intimations of His Spirit, knocking as it were at the door of the heart, is ready and willing to open unto Him immediately, and allow Him to take the rule and reign there. These considerations have occurred upon reading the accompanying extract taken from a late paper.

A Reminiscence.

My dinner table was laid for invited guests, and everything was ready for them to be summoned into the dining-room. I gave a parting glance at my well-arranged table, and felt proud and pleased. I knew that the dinner was well cooked, and the feeling of satisfaction which possessed my soul more than compensated me for the extra labor and care I had had in preparing it. I seated my little girl, five years old, fresh and sweet in her clean starched dress, in her high chair,

[* The two first named are said to have been appointed in 1858, the third in 1863, and the last in 1869.—Eps.]

and was about to turn to go into the parlour to call them to dinner, when a sudden c from her made me look back. She had, some accident, overturned a tureen of gravy and the greasy liquid was rapidly spreading itself over the table. My temper rose in twinkling, and an angry exclamation rose from my lips. I was overworked with work and excitement, for a dinner party was not common occurrence in our quiet household, and our guests were those of whom, to tell the truth, I stood somewhat in awe. A minute before, everything was so auspicious and now, what should I do! It seemed to drop too much for my tired nerves—man drops too much for my tablecloth. I was about to jerk my child down angrily from the table, when a blessed influence held me, caught the expression on her face. Such sorry, frightened, appealing look I never saw and suddenly a picture of the past came, and stood out vividly before my mind's eye. My child's face revealed feelings which I had experienced twenty years before.

I saw myself a little nervous girl, about eight years old, in the happy home of my childhood. It was a stormy afternoon in winter. It was when coal oil lamps were first introduced, and father had bought a very handsome one. The snow had drifted up against the kitchen windows, so, although it was not yet night, the lamp was lighted. Mother was sick in bed, up stairs, and we children were gathered in the kitchen, to keep the noise and confusion away from her. I was feeling very important, helping get supper; at any rate, I imagined I was helping, and, in my officiousness, I seized the lamp, and went down cellar for some butter. I tried to set it on the hanging shelf, but alas! I didn't give it room enough, and down it fell on the cemented floor.

I never shall forget the shock that it gave me. I seemed almost paralysed. I didn't dare to go up stairs, and I was afraid to stay down there, and, to make it worse, I heard father's voice in the kitchen. He had cautioned us all, again and again, to be careful of that lamp, and now, there it lay, smashed to pieces! But his voice seemed to give me the impetus I needed to go up, and meet the scolding or whipping, or both, which I felt sure awaited me, and which I really felt deserved. So I crept up over the dark stairway, and as I entered the kitchen, I met father with such a stern look upon his face that I was frightened. I saw there was no need to tell him what had happened. He had heard the crash, and if he hadn't, I guess my face would have told the story. The children stood silently around, waiting to see what father would do, and I saw by their faces that they were horror-struck, for that lamp had been the subject of too much talk and wonder to be smashed without a sensation.

As for me, I felt so frightened, so confused, and sorry that I couldn't speak. But upon glancing again at father I saw the angry look die out of his eyes, and one of tenderness pity take its place. I doubt not that he saw the same look in my face then that I saw in my child's face to-day. In a minute he had lifted me in his arms and was hugging me close to his breast. Then he whispered, oh, so kindly, "Never mind, little daughter, we all know 'twas an accident, but I hope you will take the small lamp when you go down cellar again." Oh! what a revolution of feeling I

experienced. It was such a surprise to me that I was suddenly overwhelmed with feelings of love and gratitude, and burying my eye, I sobbed as if my heart were breaking, so punishment could have affected me half so much, and nothing can ever efface the memory it from my mind.

How I loved my father to-day, as the sight of my own little girl's face brought it all so freshly before me! Will she love as dearly, I ponder, twenty years or more from now, be moved, moved by the same God-given impulse that stirred my father's heart in that long-ago time, I was able to press the little frightened thing to my heart, and tell her kindly that I knew she didn't mean to spill the gravy, and that I knew she would be more careful another time? Will she be helped by it, when she is a mother, as I have been helped to-day? Oh, how impossible for parents to estimate the effect of these seemingly little events!

If it had taken as long for this to pass through my mind as it has for me to tell it, my dinner would surely have been cold, and my guests tired of waiting. But it was all one in a twinkling, and buoyed up by a new and sudden strength, I quickly wiped off the tiled cloth, spread a thickly-folded clean one over the place, and called my company to dinner. Strange to say, the awe I had been feeling for my guests was gone. I felt easy and unquill, and such a remarkable spirit of happiness and sociality prevailed, and everything passed off so smoothly, that I couldn't help feeling as if unseen hands and an unseen presence had helped me through it all.—*Christian Weekly.*

"Like a Christian."—I heard of two little children—a boy and a girl—who used to play great deal together. One day the boy came to his mother and said, "Mother, I know that Emma is a Christian."

"What makes you think so, my child?"

"Because, mother, she plays like a Christian."

"Plays like a Christian?" said the mother, her expression sounding a little odd.

"Yes," replied the child; "if you take every thing she's got, she don't get angry. Before he was selfish, and if she didn't have every thing her own way she would say, 'I won't play with you; you are an ugly little boy.'"

THE FRIEND.

TENTH MONTH 19, 1878.

In the Editorial columns of a recent issue, reference was made to Wm. Penn's assertion, that the doctrine of the Light of Christ in the heart as God's gift for man's salvation, was the root of the gooly tree of doctrines professed by Friends of his day. In contrast with this, we believe it is true, that roots of a different character have been planted among us, which are producing fruits of a contrary and unwholesome nature.

Prominent among these is a mistaken and inadequate conception of the nature of that saving faith, which is so frequently referred to in the Scripture as being indispensable to a growth in grace; and which the true Christian often feels that he stands in need of, so that he is ready to adopt the petition of the disciples to our Saviour, "Lord, increase our faith."

When the Holy Spirit visits the heart of any; whether it be in mature years or in the earlier stages of life; and impresses on the mind a sense, which may be expressed in the language, "This is the way, walk thou in it;"—the visitation is accompanied with a degree of Divine authority and power, and if this is joined unto, and obedience yielded to the requiring, the blessed purpose of that visitation is effected, and a step is taken in the Heavenly path. The submission of heart to such a visitation is an act of faith, for it implies a recognition of the Divine authority accompanying the opening, agreeably to the Scripture declaration, "He that cometh to God must believe that He is, and that He is a rewarder of them that diligently seek Him." Its exercise is also essentially an act of obedience to the will of God thus revealed in the soul through the Spirit of our Lord Jesus Christ. Hence the Apostle James declares, "Faith works by love," and "Faith without works is dead." The power to exercise this living faith accompanies the Heavenly visitation and is from above, whence cometh every good and perfect gift. Therefore the Scriptures speak of faith as "the gift of God." Of similar import is the language of our Saviour, "No man can come unto me, except the Father which hath sent me draw him;" for, as Christ manifests himself in the heart, it is there we must come to Him by faith and obedience.

In every subsequent stage of our Christian experience, the exercise of faith is substantially the same as in its beginning. Faith is exercised in our yielding to conviction for sin, in our turning from our iniquities, in our seeking forgiveness of God, not through any righteousness of ours, but by the washing of regeneration and the renewings of the Holy Ghost, which are shed on us abundantly through Jesus Christ our Saviour.

Living and saving faith is therefore not an ordinary mental operation, which is under the control of the un sanctified will, and which may be exercised apart from the drawings of the Holy Spirit. We cannot therefore regard as sound doctrine, or as consistent with Scripture, and with true experience, the teachings of those who will assure an audience, that they can at any moment secure their salvation by the mere profession of a faith in Christ, originating in this way. Preaching of this kind may stimulate the hearers, and persuade them, that having made such a profession, they are in a saved state; and they may be much elated by this supposed suddenly acquired attainment. But when the excitement subsides, such will find themselves still subject to the power of temptation, and gradually learn that there is practically no difference between their present condition and that in which they were before their fancied salvation. The tendency of this, in some cases, will be to cause them to look with doubt on all profession of religion, as being little more than imaginary and delusive.

That such a result does not more generally follow is due to the goodness and mercy of God, who still pursues with His visitations and strives with all, even with the self-confident and deceived, to bring them into subjection to His Grace and to fit and prepare them for His Heavenly Kingdom.

While we desire to guard our readers against the superficial form of religion, which does not require patient submission to the purify-

ing operations of the Holy Spirit, we are concerned also to allude to the danger there is, of postponing obedience to the still small voice in the soul, when it calls to repentance and the forsaking of sin. "To-day," says the Apostle, "if ye will hear His voice, harden not your hearts;" and the true minister of Christ is still led from time to time to press upon his hearers a similar message, warning and exhorting them no longer to continue in sin and iniquity, but to turn without delay to the Light of Christ in the heart, which shows the sinner his lost condition, points out the way of escape and gives power to embrace the offered help. Blessed indeed are those, who thus come to be joined unto Christ, in an everlasting covenant, and experience their sins to be washed away in the blood of the Lamb. These, as they are faithful unto death, will receive the crown of life.

OHIO YEARLY MEETING.

The sittings of this body commenced on Second-day, the 30th ult., and closed on Fifth-day, the 31st inst. The Meeting of Ministers and Elders was held on the Seventh-day previous. The meeting convened this year for the first time in the new meeting-house at Stillwater, near Barnesville, Ohio. The town of Mt. Pleasant, where the Yearly Meeting has been hitherto held, is several miles from the nearest railroad station, and is difficult of access. The Boarding School located near the meeting-house, formerly furnished convenient accommodations for many of the members, but since the possession of it was lost by the recent legal decision, and the new Boarding School at Barnesville has been built, no sufficient reason remained for continuing to hold the Yearly Meeting in so inconvenient a situation. A committee appointed last year, was authorized to erect a building to accommodate the Yearly Meeting in its present location. This has recently been completed, and is in close proximity to the Boarding School, which has been used for the entertainment of Friends the present year.

Two meetings for worship were held on First-day, and one on Fourth-day morning. Those held on First-day were very large, and were attended by a considerable number who were not members of our religious Society. All of these meetings were seasons of favor, in which the hearts of many, it is believed, were affected with the solemnizing presence of the Master of assemblies, under which some of the more experienced members were led into exercise and sympathy with those thus collected, and to travail in spirit that grace, mercy and peace might rest upon them.

The only minister from other parts in attendance with a certificate, was Joseph S. Elkinton, of Philadelphia.

Among the subjects claiming the attention of the meetings for business, was an appeal from the judgment of one of the subordinate meetings, which was referred to a committee. This committee, at a subsequent sitting, reported it as their decision that the judgment of the subordinate meetings should be reversed. The appellant was restored to membership.

The report on education showed that there were 755 children of a suitable age to attend school, of whom 353 had been attending Friends' schools exclusively, 37 had been attending mixed schools, and 65 had not attend-

ed any school, the most of whom had received instruction at home.

The meeting was brought under considerable exercise on the subject of the right training of children; and that their education at school should be conducted under such circumstances as to shield them from harmful influences, and promote their attachment to the principles of our Society.

In considering the state of Society as shown by the answers to the queries, advice and exhortation were called forth upon several subjects, among which were the importance of bearing a faithful testimony to the peaceable nature of Christ's kingdom; the necessity of supporting our testimony to a free Gospel ministry; of guarding against drowsiness when assembled for Divine worship; and of observing the Scripture injunctions respecting plainness of apparel.

A memorial for a deceased member, Josiah Briggs, was read and directed to be printed.

A feeling of condescension prevailed throughout the several sittings, which was comforting and encouraging; although a diversity of sentiment appeared in reference to one or more subjects, yet the harmony of the meeting was not broken, and the members were drawn closely together by a participation from season to season, in the extensions of Divine favor.

A more detailed account of the proceedings of the Yearly Meeting will probably be spread before our readers when the printed minutes are received.

We must remind those who kindly send us original communications for our journal, that our rules require the author's name to be given to the editor.

SUMMARY OF EVENTS.

UNITED STATES.—An excursion train on the Old Colony Railroad, consisting of about twenty cars loaded with passengers, returning from a race at New River Lake, was wrecked near Quincy, Mass., on the 8th inst. Nineteen persons were killed, and about 100 wounded.

Reports from the large cities in the south-west show but little if any abatement in the number of cases of yellow fever, and it appears to be spreading among the small towns and plantations in the interior, in some places assuming a malignant form. It has extended westward to Chattanooga, Tenn., and northward to Cairo, Ill. The 9th was appointed in New Orleans, by a proclamation of Governor Nicholls, as a day of fasting, prayer and humiliation. The 10th was appointed to be similarly observed in Alabama.

The President of the United States has issued a proclamation respecting disturbances in New Mexico, particularly in Lincoln county in that Territory, warning all insurgents to disperse before the 13th inst., and General Sherman has directed the military forces to be employed if deemed necessary after that day.

The four largest articles of export from the United States ranged according to their value, in the order of rank and grain; hog products (lard, hams, and salt pork) and petroleum. Of the latter more than 360,000,000 worth is now exported annually.

On the night of the 12th, a terrific gale swept the coast of Rhode Island and Massachusetts. Much damage to shipping was done at Newport, Vineyard Haven, Provincetown, and other places, and several lives were lost.

The town of Edenburg, Clarion Co., Pa., was nearly entirely destroyed by fire on the morning of the 13th inst. The total loss is estimated at about \$100,000.

The election in Ohio on the 9th inst., appears to have resulted in a Republican plurality on the State ticket of from 8,000 to 10,000. An increased Republican majority is also reported from Iowa. In Indiana the Democrats claim a plurality of 13,000 to 15,000. The Greenback or National party has elected one Congressman in Indiana, and one in Iowa. The elections lately held in the States of Colorado, Indiana, Iowa, Maine,

Ohio, Oregon, Vermont and West Virginia, indicate a total Republican loss of eleven Congressmen, of which the Democrats gain five, the "Greenback" party five, and one caused by failure to elect. In several districts where an issue was clearly made on the currency question, the advocates of gold won the re-election of specimens, received increased majorities.

The managers of the Grand Opera House in New York, lately advertised a performance on the First-day of the week for the yellow fever sufferers, but notice was given by the city authorities that they would enforce the law forbidding such entertainments on that day, as the amusement would be a nuisance. The payment of \$500,000, in compliance with the act of Congress, has lately been made to Captain Eads towards completing the improvements at the mouth of the Mississippi. It is intended to resume work upon the jetties as soon as the yellow fever disappears in that section.

The average cost of supervision and instruction for each pupil in New York and New Orleans is nearly the same, being \$21.99 and \$21.90. In Boston and San Francisco it is the highest in the list of seventeen cities, \$25.94 and \$24.61. Richmond pays \$13.71 per pupil, while Philadelphia pays \$12.71, or the lowest sum in the list. Incidental expenses for each pupil vary as follows: New York and New Orleans, \$9.12; Boston, \$10.21, and San Francisco, \$9.81; Richmond, \$2.61, and Philadelphia, \$7.26.

At the annual meeting of the stockholders of the Western Union Telegraph Company, held on the 9th inst., the net profits of the year are stated to have been \$3,161,999; and after the payment of quarterly dividends of \$1.00 per share, and the setting aside \$250,000 for a sinking fund, a surplus of \$251,550 remained, about one-half of which had been used in the construction of new lines. The increase in the number of messages sent had been 2,750,000.

A large area of the surface over the Diamond mine in Scranton, Pa., caved in on the 10th inst., completely burying many of the miners and other persons, and causing damages which will require many months to repair. Between three and four hundred men will be thrown out of employment by this accident. The miners had received warning of the approaching danger, and when the catastrophe occurred the mine was deserted. *Markets.*—Am. —American gold 100 1/2. U. S. sixes 1887, registered, 110 1/2. 1887, 105 1/2; 4 per cents, 100 1/2, registered, 99 1/2 to 100.

Cotton.—Small sales of middlings are reported at 10 1/2 to 10 3/4 cts. for uplands and New Orleans.

Petroleum.—Crude, 7 1/4 to 7 1/2 cts. in barrels, standard weight for export, 93 cts.

Flour.—Minnesota extra \$5.25; Penna. and western, \$4.90 to \$5.00; patent and other high grades, \$7.25 to \$8.50. Rye flour, \$4.25. Corn meal, \$2.75 per 100 lb. Grain.—Southern red, \$1 to \$1.01; amber, \$1.02 to \$1.03; white wheat, \$1.04 to \$1.05 per bushel. Rye, \$5 to 58 cts. Corn, 48 to 50 cts. Oats, 26 to 31 cts.

Best cattle, 5 1/2 to 5 3/4 cts. for extra Penna. and western, and 2 to 2 1/2 cts. per lb. for common. Sheep, 3 to 4 1/2 cts.

FOREIGN.—Despatches from India mention that a body of Afghan troops has appeared near the Kyber Pass, in the north eastern corner of Afghanistan, near a garrison of British troops, in command of General Ross. The latter had been directed to await further reinforcements, and 10,000 British troops are stated to be at Peshawar near the border.

A correspondent of the New York Evening Post, at Rio Janeiro, states that famine and pestilence have devastated an area in north-western Brazil, greater in extent than our New England and Middle States combined. This region has been without rain for more than a year, and the crops and wells have dried up, cattle have died, and the streets are noisy cries among the people. The Brazilian Government has voted credits for their relief, amounting to about \$15,000,000, of which \$4,000,000 are to be expended in building railroads.

The relations of Turkey with the European powers continue unsettled. A recent circular of the Porte states that the Sultan reserves sovereign rights over Bosnia and Herzegovina, and concludes with a warning that the occupation of the Bosnian province of Novi Bazar may lead to great disasters. This note, it is said, has seriously compromised amicable relations between Turkey and the Powers. It is stated that 21 battalions of Turkish and 10,000 Albanian troops are now in the

The Russian Charge d'Affaires has informed the Porte that 1000 wages with Christian refugees are following the retiring Russians towards Adrianople, and he has requested the Porte to send a commission and a detachment of troops to retrace the population. The

withdrawal of the Russian troops was subsequently stopped, in consequence of the murders of Christian in the districts evacuated, and a Vienna dispatch to the *London Times* states that Russia, in informing its Powers, it has invited them to join in the energetic pursuit of the Russian Government, and instructed its agents, in order to induce the Porte to take proper measures to prevent further outrages upon the Christians.

During the performance at a theatre in Liverpool on the 11th inst., a panic occurred in consequence of a cry of fire from one of the audience. Four to five thousand people rushed to have Henry Lussell, and in the midst of the crowd to leave the building, thirty-seven persons were suffocated, and many others seriously injured.

The Forty-eighth Annual Meeting of the Auxiliary Bible Association of Friends of Philadelphia (Quarterly Meeting) will be held at No. 109 N. Tenth street, on Fourth-day, Tenth mo., 30th, 1878, at 7 1/2 o'clock, P. M. Friends generally are invited to attend.

B. W. BEESLEY, Secretary.

FRIENDS' FREEDMEN'S RELIEF ASSOCIATION OF PHILADELPHIA.

The Executive Committee expect to open their schools in North Carolina and Virginia about the 1st of Eleventh month, with the same number of teachers as last year. They will distribute the cost of travelling expenses for teachers by employing a larger number of colored teachers than heretofore, but will require fund to meet the expenses of those going from the North. As the year begins with a deficit in the treasury account, early contributions will be specially needed. They may be sent to the Providence Life and Trust Company, No. 108 South Fourth St., Philadelphia.

RICHARD CADBURY, Treasurer.

WESTMINSTER BOARDING SCHOOL.

The WINTER SESSION of the School will commence on Second-day the 28th of Tenth month.

Pupils who have been regularly entered and who go by the cars from Philadelphia, can obtain tickets at the depot of the West Chester and Philadelphia Railroad at the corner of Thirty-first and Chestnut streets, by giving their names to the Ticket-agent there, who is furnished with a list of the pupils for that purpose. In such cases the passage, including the stage fare from the Railroad Station, will be charged at the School, to be paid for with the other incidental charges at the close of the term. Tickets can also be obtained of the Ticket-agent, 204 Arch street. Conveyances will be at the STREET RAILROAD STATION on Second and Third-days, the 28th and 29th inst., to meet the trains that leave Philadelphia 8 A. M., 12.30 and 2.30 P. M.

Baggage may be left either at Thirty-first and Chestnut streets or at Eighteenth and Market. If left at the latter place, it must be put under the care of Alexander & Son, who will convey it thence to Thirty-first and Chestnut at a charge of 10 cents per trunk, to be paid to them. Those who prefer can have their baggage sent for to any place in the built-up part of the City, by sending word on the day previous (through the post-office or otherwise) to H. Alexander & Son, N. Tenth street, where it must be put under the care of Alexander & Son, who will convey it thence to Thirty-first and Chestnut at a charge of 10 cents per trunk. For the same charge they will also collect baggage from the other railroad depots, if the checks are left at their office corner of 18th and Market Sts. Baggage put under their care, if properly marked, will not require any caution from the owner, either at the West Philadelphia depot, at the Street Road Station, but will be forwarded direct to the School. It may not always go on the same train as the owner, but it will go on the same day, provided the notice to H. Alexander & Son reaches them in time.

DURING THE SESSION, passengers for the School will be taken to the Street Road Station on the first and third days of the first train from the City, every day, except First-days, and small packages for the pupils, if left at Friend Book Store, No. 204 Arch street, will be forwarded every Sixth-day at 12 o'clock, except on the last two Sixth-days in the Twelfth month, and the expense charged in their bills.

Tenth month 15th, 1878.

Incidents and Reflections.—No. 21.

DIVINE HELP.

The Psalmist, speaking in the name of the lost High, uses this encouraging exhortation, "Call upon me in the day of trouble; I will deliver thee and thou shalt glorify me." Many of the servants of the Lord since that day, have experienced the fulfilment of this precious promise; and some of them have left in record their testimony to His goodness, and the gracious manner in which He has appeared for their help in times of trial and perplexity.

When Thomas Story was a young man, and had submitted to the visitation of Divine Grace with which he was favored; and had let his face in earnest to seek for treasures in Heaven; his father was greatly distressed at his son's conduct, which he feared would destroy the hopes and plans he had formed for his worldly success and prosperity; and he used many efforts to turn him aside from the path he had chosen. On one occasion, some of his friends, and his father among them, being at a tavern, they sent for Thomas to join them; thinking, that by the exhilarating effects of spirits, they might change the current of his thoughts. He says:

"While they were contriving this scheme, I was retired alone in my chamber, and favored with a sense of the good and soul-nourishing presence of the Lord; but, after some time, a concern came upon me, which gave me to expect something was in agitation concerning me; and, soon after, an attorney-at-law of my acquaintance, came from the company to me, and mentioned certain gentlemen who desired to see me at the tavern."

"* When we came there, the company all arose from their seats, and seeming generally glad, put on airs of pleasantness.

"In seating themselves again, they placed me so as that I was in the midst, surrounded by them, and then they put the glass round; and, to relish it the more, they began a health to King William. But the secret presence of the Lord being with me, though hid from them, it affected them all in a way they did not expect; for scarce had two of them drank, till their countenances changed, and all were silenced. The glass, nevertheless, went forward till it came to me, and then I told them, I wished both the king and them well, and if I could drink to the health of any at all, I

should more especially to the king's, but should drink no health any more; and so refused it. And the glass never went round, for several of them fell a-weeping, and were much broken, and all of them silenced for a time; which, when over, some of them said, they believed I intended well in what I did, and that every man must be left to proceed in the way he thinks right in the sight of God; and so we parted in solid friendship. It was the secret grace of God which wrought this; and to Him, the Lord alone, did I impute it. And, the company dispersing, I returned to my chamber in Divine peace, and true tranquility of mind; with which I was favored for many days."

When Thomas Story was on his voyage to America, in 1693, "an exceeding great storm" arose, "so that all the yards were brought down upon the gunnels, and the helm lashed and made fast, and the ship let drive before the wind. And we, being met together in the great cabin and stowage, to wait upon the Lord, as at other times, He was pleased to appear in the needful time: for the tempest increased, with thunder and lightning and rain to that degree, that few there, if any, had ever seen the like."

"And in waiting upon the Lord, I became concerned in prayer; and being in a mighty agony, and wrestling in spirit with the Lord, received hope that we should not perish; and having concluded for that time, and my concern returning, I prayed again; and then some stout hearts were broken, and the Lord's power was glorified, and we greatly comforted. For I prayed unto the Lord, who is God of the seas as well as of the earth, and of the winds, the Creator of all things visible and invisible, that He would be pleased to send forth his Word, and command the winds as of old; and that if there was any opposing spirit that stood in our way, to hinder our progress the Lord would please to drive him away. And then I was easy, having fully overcome; and my companions, and some others were also greatly tendered. And as soon as I arose I took the Friends by the hands, and some others also, and, in full assurance, told them the worst was over for that time; and the words were scarcely out of my mouth, and I set down in the cabin, till the storm abated, and the weather became moderate for some time after."

A similar incident is related by Adam Clarke of John Wesley, who had taken passage for Bristol in an English brig which had touched at Guernsey on its voyage from France. They left Guernsey with a fine fair breeze, but in a short time it died away, and a contrary wind arose and blew with great force. John Wesley, who was in the cabin, broke forth in fervent supplication, which seemed, says A. Clarke, more the offspring of strong faith than mere desire. He said: "Almighty and everlasting God, thou hast thy say everywhere, and all things serve the

purposes of thy will; thou holdest the winds in thy fists, and sittest upon the water floods, and reuget a King forever; command these winds and these waves that they obey THEE, and take us speedily and safely to the haven whither we would be," &c. The power of the petition was felt by all present. A. Clarke went on deck and found the wind changed, and the vessel standing on her course with a steady breeze, which did not abate, but carried them at the rate of nine or ten knots an hour, until they were safely anchored at their desired port.

When John Richardson was still a youth, he was driven out from home by his father-in-law, because he would not give up his attendance on his religious meetings. He was weak and poor, and had no place of refuge, when he came out upon a great common near his father's house. He says, "As I was walking upon the common, the sense of my weak condition, not knowing whither to go, nor where to lay my head, although I had many friends, yet I could not be free to go to them, unless I had known they had business for me, being not of a forward, but rather backward and shy disposition. I say, the sense and weight of my condition came over me to that degree, that it appeared to me as though my way was hedged up on every side, inwardly and outwardly; I even thought myself like a pelican in the wilderness, or as an owl in the desert, there appearing to me scarce a man in all the earth in my condition, every way considered; and in the sense and deep consideration of my present wilderness state, I felt myself an utter oppression of spirit, and my heart seemed full, like a bottle that wanted vent: I looked round about me to see that none were near to see my tears, nor hear my cries, and in the very anguish and bitterness of my soul I poured forth my complaints, cries and tears to the Judge of all the earth, who spoke to me and comforted me in this my deplorable state, which was worse than Jacob's when he lay upon the ground, and had a stone for his pillow: he had his near kindred to go to, whom he might expect would receive him gladly, but I had none to go to but such as rather reviled me, and gave me hard language; but the Lord said unto me, as if a man had spoken, 'First seek the kingdom of heaven and the righteousness thereof, and all these things that thou standest in need of shall be given unto thee.' I then desired he would please to show me the place I should go to; and the Lord opened my way, and showed me the house I should go to, and abide in for a time. I said, 'good is the word of the Lord.' I believed, and it was a great means to stay my mind, and settle it in the Truth."

Polished steel will not shine in the dark; no more can human reason, however refined and cultivated, shine efficaciously but as it reflects the light of divine truth from heaven. —John Foster.

Traditions of the "Deluge" among the Tribes of the North-west.

By M. Eds, Shokomish, Washington Territory.

Many of the Indians on this coast have a tradition of a Deluge. The Twanas on Puget's Sound speak of it, and that only good Indians were saved, though there were quite a number of them. It occurred because of a great rain, and all the country was overflowed. The Indians went in their canoes to the highest mountains near them, which is in the Olympic range; and as the waters rose above the top of it, they tied their canoes to the tops of the trees on it, so that they should not float away. Their ropes were made of the limbs of the cedar trees, just as they sometimes make them at the present time. The waters continued to rise, however, above the tops of the trees, until the whole length of their ropes was reached, and they supposed that they would be obliged to cut their ropes and drift away to some unknown place, when the waters began to recede. Some canoes, however, broke from their fastenings, and drifted away to the west, where they say their descendants now live, a tribe who speak a language similar to that of the Twanas. This they also say accounts for the present small number of the tribe. In their language, this mountain is called by a name which means "Fastener," from the fact that they fastened their canoes to it at that time. They also speak of a pigeon which went out to view the dead. I have been told by one Indian that while this highest mountain was submerged, another one, which was not far distant from it, and which was lower, was not wholly covered.

The Clallams, whose country adjoins that of the Twanas, also have a tradition of a flood, but some of them believe that it is not very long ago, perhaps not more than three or four generations since. One old man says that his grandfather saw the man who was saved from the flood, and that he was a Clallam. Their Ararat, too, is a different mountain from that of the Twanas.

The Lummi Indians, who live very near the northern line of Washington Territory, also speak of a flood, but I have not learned any particulars in regard to it.

The Puyallop Indians, near Tacoma, say that the flood overflowed all the country except one high mound near Steilacoom, and this mound is called by the Indians, "The Old Land," because it was not overflowed.

"Do you see that high mountain over there," said an old Indian to a mountaineer, as they were riding across the Cascade Mountains, about seventeen years ago. "I do," was the reply. "Do you see that grove to the right?" the Indian then said. "Yes," said the white man. "Well," said the Indian, "a long time ago there was a flood, and all the country was overflowed. There was an old man and his family on a boat or raft, and he floated about, and the wind blew him to that mountain, where he touched bottom. He stayed there some time, and then sent a crow to hunt for land, but it came back without finding any. After some time he sent the crow again, and this time it brought a leaf from that grove, and the old man was glad, for he knew that the water was going away."

When the earliest missionaries came among the Spokanes, Nez Percés and Cayuses, who with the Yakimas live in the eastern part of the Territory, they found that those Indians

had their tradition of a flood, and that one man and wife were saved on a raft. Each of those three tribes also, together with the Flathead tribes, has their separate Ararat in connection with this event.

The Indians of the Warm Spring reservation in Oregon, and of the Fort Hall reservation in Idaho, as far as I can learn, have no such tradition. It is possible, however, that they may have concealed it from their questioners, if they have one, as Indians do many of their traditions.

When these traditions are compared with those of other Indians in the eastern part of the United States, Mexico and South America, as well as the traditions and records of the Eastern Hemisphere, it forms in many minds a very strong argument in favor both of the truth of the Bible account, and also of the unity of the race.

Some have objected to these traditions that perhaps they were not handed down from former ancestors, but were received from early traders and teachers; but for four reasons I cannot accept the objection: (1) because the first travellers have often learned this tradition; (2) they will even now often distinguish between the traditions of their ancestors and the teachings of the first whites who came here; (3) they have names of their Ararat, the great monument of the flood, as "Fastener" and "Old Land;" (4) the Mexicans, when discovered, although they had no system of writing, yet had a way of representing events by pictures, and this event was recorded among others.

Hence we must either conclude that all the traditions had little or no foundation, which would be absurd, or that there were a large number of floods, which would be almost as absurd, for in that event the tradition of one flood in each tribe could not have been preserved so distinctly, especially when a bird of some kind, and a branch of some tree, is often mentioned in connection with it, or else that there was one great flood, so great that most of the descendants of those saved have preserved a tradition of it, and if so, all must have descended from the few who were saved.—*American Antiquarian.*

Expressions of William Hunt during his last illness.

I was sent for to James King's at Newcastle to meet dear William Hunt and companion, and on my arrival was much concerned to find him so poorly. The next morning he was much worse; he said, "dear Betty, I have longed much to see thee and, if it had been the Master's will, should have been glad to have been in a better state of health to have enjoyed thy company." After a little time he said, "it will be a sore trial to my poor Tommy (meaning his companion) if I am taken away now." I answered, "I hope thou hast no apprehension of that." He said, "I do not know; when I wait I seem quite closed up;" or as he expressed it another time he could see no way open for him from Newcastle. "The manner," he said, "of my being cast here seems very wonderful to me, they having intended for another port, but added he, "my mind is quite content." My husband and I being in his room the next morning, he said, "the Lord only knows how I have loved you since our first acquaintance and longed for your growth and establishment in the blessed truth, and now feel the same renewed afresh." He then exhorted us

to faithfulness and diligence, much desiring we might come up in our duty and fill up the places Providence intended for us, being careful to lay up treasure in Heaven, and saying "what could thousands of worlds avail me now." He told my husband in the afternoon, he wanted to ask a favor of him, which was to have me nurse him awhile, to which he readily consented. On the third the small-pox appeared and it proved the confluent kind. We were apprehensive of danger, but through all his mind was preserved perfectly calm. He one time said, "one would wonder all the world does not seek after a quiet mind; it is such a choice treasure." Not only great peace attended, but also his patience and fortitude were truly great, yea sometimes I thought his victory was so complete that there seemed no impatience left in him, but all resignation to the Master's will who did not leave him, as he said, "it is enough, my Master is here;" and at another time he said, "my Master will not leave me if I mind Him." Under a weight of bodily affliction, he said, "He that laid the foundation of the mountains knows this, and if he pleases can remove it." He would not suffer his much loved companion to stay with him when he knew his distemper was the smallpox but desired he might go to Joseph King's at Kinson; though, he said, he was a choice nurse, and very affectionate, but Morris Birkbeck would supply his place, and he was so happy to think that I furnished that of his wife in nursing him. James King and his wife spared no pains or expense; had a skilled physician to attend him constantly from the beginning of his illness, who did his utmost to restore him and with whose judgment William seemed well satisfied, but said, "they are all physicians of no value without the aid of the Great Physician." I said, "I know thy dependence is upon Him; he answered, "entirely." One time asking him how he did, he said, "I am the better for thee, we partake of each other every way." Some of the family going to meeting, he said, "I hope my dear Betty's service will be acceptable." One time on my observing to him, "we could not get to be so resigned as he was," he said, "do your best and leave it." At another time with great composure he said, "the Lord knows best; I am in His hand, let Him do what He will." A few days after he said to Morris, "do not be alarmed at what I am going to say; I have a request to make, which is, if I am suddenly taken away thou wilt write to my dear wife; let her know all is well. Write also to my children desiring them to improve the hints I have frequently given them for their conduct whilst I was with them and since." Observing me to be very attentive to do all in my power, he said, "the Lord refresh thy spirit for thou hast often refreshed this body; thou hast watched this house completely and whether I live or die thou wilt get thy reward." He asked me about going to rest, I told him that night we would both stay with him, "then," said he, "will you watch with me one night more," which indicated, to me, that he did not expect to live many. On asking him how he found himself, he said, "I am here now and confined to a narrow compass." "This," said he to Morris, "is a trying time, but my mind is above it all." I often perceived praises and sweet melody in his mind when few words escaped him. On third day

said to Morris and me, "what, my dear friends, what have you been to me now? I often asked the time of day and said, when shall I be released!" At night the fever increased, and being restless he said, "I am not to be settled, dear Betty, when shall we be settled?" We were anxiously concerned that his affliction might be shortened, and it did not continue long. Oh the strength of his mind. How divinely was he supported in the midst of his conflict! He triumphantly said, "I trust reigneth over all!" and soon after quietly departed in great peace, about three o'clock on Fourth-day morning the ninth of the sixth month, seventeen hundred and twenty-two.

ELIZABETH COATES.

Dublin in Ireland, the 4th mo. 26th day, 1772.
to the Quarterly Meeting of Ministers and Elders to be held at New Garden in North Carolina.

Most dear and inwardly beloved friends, fathers, mothers, brethren and sisters, companions and yoke-fellows in the pure mystery of the gospel relation, with whom my life in Christ remains hid, that time and distance only seems to strengthen the cords and renew the cordial notes of celestial concern in the fresh springs and unction of true love. God only knows you are written on the table of my heart, and printed in the secret of my mind, where I often read with great consolation in the midst of trials which indeed have not been less since our parting with you, and your connection in this world; but He, who raised our Lord from the dead, hath strengthened us by the renewing our inward man in Himself, in whom we experience sufficiency, till remains equal to every allotment pointed out in His wisdom. Also the mutual help of our spirits, which I feel at times ascend as sweet incense from the holy altar, with the additional concurrence of faithful brethren here in our service, which hath been truly comfortable and confirming, that the God of all grace and glory hath not only called us into a strange land, but hath owned our labor of love in the hope of the gospel to the joy of the sincere in heart. To him, that is all in all, I desire ever to dedicate the first fruits of my labor, who is worthy of salvation and glory forever, amen. And now dearly beloved and longed for in the holy union, where the covenant of our spirits stands firm though far absent in body, yet being fitly framed according to the rule and measure of glory, which our God in His abounding mercy, never to be forgotten by many, hath revealed unto us, through the spirit of His beloved Son. We cannot be separated, but as we draw sap from the root that bare us we are grafted in the Vine and remain members one of another, feeding at the same table. Still I have nothing to communicate, but that which you have known from the beginning. Hold fast, I beseech you, that which you have received, improving in the gift as workmen that need not to be ashamed, learning how to divide the word and work aright, discerning when to speak and when to be silent, which I still find to be a close thing. And oh! that they who are elders and companions with those that bear the ark before the congregation, may go down with them into Jordan and see the wonders of the Most High in the deep, dividing the waters in the holy mystery hither and thither, casting up the way for the seed of promise; so shall they be endued with

sound judgment, and a good understanding, able to speak a word in season to the weary traveller, who may be sometimes halting behind their gifts; also a word of advice, caution, and counsel to such as are in danger of moving before the true anointing of the pure Word which was in the beginning. Herein all is kept in the comely order of truth, and you will flourish as by the foundation and fresh springs of Shiloh, in the unity of the spirit and perfect bond of consolation one in another. And dearly beloved, I entreat, above all things, that you let nothing cold or shy prevail amongst you, under no pretence whatever, for that catch as a canker in the mystery of iniquity to mar the beauty of the fellowship wherein is safety and strength, am free because I love with unfeigned regard, and believing you will receive this little offering; though mean, it is a fragment of my abundance which is often treasured up in my heart to you-ward, who am your younger brother. May it be in faith and patience which hopeth and endureth to the end, is my sincere desire.

WILLIAM HUNT.

For "The Friend."

Extract from Letters of Margaret Morris.

(Continued from page 74.)

Margaret Morris to M. M. Collins.

Burlington, 11th mo. 10th, 1811.

* * * I am, through mercy, very much mended since my last letter, and have resumed my usual seat in the corner, being engaged in making shirts for thy brother, which, I think, will be the last work of the kind I shall undertake.

When I came down stairs, I could not help giving a mournful look at the vacant space where my * * * cradle stood, and was ready to wish for him again to cheer me with a smile; but recollected the words of the poet: "Oh, our fondest wishes want control,

And Heaven grows jealous of the wandering soul; Then, wise and good, the object He removed "Which seemed of evil, and an ill proved."

There is certainly such a thing as sympathy of spirit, and by the letter now before me, I find that you had been sympathizing with me during the late uncomfortable wet weather, which affected me much, and I could not but compare myself to an old house which had been often buffeted by the winds and waves, until it had got so much out of repair, there was no knowing where to begin to stop the cracks and breaches made by time, and that it might as well be left to totter and fall down; however, I at length concluded to prop the old fabric up, and by the application of planks and a warm room, it is now a pretty comfortable tabernacle, considering all things.

Tell thy L. C., thy mention of the "book" he was reading to thee, gave me heartfelt pleasure; it is one I delighted to read when young, and has been a solace to me in the decline of life; although I have had to mourn and lament that at certain seasons of my life it was too much neglected, and a taste acquired, as I was fond of reading, for less profitable books; let my experience, my dear child, warn thee against reading many books that have a tendency to withdraw the mind from serious thoughts, and lay the foundation for many dangerous snares; it is easier to prevent than cure bad habits, which strengthen by unseen degrees.

Thy repeated mention of thy comfortable, happy situation, adds much to mine, and I

have cause to bless the hand that cast thy lot in a family, to every branch of whom I feel nearly united, and am flattered in believing the affection is mutual.

12th mo. 21st.

The weather with us, as with you, has been for some days very severe; but if, *as*, who have warm houses and plenty of fuel, are pinched with cold, what must those feel who have neither? Indeed, it is necessary that we should sometimes visit the habitations of misery, in order to make us more sensible of, and thankful for, the favors bestowed on us by a bountiful Providence—who sometimes lavishes his good things on us, not according to our merit, but by way of trial, to see how we use His benefits; and we ought to bear in mind, that the Hand which opens can shut, and be prepared to receive both good and evil with a chastened heart.

Love, as usual, from thy truly maternal,

M. M.

The same, to the same.

Our cousins left me the day after you did; also, thy brother went to Philadelphia the same day. I have not since heard from him; so that the old proverb has been verified, "after a feast comes a famine," and we are again quite alone; thus it will ever be, while we continue in this sublimary world—one day joy, and the next sorrow. M. M. will tell thee how much * * * has been discouraged in his prospects of success in the little way of trade he was engaged in, and has concluded to go to sea in hopes of succeeding better; it will be a great trial to me, as well as his wife, but we must submit; she, in the hope of seeing him return,—I, in the hope of meeting him where we shall part no more—for, with the poet I can say—

"That added years to life gives nothing new,

But like a sieve lets all my comforts through,"

which has been remarkably verified in my experience; but, having been long learning the important lesson of resignation, I can now say, without a murmuring sigh, "Thy will be done." This, my love, shall ever be my prayer on earth, and my highest anthem in heaven—if I am favored there to join the innumerable company of those whose sorrows here are forgotten.

To the same.

12th mo. 2d, 1811.

* * * In thy next, explain the meaning of thy saying, it will be a "year" before I shall again see thee; surely we shall think it a very long time. For me to look so far forward would savor of presumption; from day to day is what I can hardly promise myself; yet, if it shall please Divine Goodness to gratify me with another visit from the child of my age—as I fondly style thee, my love—it will be esteemed a singular favor. Yet, why should I seek to strengthen the bonds that hold me down to earth, when my feeble frame and increasing infirmities so loudly call on me to bid adieu to all? Yet, humbly hoping, and believing, too, when we shall well have performed the duties allotted us here, we shall be permitted to meet again in happier regions; and, to be prepared for the happy abode of saints and angels, it is highly important that we begin while here on earth to practise the duties and cherish the virtues which will entitle us to the notice of our Creator. I need not point out to thee, my love, what these "duties and virtues" are; the monitor in thy

own heart can tell thee in more forcible language than I can. When its voice is heard, *don't turn away from it till a more convenient season.*"

To the same.

2d mo. 19th, 1812.

* * * Is it not strange that impressions so engraving should long continue, while those of more recent date quickly pass away? But I believe it is always the case with old people, at least it is so with me, for my memory, "too faithful to its trust," brings my past sorrows often to my view, and sometimes almost unfits me for the relish of present enjoyments, of which I am favored with a large share in the affectionate attention of my dear children and grand-children, who seem to vie with each other to make the comfortless season of declining life pass less heavily away. But oh! what would all this do for one, that could not look back on the past transactions of a long life, and with some degree of confidence say, "I have done what I could," and press forward with a chastened hope that the endeavors to do right were not despised by Him in whose awful presence she must shortly appear; these serious thoughts often occupy my mind when I think as I sometimes do, of the solemn change which is approaching with slow but certain pace, when I must bid *adieu and bind me still to earth!* M. M.

(To be continued.)

Expensive Curiosities in the Brighton (England) Aquarium.—The largest item in the commissariat returns is that for dead fish, which is supplied fresh by contract daily from Billingsgate Market. More than sixteen tons are consumed annually, mainly by the mammals and reptiles. The family of sea lions (*Otario Stelleri*) dispose of about 50 lbs. a day, 350 lbs. in a week, or eight tons in a year. They are fed four times a day, either on whiting, plaice, haddock, herring or mackerel, the two latter being their favorite food. The fish is most carefully cleansed and prepared, the plaice filleted, the head and collar bones of the haddock removed, and the herring and mackerel thoroughly searched lest a hidden hook should prove fatal. The food is swallowed at one gulp, disappearing so rapidly down their muscular throats that one would imagine they could not taste it; but "Madame" is excessively dainty, and evidently discerns, both by sight and smell, the nature of the food provided, disdainful of plaice and haddock, and refusing even to attempt to catch a portion of either in her mouth until she is quite sure that the supply of that which she prefers is entirely exhausted. Her consort is troubled with a large appetite, and is somewhat less particular. They are occasionally treated with a basket of sprats at a meal, which are very quickly demolished, and it is amusing to see them diligently searching the pond lest by chance one should have been forgotten. These exceedingly handsome animals were brought from California, and have now been on exhibition for nearly three years. They have much increased in size since their arrival. "Jack" is ten feet long and weighs 1400 weight. In May, 1877, the lioness gave birth to a cub, the first of its species ever born in captivity. A second, a female, was born in March last; but, unfortunately, did not survive. The young sealion is now nearly as large as his mother. When quite young,

she prevented his taking to the water, and brought him to land in her mouth on one occasion when he accidentally fell into the pond. The parent animals are in splendid condition, and are very intelligent and docile. Their performances at feeding time are highly diverting, for they are remarkably well trained, and take food from the hands of their keeper or plunge after it into the water. The cub ate his first fish when two months old.—From the "Commissariat of the Brighton Aquarium," in the *Leisure Hour*.

Selected for "The Friend."

Leave God to order all thy ways,
And hope in Him, whate'er betide;
Thou'll find Him in the evil days
An all sufficient strength and guide.
Who trusts in God's unchanging love,
Builds on the rock that nought can move.

What can these anxious cares avail,
These never-ceasing moans and sighs?
What can it help us to bewail
Each painful moment as it flies?
Our cross and trials do but press
The heavier for our bitterness.

Only your restless heart keep still,
And wait in cheerful hope, content
To wait 'till His mercies begin to fall;
His all-discerning love, hath sent;
Nor doubt our inmost wants are known
To Him who chose us for His own.

He knows when joyful hours are best,
He sends them as He sees it meet;
When thou hast borne thy fieriest test,
And now art freed from all deceit,
He comes to thee all unaware,
And makes thee love His loving care.

Nor in the heat of pain and strife,
Think God hath cast thee off of unbelief;
Nor that the man whose prosperous life
Thou enviest, is of Him preferred;
Time passes and much change doth bring,
And sets a bound to everything.

All are alike before His face:
'Tis easy to our God most High
To make the rich man poor and base,
To give the poor man wealth and joy.
True wonders still of His grace wrought,
Who setteth up and brings to nought.

Work, pray, and swerve not from His ways,
But do thine own part faithfully;
Trust His rich promises of grace,
So shall it be fulfilled in thee,
God never yet forsook at need
The soul that trusted Him indeed.

George Neumark.

Among the extensive collection of stone and shell implements collected recently for the Smithsonian Institute by Stephen Bowers, in California, were some diminutive, flat, circular shell beads which are undoubtedly the most delicate examples of aboriginal workmanship ever discovered. They are smaller than an ordinary pin's head, the central perforations being so minute as scarcely to admit of the passage of a needle. These specimens of native wampum were probably wrought from a species of *Olivella*. It is impossible to conceive how they could have been fashioned by the aid simply of stone tools. At first they were supposed to be natural crinoid segments, but an examination of them beneath the microscope proved them to have been artificially worked, the delicate striae appearing in parallel rows and not radiating from the centre. They were found in a grave on San Miguel Island, associated with quantities of a large variety of bead cut from the *Olivella biplicata*.—*American Antiquarian*.

For "The Friend"

I have felt much concern, because many of our Society have departed from our primitive belief in all men having a day or time of visitation, wherein they may be restored to the Divine favor from which they have fallen. It has been boldly asserted, that none are visited by the Holy Spirit, until they are converted. Meetings have been appointed, persons deputed by committees or otherwise to attend such meetings, and moneys raised for such purposes, and in them the doctrine I have held forth, that the only condition required for conversion is a belief that Jesus Christ shed his blood on the cross for all their sins, which are there and then forgiven.

William Penn, in speaking of the teaching of Friends in his day, says: "All were directed to the Light of Jesus Christ within them as the seed and leaven of the kingdom of God near all, because in all, and God's talent to all. A faithful and true witness and just monitor in every bosom. The gift and grace of God to life and salvation, that appears to all, though few regard it." Preface to *Geo. Fox's Journal*, page 9.

Job Scott, in 1770, chap. 24, page 29 of his *Journal*, gives an account of his conversion to which I would earnestly direct the attention of our younger Friends, as well as those more advanced and matured. "Thus I continued still in vanity and folly, with intervals of deep distress and mourning, that is, until about nineteen years of age, when I became more fully and clearly convinced, and thereby much by the immediate operations, illuminations and openings of Divine Light in my own mind, that this inward something which had been thus long and powerfully striving with me, disturbing my every false rest, confuting every false and sin-flattering imagination of flesh and blood, or of the grand adversary, and enjoining it upon me to give up all and walk in the ways of virtue and true self-denial, *was the true and living Spirit and power of the eternal God*; the very same that strove with the old world, influenced the patriarchs, prophets, and apostles; and visits, strives with, and at seasons more or less influences, the hearts of all mankind. I now saw this the only principle of true conversion and salvation; that so long as this was resisted and rejected, separation must infallibly remain between God and the soul; but that whenever this is received and in all things thoroughly submitted to, a thorough reconciliation takes place. Some may think this doctrine bears Christ of the honor of our redemption and reconciliation; but I apprehend none can think so who understand the doctrine of salvation by Jesus. It was through the eternal Spirit, this very Spirit that visits and strives with all that Christ offered up that prepared body." It is through and only through the influence of the same Holy Spirit, that any soul was ever converted to God, or savingly benefited by the redemption that is in Jesus."

"This was the doctrine of Friends. It can only be through that which convinces of evil—that any can be converted from the evil of their ways." The churches of Rome and England, so called, and others, may assert that by water baptism the person "is made a member of Christ, a child of God, and an inheritor of the kingdom of heaven," vide Catechism.

[* Who, through the eternal Spirit offered himself without spot to God." Heb. ix. 14.]

Our preachers may assert that Christ only enlightens by his ministers and ordinances, and now, Friends have ever believed that Christ is the true Light, that enlighteneth every man that cometh into the world. Dear young Friends, may you be enabled to learn the ears of your souls to hear Him, who now speaketh from heaven, and may His words have an abiding place in your hearts, so that you may become his, by consent of every defiling thing; that he may fill in you, and become your Teacher, Father, and Director; that you may become faithful bearers of his truth, and against every false way. S. C.
 fillville, Orleans Co., N. Y., 10th mo. 1878.

For "The Friend."

ular of the Bible Association of Friends in America, and again calling the attention of Auxiliaries to the Annual Queries to be answered previous to the general meeting of the Association on the 6th or Eleventh month, the Corresponding Committee would press upon Friends, who have been engaged in the distribution of the Holy Scriptures, the importance of furnishing full and accurate answers to all the Queries, and of forwarding their reports seasonably to the Depository.

It may be recollected, that in making donations to Auxiliaries, the Board are guided in fixing what number of Bibles and Testaments shall be sent to each, by the information given in its report. Hence those Auxiliaries which do not report in time, are liable to be left out in the distribution.

Specific directions should be given in every report, how boxes should be marked and forwarded; and their receipt should always be promptly acknowledged.

Address John S. Stokes, No. 116 N. Fourth street, Philadelphia.

SAMUEL BETTLE,

CHARLES RHODES,

JAMES WHITALL,

Committee of Correspondence.

Philada., Ninth mo. 1878.

QUERIES.

1. What number of families or individuals have been seasonably furnished with the Holy Scriptures by the Auxiliary during the past year?
2. What number of Bibles and Testaments have been distributed by the Auxiliary within the past year?
3. How many members, male and female, are there belonging to the Auxiliary?
4. What number of families of Friends reside within your limits?
5. Are there any families of Friends within your limits not supplied with a copy of the Holy Scriptures good clear type, and on fair paper; if so, how many?
6. How many members of our Society, capable of reading the Bible, do not own such a copy of the Holy Scriptures?
7. How many Bibles and Testaments may probably be disposed of by sale within your limits?
8. Is the income of the Auxiliary sufficient to supply those within its limits who are not fully furnished with the Holy Scriptures?
9. What number of Bibles and Testaments would it be necessary for the Bible Association to furnish gratuitously, to enable the Auxiliary to supply each family?
10. What number would be required in order to furnish the members of our Religious Society, capable of reading who is destitute of a copy, and unable to purchase it?
11. How many Bibles and Testaments are now on hand?

The Evil of Detraction.—There is a story told of a woman who had been in the practice of circulating gossip and scandal to the injury of her neighbors, being at length brought to a sense of her wrong doing. Going to a

priest to confess in order to obtain forgiveness, he procured a ripe thistle-top and directed her to take out the seeds and sow them one by one on the land all around. The poor woman came back and told the priest that she had done what he had required of her; he then, to her astonishment, ordered her to go out and gather the seeds all up again. This, she replied, was impossible; when the priest told her it was no more impossible than it was for her to undo the mischief she had done, by repeating and circulating the evil reports.

From the "Leisure Hour."

A Pet Cormorant.

Among the many strange pets which we in Stuetland delighted to keep, one of the most interesting and amusing was a cormorant, which was brought to us from the nest, when quite young, and which we kept for several years. His earliest days were spent on the well-known Pingra Skerry in the north of Unst, and he became the captive of the most daring and successful fowler in the Shetland Islands, who brought the young "Loring," as the cormorant is called in Unst, to my father by way of a little present.

We soon found that Toby, as we named the cormorant, was not at all fastidious regarding his diet. He speedily proved himself to be a gentle receiver of every kind of food—fish, flesh, or fowl—and when all of these were scarce, he even condescended to partake of huge lumps of cold porridge, cheese-curd, bread, potatoes, or in fact anything which came first to hand. He preferred fish of course, to everything else, but quantity was his motto; quality he concerned himself little about. He had not much to do, as long when he began to recognize and intercept the convoys of provisions which the children of our fisher neighbors brought to our house for the benefit of our motley crew of pets. Toby was looked upon as an "uncanny bird," and, moreover, his powerful bill was capable of inflicting grievous damage upon the bare legs of the little wretches whom he attacked. So as a rule Toby had first choice of the fish that came to our establishment, for the children used to throw down their fish-baskets and take to their heels upon his approach. His first essay in a flesh diet was made in bolting a live mouse which a proud young tabby cat had brought home to her first kitchen. This experiment was so thoroughly satisfactory that he immediately afterwards attempted to swallow the kitten itself, and was only prevented from accomplishing the dreadful deed by the timely interposition of a common friend. Toby's capacity for food of every kind was indeed almost beyond belief.

In the winter following his advent among us fish were very scarce, and Toby had to content himself with what other victuals might be available. On one occasion my brother-in-law, Dr. Saxby, had shot a number of starlings in order to furnish a substantial repast for the snowy owl, and for a cast of young merlins which had been added to our family. When passing through the yard where Toby was anxiously looking out for a meal, I tossed one of the starlings to the hungry bird, hardly expecting him to touch it. But Toby cleverly caught it and bolted it, feathers and all, without a moment's hesitation. Another starling followed, and another, and another; but when five in all had been

thus disposed of we called a halt, remembering that there were other members of our family still to be fed. Moreover, the five plump birds, with their heads, legs, bills, and feathers, appeared to have taken the fine edge off even Toby's excellent appetite, for when he hobbled away to his favorite retreat in a coal-shed near, the legs of the fifth and last starling were to be seen projecting from his bill.

When Toby had been with us about a year he one day took it into his head to try whether his growing wings would carry him to the not distant sea. Taught by instinct, or by experience, that he could not rise from the level ground, he managed to climb to the top of a high stone wall, thereby securing a good start. I well remember the consternation which his departure occasioned, for we all concluded that Toby had left us for good and all, and that, having once reached the sea, he would never think of coming back. But such an act of desertion formed no part of Toby's plan. On the contrary, and as if to reassure our minds, he made his first visit to salt water a very short one, and speedily returned to his accustomed place. He had stayed long enough, however, to provide himself with an ample meal, and having learned how to earn his own living, he thereafter gave us little or no trouble about his food. He went off regularly every morning, sometimes staying only for an hour or two, and at other times remaining on the water all day, the period of his absence being apparently regulated by the abundance or scarcity of fish in the harbor. But he always came home in the evening, and hardly ever failed to report himself in the kitchen, where he liked to get as near the peat fire as he conveniently could. We took measures to guard against his falling a victim to any sportsman's gun during his daily fishing expeditions, and every owner of a fowling-piece far and near in our island was asked to be careful not to shoot at a loring anywhere near the harbor of Baltasound.

I grieve to say that poor Toby came to a tragic end—not at the hands of a fowler nor upon the sea, but at the very fireside which he had loved so well. An aged sheep-dog, whose fifteen years of faithful service had earned for him a pensioner's place in our household, had long regarded Toby's appearance in the kitchen with suspicion and dislike. He had been a sporting collie in his best days, and he had about the same amount of respect and regard for a cormorant that a retriever may be supposed to entertain for a partridge. Some slight difference of opinion between bird and dog as to possession of a snug corner by the ingle nook resulted one fatal day in a dire catastrophe. In a moment of senile rage at having his little comforts interloped with by a bird, whose whole race he had been taught to regard as lawful prey, the old dog attacked poor Toby and killed him on the spot before any one could interfere.

A Judge in the Stocks.—Lord Camden once presided at a trial, in which a charge was brought against a magistrate for false imprisonment, and for setting the plaintiff in the stocks. The counsel for the magistrate, in his reply, said the charges were trifling, particularly that of setting in the stocks, which everybody knew was no punishment at all. The Chief Justice rose, and leaning over the bench, said, in a half-whisper, "Brother, were you

ever in the stocks?" "In the stocks, my lord! No, never!" "Then I have been," returned his lordship; "and I assure you, brother, it is no such trifle as you represent."

His lordship's knowledge of the stocks arose from the following circumstance. When he was on a visit to Lord Daere, his brother-in-law, at Alveley, in Essex, he walked out one day with a gentleman remarkable for his abundance of mind. When they had reached a hill at some distance from the house, his lordship sat down on the parish stocks, which stood by the roadside; and after some time, he asked his companion to open them, as he wished to know what the punishment was. This being done, the absent gentleman took a book from his pocket, and sauntered about, till he forgot both the judge and his situation, and returned to Lord Daere's house. When the judge was tired of the experiment he had so rashly made, he found himself unable to open the stocks, and asked a countryman who was passing by to assist him. "No, no, old gentleman," was the rustic's response, "you were not set there for nothing." Lord Camden protested his innocence, but in vain. The countryman walked on, and left his lordship to meditate for some time longer on his foolish situation, until some of Lord Daere's servants, happening to pass that way, released him.—*Late Paper.*

William Newbold.

For "The Friend."

There are comparatively but few left among those actively engaged in the affairs of our religious Society, who can recall the characteristic traits, the standing in the church, and the labors of the Friend whose name is at the head of this article. But those who recollect him know that he was a man of no ordinary type, but was marked by his intellectual endowments, his religious experience, and the diligence and faithfulness with which he applied the talents with which he was entrusted to promote the cause of truth and righteousness and to benefit his fellow men.

During the painful controversy and other severe trials which preceded and accompanied the separation from the Society of Friends within the compass of Philadelphia Yearly Meeting of the followers of E. Hicks, he was conspicuous for the unyielding firmness, the christian integrity and righteous zeal, with which he strove to repel the tide of Socinian doctrine that swept through the Society in America, to warn and to protect the members from being carried away by it.

As an elder in the church, to which station he was appointed in the thirty-first year of his age, he was faithful in the performance of his duties, and in the Yearly Meeting, though his voice was not very often heard, his opinions and judgment were always received with deference and respect. His loss was deeply felt throughout the Yearly Meeting when he was removed from works to rewards, and many of the citizens of the State in which he lived retain a grateful sense of the efforts made by him to promote the public welfare.

In the first number of the present volume of "The Friend," there was republished an extract from the obituary notice of William Newbold, that appeared in that journal soon after his decease, but having recently been put in possession of a copy of some notes taken of his expressions during his last illness, by members of his family, I have thought them

well worthy of being laid before the readers of "The Friend," containing as they do much that is instructive, and confirming in the christian faith.

Some expressions of William Newbold, formerly of Burlington county, New Jersey. Taken during and directly after the last few days of his life.

Note.—In making the following collection, many of his interesting and instructive remarks are omitted; some because they were not recollecting with sufficient clearness to be given positively in his language. Where changes have been made from his expressions, they are not by additions but by omissions, principally on account of family considerations.

On Third-day morning, the 12th of the Eighth month, 1828, he mentioned he thought his end was near; and to the doctor, he wished him not to administer any more medicine.

Pretty soon after he had his particular family, together with his brothers and sisters, collected, and previous to taking leave of them, addressed each individual in a brief and pertinent manner. Soon after he commenced speaking, he raised his voice, (which during most of his illness had been reduced to a whisper,) so as to be distinctly heard over the room.

At a succeeding time he had the remainder of his family collected, and also saw several individuals he had requested might be present, to whom he communicated much good counsel, mixed with earnest expressions of universal love to all who loved the Lord Jesus.

His sufferings, which he bore with remarkable patience and Christian fortitude, continued to be very great until near his close, which took place at half past one, on First-day morning, the 17th of the Eighth month, 1828, when he quietly breathed his last, in the sixty-second year of his age.

On Third-day morning the 12th, his family being collected in his room, he commenced with, "Behold the Lamb of God that taketh away the sins of the world." It seems as though I must talk to you, though I know by doing so, I dispel the angelic feelings with which my mind is clothed." "Oh the love I feel." To one of his sons, he said, "I want thee to give my love to my dear friends, and tell them that I die as I have lived, firm in the faith of our Lord and Saviour Jesus Christ, who was born of the Virgin Mary, and crucified without the gates of Jerusalem. And if I obtain salvation, it will be by and through Him. Amen."

He said to a friend present, "The Lord bless thee. Indeed He has blessed thee with many blessings. But there is a blessing to which no sorrow is added." Soon after, he was impressed with the belief that his time here was short, and he remarked to his wife, "My dear, the time of my departure is at hand, and I wish to tell thee that I have obtained a good degree of resignation. I have fought the good fight, I have kept the faith. It is too much to say I have fought the good fight, but I have kept the faith as it is in Jesus. And I believe there is a crown of glory for me." Then raising both hands, he deliberately said, "A crown, a crown, a crown."

On another occasion he remarked, "We all have our Bibles. There are at this time, a number of godly young men who are impressed with the importance of maintaining the truth, in such a day as was hardly ever known. My mind has often been pained at the notice, the indiscreet notice which some Friends have shown to some of the young

people, whose faces have been turned, I believe, Zionward. Oh, my spirit has often been pained on seeing the work thus marred. It is unkind to them, and unkind to the truth, no individual in view. It is an observation which will apply generally."

"I have no objections that Friends should know, that I say, there are some Friends who have the seed of God, the seed of the kingdom in them, but I fear there is too much of a high church party spirit in some of their minds. This will not do Christ's work. They want more Christian humility."

Of the dividing spirit in our religious Society, he said: "The doctrines of Elias Hick are as opposed to the doctrines of Christianity, as it is possible for one thing to be to another. If he were here, I should say it came to him. I should be glad to do it." "The evil he has done in the world, oh, how great. How many poor creatures have been deluded by him."

After having been still for a considerable time, he said in a very commanding manner "Get thee behind me Satan, for thou savorest not the things which be of God." "He thut putteth his hand to the plough and looketh back, is not fit for the kingdom."

When his sufferings were very great, he sometimes said Oh; but on one occasion, he remarked, "I do not mean to complain when say, Oh. I must endeavor to fill up my allotted portion of the sufferings of Christ, for Christ's sake."

"Our poor little despised meeting; I do not know what will become of it. I can let go our poor little despised meeting. No, that I am able to do any mighty work, be each one may help. Oh, the weight, the weight, the weight is wanting. Many say they are not spiritual members; they will they were; but if they will bow prostrate in humility at the throne of Grace; then the work is done, and a preparation will be there by experienced to be instructed."

"In our religious Society there will be great trials yet. They are not at an end. They will be siftings and re-siftings, renderings and re-renderings, until it is purged and purified." "For the Lord is determined to raise up and sustain a people, who will follow Him in the footsteps and parity of George Fox. Be none of us may live to see this; yet it will be."

"I hope you will not attach too much importance to your professing correct views of religion. There is a very great difference between a Christian professor and a Christian possessor."

"A man may be a Christian professor and not a Christian at all. But whoever is a Christian possessor, can not fail to be a Christian professor."

"It is too absurd to think there are two ways to heaven. And many poor deluded ones will find there never was a middle path to heaven." "If I die, I wish all to know I die firm in the faith of our Lord and Saviour Jesus Christ." "And a virgin shall bring forth a son, and thou shalt call his name Jems; for He shall save his people from the sins."

"I pray thee, Oh Heavenly Father, not that my sufferings may be diminished, but that may have my full portion of them now; & that at the close I may be favored to depart peacefully and quietly." And after a few minutes in silence, he added, "I thank I see clearly, for which I am very thankful, an

er my acknowledgments, that my prayer granted, and that I shall be favored to delight in more peace and quiet than many." On being requested to take some nourishment, he said, "It is too late. I have yielded enough to convince all of you, that I am not a fanatic. You must now give me up to my heavenly Father." He spoke to one present, of the necessity of attending to small intimations of duty. And said, "there are none of them small, as our peace is dependent on their fulfillment." He then mentioned a circumstance which occurred to himself in early life, which was confirming to his mind, and went through the necessity of surrendering our lives. And then added, "nothing belongs to me; but I mention it, that the name of my heavenly Father may be glorified on the earth."

On waking up, he said, "Cease fond nature, cease thy strife," but soon added, "Oh, I am afraid I am not patient enough." "Oh, virtues, the many virtues that are wanting to make a Christian." "I hope I am a Christian. If I am not, I have sadly deceived myself." "Sweet Jesus give me ease, for I cry I do crave." "And thou wilt grant it thy own time." "If time and circumstances would admit of it, I should have no objection to have as many collected as could be within the hearing of my voice. But not an unbeliever. For one unbelieving soul, says the work, and puts death into the pot." After a severe turn of coughing, he said trying emphatically, "Oh, I want with my dying breath, to express my firm belief in the name and power of Jesus Christ, who was born of the blessed virgin, and was borne to Olivary's Mount, and crucified without the walls of Jerusalem: and that there is salvation in no other name, being, imaginations opinions, under Heaven, let people think that they may."

"I told you some time since, that the time refreshing would come; and now it has come. It is the day of jubilee, the jubilee of a Lord." "Oh, brothers and sisters, and sisters and all, for all are brought pretty much on a level now, join me in rejoicing that this day has come. My joy is unspeakable." "I want you to see with what peace a Christian can die." "My blessings, my blessings, my blessings. They have been as the sands of the sea-shore for multitude." "Thanks to thee, Oh Heavenly Father, for so much peace of mind. What a providential care it that I have so little suffering now, near the close."

"Oh how I crave there may be no impure suffering at my grave; none but what is of the holy union; none but what is sealed with the holy seal. That is, I mean the authority from which it comes, is sealed with the holy seal. And if it is, it will bring comfort to the minds of the hearers."

"Some of our Friends are in the practice of holding up the names of deceased individuals as gallery texts, and of taking the opportunity to preach at funerals, because the occasion is a solemn one, and a time when our feelings can be easily wrought upon; which is wrong."

"This is no time to study language. I do not swerve if the whole world were ordered me. This is no time to balk or flinch, must say what there is given me to say." "Oh the comfort, the inexpressible comfort of having Jesus for our friend, at such a time

as this." "I have had a great deal to say, and if I have been at all instrumental in saving one poor soul, Oh what a blessing!"

Obesinances.—Herbert Spencer writes as follows in the *Fortnightly Review*: Speaking of a party of Shoshones surprised by them, Lewis and Clarke say: "The other two, an elderly woman and a little girl, seeing we were too near for them to escape, sat on the ground, and holding down their heads, seemed as if reconciled to the death which they supposed awaited them. The same habit of holding down the head and inviting the enemy to strike when all chance of escape is gone is preserved in Egypt to this day." Here we are shown an effort to propitiate by actual submission; and from acts so prompted originate obesinances. When, at the outset, in illustration of the truth that ceremony precedes not only social evolution but even human evolution, I named the behavior of a small dog which throws itself on its back in the presence of an alarming great dog, probably many readers thought I was putting on this behavior a somewhat forced construction. They would not have thought so had they known that a parallel mode of behavior occurs among human beings. Describing the *Bataka* salutation, Livingstone says: "They throw themselves on their backs on the ground, and, rolling from side to side, slap the outside of their thighs as expressions of thankfulness and welcome." Whether or not consciously adopted for this reason, the assumption of this attitude, which implies, "You need not subdue me; I am subdued already," is the best means of obtaining safety. Resistance generates antagonisms and arouses the destructive instincts; and by prostration, on the back, which, perhaps more than any other position, makes self-defence impracticable, resistance is negatived. I say perhaps, because another attitude may be instanced as equally complete, which more elaborately displays complete subjugation. "At Tonga Tabu * * * the greatest respect imaginable by prostrating themselves before him, and by putting his foot on their necks." The like occurs in Africa. Laird says the messengers from the King of Pundah "each bent down and put my foot on their heads." And among historic peoples this position, originated by defeat in battle, became a position assumed in acknowledged submission. From these primary occasions thus representing, as literally as may be, the attitudes of the conquered beneath the conqueror, there come obesinances which express in various ways the subjection of the slave to the master—this last being the sequence of the first. Of old in the East such subjection was expressed when the king's servants girded sackcloth on their loins and put ropes on their heads, and came to the King of Israel." In Peru, where the militant type of organization was pushed to so great an excess, Garcilasso tells us that a sign of humility was to have the hands tied and a rope round the neck; that is, there was an assumption of those bonds which originally marked captives brought from the battle-field. Along with this mode of simulating slavery, another mode was employed when approaching the Inca; servitude had to be indicated by carrying a burden; and "this taking up a load to enter the presence of Atahualpa, is a ceremony which was performed by all the lords who have reigned in that land."

THE FRIEND.

TENTH MONTH 26, 1878.

We believe the happiness of man is promoted even in this present life by a sincere devotion to the cause of religion; and yet it cannot be denied that it is through many tribulations the righteous enter the kingdom. Of the Blessed Saviour himself it was foretold, that He should be despised and rejected of men, a man of sorrows and acquainted with grief. And this prediction is shown to have been true by the narrative of His labors and sufferings when personally on earth. He said to His disciples, "In the world ye shall have tribulation," but he added, "Be of good cheer; I have overcome the world." Again he told them, that they should "weep and lament," but that their sorrow should "be turned into joy." In close accordance with these expressions, is the testimony of Paul, who reminded the Ephesian elders of the "many tears and temptations which befell him;" and declared as to the future, that "The Holy Ghost witnesseth in every city, saying that bonds and afflictions abide me;" but he could also add these noble words, "But none of these things move me, neither count I my life dear unto myself, so that I might finish my course with joy." In his epistle to the Corinthians, he speaks of himself "as sorrowful, yet always rejoicing," and says, "I take pleasure in infirmities, in reproaches, in necessities, in persecutions, in distresses for Christ's sake." He tells the Colossians that he rejoices in his sufferings for them; and the Thessalonians, that they "received the word in much affliction, with joy of the Holy Ghost;" and that in the midst of all his "affliction and distress," he had been comforted by their faith.

It was no doubt the fervent faith of the Apostle, that enabled him thus to rejoice in tribulation, for he entered as seeing Him that is invisible; and the blessed recompense of reward that awaited him was made a substantial reality to him by the power of this faith. How animating is his language, when he felt the end of life approaching: "I am now ready to be offered, and the time of my departure is at hand. I have fought a good fight, I have finished my course, I have kept the faith: henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, shall give me at that day;" and again: "The Lord shall deliver me from every evil work, and will preserve me unto His heavenly kingdom, to whom be glory for ever and ever."

This hope in the Divine goodness and mercy, and the testimony of the Spirit bearing witness within us that we are joined to the Lord in a covenant that will never be broken, unless it be by our own unwatchfulness or willfulness, are amply sufficient to sweeten every bitter cup; and have been a source of inexpressible comfort to the devoted followers of the Lamb in every age. We cannot expect to escape our share of the trials and afflictions which belong to this state of existence, for, as the scripture declares, "one event happeneth unto the righteous and the wicked;" but if we will walk in the Light of the Lord's Holy Spirit, we shall have the sense of condemnation taken away, and a measure of that peace of God which passeth all understanding poured into our hearts; we shall

know the coldness and hardness removed, and at seasons be favored with a sweet sense of tenderness and Divine favor; and in place of a fearful looking for of judgment and fiery indignation in the future, we shall be comforted and cheered by a holy hope, that when time to us is ended we shall be p-mitted, through unmerited mercy, to join the glorious company of the redeemed, who have been gathered out of every nation, kindred, tongue and people, and now surround the throne of God and the Lamb.

Let none then be discouraged at the trials and sufferings which may attend their journey through life, for though they are not joyous at present, yet if we rightly profit from them, they will yield the peaceable fruit of righteousness to those who are exercised thereby.

"We have received the second number of "The American Antiquarian," a quarterly journal devoted to early American History, Ethnology and Archeology, and published at Cleveland, Ohio.

It contains much interesting information respecting Indian Antiquities, the location and history of our Aboriginal tribes, the traditions of the Delago preserved among them, and similar matters.

The Editor is S. D. Peet, of Unionville, Ohio, who solicits correspondence and information on all discoveries, explorations and investigations made on these subjects.

SUMMARY OF EVENTS.

UNITED STATES.—The returns for the present month to the Department of Agriculture, indicate that the corn crop of the United States the present year will not vary largely from 1,300,000,000 bushels, which is about three per cent. less than last year. The wheat crop as a whole will be larger, from present indications, than last year, and it is expected will exceed 400,000,000 bushels. The yield of oats it is believed will also be rather greater than that of last year.

The number of new cases of yellow fever has decreased. Frost has occurred at Memphis, and as far south as New Orleans. In consequence of the change in the weather, many refugees have returned to their homes, notwithstanding the warnings of the Board of Health. The total number of cases to the 21st inst., at New Orleans, is stated to be 12,312, of which 3733 died.

Williamsport has been selected as the terminus of the line of pipe which it is proposed to lay from Bradford, Penna., to convey the petroleum of that district to market. The distance is 104 miles. The pipe will be 6 inches in diameter, and it is expected that from 8,000 to 12,000 barrels per day will flow through it. Three pumping stations, it is supposed, will be required for the use of the summit of the line whence it will flow by its own gravity to Williamsport.

It is stated that one of the Philadelphia firms engaged in the fruit business, has this year brought to this market over 600,000 lbs. of grapes from California, on cars attached to the fast express trains, making the journey in six and a half days. Each car holds about 100 tons, and the freight is from \$1,125 to \$1,150 per car.

The number of mercantile failures during the first nine months of this year is reported to be 8678, and the liabilities \$197,000,000. For the same period last year they were 6565, and the liabilities \$161,000,000. The increase during the present year is attributed to the fact that many firms have sought to avail themselves of the provisions of the National bankrupt law, prior to its expiration on the 1st of 9th mo. last. With the exception of the disturbance of trade arising from the prevalence of yellow fever in the Southern States, the condition of business generally is believed to be more favorable and healthy than in any time since 1871.

A company has been formed in New York, with a capital of \$200,000, to produce light, heat and power by electricity. Thomas A. Edison, the well-known discover and inventor, is one of the incorporators. In consequence of the reported discovery of the means of lighting cities by electricity, the number of shares of stocks of gas-lighting companies in New York, Boston, Montreal and London, has fallen from time to time twenty per cent.

The annual report of the Inspector General of steamships, shows that during the year ending 6th mo. 30th, 1878, 1436 steamers were inspected in the district extending from the eastern part of Maine to Cape Charles. There were 109,212 passengers, and 10,725 crew members licensed 4906. Total number of lives lost by various casualties 117.

Markets.—American gold 100 to 100½. U. S. sixes 1881, registered, 107½; do. 1867, 105½; 4 per cents, 1907, registered, 99½ to 100.

Cotton.—Small sales of middlings are reported at 10½ cents for 40s for uplands and New Orleans.

Petroleum.—Crude is quoted at 73 cts. per gallon in barrels, standard white 9½ cts. for export, and 13 to 13½ cts. for home use.

Flour.—Minnesota extra, new wheat, has been sold at \$4.75 to \$5.50 extra; Penna. extra family, at \$4.50 to \$5.00; Ohio extra, new wheat, at \$4.75 to \$5.00; and other high grades, at \$7.25 to \$8.00. Rye flour, \$3.50. Corn meal, \$2.65 per bush.

Grain.—Red wheat, \$1 to \$1.01 per bushel; Delaware amber, \$1 to \$1.02; Penna. 1 to \$1.01, small lots of white wheat \$1.02 to \$1.03. Rye, western, 55 to 56 cts. Penna. 57 cts.; southern, 50 cts. Corn, western yellow, 49 cts.; Penna. and southern, 48 to 49 cts. Oats, fair, 27 to 28 cts.

Beef cattle, 5 to 5½ cts. for extra Penna. and western, 4½ to 4 cts. for fair to good do., 3 to 4 cts. per lb. gross for common. Sheep, 3½ to 4½ cts. Hogs, 4½ to 6 cts.

FOREIGN.—A bill has been passed by the Reichstag intended to regulate and suppress the movements of the Socialist party in all the provinces, and to prohibit and modified their passage, in consequence of the strong opposition which it met with. It finally passed by a vote of 221 against 149. During the discussion it appeared that the Socialistic element had obtained a strong hold upon the popular mind in many localities, and that the government apprehended serious danger from their domination.

Vienna dispatch says that the Austrian reply to the Turkish circular, in dignified terms repels the Turkish charge of atrocities by the Austrians.

The Sultan of Turkey states that he has written to the Ameer of Afghanistan, urging him to come to a good understanding with England.

In consequence of the negotiations respecting reforms in Asia Minor, it is stated that the mixed Christian and Mussulman police are to be commanded by English officers. An English assistant judge will be added to each court of appeal. The Governor and head tax-gatherer will be appointed and dismissed subject to English approval. These and some other equally important clauses have been approved in principle by the Porte.

The official report of an investigation into the affairs of the City of Glasgow Bank shows a loss in the balance sheet of upwards of five million pounds sterling, which with the addition of one million pounds, the capital of the bank must be met by the shareholders. The report states that a practice of systematic deception had been carried on by the directors. All of the directors, six in number, with the secretary and managing director have been arrested. It is said that the failures of private firms since that of the Bank of Glasgow, amount to \$28,510,000. In consequence of the financial and mercantile panic resulting from the panic this occasioned, the Bank of England has advanced its rate of discount to six per cent.

A royal order, dated in Madrid on the 12th ult., has been promulgated, which directs that henceforth if any slave, from whatever cause, shall enter the territorial or maritime jurisdiction of Spain, or of any of her colonies or possessions outside of the Island of Cuba, such slave shall be declared free, and all children born of slave mothers, after the latter have touched the soil of Spain outside of Cuba, shall also be declared free. The owners of slaves liberated by the order will be duly indemnified.

21st, the awards to exhibitors at the Paris Exposition were announced, of these 607 were assigned to American exhibitors.

Sir Stafford Northcote, Chancellor of the Exchequer, speaking at Birmingham on the 18th inst., condemned over-anxiety respecting the fulfillment of the provisions of the Corn Law. It was his conviction that the Powers would not suffer the treaty which cost so much, to be set aside. The English government's policy would be one of firmness and prudence, and it would watch over the interests of England's Indian colonial empire. The great principle of its policy is the preservation of the Ottoman Empire, and it intended to introduce matters of a similar kind in Asia, Turkey, and Afghanistan. The Chancellor reiterated the statements made by the Home Secretary, that the government had

no desire to extend the boundaries of the Empire, that direction, adding that the government will allow its attention to be distracted from the extent of its empire.

An inundation has carried away the dyke on Damietta branch of the Nile, by which 80,000 acre land have been overflowed, upon which were five villages.

ERROR.

In the notice of the epistle issued in 1877, by Erie claiming to be Western Yearly Meeting, published week, the address of J. P. Wood, (from whom the document was received,) was erroneously given as Indianapolis. It should have been Plainfield, Hendricks Indiana.

The Forty-eighth Annual Meeting of the Auxilliary Bible Association of Friends of Philadelphia Quaker Meeting will be held at No. 109 N. Tenth street, Fourth-st., Tenth mo. 30th, 1878, at 7 o'clock, p. Friends generally are invited to attend.

B. W. BEESLEY, Secretary.

WESTTOWN BOARDING SCHOOL.

THE WINTER SESSION of the School will commence on Second-day the 28th of Tenth month.

Pupils who have been regularly entered and who by the cars from Philadelphia, can obtain tickets at depot of the West Chester and Philadelphia R.R. corner of Thirty-first and Chestnut streets, by giving their names to the Ticket-agent there, who is furnished with a list of the pupils for that purpose. In such case, the passage, including the stage fare from the Rail Station, will be charged at the School, to be paid with the other incidental charges at the close of term. Tickets can also be obtained of the Treas. 304 Arch street. Conveyances will be at the S.R. and T. Co. to meet the train at the depot Philadelphia, S and 10 A. M., 12.30 and 2.30 P. M.

Baggage may be left either at Thirty-first and Chestnut streets or at Eighteenth and Market. If left at latter place, it must be put under the care of H. Alexander & Son, who will convey it thence to Thirty-first and Chestnut at a charge of 40 cents per trunk, to be paid on delivery. Those who prefer can have their baggage sent for to any place in the built-up part of City, by sending word on the day previous (through post-office or otherwise) to H. Alexander & Son, N. corner of 18th and Market Sts. Their charge in such case for taking baggage to Thirty-first and Chestnut streets, will be 25 cents per trunk, for the same day, they will also collect baggage from the other rail depots, if the checks are left at their office corner of 11 and Market Sts. Baggage put under their care, if properly marked, will not require any attention from owners, either at the West Philadelphia depot, or the Street Road Station, but will be forwarded direct to the depot, and will go on the same day to the owner, but it will go on the same day, provided notice in H. Alexander & Son reaches them in time.

DURING THE SESSION, passengers for the School will be met at the Street Road Station, on the arrival of first train from the City, every day except First day, and small packages for the pupils, if left at First Book Store, No. 304 Arch street, will be forwarded every Sixth-day at 12 o'clock, except on the last two *Sundays* in the Twelfth month, and the expense charged their bills.

Tenth month 15th, 1878.

DIED, at his residence in Winona, Louisiana, C. OHIO, on the 28th of 9th mo. 1878, JOHN S. STRAYTON in the 57th year of his age, a member of New York Monthly and Particular Meeting. Firm in his religious convictions, and regarding religion as the crown and all, he was careful that nothing in conduct should mar the beauty and harmony of Christian character. His relatives and friends bid the comforting hope that through redeeming love he now he has been permitted to enter that "to which remaineth for the people of God."

10th mo. 10th, 1878, at the residence of 1. son-in-law, Wm. R. HUNCOCK, near Columbus, N. ELIZABETH CARSLAKE, widow of the late Joseph C. Lake, in the 71st year of her age, a member of Upper Springfield Monthly and Mansfield Particular Meeting.

George Moore.

For "The Friend."

One of the recent biographies of that admirable writer, Samuel Smiles, is that of George Moore, an eminent and successful London merchant; whose history presents several points worthy of notice.

His early life was spent in Cumberland, at the borders of Scotland; where he acquired that vigor of constitution and physical strength, which, under the impulse of a powerful will, enabled him to undergo an amount of exertion, at which most of those who read "Life," must look with unfeigned amazement.

His father inherited a small farm, which his elder brother was expected to cultivate in his turn—George determined to seek a wider field for the exercise of his abilities; and after acquiring some knowledge of the dry-goods business in his native county, went to London to seek his fortune, when still very young, where he made numerous unsuccessful efforts to obtain employment, till money and courage were both nearly exhausted. Finally, when most ready to despair, a linen-trapper, named May, who himself had been a Cumberland boy, received him into his warehouse. Here George's zeal, faithfulness and untiring industry, won for him the esteem of his employers.

He thus relates his own experience:—"Compared with the young men with whom I was associated, I found my education very deficient. The first thing I did to remedy my defects was to put myself to school at night, after the hours of employment were over; and many an hour have I borrowed from sleep in order to employ it on the improvement of my mind. At the end of eighteen months I had acquired a considerable addition to my previous knowledge, and felt myself able to take my stand side by side with my competitors. Let me not only rely in such cases, but what is termed Luck. Depend upon it, an ill will make his way, unless he possesses knowledge, and exerts all his powers in the accomplishment of his objects."

After he had been about six months in his position, he one day observed a bright little girl come tripping into the warehouse, accompanied by her mother; and, on inquiring who they were, was told they were his employer's wife and daughter. "Well," said George, "if I marry, that girl shall be my wife." It

was a wild speech, which awakened the ridicule of the other lads, but the idea took possession of his mind, and was a motive-power in after life. After many years of hard work the dream of his youth was fulfilled, and the girl *did* become his wife.

In 1826, when about nineteen years of age, he left the retail establishment in which he had first obtained employment, and entered the service of Fisher, Street & Robinson, a wholesale lace house, then one of the most prominent in London. Of this position he says:—"After I had been in the house some weeks, Mr. Fisher began to blame my stupidity. He said he had had many a stupid blockhead from Cumberland, but that I was the greatest of them all. The conceit was thus entirely taken out of me,—a very good riddance for a lad of nineteen."

In after days, George Moore used to say that he had two strong reasons for bearing cheerfully and resolutely the trials of that time. One was, that he knew the fact of his ignorance, and was conscious of how much he had to learn; hence his laborious nightly studies, sometimes until two and three o'clock in the morning. But the other and more powerful reason was his love for Eliza Ray. He had never forgotten his boyish resolution when he first saw her,—"If I ever marry, that girl shall be my wife." This resolution had settled down into a firm and steady purpose. Eliza Ray was his guiding star. He would be faithful, honest and true for her. He would work night and day for her. He knew that if, through any ignorance or neglect, he was expelled from his situation at Fisher's, he would have to relinquish his fondly cherished hopes. Hence his settled determination to cultivate his mind, to improve his business education, and to win the approval of his superiors.

At the end of a year, the firm which employed him promoted him to be town traveller. Here his energy and perseverance distanced all competition, and he sold more goods than any traveller had done before. A few months later he was sent on the Liverpool and Manchester circuit, where the business had greatly fallen off. Here he worked early in the morning and late at night. Sometimes he "worked" a town before breakfast; making early appointments with the drapers beforehand. After breakfast he packed up his goods, drove off to another place, (for there were no railways in those days,) and finished his work at a third town within the day. He wasted no time.

His extraordinary success surprised his employers. His quickness, his shrewdness, his integrity, his honorable dealings, his knowledge of character, were the subject of their constant admiration. They determined to send him to Ireland, where the trade had been carried off by an active traveller named Groncock, partner in a firm which had recently been established. Here he worked

very hard, from morn till night. He was up in the morning early, called upon his customers during the day, packed up his goods in the evening, and set off by the night coach for the next town upon his route. For weeks together the only sleep he secured was on the outside of a coach; but he slept soundly. In the intervals of his work, when he felt unwell, he would throw himself on a sofa and fall sound asleep.

Whilst travelling in Ireland, he frequently met his competitor, Groncock. The competition between them became keen. Moore worked harder than ever, and at last succeeded in getting back all the best customers for Fisher. He once met Groncock at a town in the north of Ireland, and they supped together at the house of a friend. In the course of the evening George mentioned the town at which he was next due. He afterwards found that Groncock had started the day before him, reached Belfast, and taken up all the orders for lace in the place. George immediately left Ireland for Liverpool. He worked this place thoroughly, then started for Manchester, and travelled through the great northern towns, working night and day until he had gone over the whole of the ground, and returned to London full of orders. This in its turn greatly chagrined Groncock, who had intended to take Lancashire on his way home.

In fact Groncock found it necessary to come to terms with his indefatigable competitor, and offered him what Moore called "the incredible salary of £500 a year," if he would travel for his house instead of for Fisher's. His salary then was only £150 a year, but he at once refused the offer. "I will be a servant for no other house than Fisher's. The only condition on which I will leave him is a partnership." Groncock yielded to his terms, and in 1830, at the age of twenty-three, George Moore entered as partner into the firm, long known as Groncock, Copestake & Moore.

Like most successful enterprises, their business began on a humble scale, and was gradually increased, by the industry and thrift of the partners, till it finally became one of enormous proportions, including many hundred persons among its employees. Groncock and Moore were constantly on the road selling; and Copestake remained at the warehouse and managed the finances. Moore says of him, "For half the time that I have been a partner with him he never took a day's holiday. I never took a day for the first thirteen years, during all the time that I travelled." They all lived economically, and their savings were added to their capital. With such efforts, joined with even ordinary business ability, wealth was almost sure to follow. Moore says, "I was strong as a lion, and worked generally sixteen or eighteen hours a day." He was cheered by the hope that his first love was coming nearer to him. "I believe," he afterwards said, "that I never could have surmounted the difficulties and

hardships which I had to encounter, but for the thought of her. I thought of her while going my rounds by day, and I thought of her while travelling by coach at night. The thought of her was my greatest stimulus to exertion."

During all this time he had continued his friendship with his former employer, her father, and saw his little ros-bad growing up into womanly grace and beauty. At length he told his secret and was refused. It was a terrible disappointment; but five years afterwards, when, as he expresses it, "he had served for her with an aching heart longer than Jacob served for Rachel," he renewed his suit and succeeded. He was married to Eliza Flint Ray in 1840.

(To be continued.)

An Epistle to Friends in the Ministry by George Fox.

All Friends in the ministry everywhere, to whom God hath given a gift of the ministry, and who use to travel up and down in the gift of the ministry, do not "hide your talent, nor put your light under a bushel, nor cumber yourselves nor entangle yourselves with the affairs of this world." For the natural soldiers are not to cumber themselves with the world; much less the soldiers of Christ, who are not of this world; but are to mind the riches and glory of the world that is everlasting. Therefore stir up the gift of God in you, improve it, and do not sit down, Demas like, and embrace this present world, that will have an end; lest ye become idolaters. Be valiant for God's truth upon the earth, and spread it abroad in the daylight of Christ, you who have sought the kingdom of God, and the righteousness thereof, and have received it and preached it; which "stands in righteousness and peace and joy in the Holy Ghost." As able ministers of the Spirit sow to the Spirit, that of the Spirit ye may reap life everlasting. Go on in the Spirit, plowing with it in the purifying hope; and threshing, with the power and Spirit of God, the wheat out of the chaff of corruption, in the same hope. For he who looks back from the spiritual plow into the world, is not fit for the spiritual and everlasting kingdom of God; and is not like to press into it, as the faithful do. Therefore you that are awakened to righteousness, and to the knowledge of the truth, keep yourselves awakened in it; then the enemy cannot sow his tares in your field; for truth and righteousness is over him, and before he was. My desires are that all may fulfil their ministry, that the Lord Jesus Christ hath committed to them; and then by the blood or life and testimony of Jesus you will overcome the enemy that opposes it, within and without. All you that preach the truth do it as in Jesus, in love; and all that are believers in Jesus and receivers of him, he gives them power to become the sons of God, and joint heirs with Christ; whom he calleth brethren; and he gives them the water of life, which shall be a well in them, springing up to eternal life; that they may water the spiritual plants of the living God. So that all may be spiritual planters, and spiritual waterers; and may see with the spiritual eye the everlasting, eternal God over all to give the increase, who is the infinite fountain. My desires are, that you may be kept out of all the beggarly elements of the world, which is below the spiritual region, to Christ the head; and may hold him, who bruise the head of enmity, and was before

it was; that ye may all be united together in love, in your head, Christ, and be ordered by His heavenly, gentle, peaceable wisdom to the glory of God. For all that be in Christ are in love, peace and unity. In him they are strong, and in a full persuasion; and in him, who is the first and last, they are in a heavenly resolution and confidence for God's everlasting honor and glory. Amen.

From him who is translated into the kingdom of his dear Son, with all his saints, a heavenly salutation. And salute one another with a holy kiss of charity that never faileth.

G. F.

Ford Green, the 25th of the 9th mo. 1890.

For "The Friend"

The Fugitive Cheyennes.

The following account of the escape of the band of Cheyenne Indians from the Cheyenne and Arapahoe agency, in the Indian Territory, is taken from a letter dated 9th mo. 21st last, written by John D. Miles, the Agent, to Dr. Wm. Nicholson. This band of Indians was persuaded to emigrate from their former homes in Dacotah some two years ago, to join the Southern Cheyennes who have been long located in the Indian Territory. They have so far baffled the troops sent in pursuit, and are supposed now to be near the Yellowstone river. Their flight has been accompanied with serious encounters with white settlers in Kansas and Nebraska, and many of the latter have fallen victims to their attacks. The military measures taken by the agent to restrain them, were certainly inconsistent with Friends' principles, as were those used by him on a former occasion, when the Associated Indian Committee publicly expressed their disapprobation of his conduct, and requested his resignation; but the Government retained him in his position.

The discontented portion of Northern Cheyennes, numbering about 350 souls, did finally leave us, and from reports, are giving trouble on the Kansas border as well as to troops in pursuit. Many reasons can be assigned for their leaving this country and agency from their standpoint. First, There were so many things promised them, as they claim, before they consented to come South. Second, The line of rations guaranteed in the treaty of 1876 has never been furnished in full, and a portion of the time, only a very small allowance outside of beef. They claim, too, that houses, wagons, cattle, hogs, fields, &c., &c., were to be given and furnished them as soon as they reached this country—all, too, without any 'sweat of their brows.' The Southern Cheyennes and Arapahoese endeavored in many ways to pacify them, and have them affiliate with the other Indians of the agency, and in this they were successful to the extent of about 550 or 575, under 'Living Bear,' 'Standing Elk,' 'Turkey Legs,' 'Calf Skin Shirt,' 'American Horse,' and others, who are well contented and have their children in school. The 'discontents or seceders' under 'Dull Knife,' 'Wild Hog,' 'Little Wolf,' 'Old Crow,' &c., separated themselves from the balance and were so opposed to the general conduct of the other Indians and manner of issues [of rations] as to make themselves in dispute amongst the well disposed. In council and in private they would still insist on their preference for their old homes up north, and I had really expected that some of their young men would go north,

but I never could have believed that the would have undertaken so rash an act as go in so large a body. Southern Cheyenne and Arapahoese have lately been making complaint that they were losing their best horse and that they believed Northern Cheyenne were stealing them. Finally on 5th inst. was reported by Southern Cheyennes that party of Northern Cheyennes had gone north and that others were preparing to leave. I order that I might know the strength of the charge, I ordered a roll-call of all adult males from the northern wing, which was promptly done by those who had affiliated with Southern Cheyennes; but the 'seceders' refused answer—but at the same time denying that any of their people had gone, and giving 'no excuse' that so many of their people were sick and could not report. In order to meet this objection, on the 8th inst. I sent J. Covington and Dr. Hodge to their camp, the doctor would excuse all the sick men at Covington would enroll them. No men were found too sick to travel, though a great many women and children were, and Covington urged them and fully explained to them that the roll call would not affect those that we found present, but only those who were absent. It was the decision of a large portion of the camp to move in as requested, and stand roll, and they began to pull down their lodge. This decision did not suit the *soldier elite* of the camp, and was stopped under threats of violence to those who left. The following day 9th inst., (Ration day), 'Wild Hog,' 'Little Wolf,' and 'Old Crow,' visited my office and continued to offer excuses. Colonel Mizner present, we each assured them that we had no desire to work a hardship for them, but inasmuch as it was charged that some of their young men had gone, the only way had to verify the charge was to get a count and that the *count must be had*. This we backed up by a firm but friendly statement. Col. Mizner who informed them that his troops were here for the purpose of enforcing the orders of the agent in all lawful and just requests, and that this order was just at right. That night they quietly packed up and struck north, leaving their lodges standing. This information was given me by two Cheyennes at 3 A. M., on the morning of the 10th inst., whereupon I immediately notified Col. Mizner of their escape, and requested that 'all the available troops of his garrison might be sent in pursuit to bring them back and that the Indian police of the agency would accompany as scouts and trailers.' At 5 A. M., 10th inst., they were on the trail. The information gathered from the other Indians was to the effect that they would fight overtaken. The Commissioner was telegraphed promptly of their escape; also Col. M. Wright (trailer) at Dodge City, Kansas in order to put the cattle men and citizens of the border, on their guard, as the Indian would undoubtedly strike some of their herds and likely show resistance, if checked in the march. We now have an Indian courier from Camp Supply, giving the information that the Cheyennes were overtaken on the 13th by the troops from Fort Reno, about fifty miles north-west from Camp Supply, on south side of Cimarron (Red Fork of the Arkansas) and that before hostilities were commenced Major Randbrook, commanding detachment sent two Arapahoe scouts, ('Little Sittin' Bull' and 'Chalk') to their camp (a strong

ld in the sand hills) offering an opportunity to surrender without bloodshed. This offer was made the third time and stubbornly refused. A battle ensued, which is counted by the Indian scout, "Little Sitting Bull," as very strong; lasting over twenty four hours which the troops lost three men killed, two fatally wounded, one of the latter being poor "halk" and two others slightly wounded. The scout says the troops suffered greatly for water, and were forced to come in to [Camp] apply. We feel very anxious in this matter, but yet cannot see how we could have done differently and accomplished better results.

"One thing I do know, that but few persons will be able to fully appreciate the efforts put forth to reconcile them and our nervous strain to the failure to accomplish what we desired. My fears are that the young bucks will scatter on the frontier, and perhaps do some raiding and escape north."

By information through the public papers appears that on the 24th ult. 150 of the 6th Cavalry, with their chiefs Dull and Old Crow, were captured near the Niobrara river, in Nebraska, by the United States cavalry.

From the "Episcopal Recorder."

The Christian in Business.

The Christian in business will meet with one of the severest tests of his Christian principles, of his discretion, prudence, consistent talk and conversation, and of his patient continuance in well doing.

Our poet, Cowper, wrote (what may be very true)—

"The calm retreat, the silent shade
With prayer and praise agree,
And seen by Thy free bounty made
For those that follow Thee."

But the young man in business must bring his principles into contact with the world—with its temptations, its frowns, and its ridicule, as well as its smiles.

While his fellow Christians in more retired walks of life may choose their companions, and shut themselves up, if so disposed, and scrupulously shun all intercourse with worldly-minded persons, he is compelled to be in the world (though not of it), and this may produce a continued conflict of the spirit from which others are happily exempt. But he must not shrink from avowing his principles; it would be at his peril were he to associate intimately with all with whom business brings him into contact, without letting it be known whose he is and whom he desires to serve.

By commercial transactions a man's honesty and truthfulness will also be tried and tested, almost more than by any other occupation in life.

These temptations may come upon him very gradually. Archbishop Leighton has said, "Seldom will Satan come at first with a gross temptation. A large log and a caudle may safely be left together. But bringing a few shavings, and then some small sticks, and then some larger, and soon you may bring the green log to ashes." The apparent and immediate gains by a departure from literal truth, and by the adoption of "business customs," are great and sore temptations to the young Christian, and these temptations never entirely cease, because the more a man's character is known for honesty, whether a servant or a merchant, the more will he be trusted with the interests of others, which, if

he were so disposed, he might the more easily sacrifice to his own aggrandisement.

As long as the Christian lives he will have occasion to arm himself for the temptations and trials of the day's business by private communion with God's word, which reminds him that "lying lips are an abomination to the Lord, but they that deal truly are his delight; that divers weights and divers measures, both of them, are alike abomination to the Lord." In circumstances of trial and temptation, God says, "Let not thy heart envy sinners, but be thou in the fear of the Lord all the day long," and the Christian's response is, Lord, hold Thou me up, and I shall be safe." "Set a watch, O Lord, before my mouth, keep the door of my lips."

There is another "sunken rock" to be guarded against. A thriving business will, like a well managed ship, answer to the rudder and the favorable winds that fill the sails, and it may become the idol of the tradesman's heart; so that he who began business from the laudable motive of providing for his family and fulfilling his duties in that state of life to which it had pleased God to call him, insensibly becomes one of Mammon's most devoted worshippers, and lives as though his sole object in the world were to "buy and sell, and get gain."

Such a one will, doubtless, continue the routine of religious observances which he adopted in the early days of his Christian life, and the words "Holy unto the Lord," originally inscribed on his business, will probably, as to outward things, not be erased; and we know that when a man doeth well unto himself all men will speak well of him; and even "bless the covetous, whom God abhorreth." But the Lord seeth not as man seeth; for man looketh on the outward appearance, but the Lord looketh on the heart, and much that is highly esteemed among men is abomination in the sight of God." "Therefore let him that thinketh he standeth take heed lest he fall."

Progress.

There is a great deal of easy talk about progress, but very little close thought as to what it really means. Eulogies and panegyrics of it are numerous, but exact ideas are few. People believe in it, and congratulate themselves upon it, without knowing very clearly what it is they believe in. The progress of the world is usually thought of as of some vast spectacle passing before the view, great and glorious indeed, and rightly calling forth admiration and joy, but with which the individual looker on can no more meddle, to hasten or retard, than he can interfere to change the procession of the celestial spheres. Such an idea, however, is utterly foreign to the real nature of progress. It is something which can only be wrought out by the combined efforts of individuals, and in which every man and woman has not only a deep interest, but a deep responsibility. In whatever way it is considered, whether as the growth of civilization and the increase of material comfort, or as the development of mental power and the accretion of knowledge, or as the moral improvement of mankind, in the spread of justice, mercy, truth, purity and love, it is wholly dependent upon the spirit and action of individuals, and no one can stand I outsid and decline to take part in the matter.

Each person is a producer and a consumer, but there is a great difference as to the proportions. The idler who is content to live upon the earnings of others and consumes almost without producing, is by so much hindering the material progress of the world, while the selfish one, who only labors that he may enjoy, surely makes the world no richer for his presence. But he whose heart is in his work, as well as in its reward, who strives for excellence as well as for money, who is not afraid of giving to the world more than the world gives to him, but who rejoices to know that while he is pursuing his daily toil he is benefiting mankind—such a one is actively contributing to the progress of the world.

So in intellectual progress. It matters little how highly a man or a woman be cultured, how much knowledge they may accumulate, or how much mental power they may have, if they possess it for themselves alone. The value to the world of a Newton or a Kepler is not in their vast stores of knowledge, or their wonderful insight into nature's secrets, but in the liberality with which they have diffused the results of their labors, and brought what was hidden to the light. This motive should ever be presented to the student as the great aim of his work. It is the soul of culture—that which makes it a living and growing power in the world. No one has a right to absorb knowledge without again diffusing it any more than to accept a living without earning it.

In the moral improvement of mankind, which is of all progress the most valuable, there is a still closer connection between receiving and giving. The very presence of virtue diffuses virtue. He who is pure insensibly purifies others; he who is just spreads the growth of justice; he who is loving draws forth the loving spirit. Yet even here the motive should ever be larger than self. He who is so wrapped up in his own improvement as to forget others, who is so busy cultivating himself that he has no time to stretch forth the helping hand, will awake to find that he has failed even in his small and narrow purpose. The effort of man to perfect himself can never be successful while that only is his aim. It is rather in the forgetfulness of self for the sake of others that self arrives at the best possibilities. It is while actively engaged in promoting the progress of the world that man attains his own highest progress.

After all, it is the spirit that actuates the life, more than any definite endeavor, that is the mainspring of human progress. The civilized world has succeeded in implanting almost everywhere the freedom that gives to each man the ownership of himself. There is, however, a still higher law, which dwells in the conscience and speaks to the heart, declaring that such ownership is only held in trust for the good of the world; that whatever of value may be thus held, whether of physical strength or mental culture, of money or talents, of skill or genius, of character or accomplishments, of wisdom or virtue—all are to be bestowed with a glad heart and a bounteous hand, for the benefit and happiness of others. Those who treasure this law in their hearts and carry it out in their actions, who rejoice in their possessions, their knowledge, their power and their character, that they may make them all subservient to the

pressing needs around them, are the true benefactors of their race, and by the lives of such men and women is the world's progress evolved.—*Public Ledger.*

Isaac Penington on Prayer.

Question. How did God teach you to pray? Surely ye never learned the Lord's prayer; for ye do not practise that among you.

Answer. As God brought us into a sensible condition, so we came to feel our wants, and the need of our souls, inwardly and spiritually. Now, waiting on the Lord in this sense, when we meet together, and when we are alone also, the Lord breatheth upon us, and kindleth in us fervent desires and longings of soul after that which is pure, and to be delivered from that which is impure; and that we might be ingrafted more and more into Christ; and that judgment and condemnation might pass upon all that is not of God in us; and that our hearts might be so united to the Lord, as that we might fear his name fully. For we feel and observe, that all our life and strength flows from the union of our souls with the Lord; and therefore, above all things, we cry for that, and for separation from that spirit, which captivateth into the things of the earth, and in the earthly mind and nature.

So we watch unto prayer, and watch for help from God in our calling upon Him; and are deeply sensible that we have need both of watching and praying continually, the enemy is so near, and the soul's snares and dangers so many. And truly, Christ, our Lord and Master, who taught his disciples to pray formerly, hath taught us also to pray that way; though not to say the words outwardly in the will of men, or in our own will; He hath taught our hearts to breathe after the same things, even that the name of our heavenly Father might be hallowed or sanctified more and more, among all that call upon his name in truth, and especially in our own hearts; and that his kingdom might come more and more, that He might reign more in men's spirits, and the kingdom of sin and Satan be thrown down; and that his will might be done, even in our earth, as it is done in the heavenly places, where all the hosts of God obey Him; and that we might have every day a proportion of the heavenly bread, whereby our souls may live to Him; and convenient food and provision outward also, according as He seeth good, who careth for us. Now, as we are kept in the light, and watch to the light which discovers things, we see what we are kept out of, and what we are at any time entangled in and so trespass against the Lord; and then we are taught to beg pardon, and to wait where pardon is to be received, through our Advocate, even as God hath taught us to forgive. Yet this does not embolden any of the little ones to sin; but they pray that they may not be led (or fall) into temptation; but may witness deliverance from the evil, which the enemy watcheth to betray and ensnare them with. And these cries are put up to Him, who is ready to hear, and who can answer and fulfil the desires of them that love and fear Him; and indeed not only so, but they are also put up in faith, that in the way of God the soul shall obtain and receive what it prayeth and watcheth for. Now we witness this to be true religion, and undefiled before God; and we are sensible that the Lord hath taught us this, and is with us in our faith, which He hath given us; in our obedience,

in our praying to Him in the name of his Son, in our watching, in our waiting, in the silence of our spirits, before his mighty and glorious majesty.

THE GOLDEN SUNSET.

The golden sea its mirror spreads
Beneath the golden skies,
And but a narrow strip between
Of land and shadow lies.

Selected.

The cloud-like rocks, the rock-like clouds,
Dissolved in glory float,
And, midway of the radiant flood,
Hangs silently the boat.

The sea is but another sky,
The sky a sea as well,
And which is earth, and which the heavens,
The eye can scarcely tell.

So when for us life's evening hour
Soft passing shall descend,
May glory born of earth and heaven,
The earth and heavens blend;

Flooded with peace the spirit float
With silent rapture glow,
Till where earth ends and heaven begins
The soul shall scarcely know.

—S. Longfellow.

Selected.

THE PILGRIM.

Art thou a pilgrim? Dost thou travel straight
By Calvary's cross, to find the narrow gate?
Is Christ thy hope, thy trust? yea, day by day
Thy guide, thy staff, thy lantern, and thy way?
Canst thou for Him renounce thy worldly pride?
Is he thy riches? Is all dross beside?
Is He thy sword and shield in perils' hour?
Thy rock, thy refuge, thine abiding tower?
If with thy wealth around thee thou canst bend,
And seek with all thy soul the sinner's friend,
A beggar still at mercy's open door—
Then art thou rich indeed; if not, then thou art poor.

That Rotten Spot.—A man from the car shops of a western city, once testified as follows:

The other day a freight car came into the shop, damaged by a collision. I saw that a new end-sill was necessary in repairing it. We had but one in the shop, and that had a rotten spot one side. I told the man to run it through the planing machine, and we would see then if it would do. When it came through, the rotten spot was on it yet. I laid on my rule, and saw that it would bear considerable planing on that side, and yet answer our purpose, if the spot came out. We put it through again and again and again, until the rotten was all planed away. The stick was framed for its place, and the car was sent out upon the road again.

Now if that stick could have talked, perhaps it would have said, Why do you plane me so much on one side? Why don't you treat me as you treat others? And I would have answered, I am afraid to trust you. If you ever fail it will be at that rotten spot. That must all come out before you will answer our service.

And so my friends, if there is a rotten spot in our characters, there is where we will fail first. The spot in you may not be where it is in others, but God knows where it is. If we will submit, he will plane it all away. It may take us down a good deal. We may not be large enough for a prominent place, or an important place; but there will be a place for us, be it ever so little. And it is better to have the rotten spot out, and do good work in a little place, than to fail in a prominent place.—*Ernest Christian.*

A Monster Skeleton.

The Stuttgart mammoth, which Professor Ward, of the University of Rochester, New York, purchased and brought to this country, is now fully mounted. It is said to be the only restoration of the kind in the world, and beyond question the greatest achievement in zoological science. A Rochester paper gives the following account of the mammoth. The bones from which the original restoration by Martins was made are in the possession of the Royal Museum at Stuttgart (Wienberg). They were of such class and character that by the additional assistance of quantity of hair and other portions of the gigantic frame, found in various parts of the world, a restoration authentic and reliable was easily made. Its fame spread over the entire scientific world, and at once Stuttgart and Martins became celebrated on its account. A few years ago Professor Ward, in one of his European tours, went to Stuttgart and endeavored to negotiate for the purchase of the mammoth. The price placed upon it however, was so exorbitantly high that a bargain could be made. Later, while the learned professor was travelling in Abyssinia he wrote the proprietors, telling them that upon a certain date he should be in Paris on the way to America, and that if they had any proposition to make to him regarding the mammoth, he could receive it there. Arriving at Paris he found a letter asking him to make an offer. He responded by telegraph and his offer was accepted. He therefore delayed his expected return to this country went to Stuttgart, and began the long and tedious job of taking down and packing for transportation the gigantic specimen of past ages. In this task he had the assistance of several skilful artists. The monster restoration occupied, when ready for travel, fourteen large boxes, which weighed in the aggregate over seven tons. The freight upon the animal from Stuttgart to New York was \$682 and from New York to Rochester, by canal, \$86. Several of the largest freight wagons were required to convey his lordship to the working buildings of Professor Ward, at the rear of the University buildings, and a new building had to be erected to accommodate him when he should be dressed in reception regalia, clothed, and, so far as the image of an animal could require, in his right mind. Two skilful artists from Germany, and several others from New York, were procured to assist Professor Ward in the work of putting the affair together again.

Since that time Professor Ward has been busily at work upon the restoration of this mammoth, and now has it complete. Saturday, an opportunity was afforded a reporter of the *Democrat* to examine the wonder, and we can assure our readers it is indeed a wonder for any one to examine. The building erected by Professor Ward for its special accommodation is situated a little east of Cosmos Hall. It contains nothing else than the mammoth, with the exception of the skeleton of an elephant in one corner, which is so small as to be insignificant beside its prehistoric rival. The animal stands facing the door, and hence upon entrance the visitor finds himself suddenly face to face with a startling, but at the same time an innocent looking monster. It stands before him 16½ feet in height, 13 feet between the tusks, 20½ feet from tusks to tail, and 30 feet in girth about

thickest part of the body. The tusks are a foot in thickness at their greatest, and are truly enormous in appearance. The eyes, located high up in the head, are of size quite small in proportion to the size of the body, as is the case with all animals of species to which he belongs. The hair, brown, dark, rough and shaggy, as was that of the original wearer. The legs are about a foot in diameter, and a man can easily walk between them and under the animal's legs standing upright. In order to obtain a satisfactory view of the monster, it is necessary to ascend a flight of stairs into the gallery which has been erected for that purpose. That brings the visitor nearly upon a level with the eyes, and enables him to form a good idea of the great size of the restoration. When the visitors were looking at it from this elevated point, a little daughter of Professor Ward, aged about four years, came into the building, and seating herself upon the platform upon which the monster stands, leaned back against one of the gigantic forelegs and looked up with a smile at the spectators in the gallery. A sterner or more interesting picture could not be conceived. There sat a beautiful little child, born in the civilized year of 1874, side by side with the monster whose birthday no one can tell, save by approximation, away back in pre-historic ages.—*Lite Paper.*

For "The Friend."

Extract from Letters of Margaret Morris.

(Continued from page 84.)

To her grand-daughter M. M. Collins.

3d mo. 9th, 1812.

* * * S— told me thy boy was the prettiest child he ever saw.—don't believe in my dear. I know the danger there is in being too well, and I know, too, how difficult it is to keep our affections within the proper bounds, and that we should look through the gifts to the bounteous Giver of all; as would give us a check when fond nature attempts us to cling too close to the endearing smiles of children. Take warning from what my mother suffered on this score. My two first born sons, to whom my heart was much attached, were suddenly required to be given up, and great was the trial before I could with submission say, "Thy will be done." When this is arrived at, none but the resigned can know what peace is connected with, and from it: 'tis like the philosopher's stone, which is fabled to turn all things into gold; resignation to the Divine Will turns every fleeting dispensation of Providence into real substantial good.

* * * finds very little business to do; at present the times are very gloomy; people seem as if they could not tell what to do in their hands to. Surely there is a better way than this, and happy they who are prepared to enter it, when tears and sorrow if forever cease. 'Tis to that happy land, my love, I am hastening, and hope to meet separated friends to part no more; and when, in due time, I shall be permitted to stand before the "dread tribunal," with all my dear children on either hand, and exclaiming, "Here they are: not one of them is lost!" not the thought of these things animating the drooping mind?

* The war of 1812 may account for this. J. J. S.

To the same.

8th mo. 9th, 1812.

Thy letter brought the truly acceptable tidings of your safe arrival at your peaceful home. May it please the Almighty long to continue it so, is the unfeigned wish and prayer of your affectionate parent.

I cannot tell thee how much I have missed my darling * * * and whether I shall ever be favored to see him again, is to me, very doubtful, as I daily feel increasing weakness and pain in my poor old back; but, through mercy, am yet favored with patience to bear the increasing infirmities of a long and wearisome journey, without murmur or complaint, and hope to hold out to the end, which I think is not far distant; and if I am permitted to steal quietly away without becoming a burden to my kind, affectionate children and attendants, it will be a favor to them and me, which I hope we all shall be thankful for. My kind, good M. is well, and as attentive to me as it is possible for a child to be to a mother—how much have I to be thankful for.

8th mo. 24th.—I have myself got a strange feeling in my head ever since the cough I had in the spring—a sensation as of water falling in a mill, and so loud at times I can hardly bear it, and my own voice sounds like thunder. It may be a gentle warning voice which I wish carefully to attend to, of being bound on the watch tower, and ready at whatever hour the messenger may be sent to call me hence, and to give up my account with joy—for truly I have had a tribulated path allotted to me; yet has not my wayward heart murmured at the appointments of Infinite Wisdom, but with resignation and awe to say, "Thy will be done," and shall I now, when near the goal, repine at the infirmities of age, and wish to be exempted from their effects? May this be far from me, and may I with a thankful humble heart acknowledge that all my sorrows were sanctified to me, and my comforts and blessings multiplied far beyond my deserts. I have been favored to see all my dear children walking worthy of their dear father; and my second offspring, for whom I was anxiously concerned, giving me pleasing hopes of their coming forward in the right way. What more can I wish to live for; a longer life than mine has been, would be too short to commemorate the mercies I have received. Oh! then, may my beloved children, one and all, unite in resigning, when called for, the fond anxious parent, whose life was bound up with theirs, and who presumes to hope a place of rest is preparing for her and her children, where they shall meet to part no more! Once more I salute thee in that love which I hope flows from the true source, and will increase to full fruition.

To the same.

* * * Yesterday, the 8th of 9th month, my dear Margaret, completed nineteen years since I followed my eldest son, thy dear father, to the grave, in the prime of life; and oh! how many days and years of sorrow I have since waded through; yet here I still remain, and who can say, what is yet in reserve for me? This world is a fluctuating changeable scene, and when my measure is filled up, may I humbly hope to be gathered, as a shock of corn fully ripe, into that happy rest where all tears and sorrows will forever cease. Let it be thy daily and increasing care, my precious child, to secure an interest in that happy

land, and then, whether long or short thy stay in this world, all to come will be peace and joy. I am very anxious for thy welfare, both here and hereafter; and when I have been favored with access to the place of prayer, the children of my dear departed son have not been forgotten, and I have besought the blessing of the orphans' Father for my fatherless children. To that Friend I commend thee for counsel and direction in all thy movements, and remain, as ever, thy tenderly affectionate grandmother.

MARGARET MORRIS.

(To be continued.)

For "The Friend."

Incidents and Reflections.—No. 22.

DIVINE HELP.

John Richardson relates that in his youth he was much afflicted with lameness caused by a disease in one of his limbs, which had resisted all the efforts and skill used to heal it; and with a stammering tongue, which was a disengagement to him in yielding to the duty which he felt to be laid upon him to speak to the people as a Gospel minister. Soon after he gave up freely and cheerfully to answer the Lord's requireing, he says,—The Lord healed me of my lameness; and then I cried unto Him, that He would also heal my tongue of its stammering, believing that the Lord was able to take away the impediment of my tongue, as He was to stop the violence of that humor which had attended my body, and had a recourse to my leg, and made it sore from above the ankle to the knee; and notwithstanding several men had given their advice and had showed their skill, all proved ineffectual, until I came to believe in Jesus Christ, and to press through all to Him, and to touch the skirt or lowest appearance of His blessed truth and power, in which I found true healing virtue to my soul, and also to my body, and to my tongue, even to my admiration; so that I did not only speak plain in the testimony the Lord gave me to bear, but also spoke plain in my intercourse with men.

When he had taken cold, it often caused sore throat which so affected his voice that he could scarce speak so as to be heard. On one of his religious journeys, he found himself in this condition, and sat in a meeting under great exercise of mind. "Having," he says, "left all, as I believed, to do what the Lord required of me, and yet I apprehended myself, by means of this affliction not likely to be of any service; and after some reasonings, and a fervent seeking to the Lord to know the cause of this great trouble, and withal to bring my mind to a true resignation to the will of God in this, and in all the trials the Lord might see good in his wisdom to exercise me in; I had not been long brought into this devoted and resigned state to be and to do what the Lord would have me do, but oh! I felt of the virtue of Christ as a sweet and living spring, by which I was healed: I was, and am to this day (when I remember the Lord's kind dealings with me), very thankful to Him."

When John Richardson visited the West Indies, he landed at Barbadoes on a Sixth-day of the week, so ill of a violent fever, that his life was considered in danger. The next day but one, he went to a meeting, though with great difficulty, being very weak. During his sitting there, he says, "Under much weak-

ness of body, yet quiet in mind, the living virtue or heavenly power of Christ sprang up in my inward man, like healing and suppling oil, which so effectually helped me every way, that I could say feelingly and experimentally, miracles are not ceased; for I was raised beyond my own expectation, and all others who knew my weak state, to give testimony to the glorious coming and manifestation of Christ in power, spirit, life, light and grace, for the help, health, and salvation of all the children of men who receive, believe in and obey his spiritual knocks, reproofs, and heavenly calls in the soul, without any lessening to his humanity. Great cause have I, with all the living, to love, value, honor and reverence the great and mighty name of Him who hath helped and healed, by sending his eternal Word of living power into our hearts."

When Thomas Story was travelling in the north of England in the year 1717, he was very unwell, yet he attended a meeting appointed at the request of another Friend. He had been ill all night and had little rest from cough and pain, so that he was unable to go to the meeting till sometime after it had gathered, "yet," he says, "within a few minutes after I was there, I found my heart bound up and surrounded with the gristle of Truth so close and fast, that the healing virtue thereof overpowered every other power in me both of body and mind; so that I had no present sense at all of any ailing." He adds that the distemper afterwards appeared again and ran its course, yet "this work of Truth did not only set my mind over all apprehensions of danger," but facilitated his recovery.

In 1699 he came to Philadelphia in company with Roger Gill, at a time of much and fatal sickness. When they heard of many dying there, before their arrival, Roger was so affected that he said, if he had wings, he could fly to his distressed friends. After sometime, he was taken with the prevailing distemper. As meetings had been appointed for Thomas, he could not stay with his sick Friend. He says, "When I took leave of him he told me he was pretty easy and not very ill: Yet I departed under a very great load upon my spirit, and suspected the worst; for he had prayed in the Yearly Meeting, with great zeal and earnestness, 'That the Lord would be pleased to accept of his life as a sacrifice for his people, that a stop might be put to the contagion;' and I had thought in the meantime, he would be taken at his word, though no such sacrifices, in such cases, are required; only therein appeared his great love and concern for Friends, whom he had come so far to see."

Roger Gill died of the disease, and the fever shortly after disappeared. T. Story does not assert that one event was the result of the other; he simply relates the incidents as they occurred.

The goodness of the Lord is often manifested in the healing of our spiritual, and mental diseases, as well as of those more purely physical. Joseph Hoag mentions visiting a sick woman, who had been long a sufferer. He says, "I had not been long in the house, before it opened in my mind, that the sick woman was in despair,—wearing out in a decline, under the affliction of all the terrifying ideas that the human mind was capable of realizing. I was led to state her condition to her, and how she came into it, and that if she labored to get into the quiet, and then

turn her attention to the Lord, and pour forth to Him her prayers, they would be heard and she would experience reconciliation with her God, and her peace to be made, witnessing the seals of redeeming love, before she went hence to be seen of men no more. * * * I was informed afterwards, by her sister that nursed her, that she soon became very quiet; and sometime before she died, she expressed that she had become reconciled to her Maker, and was willing to die; feeling that peace and love that was an evidence to her that her sins were forgiven, and she should be happy."

Joseph Hoag in one instance, in his own case experienced the power of the Lord both to wound and to heal. He was visiting meetings in New York State at the time. He says: "While at Smith's Clove meeting, the last I expected to attend in this vicinity, except one in course next day, near the close of the meeting it came over my mind with weight, to appoint three more meetings before I left. I exclaimed in my mind, I can not, for I have been five months from home, spring work is coming on, and I am in low circumstances and must go home. I broke up the meeting—a Friend came to me at the door, and expressed that his feelings were such, that he wanted me to have three more meetings, and named the places that had opened to me. I told him bluntly, 'I have set my face homewards, I do not intend to turn to the right or left;' feeling determined that home I would go. I had not rode far, before my horse in a brisk trot, fell through the frost and threw me over his head with such force, that I dropped on my head. A Friend riding behind, said he heard my neck snap like a dry stick, I suppose it parted one joint; I rose upon my feet with a smile as was observed, then fell on the ground, remaining unconscious until I found myself sitting up, being supported, feeling as though I had awoke out of sleep. My neck and head soon commenced paining me very severely: it seemed almost insupportable. I was taken by short stages to the Friend's house, where the meeting was held that I expected to attend, which I think was the next day. I kept my bed mostly that and the following day until meeting time; my neck being swollen with a hard ring around it, that felt more like a bone than flesh, and looked nearly black, so that my case was thought dangerous; but through divine mercy I had a number of hours for reflection, in which my feelings were solemn. When meeting time came, I was placed on a bed in the room where the meeting was held, it being my desire. In the early part of the meeting a voice spoke to me, as intelligibly as ever I heard a vocal sound. 'If thou wilt go back and have the meetings, I, the Lord, that have wounded thee, and stopped thee in thy course, will enable to perform all I require of thee; and this shall be an evidence to thee, that I, the Lord, I speak to thee—thou shalt be enabled to bear a testimony for me in this meeting.' Under the impressions of this voice my mind was brought into a calm and I was led to view, why it was, that I was brought into this situation; and also that it was offensive to the Almighty, and dangerous for man who knew the Lord's will, stubbornly to disobey. My mind was seriously humbled, my spirit contrited before the Lord, and glad to feel the smiles of forgiving mercy once more, being made willing to give up all to His disposal. Towards the close of the meet-

ing, with the help of my companion, unexpectedly to my friends, I rose on my feet, as was enabled, I believe, to bear an acceptable testimony to my friends, and felt great peace of mind for the obedience; my pains all were much mitigated.

"At the close of the meeting I called Friend to me, agreeably to the opening of the light on my mind, and desired him to go to the nearest place, and give notice of a meeting for the next day; and word was sent to the other two places, one in the day and the other in the evening. He answered me, 'I have not faith to believe thou canst possibly do it.' I answered, 'My faith is enough for both of us—the meetings must be appointed. He went and did accordingly. Next day rode twelve miles, reached the place in good season, and had a satisfactory meeting. The following day and evening, attended the other two, to the relief of my mind—having to endure considerable pain, which I endeavored to bear with cheerfulness, as I brought upon myself. I had thought to omit the event; but finding an uneasy feeling to pervade my mind, therefore I have recorded it, much desiring that when my young Friend read these lines, they may pause a little, and behold the tender mercy of Jehovah, who we are brought under the chastening rod, to spare life, even when apparently in the jaws of death; and when rightly sought unto equally tender to forgive, heal, and give ability to do all He requires of us; and then richly to reward the obedient with heavenly peace. Adored forever be His holy name!"

The Present Condition of the World.

At the recent Midway-park conference Dr. Horatius Bonar gave an address on "The days of Noah and the days of the Son Man," which is published in full in the *Christianian*. We give the following abridgment:

One special object which I have in view in speaking on these days of Noah is, that we may have a right apprehension of the present condition of our world. We are so apt to underrate the evil and to exaggerate the good. Not that I would, for a moment, be unthankful for the way in which God is working in the midst of us, by gathering in thousands and tens of thousands everywhere. Still we find evil advancing. We find infidelity advancing. We find atheism growing bold. We find men telling us that all religions are equally right or equally wrong. We find philosophic men and theologians leveling up the false religions and leveling down the true, in order to make one vast plain of all religions together. We find men calling the good evil and the evil good, the sweet bitter and the bitter sweet, putting light for darkness and darkness for light. We find men alive to the gross crimes and immoralities around us, but not in the least alive to the fountain head of all these evils, the want of the knowledge of the true God, for by wanting understanding the people perish. We find many, even among Christians, congratulating themselves upon the progress which the human race is making, and imagining that now, by means of civilization, science, and the like, we shall succeed ere long in regenerating our race, and in regenerating the world. We find among Christian men, strange forms of belief and strange forms of unbelief. Men profess to believe in Christ, and yet there seems to be very much of antichrist in their creed.

find men believing in science, believing in philosophy, believing in literature, believing the illimitable power and progress of our age; we find them believing in all these, but going aside that Gospel of the grace of God, going aside that cross of the Lord Jesus Christ by means of which God will, in his time and way regenerate this fallen world. We are apt to be deceived as to progress. The progress of modern time is, Progress! progress! brethren, what can be the progress of men to know not God? It must be downward, downward. What can be the progress of men without the Holy Spirit? It must be downward, not upward. In all this we see man as an angel of light deceiving the sons of men. In some parts of the world, and in many parts of our land, we see him in his proper forms as an angel of darkness, the emissary of the power of the air. We see him such exercising dominion, and leading men into all the grossness of lust and sin. But we see him in other parts leading men captive as his will far more subtly as an angel of light, putting on fair appearances, and making error so like the truth that it deceives the sons of men, and so leading them on, step by step, till they have left Christ behind them, and left the blood behind them, all the while aiming, "There is no religion like Christianity, and never was there a character upon earth like Christ." Satan, as an angel of light, is doing all this. That which gives such prominence, such interest, and such importance, we may say, to the days of Noah as their termination. They terminated in a flood. That which gives such importance to such solemn interest to our day is this—that it is to terminate in the coming of the Son of Man. The similarity of the two terminations, the marked likeness of the two periods—what a profound solemnity! Just as certainly as the days of Noah ended in the deluge which swept all men away from the face of the earth, so surely shall our days end in that more terrible consummation—not the deluge of water again, but the flood of fire; that fiery deluge in which earth and the works of wickedness, earth and its sons of wickedness, are to be destroyed.

But in our days we are beginning to think at God is, if I may use the expression, so unheated that He has departed from His throne of judgment, and that we are therefore to proclaim only grace, and not coming judgment. But, if judgment be really coming, the Lord be really coming, if the fire be really coming, if the last trumpet be really to sound, and sound in such a way as to waken and alarm the whole earth—then it is time for those who believe that to proclaim the coming judgment. And is not Satan specially engaged in putting aside this coming judgment? He is telling us that there is no future punishment, no hell, and that if there is a hell there is nobody in it; he is telling us that there is no judgment; he is telling us that there is no judge; he is telling us that God is far too kind to punish the sons of men—at least for any lengthened period of time. In other words, he is putting away that very thing which God raised up Enoch to proclaim in the days of Noah—"Behold, the Lord cometh to execute judgment." And we shall be unfaithful to our testimony if we only proclaim the grace, and forget the coming judgment. We shall be unfaithful to ourselves; we shall be unfaithful to the Gospel; we

shall be unfaithful to our God; and, above all, we shall be unfaithful to the dying souls of men. We shall allow the world to go down to hell with a lie in its right hand, so that it shall say to us in the day of judgment, "You never told us about a judgment; you never told us about a hell; you never told us about a devouring fire. You preached a Christ that had come to die; but you never told us of a Christ coming to execute judgment."

I will close with just reminding you of another similarity between the two periods in reference to their termination. "The flood came and took them all away." The flood came suddenly. The flood came overwhelmingly. The flood came after long warning. The flood came with terrible power. So is the coming of the Son of Man to be. When men are saying "Peace and safety," then sudden destruction cometh, and they shall not escape.—*Episcopal Recorder.*

Fruit in Old Age.—I was at the Monthly Meeting at Pardslow, a large body of Friends, where, for a short season, I was permitted to stand as upon Mount Pisgah; for I think I never had such clear views of the efficacy of the power of Christ in effecting the redemption of such as believe in and follow Him. * * * Just before we parted, (James Graham and himself) he made some mention of the mercies attendant upon his old age, in which I thought he evinced much tenderness and liveliness of spirit. It is pleasant and very encouraging to see young people dedicating the strength of their day to the service of the Lord, and to observe the middle-aged steadily bound to the same great cause; but I am never more comforted than when I think I can perceive that those who have been led along in the path of Christian obedience, are flourishing in their old age, bearing the precious fruits of meekness, humility, and brotherly love.—*Journal of Wm. Forster.*

Within the town limits of Glasgow Junction, Kentucky, a wonderful cave has recently been discovered. This has been explored in one direction for the distance of nearly twenty three miles, and a number of embalmed or mummified bodies have been discovered, similar to those found some years ago in the Mammoth and Salt Caves of the same State. The accounts of these discoveries are as yet meagre, but important results are looked for. The bodies had been placed in rude stone coffins, which presented every indication of great age.—*American Antiquarian.*

THE FRIEND.

ELEVENTH MONTH 2, 1878.

To any one conversant with the history of the early Friends, it must be a striking feature of their character to observe their conscientiousness, or sense of strict accountability to their Creator for every voluntary action of their lives. They regarded themselves as acting for God and to Him, not only on those occasions which are usually considered as involving important moral results, but even in such as are thought trivial by the majority of men. William Penn, in writing of them, ob-

erves: "In that day we were an exercised people; our very countenances and deportment declared it." * * * "We held the Truth in the spirit of it, and not in our own spirits, or after our own wills and affections; they were bowed and brought into subjection, inasmuch that it was visible to those who knew us that we did not think ourselves at our own disposal to go where we listed, nor to say or do what we listed, nor when we listed. Our liberty stood in the liberty of the Spirit of Truth, and no pleasure, no profit, no favor, could draw us from this retired, strict and watchful frame. Our words were few and savory, our looks composed and weighty, and our whole deportment very observable." * * * "I cannot forget the humility and chaste zeal of that day. Oh how constant at meetings, how retired in them, how firm to Truth's life as well as Truth's principles! And how entire and united in our communion, as indeed became those who profess one head, even Christ Jesus the Lord!"

That the foregoing was no picture of the imagination, but a true description of the primitive church, as gathered under the instrumentality of George Fox, is amply proved by reference to contemporary writers. It arose from their literal acceptance of the conditions of discipleship as laid down by Christ and the apostles. That Christ's sayings were to be not only heard but obeyed. That a believer in Him was not his own, but being bought with a price, was to glorify God in his body and spirit; in eating and drinking; in the storehouse, the farm, and the domestic circle. Thus the Society became distinguished for its practically moral character among other religious professors, and many of what are known as our minor testimonies grew from this root. It may seem a trivial thing to one whose faith in the immediate presence of Christ with men is weak, to suppose that He would take account of the motive which prompted lifting the hat to a fellow being, or the use of a false compliment in speech to one not a master or mistress; but the faithful christian will regard his Master as requiring implicit obedience when He prohibits his followers from calling men masters, or being so accosted by others in vain titularity. And when He declares that for every idle word that men speak they shall give an account in the day of judgment, and that believers cannot receive false honor one from another, He is to be accounted as profoundly in earnest as when He treats of the weightier matters of the law.

We believe neither the church nor the world can, in this day, dispense with just such conscientious witnesses to the government of Christ in the heart and daily life, as these men and women of two centuries ago were. The present storm in commercial affairs is testing the foundations of many professors whose spiritual edifice has seemed stately and firm to the public eye in fair weather, but which it is now painfully evident was built upon a sandy basis, only to crumble away in the hour of trial. How essential to the true prosperity of general society that there should be more of that class of God-fearing and Christ-loving men and women spoken of by Penn, whose liberty stood only in the liberty of the Spirit of Truth, and whom "no pleasure, no profit, no favor could draw from a retired, strict, and watchful frame!"

We have not received a copy of the printed

minutes of either body claiming to be the "Western Yearly Meeting" though reports of some of the proceedings of both have been circulated. The following extracts from a letter written by one of the Friends composing the smaller body gives some interesting information.

"I may say in much humility that we who withdraw from the larger body last year in order that we might be enabled to hold our meetings for worship and discipline consistently with our profession, and maintain the principles, practices and testimonies of the Society in its earlier days inviolate, have so far been enabled, through unmerited mercy and Divine assistance, to move forward in harmony and unity of feeling, to the rejoicing of many hearts. Yet there are those amongst us who come short of that deep inwelling of spirit before the Lord at all times, which becomes frail finite dependent beings as we are, and who have not experienced that regeneration of heart through the baptisms of the Holy Spirit, which alone qualifies for usefulness in the militant church. But our meetings for worship and discipline are well attended, and are often seasons of comfort, edification and the renewal of spiritual strength, far different from what was experienced in the mixture and confusion.

It was remarked by many Friends that our late Yearly Meeting was the most orderly, quiet meeting of the kind they had ever attended. About three hundred were regularly in attendance, mostly attended consistently with our profession. A deep interest was manifested in the various subjects that came before the meeting by the younger portion of our members, of whom a goodly number were present.

As to their labors of the London deputation and their labors amongst us, time may develop the effects thereof. They asked an interview with us, which was granted in a special meeting for the purpose. They read their credentials from London Yearly Meeting, and a letter from its Meeting for Sufferings to us: each of the deputation supplemented the documents at considerable length; the burden or drift of the whole of which was, that we should return unconditionally to the body we had left. They refused to hear from us any reason or cause why we had taken the step we had, on the ground that they could not go behind the instructions of London Yearly Meeting. I think their labors and presence among us have not unsettled or caused to doubt any of our members, but rather tended to confirm us in the course we have taken.

As to their labors with the members of the larger body, I only know of them by report. We see no good fruit from them yet, but rather the contrary; more overhearing and stringent measures. May the Ruler of the universe, in his great goodness and mercy, be pleased to show them the true position they occupy in His divine sight, is the breathing desire of many amongst us."

SUMMARY OF EVENTS.

UNITED STATES.—A violent storm, which it is stated originated off the coast of Florida on the 29th, struck the Middle Atlantic coast before daylight on the morning of the 29th. Its greatest force appears to have been expended in New Jersey and Pennsylvania. In Philadelphia, the wind for three hours blew with a velocity of 60 to 72 miles per hour. About 100 buildings were ruined, and 118 partly demolished—five persons are known to have been killed and a large number injured.

The rainfall was comparatively slight, reaching only 37 of an inch during the entire storm. The storm of course a few hours before high tide, caused a great rise in the rivers, and serious damage to result therefrom. The southern part of the city known as the "Neck" was submerged, and large numbers of cattle and hogs were drowned. In some parts the water is said to have been as high as the second floor of the houses, and the inhabitants were obliged to flee. The damage to shipping has been light, attended with much loss of life. The storm moved north, passing Montreal about 12 o'clock the following night.

For the three months during which the yellow fever has been epidemic in the South, the total number of deaths probably exceeds twelve thousand; about four thousand in New Orleans, and nearly as many more in Memphis. The present has been the most fatal epidemic since 1853, when there were nearly eight thousand deaths in New Orleans alone, within two months. The loss occasioned through the destruction of crops by neglect, stoppage of trade, and minor causes, is estimated at \$200,000,000.

Snout fell in Kansas and Western Missouri, on the night of the 29th ult. This is stated to be the earliest snow storm in those sections for sixteen years.

Prairie fires continue to cause great destruction of property in Iowa, Nebraska, and Kansas. Many persons are known to have perished in the flames, in different localities.

The estimate of the amount required for the postal service during the next fiscal year is \$39,571,900, which is \$8,315,527 more than the appropriation for the present year.

On the morning of the 27th ult., the vaults of the Manhattan Savings Bank, in New York, were opened by several masked men and robbed of securities to the amount of \$2,750,000.

A party of hostile Cheyenne Indians have recently been captured by Major Carleton's forces, in the Sand Hills near Camp Robinson. The number is variously stated at from 60 to 150.

The imports of merchandise for the past week, at New York, amounted to \$5,563,516; and the exports of home products for the same time \$7,455,045.

The number of deaths in this city for the week ending on the 29th ult., was 265. Of these 137 were adults and 128 minors.

Markets.—Gold 100 l. U. S. sixes 1884, 101; 5-20 coupons, 1895, 103; do 1807, 105; do 1808, 108; 4 1/2 per cents, 105; 4 per cents, 100.

Cotton.—Small, 17 1/2; heretofore at 9 1/2 cts per pound for uplands and New Orleans.

Petroleum.—Grade 74 cts, and standard white 91 cts, for export, and 122 1/2 cts, per gallon for home use.

Flour.—Minnesota extra, \$4.75 a \$5.00; Penna. do, \$4.50 a \$5; putent and other high grades, \$5.75 a \$6.00. Rye flour, \$2.75 a \$3.50.

Grain.—Red wheat, 95 cts, to \$1.00; amber, \$1.00 a \$1.02; white, \$1.03 a \$1.05. Eye, 54 a 55 cts, for western, and 56 cts, for Penna. Corn, 43 a 45 cts, per bushel. Oats, mixed, 24 a 25 cts, and white, 20 a 22 cts, per bushel.

Hay and Straw.—Prime timothy, 55 a 65 cts, mixed, 45 a 50 cts, and 40 a 70 cts, per 100 pounds.

Beef cattle, 3 a 5 1/2 cts, per pound. Hogs, 4 1/2 a 5 1/2 cts, per pound. Lambs, 5 a 5 1/2 cts.

FOREIGN.—Reports from Great Britain indicate but little improvement in manufacturing interests. Of thirty companies engaged in the manufacture of cotton goods, it is said one will pay a dividend of 4 1/2 per cent, and 12 in delicate health for many months, and often expressed a belief that she should not live long, always coupling therewith an earnest desire to be in readiness for the great change when it should come. And although at the last called suddenly from time to eternity yet the remembrance of her faith and hope, and of her innocent and thoughtful every-day life, afford her loved family and friends a comfortable belief that through Divine love and mercy, her spirit has been gathered into the Redeemer's kingdom of rest and peace.

—, at her residence in New Hope, Bucks Co., Pa., the 11th of 10th mo, 1878. SARAH M. BALDRESON, widow of the late John D. Balderson, in the 63d year of her age, a member of Buckingham Monthly Meeting of Friends.

—, at her residence in West Marlborough, Chester Co., Pa., on the morning of the 18th ult., MARY H. COPE, widow of the late Abiah Cope, in the 79th year of her age, an esteemed member of London Grove Monthly and Particular Meeting.

—, at her residence in West Marlborough, Chester Co., Pa., on the morning of the 18th ult., MARY H. COPE, widow of the late Abiah Cope, in the 79th year of her age, an esteemed member of London Grove Monthly and Particular Meeting.

meteoro-logical bureau, in which will be centralized the information relative to the great movements of the atmosphere, and the warnings to be given to the state in the seasons.

The Japanese Government has agreed to grant a lot for the purpose of working some of the coal fields which spread over an immense area in the island of Venice surveys by geologists, it is said, warrant the belief that one or two workings of that kind alone, to produce a yearly yield for hundreds of years equal to that of all Great Britain.

Advices from Santa Cruz represent that the condition of that island since the insurrection is hopeless. About one hundred negroes have been executed, but the remainder of the population remains alive. St. Thomas has lost over 50,000 souls by the insurrection, and that island would not cover the damage done in Santa Cruz.

BIBLE ASSOCIATION OF FRIENDS.

The Annual Meeting will be held in the Committee room of Arch Street Meeting-house, on Thursday, 4th inst., in 8 o'clock P. M.

WILLIAM EVANS, Secretary.

11th mo, 1878.

CHEAP BIBLES.—The American Bible Society have recently issued a copy of the whole Bible at the price of 25 cents, in a small Post-office form. It can be purchased at the Office of the Bible Association of Friends in America, No. 116 North Fourth street, Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankfort, (Twenty-third Ward), Philadelphia
Physician and Superintendent.—JOHN C. HALL, M. D.
Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, at Moncy, Lyncome Co., Penna., on the 15th of 10th mo, 1878, SUSAN E. LIPPINCOTT, wife of James S. Lippincott, aged 53 years, a beloved member of the Hanfield Monthly Meeting, New Jersey. She was possessed of superior intellectual endowments, and was frequent contributor to the columns of this Journal. Being favored in early life with strong religious convictions, which were accepted by her as the vitalizing principle of her life, she was ever ready to give cheerfully and sincerely attached to the Christian principles of Friends. Her last illness was protracted and painful and was attended at times with a fervent exercise of spirit that a state of acceptance with Divine purity might be attained. She was favored with the animation of a blessed immortality, through the mercy of Christ in whom she trusted as her Saviour.

She died before her death she remarked, "I do not know me that is going on around me, but one thing I know, shall soon be in heaven: I have had glimpses of it already." The following morning she observed, "there is a great brightness around me, what can it be?"

Her relative replied, "It is the Sun of righteousness that is shining upon thee." "Yes," she said, "I think it is," and soon after passed quietly away.

—, at Coal Creek, Iowa, the 11th of 9th month 1878, SEMIRA S. EDGERTON, wife of Jesse Edgerton, in the 35th year of her age, a member of New Garden Monthly Meeting of Friends, Ohio. This dear Friend had been in delicate health for many months, and often expressed a belief that she should not live long, always coupling therewith an earnest desire to be in readiness for the great change when it should come. And although at the last called suddenly from time to eternity yet the remembrance of her faith and hope, and of her innocent and thoughtful every-day life, afford her loved family and friends a comfortable belief that through Divine love and mercy, her spirit has been gathered into the Redeemer's kingdom of rest and peace.

—, at her residence in New Hope, Bucks Co., Pa., the 11th of 10th mo, 1878, SARAH M. BALDRESON, widow of the late John D. Balderson, in the 63d year of her age, a member of Buckingham Monthly Meeting of Friends.

—, at her residence in West Marlborough, Chester Co., Pa., on the morning of the 18th ult., MARY H. COPE, widow of the late Abiah Cope, in the 79th year of her age, an esteemed member of London Grove Monthly and Particular Meeting.

George Moore.

For "The Friend."

(Continued from page 90.)

George Moore was an energetic, prompt business man, who acted with great decision and quickness on whatever was brought before him. Without these qualities, he would have been altogether unable to accomplish the great amount of business which he transacted, both of his own private affairs, and the multitudinous concerns of a public and charitable nature, which gradually devolved upon him in the later years of his life.

As an illustration of his character his biographer relates, that at one period, when his health seemed failing from long continued and unremitting labor, his physician advised him, and a change of scene. He decided to take the prescribed holiday. One evening he went home to his wife and said, "You must do my things ready I am going to America tomorrow." She was of course surprised. "Why did you not tell me before?" "Well, was of no use unsettling your mind beforehand. Now I am ready to go." His preparations were easily made—commercial travellers are ready to start in any direction on a moment's notice. His things were accordingly ready, and by cock-crow the following morning, he was off on his journey to America. His papers he says: "I have always been obliged to act from sudden impulse, never giving had time to think or mature my thoughts. I have always been obliged to act on thought, or my poor brain would have been overwhelmed with the variety of subjects I had to deal with." Every minute was precious to him. Nothing tried his temper more as sleepy-headed people, who did not know the value of moments; who came languidly late, some ten minutes behind time. One day he wrote in his diary: "I have not moment to call my own. I fear my temper not so good as it was; for I have been twice irritated to-day. Lord forgive me!"

One of his employees, who afterwards removed to Dubuque, Iowa, thus describes his character: "Few of the many who received a hearty welcome, and the firm, manly of his hand at Whitehall [his Cumberland county seat], knew anything about the king was at his place of business—how all will went to him,—what a change his presence brought, from the basement to the garret overlooking Bow-bells. Speaking to us conveyed the magic word 'George Moore' throughout

the house. Like magic, too, the house was in dry order. There was a shaking amongst the dry bones. The loose joints rattled into their place. The sleepers awoke. Smart young men looked even smarter; and all the machinery worked noiselessly and well.

"When George Moore came round, he could see a department at a glance. No flaw could possibly escape his never resting eye. He was quick and decisive in action as in word. Nothing like an impossibility ever dawned upon him. I remember how furious he used to be at any one who said he 'couldn't do it'! 'Couldn't,' he said, 'What d'ye mean, man? I don't know what ye mean. There's no such word. It isn't in the dictionary. Go, and do it at once.' He could brook no defeat.

"An incident will illustrate this decisive trait in his character. I had been some time suffering from an ailment, and finally had to undergo a painful operation. Unthinkingly, I omitted to tell Mr. Moore. I left the firm, and took lodgings near the surgeon's house. About a week or so after the operation, and while I was just able to walk, a rap, almost like a policeman's, rang through the house. The door was banged open, and a quick firm step mounted the stairs, almost frightening my good old nurse out of her senses. In stepped George Moore! 'What's happened? What are you doing here? Why didn't you tell me?' 'Thank you sir, the doctors have ordered me not to move for at least a fortnight, not to eat any meat, and to lie perfectly still.' I told him this. Do you think it baulked him? Not a bit. His mind was made up. 'Doctor's orders? Fiddle-de-dee. Doctors know nothing. Get back to Auld Cumberland, my lad, and come to me at Whitehall!' That night I dined off beefsteak, and next night I was speeding on my way home at 'George Moore's' expense, in a carriage labelled 'Engaged,' with soft cushions and every comfort that could enable me to rest during my three hundred miles of journey."

This anecdoté illustrates not only the decision of character of George Moore, but also the practical benevolence which was so marked a feature in him. In reviewing his efforts in that line, one may well be surprised at the wide range of his sympathies, the number of charitable institutions with which he was connected, the amount of his private benefactions, and the exertion which he underwent for the good of others. In these exertions and varied labors, the business qualities which had brought him success and made him wealthy (under Providence), enabled him to accomplish far more than most men can do.

One of the first of the charitable institutions, which he was instrumental in founding, was a school for the education of the children of Commercial Travellers, to which body he had long belonged. It grew and prospered. He continued actively interested in it to the close of life, making liberal donations to its funds and laboring energetically for its pros-

perity in various ways. The schools were erected at a cost of £25,000, and 200 children (boys and girls), fed and educated therein. To use George Moore's own words, "I made the institution a part of my business. I canvassed the various business houses in London for funds. I travelled to Bristol, Manchester and Liverpool to summon meetings of the commercial men, and appeal to them in favor of the charity." He was declared to be an "indefatigable beggar," but he did not mind the nickname provided he could get the necessary subscriptions.

For nearly twenty years of his life, he went round in this good work. With his friends, he was often very abrupt. When he entered their offices they knew what he was about. "What is it now, Mr. Moore?" "Well, I am on a begging expedition." "Oh, I knew that very well. What is it?" "It is for the Royal Free Hospital—an hospital free to all, without any letters of recommendation. I want twenty guineas." "It's a large sum." "Well it's the sum I have set down for you to give. You must help me. Look sharp!" The check was got, and away he started on a fresh expedition. He sometimes met with rebuffs, though his perseverance usually carried all before him. Sometimes the money getting merchant would look up from his desk and growl, "What do you want?" "Well, my friend, I want £10 for the Field Lane Ragged School." "Ragged humpus! List people work for themselves, and there would be no need for ragged schools. I began without a penny." "Stop, let me go, I have called upon the wrong man." And away he went to some more charitable soul. On some occasions, he met with rebuff after rebuff. This sickened him for the day; and he went home tired of his work. But he returned to his begging next day, until he had made up the sum that he wanted. "I must not be discouraged," he said: "I am doing Christ's work."

He joined the Free Hospital, he said, "simply because it was in difficulties. I have continued to stick to it, because it is free to all who are poor and destitute, without any order of admittance." In 1857 he raised 1100 guineas for its use—200 out of his own pocket. In 1863 he determined to clear off the mortgage and ground-rent on the premises occupied by it. In working for this purpose, he used to say that he wore off the soles of a pair of boots. On the 7th of 4th month, he says: "I am persevering to get the money to buy the freehold of the Royal Free. Morrisons have sent me a hundred pounds. If I did not think it Christ's work, I should not submit to the unpleasant duty of begging." On the 17th he says, "Had a long day canvassing for money for the Royal Free. I think that few men would take the trouble and unpleasant office of begging money that I do." On the 24th, he says, "Canvassed the West-end bankers for the Royal Free. I am worrying my-

self every day about it." On the 1st of 5th month he says, "I have collected myself £1300 for buying the freehold of the hospital, and obtained about 400 annual subscribers." As might have been anticipated from the zeal manifested, the effort was successful.

He organized a benevolent Institution for the porters in his employment. In his memoranda, we find a reference to this work. He says: "All true Christians are bound to one another by ties of the most sacred and enduring nature, and are conscious of a natural interest in each other's welfare."

He took an active part in the support of reformatories for released prisoners and refuges for fallen women. He became connected with twelve different orphanages, of which he was a liberal helper. He helped the ragged children of the streets, the diseased, the blind and the forgotten. But above all, he helped on the work of education. "We must begin at the beginning," he said; "every boy and girl born into the world is entitled to a fair start in life."

He entered in his diary that he did not wish to die a rich man. "The money," he said, "belongs to God; let me give it back to Him." He made a fortune, he gave away a fortune, and he left a fortune. As he used to say, "Whatever I give in good works, it all comes back again." During the last three years of his life, he gave away an average of £16,000 a year. He not only gave liberally, but he gave with sympathy and conscientiousness.

(To be continued.)

For "The Friend."

The following letter from Arthur Howell, written during the prevalence of the yellow fever in Philadelphia, in 1798, it is thought would be interesting to the readers of "The Friend." It is dated Philadelphia, 8th mo. 21st, 1798, and addressed to his daughter "Mary Howell, at Abraham Davies, Mount Pleasant, upper end of Beggars Town." It is understood that the northern part of Germantown was at that time called "Beggars Town."

"My dear daughter,—[I] received thine of Seventh-day evening, which was acceptable. [I] expect you received mine, with the bundle, on First-day evening; want of opportunity has since prevented any information from me, as well as (my) not hearing from son Joseph, for whose welfare I was much exercised last evening. A letter from him by post this day, dated yesterday, as enclosed, removed my fears; [I] have written him which I intend forwarding to-morrow, if spared.

Times begin to be very serious, and I believe will be increasingly so; hope to continue resigned to my lot, either for life or death, having this comforting belief or hope, with the apostle, whether I live or whether I die, I am the Lord's, in whose protecting Providence I fully rely. [I] expect you have regular information through the medium of the public prints, of the state of this city, if not [I] have it in prospect to have them conveyed to you, as I expect Brown or Fenno, will send them to some stated place in Germantown, of which I mean to inform myself to-morrow if health permits. From present impressions [I] apprehend mother begins to be uneasy about my welfare in not having a line since First-day. [I] wish her with you to rest easy should there be a space between my letters,

as thou knows writing is rather a burden than otherwise, unless I feel a qualification therefore, which I cannot at all times command or come at. Should anything happen me more than common, you will soon hear of it, as bad news fly fast, and my intention is to send word by a messenger as speedily as possible, and in the interim I wish, ye, sincerely so, that my dear offspring would consider their ways and be wise, and not do anything to grieve their mother or cause the enemies of Truth, (or its friends), to reflect on either of us for an apparent want of care in their education. Remember, my dear children, that the fear of the Lord is the beginning of wisdom, and to depart or keep from iniquity is good understanding. Don't suffer your minds to be carried away, or be beguiled with transitory enjoyments, for however pleasant to the natural man, or the eye of human reason they may appear, they are delusive, and in the very enjoyment of which there is no real or solid happiness, but will end in vanity and vexation of spirit or disappointment. It is not so with those super-excellent things which God has in store for those who love Him and keep His law; verily so, for though these may and do meet with exercises, (as none are exempt, as man is born to trouble as the sparks fly upward), yet, they have something in their own minds to flee or recur unto, which supports the drooping mind under every exercise and trial, and the joy of God's salvation flows at seasons into their souls, and raises them above all, so that they cannot only sing of His mercies, but of His judgments too, as on the banks of deliverance. I have enlarged far beyond my expectations when I sat down to write; but so it is, and may it prove like a good legacy left by an exercised father for his children's welfare. I have never coveted riches for you, my dear children, though many might, or may suppose it has been the bent of my mind in pressing business as I have; but as a wise man once observed in my hearing, Mankind were very wrong in judging, or forming their judgments about industrious men, calling them worldly minded; it is not, added he, the most industrious that are the most worldly minded; thanks be to God, in that I know this, not only from heartfelt experience, but observation. How many have I seen, who, not endowed with an industrious turn of mind, and by some thought not to be worldly minded, when the poor and necessitous have applied to them for assistance, turn from and reprove them, or order them (with a stern countenance and speech, and perhaps a heart barren, or void of feeling another's woe), to go to the house of employ, or apply to the overseers of the poor; saying, I pay my poor tax, &c. Alas! for such, saith my spirit; where is their love to God; "Inasmuch," was the language of dear Jesus, "as ye did it not unto one of them, ye did it not unto me." I don't wish to dwell on this subject, neither do I know or see at present why I am thus led; but as David said, "Is there not a cause." My dear Master blessed me with an industrious turn of mind from my youth up, and had it not been so, where had I been, or what would have become of me, in the days of trial and distress, when I could not find peace anywhere but in my cellar among my leather, with my mind turned to God. I leave it as a legacy to you, my dear children, and to the world at large, that industry, under His kind Providence, has been my preservation. Let

none, then, judge from the sight of the poor, &c., but judge righteous judgment, (as we prophesied concerning our dear Saviour,) as then they will not err, but at times will led into sympathy with others where the little expected it, and instead of judging, they will commend and justify. Be industrious my children; never eat the bread of idleness be content with small beginnings (which is oftener blessed than great ones.) "Fear God and keep His commandments," for this is the whole duty of man, then I have no doubt in blessing He will bless you, and in multiplying He will multiply you, not only will the fatness of the earth, but above all, will the dew of Heaven, which is the desire of your poor father, more than for you to obtain the riches of the east.

ARTHUR HOWELL.

For "The Friend."

English Prison Notes.*

To those familiar with the valuable services of Elizabeth Fry in connection with prison visitation and reform, it will be a surprise & disappointment to learn that, consequent upon a recent parliamentary enactment by which all the prisons in the kingdom have been placed under government control, the access to prisoners on the part of religious concerned visitors, has been very much curtailed.

The new Prison Act which went into operation Fourth month 1st of this year, will, it is stated, effect a large saving of money, owing to the closing of many county jails, which are now, it is believed, be dispensed with. These prisons have been closed in Scotland whilst in England and Wales the number has been reduced from 113, in 1877, to 76 in 1881. Above half the jails in Wales have been closed by the new act. In Ireland, however, where the measure might have been especially serviceable—there being some prisons very nearly as many officers as prisoners—the operation of the act was forestalled by the insertion of a clause that each county should have at least one jail.

Nevertheless, experience will show whether this plan of concentration will really be beneficially, or whether, on the other hand it may not prove prejudicial to the moral improvement of the prisoners by fostering the gang system, and thus materially interfere with any effective service on the part of prison visitors. Where, as is the case in many prisons, the industrial labor of the convicts is leased to outside contractors, no encouragement course will be extended to visitors during working hours. The reformation of prisoners is too often made subordinate their present productive value.

But the change most to be deplored in the British government's present management of its prisons, is the rapid substitution of militia control in lieu of that by civilians. It is stated that in the new Prison Board there is but single member who is not connected with the "service;" and further, that the half-dozen Inspectors of Prisons just appointed under the new act, are all soldiers. One of these emphatically expressed the opinion that "irregular" is the fundamental, if not the only principle of prison management. The same increase of the military element extends to the wardens and prison officials generally.

* Chiefly collected from the Report (1878) of the Howard Association of Great Britain.

on this undesirable substitution the *Lancet*, prominent English journal, remarked:

"As a matter of fact, soldiers are not the suitable persons to deal with criminals. They are so entirely imbued with the belief that a man is so much raw material to be tamed and beaten into a required shape, that they overlook the fact of his being a man to be worked by a *mind*. There is no place in the military system, and it is left to the account by military men in dealing with convicts. But it is the mind which is at fault in a criminal. To disregard the mind and moral influences, in such a case, is to over-ride the *pivot upon which everything turns*."

Capt. Macnechie, who is considered to be an authority upon matters of prison discipline, wrote: "The ultimate purpose of military discipline is to train men to act together; that of penal discipline is to prepare them antagonistically to separate. The objects being opposite, the processes should equally be; but we make them the same and reap disorderly." These considerations, it is pertinent at this juncture to remark, may operate disastrously with respect to the aborigines in our country, if they, too, should be placed under exclusive military surveillance.

Upon the subject of the inequality of sentences, and the frequent imprisonment of children in tender years, a committee of the Board of Prisoners having memorialized the Secretary of State for Home Affairs, were asked that the Government should shortly be able to effect some improvements. With respect to offences committed by young children, the opinion was expressed by the Assistant Secretary that "he would like to see youths compelled in many cases to enter into organizations for the future good behavior of their children, and he believed that such a course would satisfy many magistrates. Nothing, in his opinion, could be more injurious to the children than to place them under the degrading influences of imprisonment," it appears that there were incarcerated last year, at a single prison in London, 21 boys not more than nine years of age, and 170 children not over twelve years.

Respecting the general causes of crime, the use of intoxicating liquors is of course placed foremost. Reference is made to the fact that one of the clergy have formed a Temperance Society in three grades, thus: (1.) Those who never drink intoxicants in the presence of their children, or to allow the latter to drink such. (2.) Those who agree only to drink with solid food, or at regular meals. (3.) Those who can abstain altogether. We would say that there is but one safe course of a three for "clergy" and all others, if we desire not to come under the condemnation of those who, like a certain unfortunate mentioned in the report, having many times edged himself over the Bible, to abstain, it in vain, cried out despairingly—"Indeed goodness, I do try; indeed to goodness, I try; but as soon as I see, or smell, the drink, cannot keep myself from it." The report

* Quoted in pamphlet on *English Convict Prisons: the needed Reforms*, by Wm. Tallack.
* To this class of moderate drinkers might be referred the case of a late wealthy merchant of a neighboring city, who, having disinherited his son, a young man of dissipated and intemperate habits, bequeathed the stock of choice wines in his cellar, to his wife. The young man died a few months after his father—the victim of deviated appetites which his own parent's example had

further disseminating the drink-evil and the manifold crimes springing out of the ready licensing of the traffic, says:

"Whilst there is such an overplus of public houses as to constitute temptation rather than supply; whilst the hours they are open are so prolonged; whilst those magistrates who are disposed to be more stringent are counteracted by the facilities for granting 'off' licenses; whilst boys and girls are depraved, in thousand ways, in many 'penny gotts'; whilst a way-faring man may, in many districts, and even in London itself, travel mile after mile, in vain, to find any cheap and comfortable prompt supply of non-intoxicating refreshments; whilst the earnest friends of temperance in Parliament and in the Government are so few; whilst, from day to day, the newspapers contain reports of women and children brutally kicked, bruised, mangled and outraged, through the deluging supply of highly-spirited liquors in every locality; whilst these and other conditions of evil exist—the opposition to them needs to be [intelligently directed, firm in purpose and] unintermitted."

Mis-education and imprudent habits are dwelt upon as two other principal crime-sources. The education which prepares the youth to read nothing but sensation stories and scandalous picture-papers, is of a sort which may well make us exclaim, "Better nothing, than this!" Some advancement appears to have been made in the promotion of prudent habits by the institution of "Friendly Societies," which, now numbering two million members, have accumulated funds to the extent of nearly ten million pounds. In this country, the plan proposed of making the post-offices the depositories of small savings, a small per centum of interest to be allowed by the government, would probably result beneficially in encouraging frugal habits on the part of many who might otherwise be deterred by the formality of opening a regular account in a Saving Fund.

L. P. Alden, superintendent of the State Public School for Dependent Children, Coldwater, Michigan, in an essay recently read at a convention in Pittsburg, gave some interesting facts concerning the diminution of crime and pauperism as resulting from the establishment of industrial schools and the careful training of neglected children.

As a notable instance of the happy results of such efforts in England—where, thirty years ago, Mary Carpenter, of Bristol, was instrumental in founding the first industrial training schools—it was stated by L. P. Alden that, mainly through M. C.'s exertions, more than one hundred strictly preventive institutions for young children not charged with crime, have been established in the kingdom. And whereas, in 1836, before this beneficent system went into operation, the total number of sentences to imprisonment, penal servitude and transportation, amounted to upward of 18,000, yet in 1875, notwithstanding an increase of fifty per cent. in the population, the sentences numbered under 11,000. The surprising, and withal very encouraging, statement is made with respect to the county of Gloucester, (where particular efforts have been put forth to save the neglected children,) that although that county had, in 1836, seven prisons, with an average annual population

* But, is not every public drinking-house a "temptation?"

of 850, there remains now but a single jail—the others having been pulled down or otherwise disposed of. The average number of prisoners for several years has been under 200. Somewhat similar facts with respect to France, Sweden and our own country, were also cited.

Now, as at least three-fourths of all the crimes committed—those at least of which the law takes cognizance—are referable to the use of intoxicating liquors, there would appear to be much hope for the future, if legislators, by firm and intelligent dealing with the rum traffic with the view to its suppression, would thereby co-operate with the efforts being put forth in behalf of neglected youth, to teach them habits of industry, frugality and self-restraint.

For "The Friend."

Extract from Letters of Margaret Morris.

(Continued from page 93.)

To her grand-daughter M. M. Collins.

11th mo. 13th, 1812.

* * * To look back to the year '93, when I had five dear little orphans thrown into my arms, the eldest not nine years old, I seem lost in amazement that I should have lived to see them grown up and settled, and becoming heads of families. I feel as a wonder to myself, and cannot but cry out, "What shall I render to the Lord for all His benefits?" What, indeed, *can* I render, but the tribute of love, gratitude, and praise? And may they ever ascend from a heart prepared to acknowledge its unworthiness, and adore the Hand that has led me and fed me all my life long, and who, in passing through some of the most tribulated parts of a long life, has not left me without a comfortable hope that the most dreary part of it has been under His notice, and the invisible arm of His power has been my support; and now, when near the *close*, I can say, "hitherto He hath helped me." May the same Good Hand, my beloved child, be thy companion in youth, thy stay in the noon of life, and thy evening song when all earthly comforts are withdrawing from thee.

5th mo. 15th, 1813.

* * * All this preface, my dear, is to prepare thee to hear that I have lately had a slight paralytic stroke, which came unexpected on me as I sat at breakfast on Sunday last, without pain, and I wondered what was the reason that my foot dropped out of my mouth; and when some of the family came in, I found on attempting to speak, my voice faltered, and I could not articulate. I sent for the doctor, and told him, as well as I could, that an "embargo" was laid on my tongue, and suspected I had a slight paralytic affection, which he confirmed, and gave me some medicine, which I think has been useful, but I can't speak plainly yet; perhaps it may go over, but I am content. I have written more than I expected, feel tired, and must bid thee tenderly adieu, my own sweet, my darling child, till we meet to part no more.

To the same, without date.

* * * But why should I mourn the absence of your company, seeing that I am myself on the wing, and hourly ready to land on that happy shore where dearest friends will meet to part no more. I shall be glad to know how you get along. I kept you company in sleep, till bed time, and then retired myself,

not to sleep, but to think of you till near morning. Don't let Willie forget us. On telling my dear brother Dillwyn I hoped the children would remember their grandmother, he said there was no danger of that—their forgetting they had one. How natural it is for people to love to be remembered by those they love; and with this selfish love I conclude my scrawl.

To the same. No date.

* * * But a truee to complain, and let me tell thee I have got a nice little "Sedan" to go abroad in, as Ann can tell thee. I have paid several visits, and could not believe the fresh air could have been so enlivening; it seemed as if I never before had felt so revived, and I now more than ever regret that I did not embrace the opportunity of going to New York when thou went first there. Now, I shall never see where you live; but I must content myself with the hope of meeting you in a better and more enduring habitation.

Thy own affectionate mother,

M. M.

To the same, without date.

Although I have hardly strength to guide my pen, I am not willing to omit a good opportunity, as it may possibly be the last attempt I shall ever make to inform thee of my present low and declining health. My life seems wearing heavily away, and I have not strength enough to walk across the room without help, which my good child M. S. is always, like my shadow, at hand to afford. I feel sensibly my obligations to her and others, and that it is not, or ever will be in my power to reward her and them for all their kindness and care bestowed on such an unworthy creature. I am now fixed as on a post of observation, as Young expresses it, "Where the scene, as to outward observation, grows darker every hour," for there is no relief to be hoped for from outward means; but when the mind is supported by the unfailing Helper, these light afflictions, though sometimes hard to bear, are of little account to the mind that can look forward with a hope that, in a little time, all will be over on earth, and the long chastened heart be centered in a happy rest, where the toils and sorrows of a long life will forever cease and be forgotten. If I should live to see thee once more, my dear child, and be permitted to fold thee again to my fond bosom, with thy babes, it is more than I can reasonably expect; but I still look forward to the time.

And now, my dear, I must bid thee adieu, a long adieu, if I never see thee more; yet hope to meet thee in a better place, where long separated friends, parents and children, shall meet to part no more! Susan can tell thee I rode out last week, and was refreshed by the fine fresh air; but, on stepping from the carriage, my feet being heavy with the swelling, I unluckily missed the step, and got a fall, which added to the pain in my back.

M. M.

This appears to be the last letter Margaret Morris wrote. She deceased 10th mo. 10th, 1816.

* It was in this "Sedan" that her grandsons carried her to meeting before it assembled, and sat her in the 2d gallery. To reach the seat at the end of the bench on the middle aisle, but a few steps, was the utmost exertion her rheumatic and palsied limbs admitted; with all this, she was cheerful.

J. J. S.

Incidents and Reflections.—No. 21.

EXERCISE OF FAITH.

The apostle Paul describes Faith as "the evidence of things not seen." By which description he may well be understood to refer to that conviction of the truth of the openings of the Holy Spirit in the heart of man, which gives him as positive an assurance of the certainty and reality of things yet distant and unseen, as if they were actually present and visible. The great object of the saints' faith is and always has been, as Robert Barclay shows in his "Apology," the voice of God speaking in the soul. That voice we are bound to listen to and obey in all things; whether it warns us against danger, points out the way in which we should walk, reproves us for our sins, or leads us to seek forgiveness for our past transgressions through the mercy of God manifested in the atoning sacrifice of the Saviour of mankind.

If we obey this voice of God, which teacheth as never man taught, then we show our faith by our works. But we may hear it, and be convinced of its Divine authority, and yet refuse to submit to its directions; thus manifesting that our faith is a "dead faith," which doth not profit us. By that living faith which is inseparably connected with obedience, the apostle assures as the saints of old wrought many mighty works; and the same principle operates in man to the present day, producing the fruits of righteousness in all in whom they are brought forth.

A striking example of this faith is found in the life of a poor Cornish miner named William Bray, but in his neighborhood familiarly called Billy Bray. He had been a reckless, profane, drunken man for many years; but was converted to righteousness without much outward help, by yielding to the visitation of Divine Grace. He became as conspicuous for his piety and devotion to the cause of Christ, as he had before been for his service to the world, the flesh and the devil. He was a man of much originality of mind, quickness of wit, and decidedly eccentric. Many amusing incidents are preserved which illustrate these traits; but with them all, there was a sincerity and earnestness in his devotion to religion, which made him useful in the circle in which he moved.

The following anecdotes show the unshaking faith with which he relied on the Divine openings in his mind. He says:

"There was Justin T—, who was with me in Debonshire; we were companions in drunkenness and came home to Cornwall at the same time. I was converted before he was; and when I told my comrades what danger the wicked were in, and where they would go if they died in sin, they would persecute me and call me a fool. But J. T. used to say, 'You shall leave that man alone and say nothing to him, for I knew him when he was a drunkard, and now he is a good man; I wish I was like him.' Then my heart went out after J. T. One day when at work in the field, I knelt down to pray for him. The Lord spoke to my mind, 'I will save him soon.' When I next saw him I told him I had good news for him, for while I was out in the field praying for him, the Lord told me he should be converted soon. And so he was. Shortly after his conversion he was taken ill. I saw him many times in his illness, and he told me he

was happy in Jesus, and going to heaven to praise God forever."

On one occasion, in his capacity as captain-dresser, he engaged to dress a quantity of ore, and had to employ a number of young persons. But the general opinion was, that the lot was all but worthless, and for a time it was a great trial to Billy as there would be nothing for him, and worse still, nothing for those under him. "Why, the people will say there's that odd (old) Billy Bray, an old Bryanite, an old rogue, he hath cheated boys and maidens of their wages. A prett' Christian he!" But Billy wrestled and labored in prayer, until he got the assurance that the Lord was on his way. (Dan. x. 9.) "I will bring thee through," the Lord said to him one day while he was praying; to which glorious word he at once answered, "I believe it, Lord, I know Thee wot (Thou wilt) praise the Lord, amen, glory, I don't care now what the devil says. If Thou tell me that Thou wilt bring me through, I believe Thou wilt. And his foot once placed upon the rock, it was not to be moved. The struggle was again and again renewed, but to all suggestion from whatever quarter or they came, his answer was, "I don't care whether the stuff is worth anything or not. The Lord hath told me He will bring me through, and I believe Him. And did the Lord disappoint His servant? I leave 'him at last in trouble to sink?' No! No! On the 'sampling' day the 'stuff' was found to be more valuable than any person expected, enabling Billy to pay the boys and girls their wages, his own, and then have 4s left for himself.

At one time he had a child seriously ill, and his wife feared it would die. She wished Billy to go to the doctor, and get some medicine. He took eighteen-pence in his pocket, all the money there was in the house. On the road he met a man who had lost a cow, and was then out begging for money to buy another, whose story touched Billy's heart, and to him the money was at once given. He said afterwards, "I felt after I had given away that money that it was no use to go to the doctor for I could not have my medicine without money so I thought I would tell Father abt it. I jumped over a hedge, and while telling the Lord all about it I felt sure the 'cheeld' would live. I then went home, and as I entered the door, said to my wife, 'Joey, the cheeld better, isn't it?' 'Yes,' she said. 'The cheeld will live, the Lord has told me so,'" was his answer, and the child soon got well.

During his wife's long illness, which ended in death, he "had many blessed seasons while praying with her, and promises from the dear Lord." At one time the words were so deeply impressed on his mind, "She is mine forever that tears came into his eyes. At another time he was greatly comforted by the conviction, in wrought into his heart by the power of the Holy Ghost, that he himself, his wife and family, should be saved. Therefore he said, "I had no reason to doubt of my wife's going to heaven; nevertheless the devil often tempted me that, because I was not home with her when she died, it was not well with her. But the devil could not make me believe it. Since the dear Lord has settled the matter the old king of the blacks does not tempt me that she is not in heaven. When the dear Lord speaks to His children's hearts, He speaks the truth; He is a God of truth, and all who love Him are children of the truth."

The Swift Meharoe.

The present system of commerce across the Sahara to Soudan has existed from time immemorial. The Carthaginian and Roman merchants used the same paths that are now covered by the Arab caravans. It is evident that the enterprising Carthaginians held a regular communication with Soudan, and that they received their elephants from this country, of which they had a great number. Hannibal, the Carthaginian general, had elephants in his army, and passed the Alps with them in his celebrated march to Rome. African elephants were also found in the train of Scipio Africanus when he made his triumphal entry into Rome, after the conquest of Carthage—thus clearly proving that the Carthaginians had a large number of these animals, and they could only have obtained them from Soudan. It is from the ports of Morocco, Algeria, Tunis, and Tripoli, that the people of Soudan receive their European merchandise; and the Arabs and natives of the Sahara are the only merchants engaged in conducting its trade across the desert. The common camel is almost exclusively used for the transport of goods—the meharoe or the swift camel being reserved for services requiring expedition. It appears that this last animal is an inseparable companion of the Tawarek and Berber. It seems to bear the same relation to the common camel that the racer does to the draught horse; but of all the animals it is perhaps that which, from the nature of the country it inhabits, and of the service it is doomed to perform, has been the least made an object of observation and study. The only country that agrees with it is the central Africa; it cannot live in the northern part of the continent, or in the mountainous country of Soudan; even some parts of the desert do not appear to agree equally well with it. These animals seem to be as well adapted to the mode of life of the Tawareks and Berbers as they had all been cast in the same mould. The meharoe is tall, and, from being of light and slender make, appears to stand considerably higher than the camel; his neck is remarkably long, his legs thin and delicate, and his bunch projects but little. His countenance, like that of the camel, is careless and imperious, but under this sorry aspect and seeming indolence he conceals qualities which might almost make him the king of beasts, a delicacy and gentleness which is proof against every trial, a sagacity resembling that of the dog, and a swiftness far superior to that of the horse. Like his masters, he has physical organization adapted to the region in which his lot is cast; he renders valuable assistance to caravans, when, preparing to set out, generally despatch avant-couriers, mounted on swift coursers, to reconnoitre the route, and ascertain whether it is supplied with water, and whether beset with any dangers. It is said that a good meharoe can travel about eighty miles, day by day, continuously. The mode of rearing this valuable animal is various. As soon as he is born, he is plunged to the neck in fine shifting sand, lest his soft and slender limbs should be bent by supporting the weight of his body, and for fourteen days he is fed on a diet chiefly of butter and milk, the composition and quantity of which varies every day, according to established and well known rules. At the end of a month he is allowed to run; an iron ring is then passed through his nose, and his education com-

mences. When well trained, he displays remarkable sagacity.—*D. Mackenzie's Flooding of the Sahara.*

For "The Friend"

Some Memoranda of the Massey Family.

We believe that many of the readers of "The Friend" will be interested in the honest simplicity of some of the documents that follow; and will feel their hearts touched by the piety, love and living faith that appear in others.

Thomas Wight, of Cork, Ireland, who is first noticed, was the father of Sarah; who married Samuel Massey and removed with him to Pennsylvania in the year 1710. Of this worthy elder, Dr. Baily gives the following account, in his "Rise and Progress of Friends in Ireland."

"In the year 1724, and the 8th of his age, died Thomas Wight, of the City of Cork. He was the son of Rice Wight, minister of the town of Bandon, who was the son of Thomas Wight, who was also minister of the same town, who came from Guilford in the County of Surrey.

His father, Rice Wight, was a zealous man in the discharge of his office, and more devoted and tender in that respect than the generality of the priests, and very strict in the education of his children according to the manner of the Church of England.

His son Thomas served a hard apprenticeship with a clothier in Bandon, and whilst in his service hearing of a Quakers' meeting to be held in that neighborhood, he went to it out of curiosity; but finding that the people sat silent for a long time, he began to be very uneasy and to think within himself, that as he had heard the Quakers were witches, he might be bewitched if he should stay any longer. However, he waited a little longer, until Francis Howgill stood up and uttered these words: "Before the eye can see, it must be opened; before the ear can hear, it must be unstopped, and before the heart can understand, it must be illuminated.

These three sentences, as Francis opened them to the congregation with great clearness and energy, made a deep impression on his mind, and he became, in a great measure, convinced of the truth of the doctrine preached; but the prejudice of education, and the shame and reproach he underwent from his relations for going to the Quakers' meeting, did very much war on the impression received, until Edward Burrough came to visit Friends and the people in the work of the gospel in those parts, whose preaching was so powerful and re-aching to the state of his soul, and accompanied with such an evidence of truth, that he (with many others) was no longer able to withstand it, and now he resolved, through divine assistance, to be faithful, according to the light received, through all difficulties that might attend; and indeed he became as a proverb, and a by word among his relations and acquaintances, which he bore with patience, not running into unnecessary disputations, but rather giving himself up to silence, solitude and reading the Holy Scriptures, and in a short time betook himself to plain language and plainness of apparel, from a principle of conviction in himself, upon which account he was rejected by his relations, and lived for some time with his master, who had a great respect for him because of

his singular faithfulness and trustiness in his service.

In the year 1670 he married Susanna Harwood, and in process of time had a numerous family, whereupon he betook himself to pretty much business, both in the clothing trade and in commissions from abroad, and in all probability might in a short time have acquired a considerable share of worldly riches; but he was stopped in the pursuit thereof by an illumination as he thought, from Heaven, deeply affecting his mind with a sense to this purport; that he could not be heir of two kingdoms. Hereupon he grew more retired from the world, and the concerns thereof, and devoted in his mind to the service and promotion of truth, preferring this before transitory riches; and, particularly, became an able scribe and clerk of the meeting of Cork, and for the Province of Munster, from the year 1680 till his death, discharging this office from a religious impression on his mind, and zeal for the good cause. He was also the person principally concerned in compiling an historical account of the first Rise and Progress of Truth in this Nation, which he finished in the form of Annals to the year 1700, and which was the ground-work of the present history.

He was a man of an exemplary life and conversation, and good conduct in the education of his children, a pattern of plainness, and a diligent attender of meetings both home and abroad, being zealous for the promotion of truth, both in the particular and in the general.

He was seized with an indisposition which proved mortal, in the 9th mo. 1724, under which he showed great composure of mind and resignation to the Lord's will, and on his death-bed testified his great satisfaction that he had not put off the great affair of the salvation of his soul to the last, signifying that God had sealed his salvation to him, to the great comfort of those present.

The following notice from the Journal of Joseph Pike, will show the esteem in which Thomas Wight was held by his friends. He says: "The Half Year's Meeting recommended that every Province Meeting should appoint *clean handed and faithful* Friends, to inspect and visit every particular meeting, family and person, &c. When the aforesaid minutes came to our meeting relative to the nomination, Samuel Randall and myself, with our dear friend and elder Thomas Wight, and some others, were appointed to the service.

His son Joshua thus describes the last sickness of this good man. He is writing to Sarah Massey, his own sister, and daughter of the deceased.

Cork, 11th mo. 23rd, 1724.

Dear Sister Sarah, * * * Now I tenderly desire thee amongst the rest of thy sorrows, (she had lost her husband and some of her children,) and great exercises, to labor to be patient and thankful for what the Lord has been pleased to do and try us all with. * * * It hath pleased the Lord in great mercy to take our dear and honored father to Himself. [He] departed this life the 9th day of the month past, about four in the evening. * * * having kept his bed about a fortnight. * * * My two sisters Susanna and Betty were both with him, who were tenderly concerned for him, as likewise all Friends, * * * [he] fell as it were into a lethargy all the first day of the week and most part of second day, being

the time of a Province meeting, but after meeting was over, several of his dear Friends both of the Province and of Cork, came to visit him; upon which he roused up as from sleep, and being renewed in his spirit, after being joyful to see them, broke forth into great tenderness, signifying to Friends, that though he was under great affliction and weakness of body, yet what he enjoyed inwardly of the Lord's refreshing presence was more than tongue could tell, saying, "It was well for him, that he missed not the day of his visitation, and that it would be happy for thousands, that at such a time as this was, that they may experience and feel what he then enjoyed, being sensible of his salvation sealed to him," with many more such like sayings, to the great satisfaction and overcoming of his friends, children and relations, some [of whom,] he being so filled with the love of God, that though a pretty great number of Friends would be in the room, yet [he] would speak to them by way of counsel in particular and general, and after having had a large time and opportunity with several ministering Friends and elders, &c., he taking his leave of them so heartily, as that he could scarce part with them, saying, "Oh! don't leave me yet; stay a little longer; are you going away?" &c. He then seeing his grand-children about him, put forth his arms to them, and tenderly embracing them all, exhorted them to fear the Lord and be obedient to their parents, saying, "Honor your parents that your days may be long in the land which the Lord your God giveth you," "and beware of pride and haughtiness and the vain fashions of the world;" and more to this purpose, adding, "Many of our Friends are growing into great height and pride." And remembering that one of his grand-sons was wanting, desired him to be sent for, * * * when come, he said to him, "Richard, I have something to say to thee; thou hast been disobedient to thy parents, and [has] been a trouble to Friends by thy conversation, and hast taken up to liberty and loosed the fashions of the world, and thou hast been often admonished by Friends," and giving him good advice, charged him with great earnestness to remember the words of his dying grandfather. Then clearing him self of what was upon his mind (it being the evening of the Province meeting aforesaid,) [he] called for me, and said, "Joshua, I have cleared myself to my grandchildren, and have had several good opportunities with Friends, and now I desire to be kept quiet, and not to be disturbed." * * * He remained after this for about twelve days, * * * during which time, several ministering Friends had opportunities with him, to his and their great satisfaction; and at the conclusion of one little meeting by his bedside, with lifted up hands, said, "Friends, we read that, Jacob said, 'The Lord was in this place, and I knew it not,' but we can say, the Lord [is] in this place and we are sensible of it," and so concluded in praise to the Lord. * * * He was sensible to the last, helping himself, being but very little trouble to the nurse, tenders, or those about him, and seemed to waste away gradually without much pain, and for seven hours of his last, was quiet and still; he drew his breath fine and easy, only short, without sigh or groan, (as could be perceived,) and departed this life the 9th day of the month, about four in the evening, and the 11th instant following,

his corpse was carried to the meeting house, and at or many living testimonies to the truth in which he lived and died, with mention of several of his dying words, he was decently accompanied to the grave [by] many Friends and others. * * * I conclude

Thy loving and affectionate brother,
JOSHUA WIGHT.

(To be continued.)

The Feather Business.

The business done in New York city alone in a single year is almost incredible, especially when one considers that plumes are only one small unit among many unnecessary requirements of fashion. The forests and marshes of the whole world contribute to a well stocked feather emporium. Ostrich plumes, natural, colored, make into a thousand different forms of trimming, skillfully knotted and curled into "willow feathers" or combined with other species of plumage—marabou, natural, or adorned with trembling spangles; peacock skins and tails; breasts of glossy grebe and blue heron; delicate egrets; the iridescent purple and green head and skin of the Impayan pheasant; thousands of humming birds, birds of paradise, red birds, birds green, black, yellow, blue—of every conceivable tint and mixture, are found here, each suggestive of foreign lands and wild forest life.

The chief business in feathers is with ostrich plumes, which are used for every variety of purpose. They come principally from South Africa, although the long soft Egyptian feather known as the Mogador, is of a finer quality than the "Cape" feather, and brings a higher price. The Cape feathers are pure white, often tipped and streaked with a soft gray tint. Some varieties are gray throughout and of the most delicate texture. Those from the wild Egyptian bird are sometimes as long as twenty-four inches, and the down on each particular spine is longer and thicker than on those from the Cape. They are of pure white, or of an almost invisible yellow tint. The price per pound, which contains from eighty to a hundred long feathers, runs as high as three hundred dollars for the best qualities. There is often a considerable quantity of guano and other dirt, which must be carefully removed by the manufacturer. Acids are used in cleansing feathers, after which process they are assorted and prepared for the market. The thick quill is scraped with glass on the under side until about half its substance is removed, which leaves the feather soft and graceful from stem to tip. Many are left in their natural purity, or soft gray coloring, while others are prepared in various tints to suit all tastes. The feather manufacturer uses mineral dyes adapted to the delicate nature of his plumes. Cloth dyes should never be applied to valuable plumes, as however well the feather may appear at first, it is rotted, its natural gloss and softness gone forever, and it remains only a sorrowful relic of its former splendor. A feather once dipped in cloth dye soon wears out and can never be renewed, while it may be cleansed or dyed every season by a professional worker in feathers, and still retain its brilliancy and valuable qualities for years.

Marabou, egret, and some other of the light, airy plumes, are sold in quantity by the ounce, and are worth from eight to sixteen dollars, according to quality. Birds which are imported whole, like humming-birds, birds of paradise, and hundreds of more common vari-

eties, are reckoned by the dozen or hundred. Thousands of humming-birds are brought from South America. The Indians shoot them with blow-pipe made from a small palm from which the pitch is removed, leaving a polished bore. The tiny birds are in this way stunned and captured without injury to their exquisite plumage. They are rudely stuffed, the wings secured by a narrow strip of paper fastened tightly around the body and in this form they reach the feather manufacturer, who then cures them with acids, arranges them artistically securing the wing open by means of fine wires, and displays them, a gorgeous show of glistening color, in his cases. Neither humming-birds nor whole birds of any kind are as much in use as a few years ago, and it is to be hoped the fickle changes of fashion will soon put an end to the wholesale slaughter of these small denizens of the forest and meadow.

No plumage is of more service to the manufacturer than that of the peacock, whose magnificence has been called the "consummation of art in feathers." Every feather on this noble bird is turned to some use; its long tail plumes, the tuft upon its lordly head, every one of its glistening scales, are of value.—Harper.

For "The Friend."

In the Morning of Life.

"Oh, that we had hearkened to the commandments of the Lord, then our peace would have been as a river, and our righteousness as the waves of the sea."

How forcibly was this impressive language brought to my view, while meditating on the condition of the younger members of our religious Society, as it is presented to our view at the present day, as we behold with sadness the wide departures in many ways from that ancient purity that was once so visible in the lives of those young in years, in an earlier period of this Society, when there was nothing too near nor too dear for them to part with for the cause of Truth, and to gain that peace which the world cannot give neither take away, but ever flows as a living stream into the hearts of all the true followers of the Lamb; which was their strength in weakness, riches in poverty, and a present help in every needful time. Even amidst persecutions, and while their parents were many of them in prison for bearing precious testimonies, they faint not, but were as bright and shining lights, and faithful to their leader, in spreading the precious cause of truth and righteousness in the earth, still holding their meetings in the face of their persecutors; for they chose rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season, esteeming the reproaches of Christ greater riches than the treasures in Egypt, for they had respect to the recompense of reward.

But let us query thus with ourselves, and you with me, my friends, How is it with us at the present day? Do we feel the assurance of that same unfailing Arm of power underneath to support! Do we follow the same inshining light! Do we experience his ways to be ways of pleasantness, and all his paths to be paths of peace! Do we take heed to the same small voice in the soul, speaking as never man spake, but to deny ungodliness and the world's lusts, and live soberly, righteously and godly in this present world! Or do not some rather endeavor to persuade themselves that these

very small things, or say there is plenty time yet to think of these things; go thy way for this time, at a more convenient season will call for Thee. But, oh! are there not any who can but mourn day after day because of these things, feeling that they have snatched of their own to do any good for themselves, or others; yet for Zion's sake, all they not rest, and for Jerusalem's sake they will not hold their peace, until the righteousness thereof goes forth as brightness, and a salvation thereof as a lamp that burneth, at which shall we arise and shake ourselves from the dust. Oh! loose thyself from the hands of thy neck, captive daughter of Zion, then shall we ag in shine with more brightness, showing to the world the pure fruits of the Spirit, as in the days of old and as in former years. Then shall we hearken to the commandments of the Lord. Then our peace will be as a river, and our righteousness as the waves of the sea. J.

Iowa, 10th mo. 28th, 1878.

For "The Friend."

The Chemistry of Plant Growth.

It is intended in the present article, to name one of the most important substances which plants use in their growth, the manner in which they are taken in as food, and the sources whence they may be derived. Modern chemistry has revealed some of the mysteries which hang around plant growth, while it leaves others still in the dark. It tells us that the addition of cell to cell, under the influence of the vital power, depends entirely on the possession of certain elements, which have a definite part to perform in the plant economy; some of them being universally distributed, the necessary accompaniments of all vegetation, others being only adapted to the appetites of certain plants; some being taken in from the air, by the leaves, some from the soil, through the rootlets; and that by the addition to the soil of such necessary substances, as are lacking, the farmer may vastly increase the productions of his land.

The four elements of which the great part of the vegetable, as well as the animal world, is composed, are carbon, oxygen, hydrogen, and nitrogen. These united in an almost endless number of combinations, some very simple, some exceedingly complex, form the starch of the potato, the gluten of the wheat, the woody fibre of the tree, the sugar of the cane, and the various acids of the fruits, which give them their diverse flavors. When vegetable fibre is burned, the ash forms but a very small portion of the original substance, and yet but little has passed away with the escaping gases but combinations of these four elements, and vegetable growth consists mainly in heaping, one on another, their less than microscopic particles. Every growing plant is a laboratory, continually taking from the soil and air the necessary elements, transforming them into its particular form of cell growth, and secreting them where needed. There are no blunders made. The starch in the wheat plant is not stopped in the stalk, but goes to the grain. The apple always manufactures malic acid, and not citric. The farmer places his fertilizers in the ground, sure that if the proper conditions are complied with, they will find their way to the right spot.

These elements constitute, then, by far the most important constituents of plant food.

Let us consider their uses, and their sources separately.

The first is Carbon. This is such a universal accompaniment of life, that organic chemistry is considered the chemistry of the carbon compounds. In every particle of vegetable growth, it is to be found one or more atoms of carbon. When wood is burned, with insufficient access of air, the carbon remains, showing all the rings and knots of the original growth. This charcoal is about three-fourths of the volume, and one-fourth of the weight, of the wood used to make it. Charring of vegetable substance is produced, by driving off the more volatile parts, and leaving the black carbon. This may be done by the application of heat, or by the action of some substance, as sulphuric acid, that will unite with them. It is fortunate that a material so essential to plant growth, does not need to be furnished by man. A boundless supply is provided wherever the atmosphere penetrates, which is continually renewed and forever fresh. From the lungs of all animals, from the chimneys of all burning fires, and from all decay, there issues this carbon, combined with oxygen, as an invisible gas. In this combination, it is of no use to the plant. The plant needs oxygen, but it obtains it from other sources. It must then separate the compound, appropriate the carbon, and send out the oxygen. This separation requires no small amount of power. The bonds which hold the molecules of carbonic acid together, are not easily broken. When charcoal is burned, the carbon particles rush to the oxygen particles of the air, and heat and light accompany the union. Now this heat and light, show us the exact amount of force necessary again to break asunder the molecules of the carbonic acid formed. Without noise, without any manifestation of power, the leaves of plants all over the earth, are using the force of the sunlight to effect this decomposition, are taking up the infinitesimal particles of carbon, and giving out the oxygen, to go again on its errand to the lungs of the animal, there to combine with carbon, which is of no use to the higher life, and convey it to the plant. The oxygen particle is the carrier paying its alternate visits to the animal and vegetable life, and in its course removing the poisons from one, and providing for the necessities of the other. Every 10,000 volumes of air contain about 4 volumes of carbonic acid, and the two kinds of life preserve this proportion over the globe. Experiments seem to show that plants derive their carbon almost exclusively from the air. When planted in soil destitute of carbon, they flourish; but when fed with air from which carbonic acid is filtered out, they pine and die. It is evident therefore that man can do nothing to supply this great need of vegetable life. He may safely trust, that natural causes will give all the carbon that natural causes will give all the carbon that the leaves of his crop, acted on by the sunlight, are capable of absorbing. But any other substance which causes a vigorous growth of leaf tissue will increase the machinery of the plant for appropriating this food from the air.

Carbon is in the form of carbonate of lime, or limestone, is entirely useless. The burning in the lime kiln drives off all the carbonic acid, and leaves the quick lime, which slowly dissolves in the soil. Oyster and clam shells, composed also of carbonate of lime, no matter how finely ground, are also without value, while bone dust, containing but little carbon,

is extremely valuable on account of the phosphorus which is one of its ingredients.

Oxygen exists still more plenteously than carbon. Ninety per cent. of all green plants is water, and of this eight-ninths is oxygen. It is also an element of starch, sugar and vegetable compounds generally. This excessive demand is met by an equally abundant supply. The free oxygen of the air is not available, but the roots draw it up in connection with almost all their nourishment. It is combined with all but one of the known elements, with some in many proportions. It constitutes a large proportion of all soil, and fertilizers; even such hard rocks as limestone and flint, contain about one-half their weight of this, in its free state, light, transparent, mobile gas. Man would find it difficult to add fertilizers that were not largely made up of it. He may therefore safely leave all care for it also to the agencies of nature.

(To be continued.)

For "The Friend."

FROM A CORRESPONDENT.

The accompanying extract taken from a letter of John Barclay, written near the close of his life, I have thought might be encouraging to some of the younger readers of "The Friend," who may at times, with heavy hearts, view the fast thinning ranks of the fathers and mothers in the church, and the seeming unfitness of those who most surron, in all probability, take their places. Words like these, coming from one who lived so pure and dedicated a life as dear J. B., may well have weight, even with those of us who have not his bright and holy faith.

S. B. H.

"I am cheerfully confident, that if those, to whom we some what look, as watchers, as seers, as stand-ard-bearers, as counsellors, are removed, (and they are removing,) to their rest,—or, if any of these that remain, should not keep their habitations firm and unshakable, but turn aside in any respect from the ancient testimony,—that He who raised up such a people as we were at the first, will never cease to raise up others, and put forth some into the foreground,—into the very seats of the unfaithful. I have seen it wonderfully in my short day,—I have read it of those that have gone before: and therefore, let me never throw away their shield, and weakly compromise the trust devolving on them."

Selected for "The Friend."

From Richard Shackleton to B. C.

Baltimore, 23rd of 9th mo, 1779.

I doubt not, but — has his buffetings and conflicts as well as other folk. The enemies of our own houses watch their opportunity to hurt and annoy us. The enemies of the cross of Christ and of the discipline of the church, wage and have waged long war with the house of David; but whether it be Scripture or not, it is most true, that the Lamb and his followers, will get the victory. Whoever stands on the bottom and ground of Truth, and keeps in the meek, innocent spirit, will assuredly sooner or later prevail.

The continuance of our Christian Society, as a light in the world, depends much on the visited youth giving up all, surrendering at discretion, without any capitalizing, in order to preserve this or that favorite object alive, which ought to be slain. We have many half baked cakes, flitting morning clouds, and

momentary early dews among us. All states have their trials and temptations, and in faithfulness or disobedience lies our increasing strength or weakness. Little trivial circumstances of dress or other light matters are presented by the enemy to young and tender minds. The sure Friend and monitor in their bosoms, dissuades from entering into the temptation; here the conflict begins, army against army; the free agents have to make the choice, which standard they will join, and in this choice is involved their safety, their preservation, and capacity for further growth in holy stability and religious experience. In their making a right choice, and in their diligent waiting for renewed help to persevere in that choice (through Divine mercy,) consists their happiness in time and in eternity.

Thy truly affectionate friend,

R. SHACKLETON.

From R. Shackleton to —

Baltimore, 1st of 8th mo., 1772.

I have a secret hope, thy little ones will grow up to be a help and comfort to thee, and in order that it may be so, and that the Lord may delight to bless them, I doubt not but it is thy solicitous care, to watch over the tender plants, lest any budding of pride, or any wrong shoot spring up and frustrate the gracious intentions of Heaven in any degree towards them; and carefully and assiduously to nurture them up in that simplicity of manners and appearance which Truth leads into. Many parents, it is to be feared in our day, have been deficient in the education of their offspring; checking, hindering and preventing that which ought to be cultivated in them, and cherishing, forwarding and encouraging what ought to be rooted out and destroyed; and hence it comes to pass, that so little tenderness of spirit and amiable simplicity is to be seen in our youth, and very little of a succession of testimony-bearers in its prospect.

One of the first temptations thrown in the way of children after the age of infancy, is a little finery in dress, and the convictions of grace remonstrating against it being resisted, the reproofs of that Divine Monitor, (tho' repeated resistance,) becomes less forcible, less clear and less felt, and so disregarded too much; and hence for want of faithfulness in the little, and in the early discoveries, there is not a right growth experienced, but the contrary prevails, and here is one great reason that the city of our Father's sepulchres lies waste. I write not, as doubting thy care in this respect; but may it be our care, more and more, by example and precept, to train up our children in the way they should go, as the most probable means, with the Divine blessing, of preventing their departure from it in their riper years.

And if there should in our families, fall out some exception to this general rule, yet we shall have the comfort arising from a conscious sense that we have done all in our power, and are clear, in the sight of our great Judge, the chief Shepherd, who committed this little flock to our charge. And being thus consciously careful concerning ourselves and our own private families, we are drawn farther to look over the more extensive family of our religious Society, and as Truth gradually opens our minds, and enlarges and sanctifies our understandings, we may find it our concern to speak a word in the church, and in the families of our friends by way of discipline,

expressive of our own experience and feelings, revolving in the remembrance of others, the zeal and piety and christian care of our forefathers, and magnifying and making known in their eyes, the laws and statutes, the rules and minutes, and queries delivered down to us. This branch of duty also, I doubt not but that has looked at, but a contemplation of the extent and weight of it, and the want of helpmates in discipline, have much discouraged thee from putting a hand to it. I am not for putting myself, nor any other, in forward in this, or any other religious service, than the Master himself shall require, in whose hands are gifts and qualifications, which alone can edify His Church, and in whom alone is the right putting forth, and the times and seasons for it; but there is in the Church a form of discipline prescribed, and when we are at the stated times assembled, for the support of it, having our own hands measurably clean, and our eye single to God's honor, and the welfare of our brethren and sisters, we find a duty in these matters naturally devolving and incumbent on us, as our reasonable service, and as woe is to those who are called to the ministry, if they preach not the gospel, so also, woe is to those concerned in discipline if they do not faithfully and honestly and assiduously support it.

R. S.

Jesus Seen in Death.—The only true light in a dying chamber is the light which comes from "the Light of the World," "Jesus, the Resurrection and the Life." "I see Thee! I see Thee!" exclaimed a devoted Christian in the dying hour. The eye of faith rested on Jesus. It saw not death. O God, grant that in my dying hour I may see Jesus, and never see death!

THE FRIEND.

ELEVENTH MONTH 9, 1878.

SUMMARY OF EVENTS.

UNITED STATES.—The weather report for Tenth month, gives the mean temperature 58.1 degrees—which is nearly one degree higher than the same month in either of the preceding seven years; and more than three degrees above the average of the past eight years. The total rainfall was 2.04 inches. Maximum velocity of wind 75 miles per hour, on the morning of the 29th, during the great storm. At Cape Henry during the same hurricane, the wind attained a velocity of 81 miles, and the damage along this portion of the coast, especially to the life saving stations, is reported to have been heavy.

Telegrams from the South announce that quarantine at Montgomery and Mobile against New Orleans travel, is raised. Through lines to New Orleans have commenced running. It is not however considered prudent for refugees from the cities to return to them.

The annual report of the Patent Office shows 19,657 original applications were received, and 11,110 new patents issued. There were 672 reissues, and 722 patents granted for designs, and 2737 cases were filed. The total receipts of the office were \$734,888, and the total expenditures—\$665,906. Of the amount expended \$50,000 was for the restoration of models injured by the fire last year; 5503 trade marks were registered, against 938 the previous year.

The total coinage of the United States Mints during last month was \$6,255,400, including 2,070,000 standard dollars.

The public debt account for Tenth month, shows a decrease of \$1,708,492. The payments made from the Treasury during same period were, on account of civil and miscellaneous, \$5,339,814.69; war, \$5,174,639.77; navy, \$128,533.55; interior (Indians and Pensions), \$1,296,877.35; total \$13,253,865.56; this does not include payments made on account of the interest or principal of the public debt.

An instance of quick despatch in unloading and loading a large steamship, was the case of the City Bristol—she arrived at this port from Liverpool on 1 26th ult., and cleared for the same port on the 30th.

The British Empire took out recently, perhaps its largest cargo ever shipped from this city. Among the commodities it were 7000 barrels of flour, 100 bales of cotton, 2000 barrels of apples, 1000 tierces lard, and 1400 boxes of bacon. The whole was valued at \$256,000. The exports of grain from Philadelphia this year, in common with the other ports, has wonderfully increased. The amount to 10th mo. 25th, was nearly 25,000,000 bushels of wheat and corn. Last year to same date it was about 10,000,000 bushels; 53,000,000 gallons of petroleum have been exported during the year, against 29,000,000 the same period last year. The imports during 9th mo. 1878, were over \$400,000 in excess of same month last year.

The number of burials in this city for the week ending on the 2nd inst., was 293. Of this number 4 died of consumption, 13 of old age, diphtheria 10, an scarlet fever 14.

Markets, &c.—Gold 101. U. S. sixes 1881, 108 5/8; 105 1/2; 41 per cent, registered, 104 1/2; do. coupon 104 1/2; 4 per cent, 100 1/2.

Cotton, 9 1/2 a 9 1/4 cts. per pound for uplands and Not Orleans.

Flour.—Market dull. Minnesota and Penna. extra \$4.50 a \$4.75; patent and other high grades, \$5.75, \$6.50. Rye flour, \$3 per bushel; corn meal, 2.65.

Grain.—Red wheat, \$1 a \$1.03; amber, \$1.03 a \$1.04; white, 93 a \$1.05. Rye, 50 a 57 cts. Corn, 46 a 47 cts. Oats, 25 a 31 cts. per bushel.

Hay and Straw.—Prime timothy, 60 a 70 cts., per 100 pounds; mixed, 45 a 60 cts. Straw, 65 a 75 cts.

Beef cattle were a fraction higher, 2700 head sold from 2 to 2 1/2 per cent, as to quality. Hogs, 4 1/2 a 5 1/2 cts. per pound. Sheep, 4 a 5 cts. Lambs, good, 5 a 5 1/2 cts. per pound, common, \$2 a \$2 1/2 per head.

FOREIGN.—In London silver is quoted at 50 1/2 per ounce. At this quotation the new silver dollar is worth 85 1/2 cts. in gold value.

English papers speak of the course being pursued by the United States Government in reference to the Canadian Fishery Award, as unfriendly. *The Pall Mall Gazette* says: "All the world can see that we have on our hands just now quite as much as we can well deal with, and a really friendly Power, with a grievance against us, which, holding to its position, would refuse to back out of the matter in an irritating way before the public until our affairs had assumed a more peaceful aspect."

On the night of the 1st inst., a fire occurred at Maynooth College, in the county of Kildare, which destroyed both wings, and slightly damaged the library. The loss is estimated at \$30,000. The students lose all their personal property.

The subscriptions in Paris for the relief of yellow fever sufferers in the United States, amounted to \$24,000.

During the first eight months of this year, the number of arrivals in Paris by rail amounted to 15,820,315. On the 29th of the capture balloon at the Exposition, had made 748 ascensions, taking up 24,604 passengers, while 250,200 persons paid the admission fee to the space beneath. The receipts amounted to \$128,626.20.

According to the last report to the Minister of Public Instruction, there are 24 public libraries in Paris, open to all. The largest is the National, with over 500,000 volumes.

The original estimate for the construction of the St. Gotthard tunnel was £7,500,000. It has since been ascertained that the cost of construction will exceed eleven millions sterling. Plans for raising Switzerland's portion of the debt which is now carrying the quantity.

An international exhibition is to be held in Melbourne, Australia, in 1880. Parliament has granted \$350,000 for the erection of the buildings.

FRIENDS' ASYLUM FOR THE INSANE.
Near Frankford, (Twenty-third Ward), Philadelphia.
Physician and Superintendent—JOHN C. HALL, M. D.
Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board of Managers.

DIED, at his residence, on the 27th of 10th mo. 1878, JOSEPH R. CHEYNEY, in the 71st year of his age, an esteemed member and overseer of Birmingham Monthly Meeting, Pa.

Incentives and Reflections.—No. 21.

EXERCISE OF FAITH.

Billy Bray thus describes his labors in the erection of places for worship in the part of Germantown in which he lived:—

"In the neighborhood where I lived there were a great many dark minded, wicketed people, and chapels were few. The Lord put it into my mind to build a chapel. My mother had a small place; and by one of her little girls there was a small piece of common. The Lord opened my mother's heart to give spot on that piece of common to build on. When my mother gave me the ground, I began to work as the dear Lord told me, and to make away the hedge of my mother's field, and to dig out the foundation for a chapel, or a aisle to worship God in, which was to be called *Bethel*. Many will have to bless God for ever that *Bethel* Chapel was built, for many are in heaven already that were born here. In that day there was but one little house in our neighborhood, at a place called 'Zweitsche'—which belonged to the Wesleyans. Our people had a little old house to preach in, which would hold only twenty or thirty persons. So we wanted a place to preach in, and the people a place to hear in. I had a thorn in the flesh, and so had I. For I had not only the wicked against me; but a little class which was held in the house where we preached; most of them turned against me, and tried to set the preachers against me. But with all they could do, they could not hurt me, though they made me uneasy at times. I went to work, and raised a toke, and got mortar, and set the masons to work. And the dear Lord helped me, for I was very poor, and had no money of my own. But the dear Lord raised me up friends, who lent me money to pay the masons; we got the chapel walls up, and timber for the roof; and then got it sawed and put up. But we did not timber enough by one principal; and asked my Heavenly Father to send me some timber, or money to buy some. That morning there was a Wesleyan local preacher home raying; the Lord said to him while he was in his knees, 'Go down and give William Bray a pound note.' At that time there were no sovereigns; there were one pound notes, rawn on the banks. After he had taken his rackets he came down to me by the chapel, and said to me, 'What do you want a pound

note for?' and I replied, 'To buy timber to put a principal up on *that* end of the chapel. He said he never felt such a thing in all his life, 'for while I was home praying this morning it was always coming into my mind to go down and give you a pound note, and here it is.' So I had the note, went to Truro, bought a principal, put it up on the chapel, and there it is to this day. When the timber was on the chapel, I went round, and got two pounds towards covering the chapel. At that time we had young children, and the youngest of them was taken very ill. When my little maid was taken ill, Satan tempted me that I would take seven pounds to cover the chapel, and I had but two pounds; and our little one would die, and it would take one pound to bury her, and then I should have but one pound left. The devil tempted me very much on that point; for if I wanted it I had a right to take it, for the dear Lord and I in this place kept but one purse; and I paid any money that I earned at mine to the chapel, when I wanted it. So I had but one to give my account to, and that was the dear Lord, the very best comrade that man can ever have. So the devil tempted me that the child would die. While I was of those some tempted, it came into my mind that I should be applying to build this chapel, and it was applied to me. 'Because thou hast built this chapel, I will save thy child's life. And I said, 'Where is this coming from?' And it was said to me, 'I am the God of Abraham, Isaac, and Jacob; he nothing to doubt, it is I, saith the Lord; and I believed it; and it was so. When I went home I told my wife that the child would not die for the Lord had told me so. She replied, 'Don't say so; for all the neighbors say she will die, she is so very ill.' Then went to the mine to work; when I came home the child was not any better, and had not eaten any meat. On that night the child was very ill; and got no better all the forenoon of the next day. She was very ill when I came home to dinner. That day I was afternoon 'score' at the mine. We knelt down to pray; the child was lying in the window-seat; we had for dinner what was very plentiful at that time, fish and potatoes; and in my prayer I said, 'Dear Lord, thou hast said that my child shall live, but she has not eaten any meat yet.' And she began to eat meat there and then. She is living now, and is the mother of ten children; so the Lord made the devil a liar once more. The devil did not do me any hurt; he only made me bolder. I had only two pounds; and the cost would be seven pounds by the time the roof was on. I borrowed a horse, and rode ten or twelve miles from where I lived, up among the farmers, and asked one of them whether he had any need to sell, for I wanted three hundred

sheaves. He told me he had, and that it was £2 for a hundred. So I told the farmer to bring three hundred sheaves to me as soon as he could, and some spears for them. But I did not tell him that I had only two pounds. He brought down one hundred first, and some spears. I had three pounds when he came; so I paid him for the hundred of reed, and the spears, and had a few shillings left. I asked the farmer to bring down the rest of the reed as soon as he could; but didn't tell him I had not money to pay for it. And it wasn't necessary that I should, for by the time the other two hundred sheaves were sent a friend gave me money to pay for it. Then I put a man to work to cover the roof, and that would cost one pound ten shillings with a little other work besides; and when the man came to be paid I had but one pound; so I wanted ten shillings more. The Lord put it into my mind to go into a high road near where a great many people went up and down to work; and the first man I met was P. B. I said to him, 'You have not given me anything yet towards my Father's house.' And he said, 'No; nor do I intend to.' I replied, 'What are you amind' for the Lord to say to you in *that* day. You saw me a hungered, and gave me no meat; thirsty, and ye gave me no drink; a stranger, and ye took me not in; naked, and ye clothed me not.' And he said, 'Well, I don't mind if I do give you ten shillings.' I said, 'That is just the money I want.' So he gave me the ten shillings; and I went home and paid the thatcher.

"After that I wanted timber for the door and windows and forms. A mine had lately stopped; and they were selling off the timber. There was a bargain in timber, for one pound six shillings; but I had not money to buy it. To a friend who asked me whether I had been to the mine, and bought any timber, I said I had not, because I had no money. Then he gave me one pound, and with that and some other sums the Lord sent me from other places I was able to buy what I wanted. As the timber had to be brought home to the dear Lord's house, I wanted a horse and cart. One of our neighbors had a horse, but he said she would not draw anything. I asked him to lend her to me. He told me I might have her, but she would not draw; but I took the mare and put her in the cart, and brought the timber home. I never saw a better horse in my life; I did not touch her with whip or stick, though we had steep hills to come up over. When I took back the mare, and told my neighbor, 'I never saw a better mare,' he said, 'I never saw such a thing; she will not draw with any one else.' That mare was working that day for a very strong company, Father, Son, and Holy Ghost; horses, angels, men, and devils must obey them. If there had been no one there more powerful than Billy Bray, she would have been as bad with him as with anybody else. But, blessed and praise the name of the dear Lord, He said,

* This expression may be misunderstood without an explanation. He freely used his own money, when he had any, but what was given him for the Lord's cause was sacredly appropriated.

'The horse shall work, for the timber is to seat my house;' and what the dear Lord says shall be obeyed.

"I went on and finished the chapel. Then some of them said, 'Now your chapel is done, you shall not have preaching there.' When they said that, I locked up the chapel door, and carried the key home, and hung it to a nail behind the door. I said, 'Lord, there is the key; I have done what Thou hast told me to do; the chapel is built, and there is the key; if it is Thy will the key should stay there seven years, or that it should be taken down every minute in the day, Thy will be done, my dear Lord.' That very day our preacher appointed services at the new chapel even more frequently than I should have asked had I been present."

For "The Friend."

The Chemistry of Plant Growth.

(Continued from page 102.)

The same may be said of *Hydrogen*. This lightest of all gases exists in water, combined with half its volume of oxygen. The necessity of water to plant growth needs no proof. Not all its value, however, depends on the use made of it directly by the vegetable. It dissolves various inorganic constituents of the soil, and puts them in a condition to be absorbed by the rootlets, and carried up in the sap. The plant thus fed becomes better and better fitted to imbibe other nourishment from the air which in decay is partly returned to the soil. Hence a rainy season so far from exhausting the soil, is really a cause of a permanent increase of its richness, unless the farm products are sold off the farm without any adequate return in the shape of fertilizers.

We now come to *Nitrogen*, the only one of the four elements which it is necessary and practicable that man be careful to supply in large quantities to his growing crops. For though it exists in unlimited quantities in the air, in a free uncombined state, the following experiment, repeated several times by English and German chemists, seems to show that, in this state, it can not be used by the plant: A seed was carefully analyzed and the amount of nitrogen in it accurately determined; a similar seed was planted in a soil from which all substances containing nitrogen were excluded. The air with which it was brought into contact was deprived of all gases, such as ammonia, that contained nitrogen chemically combined with other substances, while possessing its full proportion (about four-fifths) of the free nitrogen which always exists in the air. After the plant had grown it was analyzed, when it was found that the contained nitrogen was exactly the same as that previously determined in the seed; thus showing that while it had used all the nitrogen of the seed, it could not assimilate the uncombined nitrogen that existed in such profusion in the air. Whenever, then, a nitrogenous substance is decomposed, and the nitrogen given off into the air, it seems probable that it is lost as plant food. It certainly is, unless there are natural causes in operation which induce the nitrogen to combine chemically with the oxygen, and thereby again become available. The electricity in the atmosphere does produce this combination in a slight degree, as nitric acid is found to be more abundant in the air after thunder storms. It is also claimed that there is sufficient elec-

trical action continually going on between a growing plant and the atmosphere, to effect this union. But all of this seems inadequate to compensate for the amount of free nitrogen that is poured forth into it. All decay of animal and vegetable substances, under circumstances where the nitrogenous gases are not retained, is an occasion of loss. The immense amount of drainage that is daily swept into the sea from the large cities all over the earth, involves a tremendous waste of nitrogen—a waste that will not be recovered for a long time, if at all. The explosive force of gun-powder is due to the sudden formation of gases, which take up several hundred times the volume of the original powder. One of these is nitrogen, derived from nitre, one of the constituents. This goes to swell the vast amount of nitrogen in the air, useless as plant food. Here we may then derive an economic argument against war. If the nitrogen lost, perhaps forever lost in a great battle, had been applied to the sustenance of vegetable growth, there would have been food enough produced to have maintained for a long time, all the victims of the battle field. The old method of warfare by sword and battle-axe, involved no such waste. But the civilization of the present, applied to the barbarous custom, robs the future of its means of sustenance, diminishes the food supply of the earth, and is thus indirectly responsible for famine and want.

It should be stated in this connection, that a French chemist, Basset, claims to have discovered a method of manufacturing ammonia, by combining hydrogen with the free nitrogen of the air. If this is to be relied upon, this most costly portion of plant food may be supplied in inexhaustible quantities and at a trifling cost. Worn out fields may be resupplied with a most indispensable element, and their yield increased almost indefinitely.

The sources of nitrogen adapted to the use of vegetables, are ammonia, and combinations with various bases in the forms of nitrates. These are largely supplied by the manure from barn yards, and give to this article the greater portion, though not all of its value. Ammonia chemically belongs to the class of bases, but is so weak that almost any other base may drive it away. Hence if lime and barn-yard manure are added to the soil at the same time, the effect is to expel the ammonia into the air, and thus lose it. This may be proven by mixing lime in a vessel with moistened manure, when the odor of ammonia is usually distinctly perceptible. Plaster, which is sulphate of lime, has an entirely different effect, tending rather to retain the ammonia, by effecting a combination as sulphate of ammonia, which is dissolved in the soil.

Another source of nitrogen is nitrate of soda, or Chili saltpetre. This is found in large quantities on the western coast of South America, and is supposed to be due to the decomposition of immense masses of sea-weed, which have been washed on shore in geologic times, by storms. It contains about 14 per cent. of nitrogen. It is largely exported, partly for use as a fertilizer, principally as the material from which saltpetre is manufactured, and is not very expensive.

Hence, with the exception of nitrogen, the supply to growing vegetation of the four great organic elements will take care of itself; the carbon coming from the carbonic acid, always in the air, the hydrogen from the water, which

cannot be supplied in large quantities by man and the oxygen in combination with almost every thing which the roots draw up. They remain yet to be considered, certain inorganic elements, more or less widely diffuse through the vegetable kingdom.

For "The Friend."

Some Memoranda of the Massey Family.

(Continued from page 102.)

There is something very touching in the account of a dear child, early gathered to Heavenly home, drawn up by Thomas Wight

An Account of Joseph Massey, son of Joseph and Elizabeth Massey, of Bandon, Ireland.

He was born the 13th of 7th mo. 1707. From his cradle he was observed to be a lively plant, and more than ordinary, subject to the words of his parents, * * * When he came to know between good and evil, he was ready to do the good and refuse the evil. When instructed thereunto, very forward he was to learn his books; and when attained to read in the bible or other religious books he was inquisitive to be informed about such things as started in his mind from thence not usual with children so young; and would be speaking of God and Heaven; and sometimes in the school, would utter very notable expressions which would cause his schoolmates to admire [at] it, and speak of it as never to have heard the like from one so young. When he was about five years old being in a meeting at Bandon, where a Friend was preaching, something that was said, reached his heart [so] that he was broken into many tears; after the meeting was over, his cousin of his asked him what made him to weep; he said he was crying to his Maker for his sins; "for," he said, "if I don't cry to Maker for my sins, He will not forgive my sins." Note the reason understood for his using the word Maker, instead of God, was out of fear of taking God's name in vain, in compliance with the 7th commandment; such was his reverent regard thereto. Several times after that, he was observed to be tendered in meetings in that town.

When his mother removed to dwell in Cork and put him to school there (as his manner was at Bandon to reprove his schoolfellows for speaking bad words, and which they took in good part), he used the same liberty in Cork; for which, some of the scholars derided and mocked him, which so troubled his mind, that he spoke of it to his mother; for he was apt to take notice of old or young, that would speak, or do anything that he thought was amiss.

In his seventh year, he sickened with the small-pox; in which time, words dropped from him (and not only then, but some time before) as from one sensible of his latter end. He would often be relating one passage or another which he had heard or read concerning God or Jesus Christ; as, once he said, "The fear of the Lord is the beginning of wisdom." Another time, "a liar is an abomination to the Lord." Once he prayed to the Lord to deliver him from evil. Another time said, "The Lord knows my misery," repeating it again and again. And added, "The Lord preserve me." He also said over the Ten Commandments and the Lord's Prayer.

Two days before he died, he said to his mother, "I am going out of this world into Eternal Glory—into Eternal Glory." Before

he died, he of himself sat up in the bed and was heard by the nurse and his mother to make a melody to himself; from which his mother said, she thought he had received an earnest of a future glory and said to him, "My dear, what pretty song was that thou wast singing?" At which words, he embraced her with his arms and said, "Oh! my dear mother!" and blessed her, and laid himself down. After which a hoarseness and strangeness took him off from his speech except single words two or now and then. But in the remainder of his time notwithstanding the malignity of his distemper, he kept in patience till he died, being next morning having a blessed pattern and example for all young children and others to follow; that their latter end may be like his, and that they may receive an earnest of that future glory which he did, before they go hence, and be men of no more.

He died the second day of the Sixth month, 1714, not fully seven years old.

THOMAS WIGHT.

The certificates of character and station with which Friends were furnished in those early days, when removing to another place of residence, are much fuller in their statements, and must have furnished much more information to those to whom they were sent, than the very condensed forms which are now in use. This is shown by the following.

Certificates of Samuel and Sarah Massey from the Meeting of Cork, Ireland, to the Meeting of Philadelphia.

From the Men's Meeting of Cork, in Ireland, 7th Fifth month, 1710, to our beloved Friends in the Province of Pennsylvania or elsewhere: where this may come. Whereas Samuel Massey the bearer hereof, one of our Men's Meeting, by occupation a tallow chandler and soap boiler, having had inclinations for several years past (as he informs us) to settle in Pennsylvania, and finding the same to continue with him, concludes, if the Lord permit, to proceed in it. In order to it (as an opportunity is like soon to present) he desires Certificate, as in such cases are usual, and being asked the question, informs us that his going will be clear in respect to debts. So, as Friends have understood his mind before, about two years past, and discoursed him now, what seems needful, have thought it to leave him to his liberty. The chief motive represented to us for his remove is, the want of trade to answer the great rents here and charges of his family, which he hopes will be easier to him in that country; is industrious and careful and his conversation orderly: having a wife and five children besides servants. So, desiring all their welfare, conclude with the salutation of our dear love to Friends.

Your friends and brethren, 18th Seventh month, 1710.

George Griffith, Samuel Randall,
Joseph Pike, Richard Pike,
Ebenezer Pike, Robert Pollock,
Walter Phillips, William Allen,
Tho. Wight, and several others.
At our Three Weeks' Men's Meeting in Cork, 28th Third month, 1711, upon the sorrowful news of the above, Samuel Massey and family being taken by the French, whereby as he writes from Antigua, he was deprived of his certificate and desiring the copy thereof to be sent him; we the undernamed do cer-

tify that the above is a copy of the original, delivered the said Samuel Massey the 18th 7th month past.

Signed in behalf of the said Meeting.

Joseph Pike, George Griffith,
John Dennis, Joseph Forn,
Tho. Wight.

Certificate of Sarah Massey. From Cork, 1710.

From our Womens' Meeting in Cork in Ireland, the 18th of the 7th mo. 1710. To our well beloved Friends and sisters in Philadelphia in Pennsylvania or elsewhere. These are to certify that the bearer hereof our well beloved Friend Sarah Massey, wife of Samuel Massey and daughter of our Friend Thomas Massey of Cork, having intentions of going to America with her husband and tender babes, and being one of a blameless life and conversation and a member of our Womens' Meeting many years, and one whom we are loath to part with, but that her husband's inclinations, bending much for those parts, it can't well be otherwise, we therefore let you know that she is one who is in the true love and unity with us, and accordingly do recommend her to your notice as such; desiring and hoping no other, but that her conduct and example with you there may bespeak the same; so dear Friends in the same true love and bond of unity, wherein our holy fellowship in the Truth stands, we dearly salute you, and bid you farewell in the Lord.

Signed in behalf of the above meeting, by your loving Friends.

Elizabeth Pike, Jane Morris,
Frances Griffith, Martha Devonsher,
Sarah Devonsher, Rebecca Randall,
Mary Shigh, Elizabeth Allen,
Sarah Fenn, Jane Wheldon,
Susanna Wight, and others.

A letter of advice, written by Sarah Massey to her children shortly before her decease, has been preserved, and is subjoined.

The advice of Sarah Massey to her children some little time before her death in 1712.

This is for you, my children, Sarah, Wight, and Mary,* I not knowing how short my time may be, nor how I may be favored with opportunity (many being taken away suddenly) it seems to rest upon my mind to leave these few lines with you as though it were my last words.

I hope I need not say unto you as unto children (you being all arrived to years of understanding) to know your duty, both to God and man, and now that which is required of you is, to walk answerable to what the Lord has been pleased to make known unto you in the secrets of your own hearts.

However, that which I recommend to you is, fear and serve God, and let him be obeyed by you in all things, so that you may expect a blessing to attend your undertakings; be just in your dealings; true to your words; however, be not forward to promise, but when you have endeavor to perform to the utmost, so that the truth may not be evil spoken in your behalf; and you that have children, see that you discharge a good conscience towards them; do not indulge wrong things in them; but be good examples to them in all things, both in plainness of apparel and plainness of speech, and although some make light of it, yet how deeply have many of our worthy elders suffered for it, and many other vain

customs! And see that you be mindful in coming to meeting, the week-days as well as the First-days, and also meetings of business, and remember you were not made to serve yourselves only, but to do some good in your day, age, and generation, according to your several abilities. And if it please the Lord to bless you with outward things, be not lifted up with them, but be ye the more humble, for riches have wings and they flee away. Remember the advice of our blessed Lord which was, "Labor not for the bread which perisheth but for that which will endure."

I have little of this world to leave you, but yet have made a will, and if there be anything, I have left it amongst you, and I desire you may not be as strangers to one another, when I am dead and gone, but live in love and remember what your blessed Lord said, "By this shall men know that ye are my disciples, if you love one another." So to Him who is able to preserve you, and keep you from falling, do I recommend and commit you, desiring you may so walk, as becomes your holy profession, that when day and time in this world shall be no more, you may have a place and an inheritance amongst the sanctified, through Christ Jesus, which is the earnest desire and prayer of your concerned and affectionate mother,

SARAH MASSEY.

Bible Distribution in China.

BY J. THORNE.

In some places, the streets will not allow a moment's stoppage of traffic. To raise a crowd is only too easy in almost any place, but in a frequented street it is hazardous, and the least tendency is met by counter cries to "move on." The man who carries a cup of oil or piece of bean curd, in his hand, becomes as uproarious as the coolie bending under two immense pails of water. All want their own way, and the correct policy is to bend to the wishes of the people. The only way to make known to every one what you have to dispose of is to speak out, as loud as you can, "The Glad Tidings!" so that shopkeepers on both sides of you may understand, as well as the passenger who jostles your elbow. If a person stops you, tell him to move along with you, and thus inform him of the books and price. The counting out of the "cash" is the only hindrance to free locomotion, and it is sometimes laughable to see the deliberation in which one "cash" after another is dropped into the palm of your hand, and as carefully counted, while the human tide is beginning to boil up and surge round you most threateningly. Any one who has tried to stop or stem the current of life on the sidewalk of a large city at home, has only a faint idea of what happens here in China. To get out of this current into an eddy, or open space, where traffic may go on unimpeded though you may have hundreds closing around you, has its advantages and disadvantages. One advantage is, that the crowd will know all about you, and what you have for them; but the intending purchasers on the outskirts of the crowd are prevented from offering their cash, or they do not feel that direct interest the speaker is trying in every way to excite. I have found it of advantage to retrace my steps after walking for miles. There are always people on the lookout for "the book," waiting this chance. Men, women, and chil-

* Married to David Ferris in 1735.

dens frequently have been met in this manner, with their change ready in hand.

From what had told me at Nanking, I was led to expect that the Chinese were generally respectful to foreigners, Nanking Chinese having the name of being particularly ill-mannered; I was not therefore prepared for the storm of abuse I received at some of the canal villages. I am something of an old stager in China travel, both in the north and in the south; but never until now have I had small boys and infants thrown against my legs, and pushed in my way, hurled forward by unruly masses of young and old—"sons of Belial," shall we say? At one place I was so served, besides being hooted and yelled at from one end of the street to the other. I believe at one time the flesh was weak enough to feel the pressure, and I lost my command over the crowd, and when that is gone, goodbye to all comfort! They set upon me to trip me up, and used the small fry as projectiles. I walked on as quietly as I could, assuming the while that I was free as the air, whatever I may have felt. I stopped at a shoemaker's stall at his invitation, and he rose from his bench to get me ten "cash," the crowd being momentarily hushed by the incident, and the shoemaker unaware of any row, so narrow and so close, so twisting and turning are Chinese streets, and the trouble being all behind me. This break allowed me a breathing spell, and from the extreme limit of my weakness I was made strong again, and felt I was permitted to receive all the protection I craved. Leaving the bootmaker bowing over his new treasure, I turned to walk ahead again, when again the crowd became riotous. Entering something like a fishmarket at this juncture, the boys that were pushed against me came to grief. One tumbled over crying. I picked him up, and while doing that another bounced off of me into a tub of fish! The market men were now up in arms. Here I fortunately caught the ringleader, and twisting him around in front of me I told him plainly before the fish dealers my opinion of him, then ordering him off, gave him a shove back. The fish men took my part, and in another minute I was walking indeed, as free as air!

It is like pouring oil on the raging sea to turn and face a crowd of men and boys—the sea even, it may be, of a city—and tell them firmly and quietly why you come to their place, showing them plainly the "Book" so they can read its title, and telling them simply, so that they can understand, the story of Jesus. Then all is plain; for if God is with us, who can be against us?—*Bible Soc. Record.*

The old minute-books of the Society's meetings for discipline, present some curious instances of the zeal of our early Friends; their care of the poor, and their anxiety to carry into every-day practice, the principles of our religious profession. One entry, of the date of about 1674, would in the present day, it is certain, if the principle were acted on, render many of our members subject to *denting*. Margaret Fell and Deborah Salthouse were appointed to visit a female member for the *selling of lace*, which the minute states to be *needless*, and Friends cannot own her in it, nor the covetous *spirit* which sells it for *advantage*. At the ensuing meeting the matter was cleared up by the visitors declaring that the delinquent was broken and tender, and

had promised not to buy any more lace to sell.—*Select Miss.*

LITTLE BY LITTLE.

"Little by little," the tempter said,
As a dark and cunning snare he spread
For the young, unwary feet,
"Little by little, and day by day,
I will tempt the careless soul away,
Until the ruin is complete."

"Little by little," sure and slow,
We fashion our future bliss or woe,
As the present passes away,
Our feet are climbing the stairway bright
Up to the regions of endless light,
Or gliding downward into the night,
"Little by little, day by day."

—*Early Dev.*

TIRED MOTHERS.

A little elbow leans upon your knee—
Your tired knee that has so much to bear—
A child's dear eyes are looking lovingly
From underneath a tath of tangled hair.
Perhaps you do not heed the velvet touch
Of warm, moist fingers holding yours so tight
Our feet are treading the blessings overmuch—
You do arms are too tired to pray tonight.

But it is blessedness! A year ago
I did not see it as I do to-day—
We are so dull and thankless, and too slow
To catch the sunshine till it slips away.
And now it seems surpassing strange to me
That while I wear the badge of motherhood,
I did not kiss more oft and tenderly
The little child that brought me only good.

And if, some night, when you sit down to rest,
You miss the elbow on your tired knee—
This restless curly head from off your breast;
This lisping tongue that chatters constantly;
If from your own the dimpled hands had slipped,
And ne'er would nestle in your palm again,
If the white feet into the grave had tripped—
I could not blame you for your heartache then.

I wonder that some mothers ever fret
At their dear children clinging to their gown;
Or that the footprints, when the days are wet,
Are ever black enough to make them frown.
If I could find a little niddy hat,
Or cap, or jacket, on my chamber floor—
If I could kiss a rosy, restless foot
And hear it patter in my house once more;

If I could mend a broken cart to-day,
To-morrow make a kite to reach the sky,
There is no woman in God's world could say
She was more blissfully content than I!
But ah! the dainty pillow next my own
Is never rumpled by a shining head!
My singing twinkling from its nest has flown—
The little boy I used to kiss is—dead.

For "The Friend."

George Moore.

(Continued from page 98.)

In his dealings with his partners and those in his employment he was liberal and generous. After the death of his two original partners, he gave to the firm, into which younger men had been introduced, the increase in value of the real estate they occupied, and which belonged to him, amounting to £45,000. Not long before his death in 1876, he carried out the wish to reward those who had been so long in his service at Bow-Church-yard, and who had so zealously helped to make his fortune. "I am proceeding," he says in his diary, "to make large presents to each of our employes that has lived about five years in our service. I have long wished to do this, and Mr. Copestake [the son of his old partner] willingly joins me in giving away between thirty-five and forty thousand pounds out of our private money, to our old servants.

They have done much, by their industry a probity, to enable us to do so. It is one of the best acts of our lives."

All who had been with the old firm for fifty years received a donation of £50, and an additional £50 for every other five years' service. No distinction was made as regards position in the firm. That had already been acknowledged in the usual way by successive rises of salary. The reward was for fidelity of service. Even the porters, with one or two exceptions, received the same measure of acknowledgment as the heads of the different departments.

The benevolence of George Moore was in no means confined to public institutions. It began in his own household, all whose inmates even those in the lowest positions, were treated with affection and sympathy, which he once said, "is the best word in the English language." His diary contains this passage, "good master and mistress will seldom I afflicted by bad servants. Woo unto thee, O my house, when thy master and mistress to get thy duty, and when those who rule in thee care not for those who serve!" As consequence he was served honestly and faithfully. At his death, some of his servants had been with him upwards of twenty five years.

The young men and women who lived at the warehouse in Bow Churchyard, were treated as if they belonged to his family. He provided religious instruction, and founded libraries and reading-rooms for them. He got some of the most distinguished and influential men of the day to lecture to them. Finding that many of the married men, with large families had borrowed money of the firm which was a clog to them, he paid them all out of his own pocket, with a remonstrance not to get into debt again.

Finding through the City Missionaries, with whom he was in constant communication that there were multitudes of people in London living together without the ceremony of marriage having been performed, he paid the marriage fees for thousands of persons in order to protect the women and give them a tie upon their husbands. It was all done privately, and neither the person who performed the ceremony nor those who were married, knew the donor of the fees. He did this for about twenty years to the close of his life, and paid out in this way more than £500.

He was the constant resort of young men wanting situations. He kept in remembrance his own early struggles, and felt a lively interest in those adventures. When he could not employ them himself, he took great pains in finding places for them elsewhere. One whom he had thus helped said, that when he called upon George Moore, "he told me there were more hands in his own place than he had work for," but, said he, "keep up your spirits, and I'll get you a place." Accordingly he wrote for me a letter of recommendation to a draper at Blackheath. He said, "If you do not succeed, come to me again, and I will give you a letter until I get you a place." He asked me how much money I had. I told him I had just received a post-office order for three pounds. He said, "you can have the loan of two or three pounds now, or come to me when you have finished your three pounds." He next asked if I had dinied. I answered "yes." "Well," said he, "Cumberland lads can always take two dinners; follow me." He led the way through the warehouse to a private

om, where I dined again. When leaving, he said, "Any time you are passing, come and dine with the young man."

After his young friends had obtained situations, he continued to look after them. He took down their names and addresses in a special red book, and repeatedly asked them to dine with him. There are repeated entries in his diary to the following effect:—

"Dined twenty-two of the boys that I have had in situations. I never forget that I had one to invite me to their homes when I first came to London."

Another feature in Geo. Moore's character as his extensive distribution of religious books. He ordered them by the hundred and thousand, to give to his young men and to send to the home missionaries through the country. As an illustration of this one entry in his diary says: "Bought 552 of *Mr. Cheyne's letters*, and 500 of *Bonar's Way of Peace*, gave them to each of our young people, and to the country-town missionaries. I am always watering other people's vineyards. Let me not neglect my own!" He circulated the Bible far and wide. He sent thousands of copies to Cumberland, to be distributed among the poor people. He distributed it through the work parishes of London by the hands of the City Missionaries. He made presents of it to his young men and women, to his porters and to the poor people whom he entertained. He tried to introduce it into the bed rooms of very first class hotels in Paris. He succeeded in ten cases; but failed in three. His biographer says, he was perpetually giving books. He sometimes had as many books on hand as could stock a bookseller's shop. During the last year of his life he sent out seventeen thousand *British Workmen's Almanacs*.

One of the entries in his diary is as follows: "Again I went out amongst the poor with my missionary, and relieved them. Such fearful filth, rags and poverty!" Many thought it undignified on the part of a rich merchant to go about amongst ragged and filthy people; amongst thieves, tramps and vagrants. He himself said, he felt that nothing could reach to the depth of human misery, or heal such sorrow as *thine's*, but the love of Jesus—the Good Shepherd who earned over them with infinite pity, and laid in His life for the sheep.

It was not only money, but thought and sympathy, he gave to these afflicted people. The poor and the destitute were constantly a his mind. He could not sleep for thinking about them. The weary eyes of the hungry children haunted him.

(To be concluded.)

I entreated them to turn their minds to Christ, the inward Teacher—the Teacher sent of God to teach them the way of life and salvation; and then signified to them that our footing them to turn their minds inwardly to Christ was not to take them off from the Holy Scriptures, or faith in Christ crucified southwardly. Though we press men to believe in the light and to walk in the light, yet we do not declare that, as though they could do it of their own will or power, but that they ought to look to and wait upon Christ or ability so to do. God hath provided a means sufficient for the salvation of men, and his means is Christ Jesus, the one Mediator between God and men, the great and alone sacrifice of propitiation.—*Richard Cardy.*

For "The Friend."

William Penn's Travels in Holland and Germany, in 1677.

In a recent number of the "Pennsylvania Magazine of History and Biography," published by the Historical Society of Pennsylvania, is a paper by Oswald Seltensticker, Professor in the University of Pennsylvania, on the above subject. Its object is to show that, "short as that journey was, it had a very potent influence on the settlement of Pennsylvania, preparing the way for an immigration, that rapidly filled the wooded hills and fertile valleys of the young colony with city farmers, and gave to the population of that State features of a peculiar mould." In fact, that journey, far from needing the accidental circumstance of date for rising into prominence, has an independent interest of its own, that entitles it at any time to careful consideration.

As many of the facts brought to light by this pains-taking writer are interesting, we extract some of the more striking of them.

In this journey, undertaken in the Seventh month, 1677, William Penn's companions were: George Fox, Robert Barclay, George Keith, George Watts, John Furly, William Talloct, Isabella Yeomans (Geo. Fox's step-daughter), and Elizabeth Keith.

There is no question but that in both countries, and notably so in Germany, the doctrine and peculiar habits of the Friends met with a strongly-marked antipathy. The word Quaker, sufficiently reproachful in England, had been adopted in Germany as an epithet designating the very acme of wild fanaticism, unsoundness in religion, and daring innovation. For once, the clergy, the civil government, and the mob were in unison, all assailing what they gracefully termed the Quaker abomination. When a Lutheran or a Calvinist was to be denounced for not strictly keeping within the beaten track, the most damaging reproach that could be hurled against him was that he was no better than a Quaker. The very titles of the books which appeared at that period betray the acrimonious temper that pervades them.

William Penn and his companions "landed on the 26th of that month in Briel, a seaport of Holland, and were there met by several old friends, of whom the journal names Aaron Sonneman, Benjamin Furly, S. Johnson, and Vettekeuken. B. Furly was an Englishman, doing business in Rotterdam, perhaps a brother of John Furly, who belonged to Penn's party. He had joined the Society of Friends in Rotterdam, and became subsequently very useful to Penn as agent for the sale of Pennsylvania lands. The name Vettekeuken, also, is found in the account of the first emigration from Germany. When Francis Daniel Pastorius, in 1683, came to Rotterdam, he took lodgings at the house of his friend Marjacket Vettekeuken, and was met there by Benj. Furly, Jacob Teller, and the others.

"By way of Leyden the travellers, accompanied by Jan Roelof, Jan Arents, and Jan Claus, went to Haarlem, where they attended a meeting consisting of Friends and Mennonites. On the 2d of August, the party, increased by some Friends of Haarlem, Alkmaar, and Emden, arrived in Amsterdam, the famous metropolis of Holland. Pain would we hear from Penn how that busy mart of the world, the Venice of the North, impressed him, what he had to say on the political complexion of

the country, of the people and their ways. But in vain do we look in the traveller's notebook for information of a secular character, remarks on architecture, national peculiarities, government, improvements, scenery, and the like. He had only one object in view, the spread of his faith, and all other interests were sunk, as it were, below his horizon. Holland, it may be briefly stated, was at that time prominent for its progress of war, its maritime enterprise, its art-culture, and learning. After passing through a long series of bloody contests, it had just sustained a war against the combined forces of England and France; with the former peace was concluded in 1674, with the latter hostilities continued while the preliminaries of a treaty were being discussed at Nimwegen. At the head of the government stood William III., by the revolution of 1672 Stadtholder of Holland; he had in this very year espoused Mary, daughter of the Duke of York, thus paving his way to the English throne.

While Penn is silent on the affairs of the world, he apprises us of an event that soon after his arrival occurred at Amsterdam, and which in the history of the Friends, unquestionably, was of great importance—the holding of a General Meeting.

In Amsterdam a congregation of Friends had been in existence since 1657, the year in which William Ames converted Jacob Williamson Sewel, and his wife, Judith Zinspenning. Other Quaker missionaries from England, John Stubbs, Wm. Gator, John Higgins, Stephen Crisp, and Benjamin Furly, who visited Holland shortly after, associated with Ames in gaining proselytes. Small societies sprang up in Rotterdam, Leyden, Haerlem, Alkmaar, Utrecht, and other towns. At length a general meeting was called, and William Penn, with Fox, Barclay, &c., had come purposely to attend it, and to lend their aid in effecting an organization. In the first session (2 August), the establishment of monthly, quarterly, and yearly meetings was determined on; the time for holding them was fixed, questions of discipline and jurisdiction were considered and settled. In the Select Meeting, held the evening of the next day, rules on marriage, printing, collections, and disbursements were adopted. To the Yearly Meeting at Amsterdam, not only the Friends of Holland, but also those in the Palatinat, Hamburg, Lubec, and Frederiekstudd (a town in Holstein), were to send delegates. Thus the system of Meetings, the most simple and democratic that can be devised for the government of religious societies, was to be extended over the Continent in the same manner as it had been introduced in England, and other English-speaking countries. We cannot help noticing here, how much superior the Friends were as organizers to other sects that struggled into existence."

"The harsh treatment to which the Quakers of Dantzick were subjected, had been the occasion of Penn's consulatory letter written in 1673; hence it was not natural that they turned to him for advice, when their wrongs continued unabated. The petition to John Sobieski, drawn up in the name of his suffering brethren, is couched in that fearless, plain, and impressive language, which has the true stamp of a manly soul. '*Le style est l'homme.*' After giving a succinct account of the belief of the Friends, and their reasons for separating from the Church, the petition thus addresses

the king: 'O king! When did the true religion persecute? When did the true Church offer violence for religion? Were not her weapons prayers, tears, and patience? Did not Jesus conquer by those weapons, and vanquish cruelty by suffering? Can clubs and staves, swords and prisons, and banishments reach the soul, convert the heart, or convince the understanding of man? Very opportune allusion is also made to the tolerant principles of Stephen, one of Sobieki's predecessors on the throne of Poland (1576-1586), whom Penn quotes as saying: 'I am king of men, not of consciences; king of bodies, not of souls.'

"What the valiant king thought of Penn's missive is not recorded. That religious opinions conscientiously held should not be interfered with, restrained, or punished by the State, was an idea far in advance of the age, and the reasons that Penn puts forward for toleration, clear and forcible though they are, have even to the present not found general recognition.

"And now, on the 6th of August, the Friends, who had set out together from England, separated at Amsterdam; George Fox, with others of the party, went to Emden, Bremen, Hamburg, and Frisia; Penn, accompanied by Keith, Barclay, and Farly, took the boat to Naerden, and then the stage-coach to Herford in Westphalia, to pay a visit to Princess Elizabeth Stuart, niece of Charles I.

"The abbey at Herford (Herwerden), founded about a thousand years ago, by a grandson of Wittekind, was under exclusive imperial jurisdiction, a privilege, which the town itself had lost by the peace of Westphalia, when it was annexed to the Electorate of Brandenburg. To the abbey still clung certain traditional attributes of sovereignty, the shadow of a court, consisting of a few hereditary dignitaries and other honors, more ornamental than exalted. Elizabeth, who had been solemnly invested as Abbess in 1667, was one of the most remarkable women of her age. She was born Dec. 26, 1618, the year when the war that proved so calamitous to her house broke out, being the oldest daughter of Frederick V., Prince Palatine of the Rhine, who in 1619 accepted the crown of Bohemia, and, soon after, lost in consequence of the unfortunate battle of Prague, not only the newly-conferred dignity, but also his hereditary throne in Heidelberg.

"Thus Elizabeth had from infancy a share in the sad disappointments of her parents. The earlier years of her childhood she spent, in company of two of her brothers, with her grandmother, Juliana, the widowed Electress of Brandenburg and mother of Frederick William, the Great Elector: when she was ten years old, she joined her parents in the Hague, and, naturally averse to frivolous pastimes, pursued the severer studies of mathematics and philosophy with eminent success."

(To be continued.)

Selected.

To habituate children from their early infancy to *silence* and *attention*, is of the greatest advantage to them, not only as a preparative to their advancement in religious life; but as the ground work of a well cultivated understanding. We are almost the only professors of Christianity who acknowledge the use of this absolutely necessary introduction to Christian knowledge and Christian practice. To have the active minds of children early put

under a kind of *restraint*, to be accustomed to turn their attention from external objects, and habituated to a degree of abstracted quiet, is a matter of great consequence and lasting benefit to them. To this they are inured in our assemblies, and to sit in silence with decency and composure: though it cannot be supposed their young and active minds are always engaged as they ought to be; yet to be accustomed thus to quietness, and initiated to curb and restrain the sallies of their youthful dispositions, is no small point gained towards fixing a habit of patience and recollection, and a regard to decorum, which seldom forsakes those who have been properly instructed in this entrance to the School of Wisdom, during the residue of their days.

From "The British Friend."

Man's Salvation God's Work.

"Serious thoughts for the thoughtful, that they may still further consider in the fear of God, what is herein written, and that the inconsiderate may be led to consider from whence the issues of life do flow, and so be led to prostrate themselves in spirit before God."

"Such was the foundation of all the testimonies of Friends at their rise, and such must remain the great distinguishing testimony of the Society, or, in the very nature of things, they must speedily, as a people, pass away, as having no place in God's economy. To everything there is a purpose, so in proportion as the true import of our position as individuals or as a people is lost, must weakness and blindness be our lot, until in the confusion into which we are brought, we are lost in the mass, and our testimony to our God and for the world is lost also, and the question then asked, Where are we?"

"That the great testimony of the Society is not understood by many of its members is a matter that seems too evident, and that many who have undertaken to point out the cause of our weakness as a people, have themselves far from rightly understood that cause, simply from their having so little experimentally known what was the secret of the strength of those principles as propagated by the first Friends. God's work in man in order to his salvation, and the turning of men's minds to this work was their and is our great mission as a people, if we are still to hold our place in the visible Church of Christ upon earth. For however true it is that the Church has to bear testimony to the work of Christ, as finished externally to us, the still greater and all important testimony is to the effect of that work wrought in the soul; that it is that is paramount to the well-being, vitality, and growth of the individual, and consequently of the Church.

Many were, and still are, the forms of man's devising to keep religion alive in the mind of man, but our great testimony is this, that as all true religion alone can spring from God, so He alone by His Spirit can maintain that which He Himself has created; hence our dependent condition as men and creatures, and our necessity to wait in humble dependence, upon the dictates of the Spirit in our daily life and conversation. For as the spirit of a man alone understandeth the things of a man, so the spirit of God alone can unfold to man the things of God.

The work of God in man is first to unsettle, to wound, to undo, before the great Healer can restore, comfort, or bind up. Man's mind

in the fall is separated from God, and consequently is not subject to the law of God nor indeed can be. The first effect of the unsettlement, by whatever means it may be pleased God to use, is to bring man to an inward prostration of soul before God, who he hath offended, and to make the sinner sensible he has no hope but in God's mercy. Thus it is that the Saviour is revealed an Almighty Helper, and the returning prodigal made to feel his salvation is all of God, an having entered into the Holy of Holies, the blood or life of Christ revealed unto him therein and thereby makes covenant with God, if He will be with him, giving him food for his soul as well as for his body, and will clothe Him by His Spirit inwardly as well as his body outwardly, then will God be his God and he will follow wheresoever He is pleased to lead. This is entering into the condition of a true spiritual worshipper, even such a our Saviour said the Father seeks to worship Him, those who do so in spirit and in truth.

"This has been and is the great teaching Friends, being truly old Christianity receive that God through Christ is the spring whence all good comes to man, and that man as man is powerless to effect any good as to his own or his fellow's salvation, unaided by the Spirit of the Lord. So that all man's works fall the ground, however good, unless prompted by the Spirit of Him, who is Lord of heaven and earth. Hence the weakness of man's works and the little good they effect, because so little is the offspring of the child-like nature which is begotten of God. The self-denial that is essential and pleasing to God is that which removes both inwardly and outwardly whatever hinders our coming into perfect subjection to the Divine will. To walk before God is to worship God in spirit and with truth in the inward parts—in short, being a true Friend, as well as a living Christian, because man's dead works are done away; such being dead to the world, but alive in Christ through the Spirit. Here is the true looking-glass for us to behold ourselves in, and by which we may know whether we are bringing forth the fruits of the Spirit, yea or nay; for such as are led by the Spirit are God's and are the Sons of God, and not every one who saith "Lord, Lord, shall enter into kingdom, but he that doeth the will of the Father which is in Heaven."

Friends, if faithful to their principles, cent the people in an entire dependence upon God and a wholehearted and willing obedience to the dictates of his Holy Spirit in the heart and as God is the author of this great work of man's salvation, so it is He, the Almighty One, by His Son and Spirit's work in the heart that can alone carry on, and ultimately perfect and complete it; hence the necessity for the individual mind to watch, and pray for continual preservation. The mind so kept grows vigorous in the fervor, and service of God; it knows God to its habitation and dwelling place. The Gift to such is a precious treasure, but the Spirit stands first, inasmuch as these know that it is only by the Spirit and its teaching the can rightly comprehend the truths contained in that treasure-house.

It is the great mission of the Church to leave the world and to gather out therefrom; but how can that be otherwise than by first knowing the leaving power of Christ in our own hearts, bringing us into subjection

God in all things. For we are called to lead, even as we are called to follow. It is our duty to follow Christ: it is also our duty to lead by precept and example to Christ. That which His Spirit leads out of, or exerts upon, should lead none into, or we become transgressors, and accountable to God for the sins of others. To call all unto a subjection to God, so as to know the government of ourselves, and of the Church to be laid upon His shoulders, whose right it is to rule and reign, both ancient and new, and will admit of no interference. Let all come to honest self-examination in this matter. What works, let us ask ourselves, are wrought in God, and by His power and Spirit? What a stripping would this bring us into, and what an emptying of our hearts before God! such a rending of the heart, instead of the garments, as would indeed lead to a true turning to the Lord, who would then, indeed, have mercy upon us, and pardon still abundantly pardon. We shall then be felt a renewal of power from on high to work for His name, and who will be rich, honored, and adored by a holy people, which may we become in His hand, but if unfaithful and unwilling, God will raise up those, comparable to the stones of the street, who will give glory to His name by bringing forth into the world repentance.

CHARLES W. THOMSON.

Stoke Newington, 2nd mo, 1878.

A Wonderful Escape.

A correspondent of the *Eric* (Pa.) *Dispatch* gives the following account of a remarkable rescue which was accomplished on Lake Erie, five years ago:

In the autumn of 1833 Captain Gilman Appleby, of Conneaut, Ohio, was captain and art owner of the schooner *New Conneaut*.

The steambow was then being built at Conneaut (the North America,) of which Captain Appleby had charge, and was for many years her master. An aunt of his, then residing at Lack Beck, below Buffalo, was at Erie on a visit, staying with a brother, who was then resident of the town. The lady went to Conneaut in company with a nephew to visit her brother there. After remaining for some time she became exceedingly anxious to get home. Captain Appleby, who was busy with the steambow, endeavored to dissuade his aunt from taking the home journey until he could be going out with his vessel, when he could take her home. His efforts in that direction, however, were unavailing, and he had her taken on board the schooner to go to Buffalo in charge of the crew. The vessel being light, and the time of the year August, the captain had entire confidence in the ability of the crew to manage the craft and land her relative safe at her destination. Everything passed off quietly until after the vessel had passed Erie, when a sudden squall struck and rolled her over upon her side, when she was early filled with water, but continued to float. The crew, loosening the vessel's yawl, jumped in, and pulled for the shore, leaving the woman in the cabin, as they supposed, drowned. The party landed at or near Port Clinton, Chautauque County, N. Y., and made their way, as best they could, back to Conneaut. Three days after the accident, Captain Wilkins, of the steambow *William Peacock*, in coming down from Detroit, was brought by Captain Appleby to board the wreck, if he saw it, and if possible get the

body of his aunt out of the cabin, and convey it to Buffalo. Captain Wilkins discovered the disabled vessel drifting down the lake, and after coming alongside, Capt. Wm. Henton, then first mate of the *Peacock*, boarded the wreck and made search. The schooner lay upon her side, and to all appearances, was full of water. A pole was employed, and it was supposed every part of the cabin was touched, and as no object in the shape of a human body was felt, the conclusion was reached that the remains had floated out of the cabin into the lake; hence further search was given up. Two days afterward Captain Appleby came down with a vessel with facilities to right the schooner and tow her into the nearest port, the drowned woman's son being allowed to assist in the recovery of the body. The vessel was finally righted, and when the cabin door had nearly reached a level position, the woman walked through the water and came up the stairs upon deck. She was caught by Capt. Appleby and supported, while her son wept and the sailors screamed. Five days and nights had she been in the water, while a portion of the time she was up to her arm pits. She could not lie down, and what sleep she got was in that position, and all the food she had was a solitary cracker and a raw onion, which floated on the water. She stated that after the vessel capsized and was abandoned by the crew, she found herself alone in water waist deep. The cabin door was open, but the flood was two feet above it, and the sea made constant changes in her position. When Captain Wilkins stopped she could hear the boarding party talk and walk on the vessel, and, although she used her voice to the utmost to attract attention, she could not make them hear. She saw the pole thrust into the cabin door by Captain Henton, and asked if she could hold on to it and be pulled out, but no answer came, the captain hearing no noise other than the splashing of the water, and having not the remotest idea that the woman was there, alive or dead.

First Useful—then Ornamental.—“A girl who can put on a square patch, may not be so accomplished as one who can work a green worsted dog on a yellow ground, but she is of far more real value in the community.”

It is possible that in olden times too much stress was laid on the importance of teaching girls to mend and darn so expeditiously that it would be difficult, almost impossible to discover that there had been any necessity for the labor; but if there was any error in teaching and exacting such perfect work, it was a fault “that leaned to virtue’s side,” and beyond all comparison better than the wretched “botching” to be found on the garments of some—of many—of the girls of the present day. Landresses that wash for school-girls, could make strange revelations of neglect of garments and careless repairs; were not their lips sealed through fear of losing good customers.

When a broken stitch is allowed to go unrepaired, until it has become a hole so large that the mending cannot be longer worn without some repairs, it is then drawn up in an ugly bunch—hard enough to blister the face—instead of being nicely darned; or when a tear or rip on a dress or under garment is pulled together with thread coarse enough to injure the fabric, who is to blame—the mo-

ther or the daughter? What instruction has ever been given the young girl about looking out for the beginning of evil in her wardrobe? Has she been taught to darn or mend every rent or rip the first possible instant after it was discovered, and to do it neatly?

Oh, no! There are far too many young girls from whom the most rigorous application to fanciful accomplishments is exacted, whose mothers have never taught them to sew decently, if at all. When the mothers of these young ladies were girls of ten or twelve, they would have been ashamed to have had no more practical knowledge, or have proved themselves such utterly worthless members of the home circle. Why should they defraud and dwarf their own children? It is not a very remote period to look back to, when if mothers had permitted their daughters to enter womanhood ignorant of domestic arts, or unable to keep their own garments in proper order, they would be thought incompetent to have the charge of children, destitute of that affection, that seeks the present best good of those committed to their charge, and is anxious to secure their future prosperity.—*Christian Union.*

THE FRIEND.

ELEVENTH MONTH 16, 1878.

There has recently been held in this city a convention of Unitarians, attended by prominent members of that body from different parts of the country. How far the essays and speeches that were delivered, expressed the sentiments of others than their authors, does not clearly appear. Probably all present did not unite in some of the utterances.

The first essay was entitled, “The New Criticism of the Old Testament,” and from the report printed in the *Public Ledger* of this city, we infer, that it denies to the writings of the Old Testament any claim to revelation or prophetic character; and asserts that the method of criticism advocated in the essay “does not leave one stone of the popular conception on another; but from the widespread ruin it builds up again, with slow patience and indomitable resolve, another and a better.”

The doctrine of the vicarious atonement of our Saviour, or that the forgiveness of our sins is through the merits of His sacrifice, was stated to be the real point at issue “between true and false Christianity,” compared with which “the doctrines of the Trinity, of the Deity of the Saviour, of the place and eternity of punishment, and of the peculiar inspiration of the Bible, have ceased to be of practical importance.” We suppose that Unitarians generally unite in the rejection of this doctrine of the atonement, and that this circumstance draws a dividing line between them and other Christians.

“What we want,” said one of the speakers, “is the faith in a living God, not afar off, but close to us and within us.” The inward manifestation of the Holy Spirit to the soul of man through our Lord Jesus Christ, is one of the fundamental doctrines of the Gospel, as believed by the Society of Friends; and so far as the sentence above quoted inculcates a belief therein, we believe it is consistent with the teaching of our Saviour and his apostles. It was largely the mission of the first mem-

bers of our Society to call the attention of the people to the inviolable Spirit of Christ, as that which must lead all in the way of salvation, must wash, purify and redeem from sin and corruption, and prepare them for admission to the Heavenly Kingdom. But while they and the modern Unitarians appear to be one in sentiment as regards this most precious and practical doctrine, the Society of Friends differs from these, in receiving in simple faith the scripture testimony as to the Divinity, atonement and mediation of the Son of God; and further declares that these great truths were confirmed to their minds by the openings of the Spirit within them which did bear witness to their reality, and gave them a living faith in their verity.

We can readily conceive, that one who attempts to bring these deep and mysterious subjects under the control of his intellectual powers, and to make his own reason the standard by which to judge of spiritual matters, will very probably become confused and darkened, and may end in rejecting some of the most solid and substantial truths. Our Saviour himself rendered thanks unto God, "because thou hast hid these things from the wise and prudent, and hast revealed them unto babes." And the Apostle Paul declared to the Corinthians, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him; neither can he know them, because they are spiritually discerned."

Here is the place where we believe many well-meaning persons have erred. They have felt within them the strivings of the Spirit of God convincing them of sin, and causing them to feel that they are unfit to dwell with purified spirits in the presence of a holy God. But instead of simply yielding to these Heavenly visitations, and in humility and faithfulness following them to the foot of the cross, they have trusted too much to their own intellects to guide them in religious things, and thus have erred from the faith. We are confirmed in the belief that this has been the case, from observing to how large an extent, where Unitarianism has prevailed, it has been among the more educated classes of the community; in whom the consciousness of possessing trained and developed intellects is most likely to produce an undue dependence on these possessions. Such results are nothing new. Paul declared nearly 2000 years ago, that the world "by wisdom knew not God," that "the Greeks seeked after wisdom; but we preach Christ crucified, * * * unto the Greeks foolishness;" that "my speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power; that your faith should not stand in the wisdom of men, but in the power of God."

The error of those who direct their attention solely to the outward coming and offering of our Saviour, and who expect salvation as a result of that, without knowing Him to accomplish His work of purification by His Spirit in the heart, is equally dangerous with that to which we have above referred. It was a frequent concern of our early Friends to guard their hearers against this delusion. Edward Burrough in his tract entitled "The everlasting Gospel of repentance and remission of sins," says, "All that will be saved must be sanctified, cleansed and purified from all unrighteousness by the Spirit and Word of

God, whereby every heart must be made clean." "It is not enough [to bring] unto eternal life only to believe that there was such a one as Christ and that He did and spoke such and such things at a distance without you; for many may make belief and profession of this, and yet perish; but Him that was, of whom you read without you, must you receive and witness within you." He further declares, "There is no other Christ Jesus but He which lighteth every man that comes into the world with the true Light; and except this Christ Jesus is revealed by the Spirit of the Father within, salvation is not received by him."

From a letter subsequently received from the same Friend that wrote the one from which we gave an extract in our 12th number relating to the action of the London deputation and the "smaller body" in Western Yearly Meeting, we take the following. He states that he had no expectation that any part of his former letter would be made public.

Though the more detailed and explicit statement thus furnished does not materially vary the impression given by the former one, we believe it best to publish it; being very desirous that no inaccuracies in reference to such matters should be found in our columns, without correction.—Eps.

"I was not quite explicit enough in giving the story of the visit and labors of the London deputation. After they had gone through their supplementary remarks in the meeting granted them, near the close they informed Friends that they did not wish any reply from us. None was made. As they were about taking their leave it was remarked by one of our Friends, that judging from their remarks it was evident they were laboring under misapprehension in regard to the causes that had led to the position we now occupied; and asked if they would be willing to grant us another interview, in order that we might have the opportunity of correcting them. To this they consented. Accordingly at a conference of our members the nomination of a few Friends was approved to meet with them. In that interview we pressed the privilege of bringing our grievances to view; then it was when they refused to hear us, and said they could not go behind the instructions of London Yearly Meeting. This was said more than once.

We did not ask them to go into an examination of the subject in meeting when all our members were present; neither did we ask for the appointment of a committee.

There was no official action taken by our Yearly Meeting in regard to their visit."

SUMMARY OF EVENTS.

UNITED STATES.—The Fire Marshal of Philadelphia reports that the whole number of fires during the year, 1870, of these 350 resulted from carelessness, 73 accidental, 8 from incendiarism. The total loss is estimated at \$718,518; the insurance on which amounts to \$,502,555. The Superintendent of the Police and Fire Alarm Telegraph reports 186,512 messages were transmitted, the means of which 746 persons were restored to their friends; 2,922 lost children restored to their parents; 8840 messages relating to fires were sent; 6,042 relating to lost property.

In the House of Correction there were received during the year, 7,523 inmates; of this number 2,200 were self-committed. The population of the Alms-house is 2,751.

A very destructive fire occurred at Cape May, N. J., on the 9th inst. Nine hotels, twenty-one cottages, about 1000 bath-houses, and 5000's pier were burned. The estimated loss is about \$200,000.

On the 5th inst. elections were held in thirty States

for members of Congress, and in a number of them State officers. The results show Republican gains in the North and Democratic in some of the Southern States. The next Congress will probably be Democratic in both branches. The Senate will consist of Democrats, 33 Republicans, and 1 Independent. 75 House 153 Democrats, 133 Republicans, and 7 Independents.

The Commissioner of Patents, with the approval of the Secretary of the Interior, has issued an order providing that the fee of \$25, required by law for the registration of trade marks, shall hereafter be payable in instalments—the first of \$10, on the filing of the paper and the remainder when the registration is granted. A circular has also been issued by the Board of Health of New Orleans, physicians have reported 12 cases of yellow fever treated by them during the epidemic, not previously reported. It is estimated that have been 40,000 cases during the past four months, New Orleans and vicinity. The report, for last week shows 11 new cases in New Orleans, 35 in Mobile, 9 Chattanooga, and 33 deaths in Memphis.

The total amount of subscriptions forwarded through the authorities of the various cities and their committees, is \$1,320,000. This sum is exclusive of private religious and society contributions. From foreign countries \$200,000 have been received.

Thirteen ocean steamships were fitted up in port New York last week, with a sufficient aggregate tonnage for 250,000 bales of cotton.

The mortality last week numbered 275. For the year the health officer reports the general sanitary condition of the city as follows: In the month of January the year there were 18,270 births, 6,117 marriages, & 16,004 deaths.

Markets.—Wheat—Gold 100½, U. S. sixes 1881, 100½, U. S. 105½; 41 per cents, 104½; 4 per cents, 100½.

Cotton.—Sales are reported at 9:3 a. m. per lot for 100 bales and New Orleans, 49 cents.

Petroleum.—Crude 7½ cts. in barrels, and standard white 9 cts. for export, and 11½ 12 cts. for home use.

Flour.—Minnesota extra 4.50 for medium and \$4 for choice; western, \$4.75 for medium, and \$5.25 fancy. Patent and other high grades, \$6 a \$8, as quoted.

Grain.—Wheat market is quiet. Red, \$1.02 a \$1.04, amber, \$1.03 a \$1.05, white, \$1.06. Corn, 74 a 50 cents, mixed, 26 a 27 cts., and white, 28 a 33 cts.

Hay and Straw.—Prime timothy, 60 a 70 cts., per pounds; mixed, 45 a 60 cts. Straw, 65 a 75 cts. per 1000.

Butter and eggs were dull, but prices remain about same. Good Penna. and western stews brought 5½ cts. per pound. Sheep, 3 a 4½ cts. per pound as common. Hogs, 4 a 5 cts. per pound.

FOREIGN.—The subscriptions in Glasgow for the relief of the City of Glasgow Fair, which had amounted on the 11th to £23,000, and in Edinburgh £27,000.

A parliamentary paper, recently issued, shows that paper-money is increasing and crime diminishing in England. There are one and a half per cent. more paupers than in 1869, and one and a half per cent. more deaths of trade, as it is confined to the north, the northrop showing a decrease. In regard to crime, it is also there that there were fewer sentences for penal servitude recent than in any year on record, except 1873.

Ten years ago over one million of acres were devoted to raising sheep in the State of Wyoming, and 87,000 men are thus employed. The decrease is attributed to the great uncertainty attending the crop, and to a method of foraging cattle.

Telegrams from northern and eastern Europe, announce heavy snow falls. The Appennines and Alps present an appearance of the Siberian mountains, all black with snow. In France the rivers are very high.

The coming sugar crop in Cuba promises to be excellent. It is estimated that the yield will reach 70,000 tons.

Death, on the 4th of the 9th month, 1878, PREMISE SURIN, in the 80th year of her age, beloved mother of F. per Springfield Monthly and Mansfield Partisan Meeting, Burlington Co., N. J.

—, on the 3rd of 11th month, 1878, Enoch ELLENOR, in the 32nd year of his age, son of Royal and Ann Eldridge, of the Society of Woburn, in the Parish and Goshen Monthly Meeting, Chester Co., Pa. It was the concern of this dear young Friend, to lead "a clean and blameless life." He said, "I have endeavored to 'keep a conscience void of offence.'" "This has been a life time work with me, not the work of a day, and it is by no means finished." He again, "I am a firm believer in the religion of Jesus

For "The Friend."

William Penn's Travels in Holland and Germany, in 1677.

(Continued from page 110.)

"When Elizabeth was 17 years old, she was offered the hand of Ladislaus IV., King of Poland, provided she was willing to become Catholic. The offensive condition did not originate with the king, but was forced upon him by the prelates and Woiwods of Poland, who boisterously protested against a heretic partner of the throne. The Princess, less pliant than was Henry IV., spurned to purchase her elevation by the sacrifice of religious convictions.

"Many had been the afflictions that checked Elizabeth's life. Her childhood and youth were passed in exile; at the age of 13 she lost her father; a beloved brother, Frederick Henry, found a sad death by drowning in the *ro Zuyder Zee*; the heroic struggles of her other Rappert at the head of the Cavaliers ended in failure; her uncle, Charles I., died by the hand of the executioner; her brother Philip, taking vengeance for an affront, killed with his own hand a French nobleman, and fell at the siege of Bethel; the apostasy of her brother Edward, and her sister Louise, the dissolute Abbess of Mautuisson, could not at shock one so sincerely attached to the Protestant faith; finally, the immoral conduct of her brother, Charles Louis, after his restoration to the throne, was to her a source of bitter grief.

"In the tranquil retreat at Herford, Elizabeth found at last the promise of a quiet, contemplative life, such as was best suited to her cast of her mind. She owed the position of Abbess to her cousin, the great Elector of Brandenburg, Frederick William, who ever stood at her side as friend and protector."

"Penn arrived with his companions at Herford on the 9th of August. Let us cast a glance at the two principals in the remarkable interviews that then took place. Penn, the age of 33 years, in the flush of manly manly, blending all the graces of the courtly gentleman with the fire of the religious enthusiast, looking back upon a strangely checked life, that had led him from the lawns of Herford to the prison walls of Newgate, the determined champion of religious liberty, and remaining, perhaps, of a distant domain, that could be blessed with it; opposite to him

Elizabeth, who was then in her 60th year, the granddaughter of a king, and who herself might have been a queen, an adept in philosophy, the friend of the sages of her time, still seeking an answer to life's enigmas, which science did not give, in religious experience, in an inward revelation, such as the ministry of Labadie had led her to hope for. And now the young Quaker stood before the old Princess, to teach, to convince, to inspire her.

"On the morning of the 10th of August the first meeting took place by appointment, at which the Princess, the Countess of Hornes, her intimate friend, and a few others were present. The impression that Penn made buoyed his hopes, and other meetings were held in the afternoon, and during the following days. Penn, fully realizing how great issues hinged on the present opportunity, opened the floodgates of his heart, and spoke with the unrestrained fervor of conviction. The effect of his pious eloquence appears to have been marvellous. 'The eternal Word,' he says, 'showed itself a hammer at this day, a sharper than a two-edged sword, dividing asunder between the soul and the spirit, the joints and the marrow. Yes, this day was all flesh humbled before the Lord! It amazed one, shook another, broke another.'

"As long as the Friends stayed at Herford, they were entreated, morning and afternoon, to renew their calls, an invitation to stay to dinner having been respectfully declined. Others also came under Penn's powerful influence. The young Countess of Hornes was very much interested; a French lady, a companion of Elizabeth, 'from a light and slighting carriage towards us became intimately and affectionately kind and respectful to us.' The servants of Elizabeth, lodgers at the inn where Penn stayed, and inhabitants of Herford that attended meetings were reached by the 'quickening power.'

"At last the hour of parting came, and most affectionate was the leave taking. The Princess wished to unburden her mind, but overpowered by emotion could stammer only, 'I cannot speak to you, my heart is full,' at the same time clasping her hands upon her breast. Penn, 'melted into a deep and calm tenderness, was moved to minister a few words softly to her.' She recovered, and cordially invited him to visit her again upon his return. This he did, arriving at Herford on the 22d of September. As the proceedings differed very little from those at the first visit, a short reference to them will serve our purpose. There was a new series of 'tender opportunities,' fervent exhortations, and startling effects. Emotion must have run high. The Princess exclaimed: 'I am fully convinced, but oh! my sins are great!' The Countess of Hornes, Penn says, was so overpowered, that she was broken to pieces; the French lady is reported as improved, zealous, and broken. Very likely Penn was led to hope that the Princess would accept the 'testimony,' but she never was

definite in her declarations. 'I can say little for myself,' she wrote in answer to a letter that Penn addressed to her between his two visits, 'and can do nothing of myself, but I hope that the Lord will conduct me in his time, by his way, to his end.' Though in full sympathy with the aspirations of the Friends, she took no step to become one of their number. She died in February, 1680, and Penn paid to her memory a touching tribute in the second edition of 'No Cross no Crown.'

"In Frankfort, the pilgrims arrived on the 29th of August. Their coming had been announced to persons of a kindred mind, and so they were met, before they reached the city, by two prominent men. One of them was the merchant Vandewalle, who introduced the three Quakers to a circle of eager friends, that gathered in his house. Of all persons whom Penn became acquainted with on that occasion, decidedly the most interesting was the enthusiastic Johanna Eleonora von Merlau, a woman of more than ordinary mental abilities. She is quite a prominent personage in the history of the German revival, and her peculiar views on important doctrinal points, as set forth in her writings, drew upon her general attention. Johanna was born 1644, and consequently of the same age as Penn. Being the daughter of a nobleman, she moved in aristocratic society, and was for several years court lady to the Duchess of Holstein, but the giddy pleasures of her companions had no charms for her, and in spite of taunts she led a devout, religious life. During this time Johanna formed the acquaintance of an officer of the army, a Mr. do Bretewitz, the offer of whose hand she accepted; but she was glad, when, owing to some misunderstanding, the engagement was cancelled, as Bretewitz was for her too much a man of the world. Much to the regret of the Duchess, Johanna at length left her court, and went to reside in Frankfort with the widow of a nobleman, M. J. Bauer von Eisenek (born 1641), who, like herself, was deeply interested in Jacob Spener's *Collegia Pietatis* at the Saalhof. She stayed six years in Frankfort, from 1674 to 1680, when she gave her hand to the famous theologian, Dr. Wilhelm Petersen, a voluminous author, and now Johanna herself began to write works, explanatory of Apocalypsis, and in defence of the doctrine of the 'Restoration of all Things.' Her views entirely agreed with those of her husband, but were reached independently.

"It was Johanna Eleonora von Merlau and Mrs. Bauer von Eisenek whom Penn met at Vandewalle's house. Both ladies took a great fancy to the Quakers, or as Penn has it, 'their hearts yearned strongly towards us.' Johanna gave the Friends a particular invitation to her house the next morning, which they complied with. They had, says Penn, a most blessed opportunity; the Lord's power appeared, a student, who resided with a Lutheran minister, whom the young woman sent for, was

broken to pieces, and a doctor of physic who accidentally came in confessed to the truth.

"When, after some days spent in Worms and Krishem, the Friends returned to Frankfurt, it was again the house of these two pious ladies where a meeting was arranged, 'whither resorted some that we had not seen before.' The religious exercises lasted till 9 o'clock at night, and then the Friends had to stay to supper. The ladies joyfully consented to another meeting the following morning (August 29th), which proved to be 'a blessed and heavenly opportunity.' On the same morning, a more public meeting was held at Vandewalle's house, which was likewise a great success, those present being in a tender and broken frame of mind.

(To be continued.)

George Moore.

(Continued from page 109.)

Some of the foregoing extracts from the memoranda left by George Moore, evince the religious thoughtfulness of his mind, and his conscientious concern to be found a good steward of the outward wealth committed to him. His earlier years were those of a business man of the world. The sudden removal of his brother-in-law, his own severe illness, and the death of his worthy partner, Groncock, in 1853, were instrumental in awakening him to a serious consideration of his spiritual condition. He passed through a season of great depression of mind, in which he underwent many conflicts of spirit. While in this condition, he wrote, "Oh that I could feel that I had at length entered the strait gate, and was travelling the narrow road that leadeth to eternal life! As Newton says, I know what the world can do, and what it cannot do. It cannot give or take away that peace of God which passeth understanding. It cannot soothe a wounded conscience like mine, nor enable me to feel that I could meet death with comfort. I feel a constant conflict of conscience with inclination, of the desire to do right against the promptings of evil. I feel that I am unstable as water—poor, weak and simple." In another entry, he says, "I have been earnestly praying for the last two years, for God to give me some sudden change of heart, but no sudden change comes."

"At length some light and comfort began to dawn on his soul. 'I am determined,' he says, 'for the future not to perplex my mind with seeking for extraordinary impressions, signs or tokens of the new birth. I believe the Gospel, I love the Lord Jesus Christ.' 'The new birth must be a change of mind, from ungodliness to belief in and worship of God through our blessed Mediator. This is expressed in the Old Testament by the promise of God: 'A new heart also will I give you, and a new spirit will I put within you; and I will take away the stony heart out of your flesh, and I will give you an heart of flesh.'"

"He became anxious to show his faith by his works. 'Profession,' he says, 'must be accompanied by practice. At the same time good works are no justification before God, for by the flesh shall no man be justified. The believer is justified, but good works must prove his claim to the title. Good works are the evidence of faith.' Therefore it was that he became so abundant in his efforts to promote the spiritual and temporal welfare of his

fellows; that he recognized the poor, the destitute and the degraded as brethren and sisters, who had a claim upon his help and sympathy; in short that he so used his time, talents and wealth as to make the language of the patriarch Job applicable to himself—"When the ear heard me then it blessed me; and when the eye saw me, it gave witness to me: because I delivered the poor that cried, and the fatherless, and him that had none to help him: the blessing of him that was ready to perish came upon me, and I caused the widow's heart to sing for joy."

He was not ashamed on suitable occasions, to avow his religious views. When dining with a friend, one of the guests remarked, "Surely there is no one here so antiquated as to believe in the inspiration of scripture." "Yes, I do," said George Moore from the other side of the table, "and I should be very much ashamed of myself if I did not." Silence followed, and the subject was changed. When the company had retired to the drawing room, the non-believer in inspiration asked of one of the women, "Can you tell me who is the gentleman who so promptly answered my inquiry in the dining-room?" "Oh, yes! He is my husband." "I am sorry," said he, "that you have told me that so soon, for I wished to say that I have never been so struck with the religious sincerity of any one. I shall never forget it."

The death of George Moore was sudden. While standing in the streets of Carlisle, in the fall of 1876, he was struck by a runaway horse, and so severely injured that he lived but twenty-four hours after. But though his death was sudden, it could scarcely be said to be unlooked for. For some time previous, the thought of death seemed almost ever present, and he often said, "Let me be ready, ready!" He began his diary of 1876 with the following entry: "It may be that I have entered on the last year of my mortal career. If so, what have I to rescue me when stripped of all that I can call my own? I do believe that Jesus will go with me through the dark valley, and that I shall have abundant entrance into the presence of God."

As the time of his death drew near, his wife says he often spoke of this and that having been finished, done with, and ended."

He had been invited to attend a meeting of the Nurses' Institution at Carlisle, and having learned that the object of the meeting was to set apart some nurses to help the poor and helpless, he said to his wife, "I must go; it will be the last time I shall be in Carlisle." As he descended the stairs to his carriage, he called to his wife, "What is that passage in St. Matthew?" "Do you mean, 'I was sick and ye visited me?'" "No!" he said, "I remember: 'Well done thou good and faithful servant, enter thou into the joy of thy Lord.'" These were the last words that passed between husband and wife in their happy home.

When the accident had occurred, George was carried into an inn near by, where his wife soon joined him, she thus describes the last scene:

"He had so often talked of death while in health, and of wishing to be told he was dying, and that he hoped I would say three texts to him; so I felt that I must tell him. At first I said, George, darling, we have often talked about Heaven. Perhaps Jesus is going to take you home. You are willing to go with Him, are you not? He will take care of you!

He looked wistfully in my face and said, 'Yes! I fear no evil. He will never leave me nor forsake me.' Several times after, he said: 'I would or two, expressive of the same trust. He was soon past much speech. But he knew perfectly that he was dying, and his faith failed not.

For "The Friend."

The Black-throated Bunting, (*Eupstiza Americana*.)

Though this bird may not be familiar to most of the readers of "The Friend," yet it is not by any means rare in some of the States though in the eastern portion of our own (Pennsylvania), it is not frequently met with. It appears to inhabit certain localities, while in others it is rarely seen; for instance, there is a district of country about six miles north of Philadelphia, where some five or six pairs of this species can be seen every summer, and these birds are confined to an area of not more than one mile square.

The sides of the head of the male and sides and back of the neck are of an ash color; the crown tinged with yellowish green, with a superciliary and short maxillary line; the middle of the breast, and edge of the wing yellowish, belly, and under tail coverts white; a black notch on the throat diminishing to the breast; wing coverts of a chestnut color; interscapular region streaked with black, rest of the back immaculate; length, about six and a-half inches. The markings of the female are less distinctly indicated.

They make their appearance in Pennsylvania, from the South about the 12th of 5th mo., and commence nest building about the 1st of 6th mo. The female chooses the site of their domicile; the male accompanying her from burdock to burdock, and from daisy to daisy, until she finds a place to her liking; but, he it said to her credit, she consults her mate as to the fitness of the situation for their proposed home, and if the place proves satisfactory to both, the male evinces his pleasure by mounting to the nearest tree top and chants his feeble attempt at a song of chee-chee-chee-chee, while his little mate goes in search of building material for the construction of their nest. She, like the Indian squaw, performs all of the labor, aided by the incessant chanting only of her mate; and though he does not render her any assistance he will occasionally descend from his perch to inspect her work.

The nest is placed in a bunch of daisies or burdock, generally three or five inches from the ground, and is composed of fine dried grass, and the smaller roots of plants; it is lined with horse hair. The eggs, which are four or five in number, are of an uniform pale bluish color about the size of a blue bird's; in fact they resemble the eggs of that bird so closely that it would be extremely difficult to distinguish them, were the nest not found by which they may be identified at once.

Incubation lasts about fifteen days; during this time the male performs his humble chant which unmusical as it may be to our ears, is no doubt very cheering to his mate. When the young are hatched, there are five hungry mouths to be fed, and a great many grubs and insects are required to satisfy those mouths, tiny though they be. When the young are able to fly their parents' labor does not end, for we can see five little birds ranged along the fence, crying out eagerly to be fed.

In the course of a few weeks they are old

nough to shift for themselves, but they accompany the old birds when they depart for the South; for which journey, they commence to prepare about the middle of 9th mo. From this time we see them no more until the sunny days of the Fifth month bring them to us again.

Iowa.

It appears from the ancient records of the religious Society of Friends, that at a very early period after its rise, a fervent concern was manifested by the body, for the preservation of its members in the unity of the blessed faith of the gospel. A godly care was also exercised to guard against the promulgation of those ungodly and speculative notions, which, under various alluring and specious forms, the deceitful adversary of man's happiness is so often presenting to the active and inquiring mind, to beguile the unwary and draw them from their love and allegiance to Christ Jesus, the Shepherd and Bishop of souls. Our worthy Friends were fully aware of the danger there is, in endeavoring toathom the inscrutable counsels of an all-wise and incomprehensible God, by the finite powers of human reason; and in attempting to explain away, or to accommodate, the "wful" mysteries of the kingdom of heaven" to the narrow conceptions of men. They therefore encouraged their members to exercise that humble, confiding faith, which works by love; and which, without seeking to comprehend "the why and the wherefore," delights in simple obedience to the will of God; and in expressing their views on doctrinal points, to keep close to the plain and explicit language of the Holy Scriptures, relying upon their divine testimony, as the most authentic and perfect declaration of Christian faith, containing a sufficient explanation of all things necessary to be believed in order to salvation.

Incidents and Reflections.—No. 23.

EXERCISE OF FAITH.

A little while after William Bray had done building Bethel Chapel, he believed himself called on to become instrumental in building one at Kerley Downs. He thus continues his relation:

"When this was applied to me I believed it, and rejoiced greatly to think that I was honored to work for so good a Master as the King of heaven, and earth, and sky. Kerley Downs was near a mile from where I lived, in the same parish. At this place there was preaching in a dwelling-house, and a class met in the same house. The friends had been trying for some time to get a spot for a chapel, but had been disappointed. They had made a collection for the chapel they intended to have, but the site was sold to a man for a higher price after it had been promised to the society. One of the neighbors who owned a farm said to one of the class, 'Where is the money you collected so long ago towards a chapel? which you have not begun yet.' He said, 'If you have a mind to build a chapel, you may have ground of me.' I told the preacher we could have a spot for a chapel, and if he did not call a meeting to appoint trustees I should begin about

the chapel myself. So he appointed a day and got trustees; but all that promised to help left me to myself. So my little son and 'me' went to work, and got some stone; the good friend who gave the land lent me his horse and cart; and we soon set the masons to work. Those who read this must remember that I was a very poor man, with a wife and five small children at that time, and worked in the mine underground. Sometimes I was forenoon 'core,' and when I had taken my dinner I should go to the chapel and work as long as I could see, and the next day do the same. The next week I should be afternoon 'core;' then I should go up to the chapel in the morning and work until the middle of the day, and then go home and away to the mine. The week following I should be night 'core;' I should then work about the chapel by day, and go to mine by night; and had not the dear Lord greatly strengthened me for the work, I could not have done it. When I was about the chapel, I had potatoes to till in my garden; and every Sunday I was 'planned.' Sometimes I had to walk twenty miles, or more, and speak three times. I have worked twenty hours in the twenty-four; and had not the Lord helped me I could not have done it. Bless and praise His holy name, 'for in the Lord Jehovah is everlasting strength.' I do know He is a friend when all other friends leave us; and He will help us to overcome our enemies.

"Sometimes I have had blisters on my hands, and they have been very sore. But I did not mind that, for if the chapel should stand one hundred years, and if one soul were converted in it every year, that would be a hundred souls, and that would pay me well if I got to heaven, for they that 'turn many to righteousness shall shine as the stars for ever and ever.' So I thought I should be rich enough when I got there. The chapel was finished after a time; and the opening day came. We had preaching, but the preacher was a wise man, and a dead man. I believe there was not much good done that day, for it was a very dead time with preacher and people; for he had a great deal of grammar, and but little of *Father*. 'It is not by might, nor by power, but by my Spirit, saith the Lord.' If it was by wisdom or might, I should have but a small part, for my might is little and my wisdom less. Thanks be to God, the work is His, and He can work by whomever He pleases. The second Sunday after the chapel was opened I was 'planned there.' I said to the people, 'You know I did not work here about this chapel in order to fill my pocket, but for the good of the neighbors, and the good of souls; and souls I must have, and souls I will have.' The Lord blessed us in a wonderful manner.

"After this the Lord led me to build another chapel in the parish of *Greenpark*. The Lord put it into the heart of a gentleman to grant me a piece of land; and after we had dug out the foundation, we wanted stone to build with. The Lord put it into my heart to go down by the railway and try to raise stone. Some one had been there before, and their quarry was poor. They had worked to the east and to the west, and left a piece of ground untouched in the middle. We went to work on this piece, and the dear Lord helped me, as He said. Some wonder to see what a lot of stone we got out. But they must know I was working for a strong com-

pany, the Father, Son, and Holy Ghost, and that company will never break. I worked in my 'core' at the mine all the while I was raising stone; and as I was living a great way from the place where I was building the chapel, the Lord helped me again by putting it into a gentleman's heart to give me five shillings a month while I was raising stone for the dear Lord's house. At a coffee-house near the quarry, when I came up from mine last 'core' by night, I had my breakfast for sixpence or sevenpence, and then away to raise stone. When the masons were set to work, I had no money in hand, and no bank to go to but the bank of heaven. But, thanks be to God, that is a *strong* bank; and I had often to go there by faith. At this time the Lord sent Mr. T. to me, who said, 'You will want timber, and lime, and slate, will you not?' I said, 'Yes, sir.' Then he told me to go to his stores, and have what I wanted. When the masons wanted money I went round collecting, and the friends were very kind and gave me money. I went to Camborne, and farther west. Amongst other places I went to Helston, where there lived a miser said to be worth a great deal of money, who was never known to give anything to any object. When I asked him for something for the chapel, he said he could not afford to give me anything. I said, 'You can give me some money if you like, and if you do not you may soon die, and leave it all behind. I am very rich, but he soon became poor. I am begging for the Lord's house, and if you do not give me something the Lord may take you away from your money, or your money away from you.' When I told him further that the gold was the Lord's, he said, 'Go round the town and see what you can get, and come to me again by and by.' I said to him, 'No, you have got money, and I must have some now,' and talked to him about what the Lord would do with *greedy* people. Then he wiped his mouth, put his hand into his pocket four or five times and talked away, but at last he took out two shillings and sixpence, and gave me. It was a hard job to get even that from the old miser. I do not think Satan let him sleep that night because the dear Lord permitted me to take half-a-crown from his *god*. When I told some of the friends that I had got half-a-crown from him, they said, 'it was the greatest miracle ever performed in Helston.' I had a 'plan' at St. Just, and after I had done my work there I went on to St. Ives, and was directed to find out a good man named Bryant. St. Ives was a small place about the year 1833. Friend Bryant told me that I had come to St. Ives at a very poor time, for there was but little fish caught that year; and some of the people were almost wanting bread. 'It was poor times,' I said, 'with Peter when the Lord told him to let down the net on the other side of the ship.' Br. Bryant missed for I had come at a very good time, as the event proved. We went up to the Wesleyan Chapel; there were a great many lively members and we had a good meeting. We prayed to the dear Lord to send some fish, and He did. After the meeting was over, we went into a coffee-house to get a little refreshment; then we began our meeting, and continued it till midnight, praying to the Lord to send in the fish. As we came out of the meeting to go to our lodging, there were the dear poor women with the pitchforks on their plates, and the fish was shining in the moon-

light. The women were smiling, the moon was smiling, and we were smiling; and no wonder, for the dear Lord put bread on many shelves that night, and blessed many families. We asked the women what fish was taken, and they told us that many boats had taken ten thousand, and some twenty thousand. Against the next day there were, if I mistake not, eight thousand eels taken. Some of the fishermen said to me, 'Now you shall have some money for your chapel; and if you will get a boat and come out we will give you some fish.' A friend with me, a carpenter, a bit used to the sea, got a boat and rowed me to the place where the fish were. They looked 'pretty,' for they were shining and leaping about, and the fishermen dipped up the fish, and threw them into our boat. I thought of the church-ministers, who took their *tithes* of the corn; but I took mine of the fish. When we came to land, the carpenter 'told' up the fish to the people that bought them, and I took the money, which amounted to £6, 15s.

'A Druggist, also, promised me the profits of one week on medicine sold, which brought me two guineas more. Altogether I brought away from St. Ives £17 towards the chapel. So when I came home I could easily pay the masons and carpenters. You see how the Lord helped me through all,—first by putting it into a gentleman's heart to let me have a spot to build on; then to get good stone in what had been only a poor quarry; also, in sending Mr. T. to tell me, when I was not worth a penny, to go to his store for timber and lime and slate; then in enabling me to collect so much towards the expense of building; and particularly at St. Ives, when the dear Lord sent the fish in answer to prayer. He has said, 'Call upon me in the day of trouble, and I will deliver thee, and thou shalt glorify me.' And we are 'in everything by prayer and supplication with thanksgiving to let our requests be made known unto God.' Bless His holy name: I will praise Him and glorify Him for ever and ever. 'O magnify the Lord with me, and let us exalt His name together. I sought the Lord, and He heard me, and delivered me from all my fears. * * * This poor man cried, and the Lord heard him, and saved him out of all his troubles.'"

For "The Friend."

Charles Wheeler.

The closing days of the life of Charles Wheeler, given by his father Daniel Wheeler, have been much before me since witnessing, during the past week, a deeply instructive scene, that of the closing hours of a dear young man who finished his course in the 32nd year of his age; leaving his relations and friends with "a comfortable hope" of a blessed and happy immortality.

He was exercised amid his great physical sufferings for those who were about him: "Faithfulness—Faithfulness!" to our God, was the burden of his deeply exercised spirit: pressing it upon us, to "Bring all the tithes into His store-house," &c.

11th Mo, 8th, 1878.

"Although my dear Charles has been nearly two years in a critical state of health, and for the last six or eight months rapidly declining, he did not appear *entirely* to lose the idea of recovery, until about a fortnight before his decease: of its great uncertainty he was fully aware. In the early part of his illness he

would say, 'if it be the will of my heavenly Father, I could enjoy life a little longer;' but in its more advanced stages he would acknowledge, that 'life is no longer desirable, under such an accumulation of suffering: but the will of the Lord be done.' About twelve days before his close, he said to me, 'I am going, I see it plainly;' and then adverted to a check which had occurred in his disorder, and had been the means of allowing him to see all his family; speaking of it as a mark of Divine condescension, quite incomprehensible to himself. 'It is one of the links in that chain of providences, with which I have been so marvellously encompassed.'

He used frequently to compare his own case with those of others in the family who had preceded him. Speaking about this time of dear William,* [his brother] he observed, 'I know little about his death, but I know how he lived; he fed on heavenly food.' O! that I were as much prepared for the change as he was,—to him it die was but to sink into his Father's arms; adding with much emphasis, 'blessed are those who can die as he did!'

He often spoke of his own unworthiness, saying, that his only dependence was on the mercy of God in Christ Jesus; and on this he seemed to rest without a sense of fear. Once or twice, when referring to the composure he felt, he said, 'surely I am not self-deceived;' shortly adding, 'O! no; it cannot be that the mercy, which has so signally followed me up to the present time should now forsake me!'

On one occasion he said to one of his brothers, 'heed not the world nor the things thereof; I wish I had heeded it less; and once when in great bodily extremity, he exclaimed, 'here is the end of pride!' He was frequently engaged in fervent prayer for patience and support, for the pardon of all transgressions, and a release in the Lord's time. Three days before his death he was heard to say, 'Bless the Lord, O my soul! and forget not all His benefits. Even though He slay me, I will trust in Him. Blessed be His name. He has granted me a little relief. One crowning mercy yet remains; and for that I desire to wait his time. O! grant me grace for this. Thou, O Lord! art full of compassion and gracious, or thou wouldst have abandoned me long ago: even yet I feel my proneness to rebel. O! let thy Holy Spirit support me through the few fearful hours that may remain; and grant me patience to wait thy time. I ask it for the blessed Saviour's sake.'

A text on which he frequently dwelt, was that in Revelations, 'They shall hunger no more, neither thirst any more,' &c.; and perhaps his own sufferings from thirst, which were at times distressing, led him to realize more fully the blessedness of those thus set free from the infirmities of the flesh. A few days before his death, when parched with fever, and much exhausted, he exclaimed, 'I shall soon be where all is rest, and more than rest,' referring to the passage, 'Eye bath not see,'

* William Wheeler died on the Isle of Wight, to which place he had resorted for a more genial climate: his illness was a consumption, which rapidly terminated his life.

The life of William Wheeler had been marked by watchfulness and prayer, and a conscientious regard to the pointing of Divine wisdom in the discharge of his religious duties, as well as by an active and diligent attention to his concerns in business; his end was eminently crowned with peace, and an humble and confidently trust in redeeming mercy."

&c. One evening when in a very suffering state, he remarked, that this was a new kind of conflict to him,—he had long been accustomed to mental conflict; but such positive physical suffering, he had neither known nor imagined. On being asked which he thought the more difficult to endure, he replied, that in his present state, he greatly preferred the contest allotted him; but, that when in health, when the mind was vigorous he thought the mental struggle less severe.

On the morning of the 5th of Second month 1840, we thought him very near his close; but he afterwards revived and seemed disappointed at being again delayed. O the same day, when in severe pain, he supplicated thus: 'O Lord, if it please thee, grant me a little patience; for without thy holy aid, it is past all mortal endurance.' As evening approached, he seemed to have an extraordinary dread of the coming night, exclaiming despondingly, 'another night, another night; and truly it proved a season of severe conflict, though the last of mortal suffering. About nine p. m., a change was noticed which he soon detected himself, saying, that he thought he was dying; and shortly afterwards, 'O Lord, if it please thy righteous will, release me. Blessed be thy holy name!' A short time before the close, on being asked if he felt peaceful, he replied calmly, 'I feel no fear.' He bade us separately farewell; and I believe his last connected expressions were, 'You are very kind—the Lord Almighty bless you.' The pains of the body seemed all he had to contend with: the struggle continued till about four a. m., when he quietly expired, being apparently sensible till within a few minutes of the last.

Dear Charles' desire that I should pray for him, when on the bed of sickness, often tended greatly to my own humiliation, it being at that time frequently my lot to be as one unable to pray even for myself; and when the spirit of supplication was at seasons permitted to influence my mind, it was not that length of days should be added to his life or that it should be shortened; but that the will of his heavenly Father should be done, whatever it might be; and that all his afflictions might be sanctified to his eternal benefit; and strong were my cries to the God and Father of our Lord Jesus Christ, that though the dear sufferer might not be permitted to give us any strikingly comforting assurance of his being 'accepted in the Beloved;' yet that an evidence might be vouchsafed of his having been admitted into that heavenly kingdom, which shall never have an end. On looking at his remains some hours after his departure, to my unspeakable comfort, I saw on his placid countenance that evidence for which I had besought the Lord. In the midst of death, there was a sweet angelic smile, surpassing that of life, its loveliness none can describe.

In the course of the illness of my dearest Charles, and the frequent opportunities we had of close converse on subjects of the highest importance, he never once brought into view his having forsaken all from an apprehension of duty to accompany me on the long voyage in the South Seas. To have reminded him of a sacrifice which had cost him so much; and which I humbly believe was not only called for, but accepted at his hands, by Him who had prepared the offering, would have raised a feeling of honest indignation in his mind,—that an idea should be entertained of any

rit being due to him, or that he had any of dedication to lean upon, or to plead his se. On the contrary, he seemed truly to see nothing of his own, but the infirmity incident to the frailty of human nature; an dwelling on his own unworthiness of least of all the Lord's mercies extended him, and alluding to them in humble gratitude. Doubtless it was best that he should wish so humble a view of himself; and I ever found it my place to throw out any, by way of encouragement to his often opening mind: preferring to commit him to the hands of Him who judgeth righteously, whose compassions fail not; and who ever faithlessly to forgive all that have bring of their own to pay unto their Lord, who are truly poor and of a contrite spirit.

DANIEL WHEELER."

For "The Friend."

The Yellow Fever.

The following narrative, written by S. Andram, a clergyman of Memphis, detailing personal trials in the pestilence which has lately swept away so many of our fellow-citizens in the South, probably represents the experience of hundreds of others; and will be a more vivid picture of the serious character of such a visitation than could be derived from general statements. It was published in the *Religious Herald*.

On the first of August we occupied for the first time a beautiful new residence, in one of the healthiest portions of the city. Our only consisted of parents, two sons, and a cred woman. One of these sons was city editor of a daily paper, and the other a student. We were all pleasantly occupied, and our family gatherings for meals and devotion were happy indeed.

Early in the month the fever made its appearance in North Memphis, a mile or more from our home. Then began the stampede of citizens, going by day and night, amounting to such a panic as I never saw before. I considered the question; I knew what the plague of 1873 was, and of course, dreaded a second trial of its horrors; my course was clear; I was to remain, never might leave. I went to the citizens' meeting; aided in its organization; took my seat on a ward committee, and went to work. I requested my wife and sons to leave. The first one said his duty was to remain with me, and there was no place for discussion. S. L. and the younger son agreed to retire a few miles only.

On the 29th of August, my son brought the postmaster, and also one of the proprietors of the *Avalanche*, to our house; he had an attack of the fever. My son, in his magnanimity, put — Thompson, the postmaster, in his own room. Up to this time there had been no fever in our immediate neighborhood. My wife — Thompson was dying at ten o'clock at night, my family physician sent for me, and I found him hopeless with the fever. Such quantities of black vomit as he threw up, I never seen before. 'My pastor,' he said, 'wanted to tell you my peace with God is fact. My mother taught me about Jesus, I shall soon see him and her.' Later in the night he was trying to sing. On reaching me just before day, I found — Thompson just passed away. With a little group of attendants, I buried those two the next morning. From four to six was a large attend-

ance at a funeral; later in the epidemic there were generally no attendants at all.

"On the 8th of September, my son Herbert was attacked violently. We watched him, O how anxiously and sadly, for three days and nights. He died on the 11th. On the morning of that day his mother was smitten, and at six o'clock in the evening I was seized with the plague. For two days I had from time to time talked with him about his death. He professed faith in Christ in Savannah, during brother Earle's meeting there, and declared to the last his firm confidence in the merits of Jesus Christ. He told me about his affairs; suggested the character of his burial, and affirmed his willingness to die. I called his attention to the fact that he might have gone away, and that he was dying for me. He replied, 'I would do the same thing again in similar circumstances.' 'Only this,' said he, 'I regret; I leave my life so unfinished.'

"On the 19th of September, our cook, Eliza, who had been with us for years, and whom we all loved, died with the fever. I left my son several times at her request to read and pray with her as she was passing away.

"It is a bitter thought that, for the last six hours, Herbert was left in the hands of a strange nurse; neither parent being able to see him and speak a last word of farewell.

"When Herbert died, George was in Georgia at his grandfather's, having carried my friend, Dr. Boggs' children to their relatives. I had a telegram sent to each of my children not to come to Memphis. On learning, however, that his brother was dead, and his parents sick, George set out at once to cast his lot with ours. * * * To my great surprise, on Sunday, the 15th, George entered my room. I shrieked with horror: 'You are a dead man! Is not one son enough to sacrifice to this plague! Fly from this place!' He quietly said: 'Father, be quiet. We are not afraid to die. I have laid aside all my ambitious views, and do let me help you while I live. I have felt that God was with me all the way, and especially since leaving Chattanooga.' I yielded to his wishes. He found our house in the hands of strangers—black and white. Some of these yellow fever nurses are drunkards. They seek a good supply of stimulants for their patients, and they drink freely themselves; and often appropriate what they find of valuables in the rooms and houses of the dead. Changes of nurses were needed in our house, and he made them promptly; thus contributing to our recovery, and especially that of his mother. Three days after his arrival, George was the subject of the fearful fever. He went out a mile and a half to pass the night at the residence of Dr. Boggs. After suffering all night, he was moved to a house a little distant, and placed under the treatment of Dr. McFarland, of Savannah, Ga. Our reports of him for three days were favorable. He grew worse on Sunday, the 22nd, and on Monday I left my house for the first time; indeed I had not been out of bed for a day; and went to my son. Most persons thought it would kill me, but God kept me. I watched him and directed his nurses for two days and nights; frequently talking with him of death; repeating Scripture, hymns, &c., and praying with him.

"When he died on the 25th, I returned with the heavy message to his feeble mother. Now we had 'sorrow upon sorrow.' The next morning early we went to bury our dead.

We were both very feeble, and there was no church member, no neighbor, no citizen to go with us. The two nurses, one an Italian and the other a Negro, were our only attendants to and from the grave. There was no neglect in this matter, no one to censure, but it shows to what extremities the plague reduced our people."

For "The Friend."

The Chemistry of Plant Growth.

(Continued from page 106.)

The general distinction between organic and inorganic substances, is the fact that the former are carbonized or charred by the application of a dry heat, while the latter are not. Many of the latter are also indispensable to plant and animal life. Thus without phosphorus it would be impossible for higher forms of life to exist. It must not then be supposed that because carbon, oxygen, hydrogen and nitrogen are supplied in abundance to vegetation, it has all needed to complete its full development. Unless certain inorganic elements exist in the soil in abundance, growth is stunted.

Animals too require the presence of these inorganic materials. Phosphorus is a very important element of bone and nerve tissue. About one-half the weight of bones is phosphate of lime, and one-fifth of this is phosphorus. In an infant eight per cent. of the brain is phosphorus, which increases to sixteen or over at maturity and diminishes in old age. While the brain of an adult idiot contains no more than that of a child. Iron exists in the blood, sulphur in the muscles, and chlorine and sodium in various fluids of the body.

But animals are not constituted so as to derive their materials directly from the soil. The plant first seeks them out, appropriates them to its own growth, and puts them in a condition to be useful to the animals. We have seen that the two great kingdoms of life, are entirely dependent on each other, for keeping the proper supply of carbonic acid in the air. Here we have another dependence of the higher life on the lower, for bringing these essential elements to its existence, into a form which adapts them to its use.

Though so essential to animal and vegetable life, these inorganic materials, are really but a very small proportion of the plant. They constitute the ashes which remain after complete combustion. Sulphur and phosphorus belonging to this class, pass off as gases, with the organic element.

The following table gives their proportion in a few common crops.

	Grain of Wheat.	Straw of Wheat.	Potatoes.	Clover hay.
Carbon,	46.1	48.4	44.0	47.4
Oxygen,	43.4	38.9	44.7	37.8
Hydrogen,	5.8	5.3	5.8	5.0
Nitrogen,	2.3	0.4	1.5	2.1
Inorganic,	2.4	7.0	4.0	7.7
	100.	100.	100.	100.

From this we notice that over 90 per cent. of vegetable matter, is provided by natural circumstances, and in most cases a large proportion of the remainder. Yet all of this will not sustain plant growth, if the few ingredients which often have to be supplied by human agency are lacking. Man is asked to perform but a trifle of the work, of crop nourishing, and that trifle consists largely of transport-

ing to the soil, the elements elsewhere provided by nature. There are about eighteen inorganic elements, which plants use more or less in their growth. Of these it will only be necessary for us to notice eight, as being the most extensively diffused, viz.:—iron, chlorine, sodium, calcium, potassium, sulphur, phosphorus and silicon. Iron exists combined with oxygen in sufficient abundance in most soils. It has been found that plants cannot perfect their green coloring matter without the presence of iron. Sodium and chlorine are used in only moderate amounts, by vegetation, and may be derived from common salt. If in the ground they are used in small quantities. But healthy plants have been raised in soil destitute of them. Sulphur is obtained from sulphate of lime (plaster), and is also an ingredient of all artificial phosphates. In the form of sulphuric acid it seems to be necessary to agricultural plants. Calcium comes from lime, which in an unslacked state is calcium oxide, and combines in slacking with water or with moisture from the air. Besides being a necessary constituent of vegetation, it has other offices to perform, for the plant. Most soils contain a quantity of animal or vegetable matter, which if not decomposed, can be used as plant food. This is very often surrounded by a quantity of carbonic acid gas, which prevents the access of oxygen. Without oxygen the decomposition cannot go on. The burnt lime absorbs this oxygen going back to its original state of carbonate of lime, and permitting the air to facilitate decay. It also assists in the decomposition of some mineral substances, which are thus prepared for use, and has a value in certain heavy soils, by making them more loose and friable, thus permitting the passage of air and moisture more readily. Lime is also added in the form of land plaster. As this requires about 400 times its volume of water to dissolve it, it is most efficient in damp ground, or during a wet season. Its value in retaining ammonia has already been spoken of. Silicon does not exist in a free state, but combined with oxygen. It is most commonly known in the form of the beautiful six-sided crystals of quartz or amethyst, or in irregular masses, which are then called flint. Sand usually consists largely of silica, and when cemented together by some natural cement, it constitutes a rock variously called sandstone, freestone and brownstone. In these forms it is entirely insoluble in water and acids, and of no possible use as a fertilizer. Silicates of potassium and calcium existing in many soils, are however slowly decomposed by carbonic acid, the silica unites with water, and forms what is usually known as soluble silica, and is thus taken up by the plant. As there is abundance of it in all soils, it is probable that this action, though very slow in its operation, produces sufficient soluble silica for all purposes of growth. It goes into stalks of wheat, corn, and the stiff grasses that grow on marshy land, and forms the hard, shining outer sheath. It does not seem to be like calcium indispensable to these plants, as healthy wheat has been matured with almost no silica, but when present it is taken up in large quantities.

(To be continued.)

Peace in this life consists not in an exemption from suffering but in a voluntary acceptance of it.—*Penelon.*

Novel Reading and the Young.

For "The Friend."

There is a class of literature very extensively published and read at the present day, which it is to be feared has an influence for evil largely under-rated; and which cannot but be viewed with anxiety by all those truly concerned for the welfare of our country, or interested in the education of the rising generation. I allude to those publications known as novels, weekly story papers, and magazines. It may seem strange to imagine that any readers of "The Friend" should need a caution on this subject, but the evil is so widespread, so specious, and so frequently overlooked, that the writer, feels like protesting against what he considers a fruitful source of trouble to parents, and moral and mental injury to the young.

Any one living in one of our large cities, will observe that books and periodicals of the description mentioned are for sale at most stores and news-stands; that they are sold very cheaply, and in such a form as to be easily secreted by their youthful readers. Some lay claim to greater respectability than others, but it is questionable whether the very best do not but inspire a dislike for serious reading, and whet the appetite for something still more exciting and hurtful.

What is the general character of these works of fiction, and what is their tendency? In the first place they almost invariably give incorrect ideas of life as it really is. They tell of impossible actions by boys and girls; represent vicious deeds as noble; and portray vice in brilliant colors. They speak of virtue as cowardice; are apt to ridicule religion and religious people; they frequently make the good appear as hypocrites, and misrepresent the true relations between parents and children. Their tendency is to familiarize their readers with wickedness, either in its more gilded or hideous forms; and to teach that riches are the great aim in life. They almost universally give a distaste for study, and teach a habit of superficiality; while in many instances they are undoubtedly a cause of nervousness to children, and directly tend to weaken the mind.

Novel readers would have us believe that at least some stories are effective agencies of good; that they are instructive, that they teach noble principles, and inculcate good morals; and that reading them is a pleasing and harmless way of passing the time. Unlucky to this it can be said, that instances (if such exist) are exceedingly rare in which a novel teaches a good moral; for generally they are compelled to picture vice in some way or other, in order to illustrate the good effects which they claim to produce; and it certainly cannot be desirable to teach children the temptations and sins of the world, supposing that by so doing their feet will be turned into the right direction. As regards reading these works being a recreation, any one candidly viewing the subject, cannot fail to see that the cost far counterbalances any supposed benefit derived from doing so. To sum it all up, then, we find there is hardly anything to recommend, and much to be said against them; they are a deadly poison to cast before the young, whether in the shape of juvenile books or papers; and too diligent care cannot be exercised to prevent boys and girls acquiring a taste for such works, either

from possessing them, or having access to them in our public libraries.

I have read somewhere that, "True culture brings out the common human mind in it, and the rare gifts in few." There is nothing more promotive of true culture than the reading of instructive and well selected books. They elevate the mind, enlarge the ideas, teach the reader to form just opinions of men and things. How important is it, then, that young people should have placed before them that style of literature, which will tend to instruct, and not degrade them; not that it is necessary to tire their brains with essays, a scientific or philosophical character; but their attention can be turned to truthful and quiet recitals of home-life, to biographies, history, to the wonders of nature, and above all to the truths of the Bible. They should learn to depend on literature entirely free from exaggeration, and from the objectionable features mentioned above, and which would direct their affections and thoughts toward the truly beautiful. Such publications can be found for them, and will be appreciated by them. When these facts shall have become generally recognized; and when parents and guardians of the young shall more correctly estimate, than many now do, their responsibility in the matter; then will the rising generation grow up, not only intellectual but also morally and spiritually the better for it.

11th mo. 1878.

[In transferring, at the request of the author, the following from the journal in which it originally appeared, to our columns, we have taken the liberty of omitting a few lines. The Friend to whom it refers was a valued contributor to the pages of our Journal; and we doubt not many of our readers will recall with interest the series of interesting and interesting articles, entitled "Random Notes," in which she had gathered some of the reminiscences of her travels in Europe. Those who have not attempted to prepare such a series of sketches, (extending in this case to thirty in number), can scarcely appreciate the amount of time and mental labor required to provide in this way for the entertainment and instruction of their readers.]

For the "Nancy Laminin"

In Memoriam.

The dark shadow that has passed over our valley has saddened many hearts. The removal of Susan Eeroyd Lippincott has brought poignant sorrow to her relatives and loving friends. Near the home of her childhood a youth, and among scenes she so fondly loved, and so sweetly sung, they have laid down in fair form to be seen of them no more on earth.

Our lamented friend was endowed with exquisite sensibilities, and drew inspiration from every scene of beauty and sublimity. Whether among the grand old canons and high peaks of Colorado and California, or the Alpine glories of Switzerland, the sweet quiet greenery of her beloved England, or the rich coloring of classic Italy, her poetic and artistic sympathies throbbled in rapturous response. But from all these her heart ever turned to the vale of her childhood with yearning that would not be stilled. Her five nobility of character was adorned by the graces of the humble christian. Years of intimate acquaintance with her did not incre-

admiration that casual intercourse awak-
ed, and the perfections of her character con-
tinued to develop as age and experience ex-
panded her sphere.

A friend writing of her remarks: "I have
felt for her a tender affection and a very
high appreciation of her native refinement of
character and superior intellect. There was
nothing so truly womanly and sensitive in
her nature, that her literary taste never car-
ried her beyond the range of the affections
of the domain of domestic duty. But to me
her spiritual attainments and sympathy, her
firm love for her Saviour, were the diadem
adorned the whole, and gave her society
harm I shall never forget. I have, I trust,
benefited in such intercourse with her, and
learned from her attractive example that 'the
ways of wisdom are those of pleasantness, and
her paths peace.'"

An intimate friend of her early years writes,
in our youthful days we were fast friends,
and the intimacy then formed continued
rough life, and time never impaired in any
part the friendship and attachment of early
years. Her many rare qualities of mind and
heart were always appreciated by me, and as
well upon the life thus ended upon earth,
I truly thankful to have been permitted to
know and to love, as I did, so beautiful a
character."

To few, perhaps, can the following lines,
Whittier, be more appropriately applied,
they sum up the graces of her christian
manhood:

"She kept her line of rectitude
With love's unobscured eyes;
Her kindly instincts understood
All gentle courtesies.
The dear Lord's best interpreters,
Are humble Christian songs,
The gospel of a life like her's
Is more than books or scrolls.
From scheme and creed the light goes out,
The saintly fact survives,
The blessed Master none may doubt,
Revealed in holy lives."

Our precious friend left many proofs of her
etic powers, but none can we more appro-
priately address than the following, written
on the steamer after having bade farewell
to her English friends, the last of whom was
beloved cousin, on the eve of her return
inward. They are the last metrical lines
she wrote, and now seem to us to have been
duly prophetic:

"She slips away from her river moorings,
And spreads her wings for a seaward flight;
A blue mist falls on the toll-worn city,
As we speed away in the dusky night.
Fading away—fading away!
I shall fade from their life away!
As the ship sails down to the distant bay,
As the sun dies out of the summer day,
So shall I fade from their life away!"
But memory dwells with a softened pleasure,
On pictures that time will never efface,
And ever within the golden setting,
There lingers the charm of a fair sweet face.
Fading away—fading away!
I shall fade from their lives away!
As the ship sails down to the distant bay,
As the sun dies out of the summer day,
So shall I fade from their lives away!"

J. S. L.

Opposing duties, though sometimes talked
out, do not, as I conceive, exist. That
which God does not require is not duty, and
never requires exertions inconsistent with
each other. What we need is wisdom to

draw correct lines, and the vigor to fill them
up with our might.—Ann Taylor.

The Power of Gentleness.—It is related that
a belated stranger stopped all night at a
farmer's house. He noticed that a slender
little girl, by her gentle ways, had a great
influence in the house. She seemed to be a
bringer of peace and good-will to the rougher
ones in the household. She had a power over
animals, also, as the following shows:

"The farmer was going to town next morning,
and had agreed to take the stranger with
him. The family came out to see them start.
The farmer gathered up the reins, and, with
a jerk, said, 'Dick, go 'long!' But Dick
didn't 'go 'long.' The whip cracked about
the pony's ear, and he shouted, 'Dick, you
rascal, get up!' It availed not, then came
down the whip with a heavy hand; but the
stubborn beast only shook his head silently.
A stout lad came out and seized the bridle,
and pulled, and yanked, and kicked the re-
bellious pony; but not a step would he move.
At this crisis a sweet voice said: 'Willie,
don't do so.' The voice was quickly recog-
nized. And now the magic hand was laid on
the neck of the seemingly incorrigible animal,
and a simple, low word was spoken. Instantly
the muscles relaxed, and the air of stubborn-
ness vanished. 'Poor Dick,' said the sweet
voice, and she stroked and patted softly his
neck with those child-like hands. 'Now, go
along, you naughty fellow,' in a half-chiding,
but in a tender voice, as she drew slightly on
the bridle. The pony turned and rubbed his
head against her arm for a moment, and
started off on a cheerful trot, and there was
no further trouble that day."

The stranger remarked to the farmer:
"What a wonderful power that day pos-
sessed!"

The reply was,
"Oh, she's good! Everybody and every-
thing loves her."

THE FRIEND.

ELEVENTH MONTH 23, 1878.

From the accounts now received from the
extended district within which the Yellow
Fever has been prevailing during the last
four months, it may be hoped that its ravages
have ceased, and that the inhabitants of that
section of our country are entering on the en-
joyment of their usual share of health.

Much has been said and written respecting
the causes producing the destroying pestilence,
and of the means supposed to be adequate for
its prevention, or to control its spread, and a
commission has been appointed to make a
thorough investigation into the subject, and
report the result of their labors.

The remote causes of epidemic diseases are
generally, if not always, outside the body,
affecting, when absorbed, the natural func-
tions of different organs, so as to produce ir-
regular action and excite a morbid condition.
Although names have been given to these
supposed morbid agents, as "malaria," "or-
ganic virus," &c., produced by natural causes,
in some occult way, yet little or nothing is
really known of their constituent elements or
the manner in which they are compounded.
Yet medical science and hygienic art have
done much to remove or modify the agents

believed to give rise to different diseases, as
well as to ward off their fatal effects when
unhappily developed, and it is a pressing duty
carefully to investigate the conditions that
experience has proved are generative of these
causes, and to store up and use the knowledge
that may enable to avert the spread, or lessen
the fatal characteristics of diseases that prey
upon the human family.

Man's own willfulness and perverse indul-
gence of his natural appetites are, in one way
or another, fruitful sources of the pain and
sickness he suffers, and it is hardly probable
he will ever fully understand the nature of
all the uncontrollable agencies that give rise
to the phenomena of disease; certainly he can
never free himself from the effects resulting
from the incessant variation in the weight,
temperature and moisture of the atmosphere
in which he lives and breathes, each of which
exert a potent influence on the functions of
his body.

Perhaps the most fatal diseases are those
generally spoken of as "contagious"; that is,
they are propagated by some emanation from
the bodies of those affected with some one of
them, passing to another who is in health,
and producing a specific train of symptoms,
ever the same in character, though varying
in their severity. These emanations are sup-
posed to be *organic poisons* generated in the
diseased system, thrown off by some one of
the excretories, and absorbed by those ex-
posed to them; but little or nothing is known
of their intrinsic nature.

It is an humbling consideration that the
human system may become so vitiated as of
itself to distil a poison that renders approxi-
mation to it dangerous and often destructive,
and it has been contended that there must
always be some external generative agency.
But *contagious* diseases, such as Small-pox,
Diphtheria, &c., must have had a beginning
somewhere, and at some time, and there is no
good reason given why the system may not
become so terribly deranged and depraved by
physical or mental causes, that some of its
secretions will be converted into a poison
communicable to others exposed to its con-
tact. Sudden fright has been known to change
the color of the hair in the course of a few
hours, and a case is recorded where the same
cause covered greater part of the body with
warts in a short time; there is therefore noth-
ing incredible in the theory of other corrupt-
ing agencies changing some of the secretions
into a poison analogous to that of the serpent.
But these are questions that may be left to
doctors to discuss and decide, and perhaps the
report of the Commission appointed may
throw some light upon them.

Our object, when we took up the pen, was
to call the attention of our readers to a con-
sideration of this subject, rarely if ever allu-
ded to in the various disquisitions put forth on
the awful scourge that has been passing over
so large a section of our beloved country.
Formerly it was a common opinion that pes-
tilences—whether epidemic or contagious—
were of direct supernatural origin, inflicted
on communities as chastisement for sin. But
with us at the present day, the attention of
the people is so constantly turned to theories
relative to the natural or secondary causes
supposed to have originated, or invited the
lodgment and propagation of the Yellow
Fever in the South, and so much has been
said—and properly said—of the manifested

sympathy and generous aid extended by the North for their suffering brethren, as contributing to the removal of the hostile feeling so rife during and since the civil war, that there is danger of altogether overlooking the serious lesson we ought to learn from the visitation that has swept so many thousands into eternity, and desolated so many once joyous homes.

With full belief in the production of the "pestilence that walketh at noon-day" from natural causes—as before expressed—we are equally convinced that it is permitted and intended by Him, in whose hand are the issues of life and death, to awaken the forgetful and rebellious people to a sense of their sins, their estrangement from and ingratitude to the Author of all their blessings, and rightful claim of their obedience and love. But alas! it is the fashion of the day, among a numerous class, to strive to thrust the omnipotent and omniscient Jehovah away from the immediate superintendence, ordering and support of the workmanship of his holy hand, to substitute therefor what they call the reign of law, and so do away with all supernatural interferences, even in the being, and in the affairs of men. But the true Christian knows that He is the source and centre of all life, and in Him we live, and move, and have our being. Though "He sitteth upon the circle of the earth, and the inhabitants thereof are as grasshoppers," yet is He the Dispenser of life and the means for supporting it, and He gives heed whenever it ceaseth; He heareth the young ravens when they cry for food, and not a sparrow falleth to the ground without his notice.

There is abundant evidence in Holy Scripture that the Most High ruleth in the kingdoms of men, and sendeth forth death-dealing maladies to execute punishment on communities that persistently rebel against his laws. He commanded Moses to tell his chosen people of old, "If thou wilt diligently hearken to the voice of the Lord thy God, and will do that which is right in his sight, and will give care to his commandments and keep all his statutes, I will put none of these diseases upon thee, which I have brought upon the Egyptians, for I am the Lord that health thee." We must confess that the people of these United States in practice fall very far below the Christian standard which they profess to acknowledge as binding upon them. Wickedness stalketh abroad throughout the land, and He who looketh at the heart and knoweth the way that we take, hath shaken his rod over us in judgment, and it may be in mercy, if the people will be willing "to hear the rod and who hath appointed it," and learn righteousness while his judgments are in the earth.

Let none flatter themselves with the idea that wickedness abounds more generally among the people where death has been reaping so large a harvest, and that other communities may escape; the lesson taught by our Saviour to those who told Him of the Galileans whose blood Pilate had mingled with their sacrifices, is applicable to every part of our nation, "Think ye that they were sinners above all who dwell in Jerusalem? I tell you, Nay, but except ye repent, ye shall all likewise perish."

May we lay these considerations seriously to heart, and be concerned individually so to walk, day by day, in the Lord's counsel and fear, as to find favor in his holy eyesight, and

move Him to withhold the farther display of the rod of his anger, and bless the nation with his preserving care.

SUMMARY OF EVENTS.

UNITED STATES.—The managers of the coal combination have decided to make the current year 17,000,000 tons, an increase of 2,000,000 tons. The allotment to the Reading Coal Company is 832,587 tons.

The annual report of the operations of the postal money order system, shows there were 4143 offices at the close of the fiscal year; 5,613,117 domestic money orders were issued, amounting to \$8,442,257; 128,000 international orders were issued, representing about \$2,000,000. Deducting all expenses the money order service yielded a net profit to the Government of about \$8,000.

The aggregate expense in operating the Bureau of Engraving and Printing of the Treasury Department during the year was \$5,800,000. During this time counterfeit has appeared on any of the work executed by the Bureau.

The United States Government has purchased, through a New York banking-house, sterling exchange to the amount of about \$5,500,000, required by the Halifax award, to be paid to the British Government in London on the 29th inst.

Last month 13,568 immigrants arrived at New York. For the nine months of the present year the total number was 64,963; during the corresponding period of 1877, there were 69,522.

The statistics of marine disasters for the 9th month, report 85 sailing vessels, 7 English and one Italian steamers lost.

Some of the members of Senator Saunderson's Committee to examine into the advisability of transferring the Indian Bureau to the War Department, have returned from an extended trip West, where they have taken much testimony from different persons interested in the subject. Army officers generally believe the transfer would be advantageous to the Indians and the Government; but they do not desire the increased responsibility. Nearly all citizens of the West, especially on the Pacific slope, favor the transfer. The Indians were mostly opposed to the change, preferring to remain under control of the Indian Department. The Winnemuccas, and Indians in California, desire to become citizens in the West, and the Committee will not be prepared to come to a decision till after additional testimony is taken in Washington.

A frightful accident occurred on the Reading Railroad, at Mahanoy City, on the 16th, by the explosion of a special engine standing in front of the station. The superintendent was in the office at the time the boiler exploded; the engineer, a man standing in the door of the station house, and four boys who were near the engine, were killed; several others were injured, and considerable property destroyed.

There were 284 deaths in this city during the past week. Of these 44 were in consumption; diphtheria 9; scarlet fever 15; typhoid fever 7; disease of the heart 10; old age 10.

Markets.—Gold 1001. U. S. sixes, 1881, coupon and registered, 100½; 5's, 1881, 100; new 4½ per cents registered, 103½; do, 5's, coupons, 104½; 4 per cents, 100½. Cotton was in demand, and steady at 9½ a 9½ cts. per pound.

Flour.—Extra, \$4.25 a \$4.75; patent and other high grades, \$5.50 a \$7.50. Rye flour, \$2.75 a \$3.

Grain.—Wheat, red, \$1.02 a \$1.04; number, \$1.04 a \$1.06; white, \$1.06 a \$1.08. Rye, 27 a 33 cts. Corn, 38 a 44 cts. Oats, choice white, 25 a 28 cts.; mixed, 27 a 28 cts.

Seeds.—Clover, 5½ a 6½ cts. per lb.; flaxseed, \$1.30 per bushel.

Hay and Straw.—Prime timothy, 60 a 70 cts., per 100 pounds; mixed, 45 a 60 cts. Straw, 65 a 75 cts. per 100 pounds.

Beef cattle are dull, and sell at 5 a 5½ cts. for extra; 4½ a 4½ cts. for fair to good; and 3½ a 4 cts. for common. Sheep, 3 a 4½ cts. per pound gross as to quality. Hogs, 4 a 4½ cts. per pound, as to condition.

FOREIGN.—Part of the city of Norwich is reported to have been inundated by a rise in the river Wisnau. Two of its most densely populated districts are several feet under water. Four or five miles of streets are submerged, and the basements of factories, warehouses, granaries and dwellings along the course of the river are flooded. From three to four thousand dwellings have been rendered uninhabitable. The flood has been caused by a fortnight's continuous rain.

The Furness Iron and Steel Company, at Barrer Furness, have determined to close their iron mine consequent of the depression of the iron trade. It will throw 2000 men out of employment.

It is estimated that in consequence of the stoppage of machinery at Burnley, the amount paid in wages one-third less than before the strike.

The continued depression of business has caused a heavy fallures among the chemical works at New Castle.

England and Germany have agreed that after the year 1879, telegrams between any points in two countries will cost three pennings (about six cents) per word, without restriction to the minimum number of words. The Dutch and Belgian States have agreed to prorate on this basis.

The Marquis de Lorne, the new Governor-General for Canada, and the Princess Louise, sailed from Liverpool on the 15th inst. for Halifax. Great preparations are being made for their reception.

Emperor William, replying to an address presented by a deputation of the Town Council of Wisbaden, he was invited to restore the Government. "He trusts that Prussia's wars against criminal tendencies will be limited by other States. "The peril," he said, common, and so ought to be the defence."

Premier Tisza, speaking in the Diet on the 15th, declared that the policy of Austria-Hungary was to prevent Turkey from becoming a prey to Russia. He expressed a firm hope that the Berlin treaty would prove a permanent or observational basis.

The Russo-Turkish war has added 70,000,000 roubles (upwards of \$50,000,000) to the annual interest on Russian debt, and inflated the currency by 500,000,000 roubles.

A dispatch from Erzeroum declares that the Rus army in the new Asiatic provinces of Russia, has as yet been placed on a poor footing.

A dispatch from Pesth, says, there have been serious floods in the river Save, attended by considerable loss of life, and an immense destruction of military stores.

There have been violent storms throughout Central Italy, and the damage caused by them is almost unparalleled. Travel on all the railways between Rome and Naples is interrupted. The Tiber overflows its banks, and the lower part of the city of Rome is inundated.

As King Humbert was entering Naples, on the 1st an attempt was made to assassinate him. The would-be assassin is a young man, says he belongs to no party, but being poor, nourished hatred toward the king.

The Macedonian insurrection is said to be daily increasing in dimensions, and spreading towards Epiros and Thessaly. The insurgents are divided into 16 bodies variously located. For many, it is stated, political trouble is a mere pretext for robbery; plunder. The Porte has sent a large force to subvert the insurrection.

A new map of Cyprus, published by one of the eminent British geographers, says that the average temperature of the island is 52.8 degrees centigrade in January, and 82 degrees in the 8th.

City of Mexico advices of the 4th say, that the fall silver has caused business depression. Exchange Speculations for gold, 22 cent. premium, London pence, and on Madrid 25 cent. premium.

FRIENDS' ASYLUM FOR THE INSANE, Near Frankford, (Twenty-third Ward,) Philadelphia. Physician and Superintendent.—JOHN C. HALL, M. D. Applications for admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, at his residence in Allowaytown, Salem Co. New Jersey, on the 13th of 10th mo. 1878, WILLIAM F. REEVE, in the 77th year of his age, a member Salem Friends' Meeting of Friends.

At his residence, Cedar coast, Iowa, on the 16th of 10th mo. 1878, JAMES PENRO in the 37th year of his age, a beloved member Hickory Grove Monthly and West Cedar Partien Meeting of Friends. During his last sickness, which was of long duration, he was preserved in a calm and composed mind, often praying for strength to bear the pain, and at other times wishing to be released, saying, "not my will but thine, O Lord be done." He closed was quiet and peaceful; leaving his family a friends the consoling belief that a crown of everlasting joy awaited him.

For "The Friend."

The late Total Eclipse of the Sun, as seen from Denver.

There could scarcely be a more favorable position for observing the grand and impressive features of a total eclipse of the sun, than the plains and mountains of Colorado. The Rocky Mountains occupy the western half of the State, and there are said to be one hundred and thirty peaks, that rise more than 5,000 feet above the level of the sea. Fifty-eight of these have been named, and a list of them with their altitudes is before me. If this list can be relied on, thirty-four of these peaks have an altitude of 14,000 feet or more. This great mountain chain rises rather abruptly from the rolling plain or plateau that extends over the eastern half of Colorado and upward across Kansas and Nebraska to the Missouri river. This great plain itself has, on its western boundary, an elevation of from five to six thousand feet, and it gradually slopes off to less than one thousand feet to the Missouri river. As the distance from the base of the mountains to the Missouri is about 500 miles, the average inclination of its plain is less than ten feet to the mile. The City of Denver is situated on this great plateau, about 13 miles from the base of the foot-hills," and at an elevation of 5,200 feet above the level of the sea. The foot-hills themselves rise to an average altitude of about 600 feet above the sea, some of them, however, being considerably higher than this. From Denver and other like situations on the plains, numerous higher summits and ridges loom the eastern part of this great mass of mountain land can be seen over the foot-hills, many of them partly clothed with perpetual snow. The streets of Denver cross one another at right angles, and one set run nearly the north-west and south-east. Up these streets Long's Peak can be plainly seen, a prominent and grand object, apparently a dozen or perhaps a score of miles distant, but really forty-eight miles away. Its altitude is 14,271 feet. Almost exactly south of Denver, Pike's Peak can be plainly distinguished when the atmosphere is clear enough, peering grandly over the shoulders of the intervening foot-hills. This fine peak is 63 miles distant, altitude 14,147 feet. At Denver we can see the foot of the Rocky Mountains from below Pike's Peak, in the south, to a considerable distance beyond Long's Peak in the north-

west, a total length of about 130 miles in a direct line; and almost innumerable peaks and ridges, some bare and some snowy, rise up to view from this great extent of mountains, forming a beautiful and magnificent picture. Over these grand mountains and the plateau in front of them, the moon's shadow was to sweep in its rapid flight across our planet, on the 29th of the month. Can we imagine a more favorable arrangement of mountain and plain for the display of this interesting phenomenon?

It had been a question with us whether an open situation on the plains in front of the mountains, or some place up among the mountains would be preferable for observing the eclipse. We were well aware of the tendency of clouds to form and congregate on the sides and summits of mountains, and that they often remain there for a long time while the plains below are bathed in bright sunshine. From inquiries on this subject we had learned that these Colorado mountains are no exception to the general rule in this respect, and that therefore the probability of our having an unobstructed view of the sun would be much greater on the plains than on the mountains. Besides, on the latter, unless indeed, we scaled one of the high peaks such as Gray's or Pike's Peak, we might be much more hemmed in, and our view of the surrounding region more limited than on the summit of even a moderate elevation on the plain, especially if this latter were far enough back from the foot-hills to give us an extensive view of the great chain of lofty mountains before us. We therefore concluded that Denver or its vicinity would be a very favorable location, perhaps the most so of any, for observing the rare and interesting phenomenon. As this place is only about 15 miles from the central line of the shadow (to the north-east of it) the time of continuance of the total phase would be only a very few seconds shorter than on the central line itself.

We arrived at Denver on the evening of the 25th of Seventh month, and on the afternoon of the 26th we rode to some of the higher situations near the City, in order to find the most suitable position from which to view the eclipse on the 29th. The result of this examination was, that we selected a broad elevated swell of the prairie, a mile and a half east of the town, known as "Capitol Hill," from which there is a commanding view of both the mountains and the plains. That afternoon it was somewhat cloudy, and on the previous afternoon it had rained on us copiously as we travelled from Cheyenne to Denver. We learned that there had been a continuous succession of rainy or cloudy afternoons for nearly a week past, and that the weather had been very unsettled for two weeks. This was discouraging; and our experience during the next two days was by no means reassuring. The 27th was cloudy nearly all day, but towards evening the clouds

dispersed sufficiently to make a beautiful sunset, presaging fine weather on the morrow. Accordingly the early morning of the 28th was clear and bright; but near noon dark and threatening clouds formed as usual over the mountains, entirely obscuring the western sky, and a storm could be seen in that direction. In the afternoon this storm reached the plains, and we had at Denver both rain and hail. Again it cleared off towards evening, and again the descending sun lent brilliancy and beauty to the scattering clouds; but we had learned not to place much reliance on this indication, in this elevated region, where the broad, heated plains and the lofty, snow-clad mountains are within a few miles of each other. The 29th opened beautifully clear; and as the air was decidedly cooler, we began to hope that there had been a real change for the better, one that would continue for ten or twelve hours at least; and our hopes were not disappointed, for it remained clear, or very nearly so, throughout the day.

We had engaged a carriage to be at the door of our hotel at half past one o'clock; and accordingly soon after that hour our party of five set off from the hotel, having with us a good supply of colored glass, some opera glasses, a very good spy-glass with a 24 inch object glass, and a tripod that had been extemporized for the occasion. We were soon on Capitol Hill, whither others from the town had gone for the same purpose. Selecting a favorable place on this high but gentle swell of the prairie, we erected our tripod and telescope, and waited for the first appearance of the edge of the moon on the sun's disc. The sky was almost entirely clear. There were a few clouds near the horizon, but none that threatened to interfere with the grand exhibition. The sun shone with great fervor, as it usually does in the clear and rarified atmosphere of this elevated region; but by using our umbrellas, and retreating occasionally to our carriage, we escaped the burning effect of his rays.

About the appointed time, 2h. 20m. Denver time, we noticed a little notch on the west edge of the sun. Slowly it increased and extended across the face of the orb of day. The diminution of light and more especially of the heat of the sun's rays was very noticeable as the moon advanced, and ere long we needed neither umbrella nor carriage to shelter us from the heat. A peculiar darkness like that produced by an approaching storm, seemed to be settling around us and on the whole landscape. When the remaining edge of the sun's disk was reduced to a very narrow crescent, we noticed that Long's Peak and the mountains near and beyond him, were apparently enveloped in a dark sombre mist or cloud; and some of the party really supposed for a moment that clouds were gathering on those distant mountains. Then soon we saw this misty gloom approaching us, producing mingled feelings of awe and admiration that

cannot well be described; and now, directing our attention again to the western sky, we presently saw the last or southern edge of the sun broken, and then immediately the corona broke forth, a beautiful halo or ring of light, with rays extending from it in perhaps every direction but more especially to the right and left. To my eyes the body of rays on the right appeared forked like the tail of some bird, while that on the left was nearly straight at the ends. On either side these rays were discernible to the distance of one and a half or perhaps two diameters of the sun.

During the absence of the sun we observed a long line of fleecy, broken clouds near the northern horizon, which from the effect of the diminished light, were of a dark salmon or bronze color. The line was a peculiar one, and there was almost a metallic lustre about it. The whole appearance of these clouds and of the dull golden sky seen between and above them, was very fine, and we thought this one of the most beautiful features we had noticed in connection with the deeply interesting and magnificent phenomenon which it had been our privilege to witness under circumstances every way so favorable.

While the southern edge of the sun was still shedding his light upon us, and before the apparent cloud of misty darkness had settled on Long's Peak, there was heard from some of the numerous spectators near us the exclamation "There's a star." On casting our eyes in the right direction, we perceived a bright little luminary in the west, not very far from the horizon, which by its position and appearance, was at once recognized as *Venus*. I noted the time, 3 h. 25 m., which was 31 minutes before the commencement of total obscuration; and doubtless if our attention had been turned exactly to the right spot earlier, we would have seen this brilliant planet while there was a much larger portion of the sun uncovered.

During totality *Venus*, *Procyon*, *Castor* and *Pollux*, *Mars*, *Regulus* and *Mercury* were all seen, I believe, by one or other of our party, also a star to the north, far distant from these, which was probably *Capella*. The position we occupied, commanding, as already stated, a view of the Rocky Mountains for 130 miles from north to south, with its numerous lofty and snow-crested summits, was so pre-eminently fitted for observing the approach and the receding of the moon's shadow, and the effect of the growing darkness and returning light on the landscape, that we had not calculated on making much use of the telescope during totality, presuming that the observation of the landscape, the search for the stars that might shine forth, and the study of the corona, would fully occupy the two minutes and three quarters of total obscuration. The several members of our party and a number of the bystanders had looked through the instrument, some of us several times, during the partial phase, but after the total phase commenced, the view of what was going on around us was so engrossing, that a very hurried look at the corona through the telescope was all that I attempted. As thus seen, it was a beautiful object, even more so, perhaps, than when viewed without the glass. The lower part of the coronal ring on the right hand or northern side appeared to be of a rich rose color for about 30 or 40 degrees. I had but a few seconds view of it, however, and for

this reason cannot speak positively of its character, nor say anything about the red protuberances which were seen by others at that part of the sun's surface. While thus examining the corona through the telescope, the sun broke suddenly forth on the right hand edge, the two minutes and forty seconds of total obscuration having passed even more rapidly than we had anticipated, and the most magnificent and interesting part of the exhibition, whether viewed through the telescope or with the naked eye, was over. Upon quitting the instrument and looking up, I was surprised to find a cloud—a small thin veil of white—interposed between us and the sun; but it was so light and thin that it could scarcely have interfered at all with our view of the phenomenon.

Turning our eyes about this time to the northern landscape, we saw that Long's Peak and all the mountains in that direction were lighted up again, the snowy patches glowing beautifully in the renewed light of the sun's rays; but Pike's Peak and the mountains in that direction were still in the shade, and the most remote of them must have remained so for nearly two minutes after the sun broke forth upon us.

The moon's shadow as thrown upon the earth's surface is nearly elliptical, except in the very rare instance where the moon is vertical at the time of central eclipse. In the present case and in this region, the elliptical shadow measured approximately 128 miles in its greatest diameter—extending from 101 degrees north of east to 101 degrees south of west,—and 94 miles in its least diameter at right angles to the former. It entered Wyoming with a velocity of 291 miles per minute, swept almost due south-easterly across that Territory and the State of Colorado, and when it left the latter it was moving at the rate of 34 miles in a minute.* On a pocket map of Colorado and the adjoining territories, I had drawn the outline of the shadow showing its approximate size, form and position at the time when the *middle* of the eclipse was to occur at Denver. From this we learn that at that time, 3 h. 30 m. p. m., the north edge of the moon's shadow was just leaving the snowy summit of Long's Peak, 48 miles to the northwest, while the south edge was then so near to Pike's Peak, that in a quarter of a minute it would darken his bare and storm-beat summit 63 miles to the south of us. I cannot say that any of us verified this by observation. There were so many things to look for and enjoy during the total obscuration, that the time was much too short to see every thing.

After the sun re-appeared, we did not remain long at our station on Capitol Hill, but drove back to the City, noticing on our way the crescent shaped images of the sun interspersed among the shadows of the trees by the wayside; a phenomenon which the absence of trees at our station had prevented us from observing. Erecting our tripod and telescope near a window in our room at the Alford House, we witnessed from that convenient and sheltered position the gradual withdrawal of the moon's opaque body from before the face of the central orb of our system. The sphericity of the moon was well brought out by the glass, and it had exactly the appear-

* In an article copied into "The Friend," (page 20 of the present volume,) the velocity of the moon's shadow is erroneously given as "about thirty miles per second."

ance of a great black cannon ball suspended before the sun. The atmosphere was so pure and clear, and the telescope defined so well that I had a very satisfactory observation of the end of the eclipse, which occurred according to my time, at 6 h. 26 m. 46 s. Washington mean time, or 4 h. 34 m. 59 s. Denver time. This is $\frac{3}{4}$ seconds later than the time of its contact as determined by Professor Colburn on Capitol Hill.

As compared with the total eclipse of 1860, which two of our company witnessed with great interest at Bristol, Tennessee, this presented a brighter but less beautiful corona; that is to say, the inner corona or ring of light was brighter and broader on the present occasion, but the radiating rays were less bright and not so well marked, although probably more extended. The bounds of the shade on the landscape were, perhaps, not so well defined in the Denver eclipse as in that of 1860. This may have been owing to the other difference just referred to, viz., the great amount of light shed by the corona, in the last eclipse. I apprehend this greater brightness of the coronal ring, may be in part attributed to the rarity and transparency of the atmosphere in this dry and elevated region 5200 feet above the sea.

At the Signal Service Station in Denver, record was kept of the temperature, both the sun shine and in the shade, during the eclipse. About the time of the first contact the temperature in the sun marked 114°, as it gradually fell to the minimum 82°, which occurred at 3 h. 35 m. p. m., about three minutes after the end of the total phase. It afterwards rose rapidly, and at the time of last contact, 4 h. 35 m. p. m., it marked 109°, which was the highest after the eclipse. In the shade the maximum temperature for the early part of the afternoon was 89° about 10 minutes after first contact, continuing at this for two minutes more, and then gradually falling to the minimum 83°, which, however, it did not reach until about 20 minutes after the middle of the total phase. From this it gradually rose, marking 88° about the time the eclipse ended, and 92° at 10 minutes after 5 o'clock. It will be seen from the above that the thermometer placed in the sun marked during the sun's absence a lower minimum than the one in the shade. This must have been owing either to a difference in the situation of the two or to some inaccuracy in the thermometers or in the observations.

C. J. A.

"Honest Friends, of what employment so ever, were then concerned to be testimonial bearers in the way of their trade or business and though it looked for a time as if it would have hurt their trades, yet as Friends were faithful, and preserved in a meek and quiet spirit, they prospered; and though some had but little when they were convinced, their endeavors were blessed; for being diligent in the management of their trades and affairs, and carefully keeping their word and promise they gained credit in the country."—*C. Stor.* 1685.

The *Religious Herald* says: Speaking of the generous contributions of the Northern people to the yellow fever sufferers, the *Christia-*

Index (of Atlanta, Ga.) says: "They have conquered us again. We are overwhelmed; we are brought to tears. Were we ever enemies? Let this river of love be a river of oblivion to all our animosities, and, seeing Christ in each other, let us love each other for his sake." Amen and amen!

John Welch the Peacemaker.

Famous among the godly Scotchmen of olden time for fervent piety and earnest zeal and range prophetic foresight, may be named John Welch, who was born in Nithsdale about the year 1570. A wild and graceless youth, he broke through the restraints of school life and the discipline of his father's house, and joined himself to a band of thieves upon the English border, who lived by robbing and plundering on both sides of the line. Here he speedily and the rags and misery which are the prodigal's appropriate portion, and soon resolved to arise and go to his father.

Fearing to meet one whom he had so greatly injured and offended, he went to Dumfries and spent some days at the house of an aunt, James Forsyth, whom he entreated to intercede in his behalf. While he was lurking here, the father providentially came to the house on a visit, and after talking a while with him, the aunt inquired whether he ever heard tidings of his son John.

"Oh cruel woman!" said he, "how can you name him to me, the first news I expect to hear of him, is that he is hung for a thief."

She sought to comfort him with the thought that many a profligate boy had become a virtuous man, but he reiterated his apprehensions, and asked whether she knew if John were yet alive. She replied that he was, and she hoped he would prove a better man than he was a boy, and then called upon him to come to his father. He came in tears, and falling upon his knees besought his father for Christ's sake to pardon his offences, and solemnly promised to lead a better life. His father reproached and threatened him, yet at length the tears of the son and the importunities of the aunt persuaded him to receive the returning prodigal, who entreated his father to send him to college, promising that in case of any future misbehavior he would be content to be dismissed forever. He accompanied his father home, was sent to college, became a diligent student and sincere convert, and at length entered upon the ministry of the Word of God.

He was very young when he was first settled at Selkirk, in a rude part of the country, and many years after an old man related that he, when a boy, was the bed fellow of the young minister at Selkirk, and that when he retired at night he used to lay a Scotch plaid above his bed-clothes which he used to wrap him when he arose to engage in nightly prayer; for from the beginning of his ministry he was not content unless he spent seven or eight hours daily in supplication.

Various persecutions and hindrances disposed him to remove from Selkirk to Kirkcaldy, bright, from which place in the year 1590 he went to the town of Ayr, a place so noted for ungodliness that there could not be found one in all the town who would let him a house to dwell in. He was accommodated for a little time with room in the house of a gentleman named John Stewart, an excellent Christian man.

When Welch first came to reside in Ayr,

the place was so divided in factions and filled with bloody conflicts, that a man could hardly walk the streets in safety. Welch undertook to quell these fierce disturbances, and in his earnestness he used often to rush between two parties of men fighting, frequently in the midst of blood and wounds. He was accustomed to cover his head with a helmet, but never to take a sword or weapons, that they might see that he came for peace and not for war. After having separated the contending parties, and reconciled them by peaceable words, he would cause a table to be spread in the open street, and there bring the enemies together, and offering up a prayer to God, would persuade them to forgive each other and eat and drink together, when he would end the work by singing a psalm of praise. By such zeal and fervor he gained the blessing that belongs to the peace-makers, and was truly called a son of God. Rude as the people were they were won by his example and his doctrine, and he became their friend and counselor in whom they most implicitly confided. Nor was their confidence in him misplaced, for his words seemed specially marked by divine wisdom.

At one time when the great plague was raging in Scotland, the town of Ayr being free from the infection, the gates were guarded with sentinels and watchmen, lest any travellers should bring in the dire disease. One day two travelling merchants, each with a pack of cloth upon a horse, came to the gates of the town desiring to enter and sell their goods. They produced a pass from the magistrates of the town from whence they came, which at that time was free from the plague. The sentinels would not admit them until the magistrates were called; and when they came they would not decide upon anything without the advice of their minister. Accordingly John Welch was called, and his opinion asked. He hesitated, and putting off his hat lifted his eyes toward heaven for a while, continuing in the posture of silent prayer; after which he told the magistrates that they would do well to send those travellers away, affirming with great positiveness that the plague was in those packs! The magistrates accordingly commanded the travellers to be gone. They went on to Cumnock, a town a few miles distant, where they sold their goods, which so infected the place with the plague that the living were hardly able to bury their dead. Such a manifest token of divine direction could not fail to have an influence upon a people so mercifully delivered, and ever after Welch was held in grateful and honored remembrance.

Many instances of his faith and fervor are recorded, and his preaching was with great authority and power. When banished to France, in 1606, he preached before the university of Saumur, with a boldness and plainness which caused a friend to inquire how he could be so confident among strangers and persons of such honor, to which he replied, He was so filled with the dread of God, that he had no apprehensions for man at all.

After remaining in France for some time, his flock being scattered and his health broken, he obtained liberty to go to England, where he languished for a while under a disease resembling leprosy; physicians said he had been poisoned. He suffered also from excessive languor, with great weakness in his knees, caused by his continual kneeling in prayer,

by reason of which, though he was able to move his knees and walk about, yet he was wholly insensible in them, and the flesh became calloused like horn. His friends entreated King James VI., that Welch might have liberty to return to Scotland, the physician declaring that nothing would save his life but freedom in his native air. His wife, who was the daughter of John Knox, by means of some of her mother's relatives at court, obtained access to the king, and petitioned him to grant her husband this liberty. His majesty asked her who was her father. She replied John Knox.

"Knox and Welch," said he, "the devil never made such a match as that."

"It is right like, sir," said she, "for we never speired (asked) his advice."

He asked her how many children her father had left, and whether they were lads or lassies. She said three, and they were all lassies.

"God be thanked!" said he, "for 'an' they had been three lad's I had never bruik'd (possessed) my three kingdoms in peace."

She again urged her request that he would give her husband his native air.

"Give him his native air," replied the king, "give him the devil!"

"Give that to your hungry courtiers," said she, offended at his profaneness.

He told her at last that if she would persuade her husband to submit to the bishops, he would allow him to return to Scotland. Mrs. Welch lifted up her apron and holding it toward the king in the true spirit of her father "who never feared the face of clay" replied:

"Please your majesty, I had rather keep (catch) his head than clay."

He never returned to Scotland, but his friends importuned the king that he might at least have liberty to preach in London, which he would not grant until he heard that all hope of life was past, and then he gave the dying man permission to preach. As soon as Welch heard that he might preach, he greedily embraced the opportunity, and having access to a pulpit, he went and preached long and fervently. After ending his sermon he returned to his chamber and within two hours, quietly and without pain, resigned his spirit to the God who gave it, dying at the age of fifty-two years.—*The Common People.*

The Home of the Gardener Bird.—In the *Gardener's Chronicle* a very curious account is translated for that journal, and illustrated with engravings by a traveller in New Guinea—Signor Odoardi Beccari—of a new species of bower bird, very similar in its habits to the Australian bower birds.

The chief peculiarity of the bird is its great taste for landscape gardening, in which art it seems to excel almost all the bower birds. Signor Beccari apparently regards the bower he describes as the bird's "nest," but unless the New Guinea variety differs in this respect from the other kinds of birds of this description, he was probably mistaken in this.

We should think it most likely that the beautiful arbors described and illustrated by Signor Beccari are mere places of social resort, like our marquee or tents for pic-nics. They select for their bowers a flat space round a small tree, the stem of which is not thicker than a walking stick, and clear of branches near the ground. Round this they build a cone of moss of the size of a man's hand, the

object of which does not seem to be explained, but may be, perhaps, merely to make a soft cushion round the tree in parts where the birds are most likely to strike against it.

At a little height above this moss cushion, and about two feet from the ground, they attach to the tree twigs of a particular orchid (*Pendrobium*), which grows in large tufts on the trunks and branches of trees, its twigs being very pliant, and weave them together, fastening them to the ground at a distance of about eighteen inches from the tree all around, leaving, of course, an opening by which the birds enter the arbor. Thus they make a conical arbor of some two feet in height and three feet (on the ground) in diameter, with a wide ring round the moss cushion for prom- enading; and here they are sheltered from the elements and have a pavilion of the most delicate materials. They appear to select this particular orchid for their building, because, beside the extreme pliancy, the stalks and leaves live long after they are detached from the plant on which they grow. Both leaves and stalks remain fresh and beautiful, says Signor Beccari, for a very long period after they have been placed in this way into the roofing of the arbor.—*London Spectator*.

For "The Friend"

"Not Wary in Well-doing."

The late Francis Wayland once remarked, that human ideas are the proper materials for the processes of logic. The ideas of revelation are not human, and these, he thought were not proper subjects for human logic. Certain it is, that many persons have been led into errors by the effort to build up a system of religious doctrine through the strength of their own reasoning powers—errors which would have been avoided by simple obedience to the guidance of the Spirit of truth.

A striking illustration of the danger resulting from dependence on speculative ideas is furnished by a narrative contained in a tract, the series issued by the Methodists. The subject, was an aged woman, of whom it is said, that in early life she had been seriously awakened and through repentance had obtained peace with God; and for many years adorned the Christian profession by her most exemplary character. Her evidence of acceptance with God was undoubted, and fear seldom disturbed her peace. At length she imbibed the doctrine of unconditional election and believed herself perfectly safe. The influence this had upon her mind was soon perceptible, the power of religion was lost; reality declined into dead formality; and yet when spoken to on the subject, she regarded herself as perfectly safe and unable finally to fall. She eventually became careless in the discharge of religious duties and finally left the society with which she was connected. Being now free from the salutary restraints which union with a Christian church imposes, she sinned with greediness. When warned of her danger, and referred to her preceding life, she seemed devoid of all religious feeling; and in extenuation of her sin, would boastfully urge, that she could not be lost for she was once a child of God. Her increasing years only increased her guilt and hardened her once tender heart; till old age with its attendant infirmities and afflictions, laid her upon the sick bed. Now, when death's chilling grasp was felt and the awful realities of an eternal world were disclosing themselves,

she saw and felt the rottenness of that foundation on which she had built her hopes of salvation.

How needful it is for all of us to heed the command of our Saviour—"Watch and pray, lest ye enter into temptation?" And to weigh well the language of the Apostle, "Work out your salvation with fear and trembling." We are never safe, but while we are kept in a humble, dependent condition, ever looking to the Lord for help and preservation." Let him that thinketh he standeth take heed lest he fall."

RED RIDING-HOOD.

Selected.

On the wide lawn the snow lay deep,
Ridged o'er with many a drifted heap;
The wind that through the pine-trees sung
The naked elm-boughs tossed and swung;
Went through the window, frosty-starred,
Against the sunset purple barred,
We saw the sombre crow flap by,
The hawk's gray fleck along the sky,
The crested blue-jay flitting swift,
The squirrel poised on the drift,
Ere, to alert, his broad gray tail
Set to the north wind like a sail.

It came to pass, our little lass,
With flattered face against the glass,
And eyes in which the maiden dew
Of pity shone, stood gazing through
The narrow space her rosy lips
Had melted from the frost's eclipse;
"Oh, see," she cried, "the poor blue-jays!
What is it that the black crow says?
The squirrel lifts his little legs
Because he has no hands, and begs;
He's asking for my nuts, I know:
May I not feed them on the snow?"

Hail lost within her boots, her head
Warm-sheltered in her hood of red,
Her plaid skirt close about her drawn,
She flourished down the wintry lawn,
Now straggling through the misty veil
Blown round her by the shrieking gale;
Now sinking in drift so soft and deep,
Her scarlet hood could scarcely show
Its dash of color on the snow.

She dropped for bird and beast forlorn
Her face and hands and corn,
And thus her timid guests bespoke:
"Come, squirrel, from your hollow oak,—
Come, black old crow,—come, poor blue-jay,
Before your supper's blown away!
Don't be afraid, we all are good;
And I'm mamma's Red Riding-Hood!"

O thou whose care is over all,
Who heedest even the sparrow's fall,
Keep in the little maiden's breast
The pity which is now its guest!
Let her not cultured years make less
The childhood charm of tenderness,
But let her feel as well as know,
Nor harder with her polish grow!
Unmoved by sentimental grief
That walk along some primrose leaf,
But, prompt with kindly word and deed
To own the claims of all who need,
Let the grown woman's self make good
The promise of Red Riding-Hood!

—The Vision of Eckard.

An Open Bible.—The report of the British and Foreign Bible Society mentions the following incidents, to show the advantage of using the windows of depots so as to give passers-by an opportunity of reading the Scriptures.

One day a gentleman in Berne passed our depot, and stopped to look at the open Bibles exhibited in the window. His eye lit on the passage in the Sermon on the Mount, "Agree with thine adversary quickly, while thou art in the way with him." He read what went

before and what came after. It was a joy to him. He had just commenced a lawsuit against another gentleman. Without a moment's delay he went from the window of the Bible depot to his "adversary" and told him what had happened; and the "adversaries" agreed with each other and the lawsuit was quashed. Then he returned to the depot and said that he wanted to buy that Bible he saw in the window. The depository offered him a clean copy of the same edition, for naturally, the book in the window was soiled by exposure to the sun. But he said, "No; I want that Bible and none other," and then explained the depository what she told me and what have just related.

The depository turns the leaves of the Bibles every day. One day a woman entered her depot and said, "Madam, you have forgotten to turn the pages of your books today." It appeared that the old woman was in the habit of doing her daily Scripture reading in the large print Bible in our depot window.

For "The Friend!"

The Chemistry of Plant Growth.

(Continued from page 118.)

Potassium is one of the most necessary elements of plant food, and one of those which it is usually most important that farmers should supply. All grains, hay and straw sold off a farm, cause a loss of potash, and the risk of permanent impoverishment of the land. The soil of run down farms, is frequently especially poor in potash. It is not return with the excrements of animals, but a large amount can be obtained from the straw of the barn-yard, from decaying vegetation, from ashes of grasses or wood. The value of potash to land may be most easily tested, by the application of wood ashes. If this produces a decidedly beneficial effect, it shows a deficiency of the article, as most of the other fertilizing agencies of the wood, have gone on as gases in the fire. So valuable is potash a fertilizer, that it seemed a few years ago as if the supply could not be made to equal the demand, and it commanded a high price. But the discovery of potash in the salt mines of Stassfurt, in Germany, has opened up a deposit apparently inexhaustible, and rich in the materials for vegetable growth. Age ago was deposited this source of plant nourishment. It has lain, undisturbed and unknown for centuries, but now is taken up from its resting place and started on its mysterious travels, through the bodies of plants and animals. More potash is now procured from these mines, than from all other sources whatever.

There is remaining one of the inorganic elements, yet to be considered. It is strange that this body, capricious, inflammable, which we know most familiarly as an ingredient of parlor matches, should be so important to life that neither plant nor animal, so far as known, exists without it. It is scattered through the wood of trees, and when they decay we see it glowing in the dark, in a process of slow combustion, and call it phosphorescence. It largely forms the hull of wheat, and thence it enters into the human system, and builds up bones and brain. We have seen that it is in some mysterious way, connected with the efficiency of the brain, and is used in the act of thinking. Phosphorus is one of the most widely diffused and valuable elements of liv-

forms; and a deficiency of it is a cause of perfect development. When we admire the white flour of the miller, from which all traces of bran are rigidly excluded, we do not reflect that he has left out one of the most useful substances of the wheat, without which the bones of a child cannot grow, or perfect structure be built up. It is impossible to tell how many weak frames, diseased teeth, and inefficient brains, are due to the lack of phosphorus in the food. This is one cause of the healthfulness of Graham bread, and meal, and similar articles which contain the hull of grain. The phosphorus of the plant is derived almost exclusively from combinations with oxygen and certain bases, which are called phosphates. It is essential that these phosphates should be soluble in water, or that the carbonic acid of the soil, in order that they may be used as plant food. The phosphate of lime in bones is soluble only in minute quantities, and after long exposure. A bone will lie for years in the soil without acting upon. When ground to dust it is more capable of solution, but still the process is very slow. When this dust is mixed with sulphuric acid, however, part of the lime unites with it and forms gypsum, the rest is left in the form called super-phosphate, easily capable of assimilation by the plant.

Such are our artificial phosphates. They are valuable just so far as the phosphate of lime is decomposed by sulphuric acid, and a soluble super-phosphate is formed. They undoubtedly supply a lack, when honestly made, they usually profess to contain the three necessary substances, which we have seen nature does not usually supply in sufficient quantity to the soil, nitrogen in a combined state, potash and soluble phosphoric acid, but with these are also found a large amount of impurities, some dishonestly added, others ingredients of the substances used in the preparation, and a large per centage of sulphate of lime, which, though useful, is worth less than it costs in a phosphate. Until recently the principal source of phosphate of lime, for the manufacture of super-phosphate, has been bones, but as in the case of potash, nature has provided an almost unlimited supply in the phosphate rocks of South Carolina. These rocks contain from 40 to 60 per cent. of phosphate of lime, cover a space of fifty square miles, and of such a depth, that 500 to 1,000 feet of available mineral underlie each acre. They form the road beds, and in some places come so near the surface, that it is difficult to dig soil enough to hill up the cotton rows. They are now exported in large quantities, and mixed with sulphuric acid, form the basis of most artificial fertilizers.

To sum up, we conclude that the four substances most necessary for human agency to be formed to growing vegetation, are calcium in the form of lime; phosphorus, in the form of soluble phosphate of lime, or phosphoric acid; potassium, as potash, and nitrogen as ammonia or a nitrate. All of these combined, we have seen, form but a very small fraction of the plant, and a little of them will go long distance in stimulating growth. Without their presence in the soil, a plant will not perfect, after the nutriment of the seed is exhausted.

But crops do not require the same proportions of these elements. Thus a fair crop of potatoes requires twice as much phosphoric acid, as a fair crop of wheat. Corn removes

from the soil three times as much potash, as an equally good yield of wheat. The following table exhibits this, for some of our common crops, better than any statements. It must be borne in mind, that the per centage is of the whole inorganic constituents. Thus 28 per cent. of potash does not mean 28 per cent. of the whole plant, but 28 per cent. of the inorganic material, which in itself is but a very small proportion of the whole.

Plants have a wonderful power of hunting needed substances from the soil. Their roots are drawn to them by some strong attraction, and an amount that the chemist cannot detect is unerringly discovered by the plant. Two of the rarest elements calcium and rubidium have been found in plants where the most delicate tests gave no evidence of them in the soil. Fluorine is quite rare as a mineral, yet the supply in the teeth of men and animals is first sought out of the dirt by the roots of plants. Copper is found in minute traces in some vegetable food for birds, and the rich plumage of cert in of them, is due to its presence. The marine plants have selected the bromine and iodine from their assortment of food, and are a source of the commercial supply of these articles.

Hence we see the same diversity in the food of plants as of animals. They both have their tastes and appetites, which must be gratified to ensure growth. They both in their wild state select what is good for them, and reject the poison. They both by seeming instinct, gather from the abundance of material around, such elements and such only as they require, and deposit them in the special organs which they are adapted to nourish, and they both by cultivation, the plant more than the animal, can be improved by rich and nourishing food, and made to utilize substances, which in their natural state they would reject.

(To be continued.)

Discouragements.

"The soul of the people was much discouraged because of the way."—Num. xxi. 4.

Those who doubt whether they be in the way of life, because they meet with a deal of trouble and perplexity in it, discourage themselves from that which they have reason to take the greatest encouragement from. When we are led beforehand, that "the way of life" is "a narrow way," "a rough way," if we found the way we were in to be broad and plain, we had reason to suspect that we had missed our way; for Christ did not so describe the way of life to us. But when we find our way narrow and rough, a way wherein we meet with many sorrows, many fears, much weariness, we have reason to say with ourselves, surely this is the way of which Christ told us.—George Barker, 1659.

John Croker.

For "The Friend."

The subject of this memoir was born in Plymouth, England, in the year 1673. His parents who were early convinced of the Truth, suffered much persecution, loss of goods, and imprisonment, because of their faithfulness in standing firm for the principles which they professed; bearing all these trials with patience and resignation, counting them as nothing in comparison with the blessed truth which God had revealed and made them sharers of.

Although young in years, the author of this memoir says, "In all these trials, I never heard or saw them uneasy; but they often encouraged their children to be sober and good, that they might come to be the servants of God, and to stand in their places when they might be called hence; believing, however it might fare with them as to outward things, that God would be a portion to their children, as they kept in his fear; and the lot of their inheritance, if they proved faithful, which would be the best of riches and the best of ornaments, far exceeding gold or silver, or any of the soft and shining raiments, which they themselves had found a concern, in a great degree to forsake and deny; accounting all things as nothing that they might win Christ, for whose sake they were made willing to be as the offscouring of many people."

John Croker writes of himself; "When I was young, I found there was an evil stubbornness or rebellion, which grew in me, so that I often kicked at the proofs of my parents, and slighted their tender counsel, and vainly spent my childish days to their, and since, to my own grief and sorrow."

In the year 1686, he was bound apprentice to a Friend, (with others, who was about to remove to Pennsylvania,) John Slidson, by trade a serge master, but one who also professed surgery, and by whom he was to be instructed in this art. He was himself sensible of the great exercise his mother had felt for his preservation, and that he might be made to feel the power of God to work in him to the cleansing and purifying of the heart. The sending him from home at this early age, seemed to have been with the hope that a separation from some of his companions might prove beneficial.

After his arrival in Pennsylvania, his master put him with the rest of the servants into the woods, to clear land for a plantation; at this he worked hard for about the space of one year. Here his thoughts frequently turned towards his parents; and their tender care and advice, together with the remembrance of his own stubbornness and rebellious behavior toward them, would cause him to feel penitent, and the language would arise from his heart, "Lord, forgive me and look down in mercy upon me." Although these tender seasons were frequently vouchsafed unto him, yet he turned repeatedly from them, and would join in with his companions in their wantonness and foolishness. But the Lord whose eye was upon him for good, continued to visit and to strive with him; outward troubles followed one after another; his master, with the most of his family, died of a distemper then prevalent in the country, and he, with the other servants, were left destitute. He, with one other young man, remained there for awhile, roaming about through the woods, and making use of such provision as

was left in the house and what they could find in the woods. This solitary life which he now led, left him much time for thought; various considerations regarding things past and present filled his mind; he recalled the many observations both by sea and by land vouchsafed him, and saw that whilst others around him were stricken down with the distemper that prevailed there, he was spared. As the sense of these things grew on him, love to God increased in his bosom; his heart was tendered and tears would flow, and under these feelings he would sit in solitary places with his Bible in his hand, desiring the Lord to open his understanding that he might know what he read; and to show him his duty towards Him in order that he should serve Him, covenanting with his Heavenly Father that if He would be pleased to make a way for him to return to his father's house, then he would serve Him, and be obedient to his parents; his language being in effect the same as that of Jacob, when he said;—"If God will be with me in the way that I go, so that I come again to my father's house, then shall the Lord be my God, and I will serve Him."

It appears from the memoir that the place of his residence was about fifteen miles from Philadelphia, and some of the Friends to whom his father had committed him in case of adversity, no doubt resided there; they therefore consulted together respecting him, and he was finally placed with one of them, James Fox, [he, however, resided in the country,] where he remained a short time. At length he was sent to the city, and put to school to George Keith. By degrees he felt from that tender lowly frame of mind, which, while in his solitary life in the woods he had experienced; he forsook his retirements, and became indifferent as to his inward state and condition. "Yet He, who has many ways of visiting his people," writes John Croker, "in order to bring them to a sense of their sin, yet found me out, and another sore trial I had to pass through, whereby I might see the Lord could and would do as seemeth good in his sight; and that those who will not bow in mercy, He will make to bow in judgment, and they shall see the goodness of God in and through all—which was my lot: indeed the great goodness of God to me, I hope I shall never forget."

(To be continued.)

Seriousness.—One of the depressing signs of the times is the general decay of seriousness, which shows itself in many ways—in conversation, in literature, and in the occupations of life. How hard it is to engage anybody in a sober and earnest conversation! People like to talk well enough, and will talk without ceasing on the most trifling subjects. They are ready to gossip, to entertain each other with the small talk of society, but it is rare, in comparison, that we sit down with one who seems to delight in conversation of a high kind. The mass of the people do not even think seriously. They have no convictions, and do not care to have any, even while life is so solemn and earnest, and so swiftly passing away. They do not care to think deeply about anything outside of their special line of business. They avoid the trouble of a real intellectual grapple with any of the great problems of life. They do not want to be burdened with opinions which are only formed

as the result of thought, and which may compel them to some positive actions or to sacrifice. They would get their views as they get their dinners, where they can be had the easiest; and take their creeds as they buy their clothes, "ready made," and as easy to put on. In politics, they go in a party; in religion, with a sect; to which they give up their own independent thinking, content to have it done for them.—*Evangelist.*

For "The Friend,"

William Penn's Travels in Holland and Germany, in 1677.

(Continued from page 114.)

"Penn's visit to Frankfort had a very important result, not then anticipated. The emigration of Germans to America took its beginning with an association formed in 1682, called the Frankfort Company. It was this company that planted Germantown, the first spot where Germans built themselves new homes on this continent. There was originally eight stockholders: Jacob Van de Walle, Caspar Merian, Dr. Johann Jacob Schütz, Johann Wilhelm Ueberfeldt, George Strauss, Daniel Behagel, Johann Laurentz, and Abraham Hasevoet; after some changes and a reorganization, there were in 1685 ten: Jacob Van de Walle, Dr. Johann Jacob Schütz, F. D. Pastorius, Johanna Eleonora von Merlan, Daniel Behagel, Dr. G. von Mastrieh, Dr. Thomas von Wylieh, Johannes Lebrun, Balthasar Jawert, and Johannes Kember. Five of the latter were residents of Frankfort; of the rest two lived in Wesel, two in Lubek, and one in Duisburg. Now, though Penn in his journal gives the names of only a few persons, whom he met in Frankfort, the identity of these few with members of the Frankfort Company, proves the connection of his visit with its subsequent establishment. Jacob Van de Walle was the merchant in whose house he held the first meeting, Eleonora von Merlan, the lady whom he honored with his friendship. Both were attendants of Spenser's *collegia pietatis*. Dr. S. J. Schütz, an intimate friend of Miss von Merlan, also belonged to this set. Ueberfeldt was a well-known advocate of mysticism, a devoted follower of Jacob Boehm. He came in 1674 to Frankfort, where he engaged in mercantile business, and went in 1684 to Holland, and, in connection with Giechel, he formed the order of the 'Angelic Brethren.' The Duisburg member of the Company, Dr. Von Mastrieh, became, as we shall see, personally acquainted with Penn, when the latter visited Duisburg; one of the members in Wesel, Dr. Thomas von Wylieh, initiated in that city *collegia pietatis* after Spenser's manner, and though not himself, a near relative of his is noticed in Penn's journal. Of the Lubek members of the Company, Kember and Jawert, nothing is known, but it can hardly be a mere coincidence, that Lubek, one of the very few cities in Germany where we hear of Quakers, should also furnish two participants to the Frankfort Company. To complete the proof that the project of buying land, and forming a settlement in Pennsylvania, originated in the very circles that had been in contact with Penn, we have the statement of Pastorius, contained in an autobiographical memoir, to this effect: 'Upon my return to Frankfort in 1682, I was glad to enjoy the company of my former acquaintances and Christian friends, assembled together in a house called the Saalhof, viz., Dr. Spenser,

Dr. Schutz, Notarius Fenda, Jacobus Van Walle, Maximilian Lerner, Eleonora von Merlan, Maria Julianna Bauer, &c., who sometimes made mention of William Penn of Pennsylvania, and showed me letters from Benjamin Furly, also a printed relation concerning a province, finally the whole secret could be withheld from me, they had purchased 25,000 acres of land in this remote part of the world. Some of them entirely resolved to transport themselves, families and all. I begged such a desire in my soul to continue their society, and with them to lead a quaggodly, and honest life in a howling wilderness that by several letters I requested of my father his consent, &c.'

"Thus we see that the origin of the Frankfort Company is directly traceable to Penn's visit in 1677. With the exception of Pastorius, who became the agent of the Company, none of the participants emigrated, though that seems to have been their intention first.

"William Penn and his companions left Frankfort on the 22d of August, and arrived the next day at Kreisheim, a small village about six miles from Worms. Here a little congregation of German Quakers had, in spite of many tribulations, managed to hold together ever since William Ames and George Ro in the year 1657 had convinced them. They were occasionally visited by travelling Friends who watched tenderly over this distant outpost of their brotherhood. William Cat mentions them in 1660, speaking of the Palatinate, 'where in due time we arrived, through the mercy of the Lord, at a place called Kreisheim, where we found a small remnant of Friends, that bore their testimony to the truth, with whom we were refreshed after a long and pretty tedious journey. There we continued some time, helping them to gather their grapes, it being the time of their vintage.' Stephen Crisp and Wm. Moore likewise visited them. And now Penn, also, turned his steps to this sequestered spot, to welcome and comfort the simple husbandmen and weavers who shared his religious convictions. Though the magistrate of the village (Vogt), instigated by a clergyman, attempted to put obstacle in the way of preaching, Penn would not be baffled, and had, with the Friends of Kreisheim, increased by a 'coaching from Worm a quiet and comfortable meeting.

"Not many years afterwards, the astounding news reached the country that the English gentleman, who had so kindly and impressively spoken to the humble inhabitants of Kreisheim, was now the proprietor of a vast domain, even much larger than the whole Palatinate, and that under laws of his making the fullest liberty of conscience was pledged to all that settled there. The Quakers and Mennonites of Kreisheim thereupon resolve to take advantage of this godsend, and to build themselves new homes in Penn's land. So we find among the pioneers of Germantown, Peter Shoemaker, Isaac Shoemaker, Thomas Williams, Arnold and Johann Cassé, Johann Krey, Gerhard Hendricks, and other immigrants from Kreisheim. The name of the village was renewed in Germantown, much of what is now called Mt. Airy receiving the name of Kreisheim (884 acres), and to the present day Cresheim Street and Crisheim Cree perpetuate in their appellation the memory of the Palatine village."

(To be continued.)

For "The Friend."

The Friend," published in Philadelphia, now before me, in which I find an essay purporting to give an account of the difficulties among Friends in Norwich Monthly Meeting, Canada, signed, A. S. It is to be regretted that the writer had not seen his way to have said either less or more on so delicate a subject; and I thought that justice to Canada Yearly Meeting and its Committee, required that his communication should be supplemented with a few additional remarks; I will mention that I think it will be news to Friends in Canada, to hear that any portion of their members have adopted any peculiar theory of Plymouth Brethren, or that the real issue between the Norwich Friends rested wholly on the use of "artificial music." I am not aware that any attempt was made to introduce artificial music into their meetings for worship; and if he only means to convey the idea that their principal bone of contention was, that one or more of their members kept instruments of music in their houses; how far much he and I may regret this, he must show that this is not peculiar to Norwich Friends, but is tolerated in nearly or quite all the Yearly Meetings of Friends, and that not only Monthly, but the Yearly or Representative Meeting would be the proper place to raise the issue as to its propriety. The difficulties in Pelham Quarter, appears to have been confined to one Monthly Meeting, and to attention of the Yearly Meeting not having been called to it in a constitutional way, there was a peculiar difficulty in the Yearly Meeting trespassing upon the jurisdiction of Pelham Quarter, by dealing unwitely with one of its Monthly. But when a part of one Monthly Meeting assumed the extraordinary responsibility of setting up a Quarterly Meeting, without asking the concurrence of the Yearly Meeting, resulting in two sets of minutes coming to the Yearly Meeting purporting to be from Pelham Quarter; way was opened for the first time in the Yearly Meeting to acknowledge the difficulty; and accordingly a joint committee of thirteen men and twenty women Friends were appointed chiefly to consider the matter. It is true, they did not have the parties face to face, the disciples of old; their faith was too weak to lead them to suppose they would be able to cast out the demon of discord. Any of the committee, I have no doubt, anxiously craved that the parties themselves fight, by prayer and fastings, take the case to the Master himself for healing. The committee asked the two parties to give them all the information in their power,—and they were certainly ably represented by Adam Peneer and James F. Barker, who performed their duties in a commendable manner,—and did before us a mass of evidence, in the form of printed and written documents, minutes of meeting, &c. We willingly listened to all they had to offer, and carefully investigated all the evidence laid before us. Two or more propositions were laid before us to dispose of the matter, which was not entertained by the committee and the conclusion at which they arrived, as stated by A. S., was the result of much care and deliberation; and the report which, as clerk of the committee, I drew up and read, I believe I am safe in saying, was adopted without any expressed dissent,—I certainly understood the committee, as a whole, consented to such a report. When the

report was read in the Yearly Meeting, it was stated that there were seven out of the thirty-three that dissented—the meeting, however, thought best to adopt the report. I will only add, that though I have passed my three score years and ten, the principles of Friends, as I understood them fifty years ago, were never dearer to me than at present, and the peculiarities which were then believed to arise out of them, cost me too much in my youth to have any desire to part with them now; and what appears to me to be the peculiar needs of the Church to-day are, a large increase individually of that old inquiry, "What will they have me to do," and a more intimate acquaintance with that charity "which thinketh no evil," and a more abundant supply of that humility which leads to "esteem others better than ourselves."

THOMAS CLARK.

Grafton, Ontario, 10th mo. 20th, 1878.

For "The Friend."

A Country Ramble.

While on a visit at the hospitable home of a dear friend in the country, feeling the need of fresh air and exercise, a visitor went forth into the fields, and turned his steps towards some woodland that looked inviting. It was situated at the termination of a gentle slope in the ground, and through it ran a small stream of water. Down the banks of this the stranger wandered, noting with interest the gradual increase of the waters as one small stream after another poured its additions into the common current. The outlets of various drains that had been laid through the meadowlands added their supply to the stream; and bubbling up through the sands at the bottom were springs that were scarcely visible to any but a close observer. Thus helped in various ways, the brook rapidly increased in size, and soon became a lively, vigorous stream, rippling over the sands, and sweeping among the stones in its bed.

The mind of the visitor was in a reflective mood, and his thoughts turned to the beautiful comparisons in Scripture, in which the Grace of God, the inward manifestation of the Saviour of mankind, is likened to a well of water springing up unto everlasting life. It is the bubbling up and flowing forth of this Heavenly gift that gives to the Church all its vitality and usefulness. Without its continued bestowal by the bounteous Giver of all good, all profession of Christianity, all Church forms and ordinances would be of no more value than the dried channel of the rivulet which had awakened this train of thought. There is a forlorn feeling in gazing on a stream dried up by continued drought, and presenting nothing but dry sand and stones coated with the withered forms of the conserve and other vegetation which had clung to them when the life-giving fluid was present. So it is in a church organization, where the life of religion has flowed away. The forms of worship may be kept up, but to the spiritually anointed eye, which is able to discern the absence of true religious concern and of Divine life and anction, these are no more attractive when separated from the continued supplies of Divine Grace, than the dried and discolored stones and bed of the brook are to one seeking for the pleasant murmur and refreshing coolness of the flowing waters.

It was now about the middle of the Eleventh month, and though the season had been mild

and open, but few traces were visible of that animal life so abundant during the heat of summer. A few insects still darted about on the surface in one or two spots, and the up-turned stones exhibited on their submerged sides a few small larvae so nearly transparent as scarcely to be distinguished by the eye from the water that clung to them.

Following down the stream still further, it again entered the woods, and here on the low, moist grounds were growing several plants that awakened in some degree the botanical interest of by gone years. The beautiful little partridge berry trailed on the earth its slender stems, with small dark, glossy green leaves, and bright scarlet berries, forming a most lovely contrast of colors. The forked Lycopodium erected its bright green stem thickly bristled with short pointed leaves projecting horizontally in all directions. Some beautiful varieties of moss claimed their share of notice. The swamp cabbage had already thrust through the sod the points of its thick, fleshy, and most curious, though fetid spathes, ready to take advantage of the first warm days of the coming year to unfold its bloom. In the gentle current of the waters, were streaming long lines of the Callitriche, whose curious orange colored stamens make their appearance among the very first of the floral products of the year. The dead trunk of a tree had given support, and perhaps sustenance, to a crop of those curious fungi, shaped somewhat like a clam-shell, whose dried fibers have often been used to receive the fire from the sparks of a flint. They recalled to mind, though but imperfectly remembered, the accounts given by travellers of the marvellous forms and sizes assumed by other species of this order in tropical regions. J.

Out of Weakness made Strong.—There are men, engaged in the toil and struggle of laboring, commercial or professional life, who must carry with them an ailing body, and look with a half envious coveting upon the permitted inaction of the recognized invalid. Where the work of each day is done with a stretch and strain of sinew and muscle, of brain and will, to which strong men are strangers; where a wrench of resolution is needed to rouse from the bed the body imperfectly rested, or to set upon any one of the mental tasks of the day the mind which works but by compulsion, and, as it were, under protest; in such cases it is impossible to exaggerate the real, though secret, heroism of the life—the self command, the self constraint, the self-victory, which may, indeed, be due to inferior motives—to covetousness, to ambition, to domestic love, to a strong sense of duty—but which, when it is complete, when it is consistent, when it is also calm, and gentle and disciplined, can be traced but to one source, can be accounted for but on one supposition—that almighty grace has there been put forth upon human infirmity, and that the words have their application to such victors, "out of weakness were made strong."—*The Fireside.*

Curlye on the Lord's Prayer.—"Our Father which art in heaven, hallowed be Thy name, Thy will be done;" what else can we say? The other night, in my sleepless tossings about, which were growing more and more miserable, these words, that brief and grand prayer, came strangely into my mind, with altogether

new emphasis; as if written and shining for me in mid, pure splendor on the black bosom of night there; when I, as it were, read them word by word—with a sudden check to my imperfect wanderings, with a sudden softness of composure which was much unexpected.

THE FRIEND.

ELEVENTH MONTH 30, 1878.

We have received a communication from Thomas Clark, of Canada, commenting on an article published in "The Friend" of 10th mo. 5th, last, on the division in Norwich Monthly Meeting, Canada. The statement he has sent coincides with the former one as to the main features of the case, though it is fuller on some points.

In again reading the account furnished by A. S., and comparing it with that signed by T. Clark, we find nothing in the latter which gives any other cause for the separation than that stated by A. S.; which was a diversity in doctrine and practice; though T. Clark appears to doubt the spread among their members of religious views as are held by the Plymouth Brethren.

He also speaks of the separation in Pelham Quarterly Meeting, as it those Friends, who are stated by A. S. to have endeavored "to maintain both the principles and practices of Friends on their original ground," had set up a new Quarterly Meeting. But he gives no facts or reasons which in any way contradict the previous narrative, by which the responsibility for the separation was thrown upon those who were afterwards endorsed by the Yearly Meeting.

He apologizes for the delay of the Yearly Meeting in taking notice of the difficulties in Pelham Quarter, because its attention had not been called to it "in a constitutional way," till the present year. But this does not conflict with the remark of A. S., that the Yearly Meeting "did not at any stage of the difficulty exercise care in the correction of wrong, or the healing of differences."

From the information on this subject which has thus far reached us, we feel disposed to ask, whether it would not have added to the strength of Canada Yearly Meeting, if it had "exercised care in the correction of wrong," and "the healing of differences," by timely inquiry into the causes of disunion, and applying a suitable remedy? If any of their own members, or those who came among them from abroad, were spreading sentiments inconsistent with the recognized doctrines of the Society of Friends, such teachers should have been checked in their course by the authority of the Church—for it remains to be as true now as it was in the days of the Apostles, that two cannot walk harmoniously together in Church fellowship unless they are agreed on matters of vital importance. If practices were being introduced whose tendency was to lower the standard of Truth, or to lead away from the self-denial enjoined by the religion of Christ, the Church should have exerted a restraining influence over those who were thus drifting away from the safe enclosure. If disension was springing up which had its root in personal feeling only, those who were spiritual should have endeavored to heal such a breach in the love and restoring spirit of the Gospel.

The communication of Thomas Clark above referred to, we have inserted in another part of our columns.

We have received a printed copy of the minutes of Ohio Yearly Meeting, held at Stillwater and commencing on the 30th of 9th mo. last. Some account of its proceedings have already been published in our columns, but we extract from the pamphlet a few additional items.

The reports on education show that 25 schools had been taught during the past year under the care of Monthly and Preparative Meetings. The number of children of a suitable age to attend school was reported to be 755; of whom, including those instructed at home, more than one-half were being educated under the care of the Society. The minute on this subject says, it "is again referred to the vigilant care of subordinate meetings, which are encouraged to be faithful in the discharge of their duty in promoting the long felt concern of the Yearly Meeting to have our dear children educated as much as possible under the care of Society." The Yearly Meeting appropriated \$200 to its Committee on Education, designed to assist in the support of Primary Schools.

The Boarding School Committee's report showed the average attendance for the Winter Session, ending 3rd mo. 7th, 1878, was 603 pupils; and for the Summer Session ending 8th mo. 22nd, 1878, 303 pupils. The total receipts for the fiscal year from Board and Tuition and other sources is given as \$6170.55; and the sum of expenses \$5763.79, leaving a profit on the year's operations of \$406.76. The conduct of the pupils and their progress in their studies appears to have been generally satisfactory.

The answers to the Annual Queries note the establishment of an Indulged Meeting for worship in Warren county, Iowa, known as "Belmont Indulged Meeting of Friends."

The Report of the Committee on the new Yearly Meeting-house, says that when the work yet unfinished is completed, it is not thought that the whole expense will exceed the original estimate of \$9,000. Of this \$1,500 had been contributed by Friends of Philadelphia, out of the Carolina Fund under their charge. The Quarterly Meetings were directed to raise their respective proportions of \$1,500, for the use of the Building Committee.

SUMMARY OF EVENTS.

UNITED STATES.—The estimates of the Secretary of the Treasury for the support of the Government for the fiscal year, ending 6th mo. 30th, 1880, aggregate \$275,137,250.94; which is \$551,545.44 less than the estimates for the current fiscal year. The estimates for some departments are increased, while for others they are largely diminished.

The sixteenth annual report of the Comptroller of the Currency, shows there were in existence at the time 2,056 national banks, with a capital of \$470,380,000, and deposits \$677,100,000. The whole number of State banks, saving funds, and private bankers was 4,400, with an aggregate capital of \$205,380,000; deposits \$1,242,790,000.

The earthquake which passed over Memphis on the night of the 18th, was also felt at Cairo and Little Rock. At Cairo, houses were distinctly felt to totter.

The income to the State of Massachusetts from the House tunnel this year will be about \$100,000, or the interest on about one-fifth of the cost. On the 14th inst. 317 loaded cars passed through the tunnel.

One hundred and twenty-five persons were killed, and one hundred and four injured on the railroads of Massachusetts during the year ending 9th mo. 30th.

Chicago packers, since the first of this month, have

slaughtered 888,639 hogs, an excess of 145,568 over last year.

Nebraska has a school population of 102,737. A new line of ocean steamships, to be known as the Blue Star Line, will begin running between this point and Liverpool, next week, two vessels departing for each end of the line weekly. They are to be used for freight purposes only.

The number of deaths in this city the past week was 265. Of this number 172 were adults and 123 children—44 being under one year of age.

Markets, &c.—Gold 100. U. S. sixes, 1881, 109.5-20's 1865, 130; do. 1867, 100; do. 1868, 109; do. 1869, 100.

Cotton.—Sales of middlings were reported at 47 cts. per pound for uplands and New Orleans. Petroleum.—Crude 75 cts, and standard white 9 of for export, and 11½ a 12½ cts. for home use. Flour.—Minnesota extra, \$4 a \$4.75; Penna. family \$4.25 a \$4.75; patent, \$5.50 a \$7.50. Rye flour, 32½ a 33.

Grain.—Wheat, active, red, \$1.02 a \$1.05; amber \$1.05, and white, \$1.04 a \$1.08. Corn, new, 34 a 35 cts old, 45 a 47 cts. Oats, mixed, 27 a 28 cts, and white 30 a 34 cts. per bushel.

Seeds.—Clover, 54 a 6½ cts. per lb.; flaxseed, \$1.30 per bushel.

Hay and Straw.—Timothy, 60 a 70 cts. per 100; mixed, 45 a 60 cts. per 100 pounds. Straw, 10 a 70 cts.

Beef cattle were in better demand, and prices firmer. Extra Penna. and western steers, 5½ cts.; fair good 3½ a 4 cts. per pound. Sheep, 3 a 4 cts. per pound, as to condition. Hogs, 4 a 4½ cts. per pound gross as to quality.

FOREIGN.—The Amer of Afghanistan having failed to satisfy the English Ministers for the affront offered the nation, war has been virtually declared, and the British forces are now moving forward through the passes in the mountain barrier which separates north-western India from that country. On the 21st inst. the British forces, having been defeated, encountered the Afghan troops near Fort Afrunsiid; during the following night the Afghans abandoned the place, and in the morning the India army took possession.

It is officially announced that Parliament will meet on the 5th of next month.

A long continued pressure on the linen trade has begun to show its effects. From Belfast to the failure of Mitchell Brothers, flax spinners and power-loom weavers is announced, with liabilities estimated from £50,000 to £80,000.

A state of appalling distress and de-tititution exist among the mechanics and laborers of Sheffield, in consequence of the business depression. Hundreds of persons are living in the tenements, without clothing, furniture, which they have been forced to sell to procure food. They are without fuel, and dependent upon the charity of their neighbors for subsistence. The mayor has called a public meeting to devise measures for relief.

The total revenue derived from spirits and tobacco in the United Kingdom of Great Britain, for the past year, is reported to have been £40,504,000, or more than £1 for each inhabitant.

Nearly a million and a half copies of the whole, or part of the New Testament, printed in twenty-two languages, were given away at the Bible stand in the Paris Exposition.

It is reported that a prolonged drought has brought the inhabitants of the Philippine Islands to a state of starvation; and their destitution has been intensified by the ravages of locusts, which have eaten off the main and vegetable crops. Many of the people subsist on roots, other food being unobtainable.

WESTTOWN BOARDING SCHOOL.
An adjourned meeting of the Committee having charge of the Boarding School at Westtown, will be held in Philadelphia, Twelfth month 26th, at 10 A. M.
SAMUEL MORRIS, Clerk.
Philada., 11th mo. 26th, 1878.

FRIENDS' ASYLUM FOR THE INSANE, Near Frankford, (Twenty-third Ward,) Philadelphia. Physician and Superintendent.—JOHN C. HALL, M.D. Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board of Managers.

MARRIED, at Bradford Meeting of Friends, Chester Co., Penna., on the 17th of 10th month last, WILLIAM HENRY, son of George Reid, and ANNA MARY COLETON, daughter of Simon Hoopes.

Forest Geography and Archaology.

BY ASA GRAY.

* * * It is the forests of the Northern temperate zone which we are to traverse, first taking some note of them in their present condition and relations, we may enquire to their pedigree; and, from a consideration of what and where the component trees have been in days of old, derive some probable explanation of peculiarities which otherwise seem inexplicable and strange.

In speaking of our forests in their present condition, I mean not exactly as they are today, but as they were before civilized man materially interfered with them. In the district we inhabit such interference is so recent that we have little difficulty in conceiving the conditions which here prevailed, a few generations ago, when the "forest primeval" described in the first lines of a familiar poem covered essentially the whole country, from the Gulf of St. Lawrence and Canada to Florida and Texas, from the Atlantic to the Mississippi. This, our Atlantic forest, one of the largest and almost the richest of the temperate forests of the world. That it comprises a greater diversity of species than any other, except one.

In crossing the country from the Atlantic toward, we leave this forest behind us when we pass the western borders of those organized States which lie along the right bank of the Mississippi. We exchange it for prairies and open plains, wooded only along the water-courses,—plains which grow more and more bare and less green as we proceed westward, and only some scattering cottonwoods (i. e. *Populus*) on the immediate banks of the traveling rivers, which are themselves far advanced.

In the Rocky Mountains we come again to forest, but only in narrow lines or patches; and if you travel by the Pacific Railroad you find it more to any; the eastern and the interior-desert plains meet along the comparatively low level of the divide which here is so fortunate for the railway; but both north and south of this line the mountains themselves are fairly wooded. Beyond, through the wide interior basin, and also north and west of it, the numerous mountain chains seem to be as bare as the alkaline plains they reverse, mostly north and south; and the pines bear nothing taller than sage-brush, and those who reach and climb these moun-

tains find that their ravines and higher recesses nourish no small amount of timber, though the trees themselves are mostly small and always low.

When the western rim of this great basin is reached there is an abrupt change of scene. This rim is formed of the Sierra Nevada. Even its eastern slopes are forest-clad in great measure; while the western bear in some respects the noblest and most remarkable forest of the world;—remarkable even for the number of species of evergreen trees occupying a comparatively narrow area, but especially for their wonderful development in size and altitude. Whatever may be claimed for individual *Eucalyptus* trees in certain sheltered ravines of the southern part of Australia, it is probable that there is no forest to be compared for grandeur with that which stretches, essentially unbroken,—though often narrowed, and nowhere very wide,—from the southern part of the Sierra Nevada in lat. 36° to Puget Sound beyond lat. 49°, and not a little farther.

Descending into the long valley of California, the forest changes, dwindles, and mainly disappears. In the Pacific Coast Ranges, it resumes its sway, with altered features, some of them not less magnificent and of greater beauty. The Red-woods of the coast, for instance, are little less gigantic than the Big-trees of the Sierra Nevada, and far handsomer, and a thousand times more numerous. And several species which are merely or mainly shrubs in the drier Sierra, become lordly trees in the moister air of the northerly coast ranges. Through most of California these two Pacific forests are separate; in the northern part of that State they join, and form one rich woodland belt, skirting the Pacific, backed by the Cascade Mountains, and extending through British Columbia into our Alaskan territory.

So we have two forest-regions in North America,—an Atlantic and a Pacific. They may take these names, for they are dependent upon the oceans which they respectively border. Also we have an intermediate isolated region or isolated lines of forest, flanked on both sides by bare and arid plains,—plains which on the eastern side may partly be called prairies,—on the western, deserts.

This mid-region mountain forest is intersected by a transverse belt of arid and alkaline plateau, or eastward of grassy plain—a hundred miles wide from north to south,—through which passes the Union Pacific Railroad. This divides the Rocky-mountain forest into a southern and a northern portion. The southern is completely isolated. The northern, in a cooler and less arid region, is larger, broader, more diffused. Trending westward, and on beyond the northern boundary of the United States, it approaches, and here and there unites with, the Pacific forest. Eastward, in Northern British territory, it makes a narrow junction with northwestern prolongations of the broad Atlantic forest.

So much for these forests as a whole, their position, their limits. Before we glance at their distinguishing features and component trees, I should here answer the question, why they occupy the positions they do;—why so much more diffused at the north, but still so strongly divided into eastern and western. Yet I must not consume time with the rudiments of physical geography and meteorology. It goes without saying that trees are nourished by moisture. They starve with dryness and they starve with cold. A tree is a sensitive thing. With its great spread of foliage, its vast amount of surface which it cannot diminish or change, except by losing that whereby it lives, it is completely and helplessly exposed to every atmospheric change; or at least its resources for adaptation are very limited; and it cannot flee for shelter. But trees are social, and their gregarious habits give a certain mutual support. A tree by itself is doomed, where a forest, once established, is comparatively secure.

Trees vary as widely as do other plants in their constitution; but none can withstand a certain amount of cold and other exposure, nor make head against a certain shortness of summer. Our high northern regions are therefore treeless; and so are the summits of high mountains in lower latitudes. As we ascend them we walk at first under spruces and firs-trees or birches; at 6,000 feet on the White Mountains of New Hampshire, at 11 or 12,000 feet on the Colorado Rocky Mountains, we walk through or upon them; sometimes upon dwarfed and depressed individuals of the same species that made the canopy below. These depressed trees retain their hold on life only in virtue of being covered all winter by snow. At still higher altitude the species are wholly different; and for the most part these humble alpine plants of our temperate zone—where we cannot call trees, because they are only a foot or two or a spire or two high—are the same as those of the arctic zone, of northern Labrador, and of Greenland. The arctic and the alpine regions are equally unwooded from cold.

As the opposite extreme, under opposite conditions, look to equatorial America, on the Atlantic side, for the widest and most luxuriant forest-tract in the world, where winter is unknown, and a shower of rain falls almost every afternoon. The size of the Amazon or Orinoco—brimming throughout the year—testifies to the abundance of rain and its equitable distribution.

The other side of the Andes, mostly farther south, shows the absolute contrast in the want of rain, and absence of forest; happily it is a narrow tract. The same is true of great tracts either side of the equatorial regions, the only district where great deserts reach to the ocean.

It is also true of great continental interiors out of the equatorial belt, except where cloud-compelling mountain-chains coere a certain

deposition of moisture from air which could give none to the heated plains below. So the broad interior of our country is forestless from dryness in our latitude, as the high northern zone is forestless from cold.

Regions with distributed rain are naturally forest-clad. Regions with scanty rain, and at one season, are forestless or sparsely wooded, except they have some favoring compensations. Rainless regions are desert.

The Atlantic United States in the zone of variable weather and distributed rains, and the Gulf of Mexico as a caldron for brewing rain, and no continental expanse between that great caldron and the Pacific, crossed by a prevalent southwest wind in summer, is greatly favored for summer as well as winter rain.

And so this forest region of ours, with annual rain-fall of fifty inches on the Lower Mississippi, fifty-two inches in all the country east of it bordering the Gulf of Mexico, forty-five to forty-one in all the proper Atlantic district from East Florida to Maine, and the whole region drained by the Ohio,—diminished only to thirty-four inches on the whole Upper Mississippi and Great Lake region,—with this amount of rain, fairly distributed over the year, and the greater part not in the winter, our forest is well accounted for.

The narrow district occupied by the Pacific forest has a much more unequal rainfall, more unequal in its different parts, more unequal in the different seasons of the year, very different in the same place in different years.

(To be continued.)

Thoughts and Feelings.

A GIFT IN THE MINISTRY.

A true gift in the ministry of the gospel is calculated deeply to humble and self-abase the mind and heart of the recipient. This, not only because the receiver is wholly dependent upon the Power which conferred it for its proper commission and exercise; but also because of the continual watchfulness and prayerfulness needed in order that the channel through which the holy oil is conveyed, be kept chaste and pure. If all who have this treasure have it "in earthen vessels, that the excellency of the power may be of God and not of us," then how important are lowliness and meekness and the entire abnegation of self, that the ear may be not only awakened "to hear as the learned," but that "the tongue also of the learned" may be given, that such may know "how to speak a word in season to them that are weary."

As before intimated such a gift is calculated to, and should produce great self-distrust and humility of mind. The Apostle in writing of himself declares: "I was made a minister according to the gift of the grace of God given unto me by the effectual working of his power. Unto me, who *am less than the least* of all saints, is this grace given, that I should preach among the Gentiles the unsearchable riches of Christ," &c.

Notwithstanding this eminent and pious example of a dependence upon the all-sufficient grace of the Redeemer, and lowliness of mind before Him, have there not been some young persons who, for want of this humility as a ballast, have sadly manifested to their more experienced Friends, the want of a properly lowly demeanor, which, as a commending savor, should and must ever attend a "gift of the grace of God," into any of the workman-

ship of His hands. Such may go on for awhile, seeming to be somewhat, but unless the preserving grace of sweet humility—the Saviour's adorning—unless the gentleness and docility of babes in Christ with condescension to their Friends, be put on and be worn as a garment, it is to be apprehended that the gift will grow dim, until the bishopric shall another take. But we hope better things; even that the precious precept of the Apostle Peter may have full place: "Ye younger, submit yourselves unto the elder; yea, all of you be subject one to another, and be clothed with humility: for God resisteth the proud and giveth grace to the humble."

If the dear Saviour was "meek and lowly of heart," is it possible for His disciples to be otherwise? Can the Master pass through humiliating baptisms, and the obedient servant escape? Is it not enough for the disciple to be *as his Lord*? Oh! the acceptable sacrifice of a reverent bowheadness of spirit! Oh! that in humility of mind, and deep self-abasement, we may follow the Captain of salvation whithersoever He is pleased to lead. For how true the lines,—

"Where thy dear Lord has been,
Thou need'st not fear to go;
The deepest vale, the darkest scene,
Is safe to travel through."

Golden-wing Woodpecker or Flicker.

In the cavity of an apple-tree but a few yards off, and much nearer the house than they are wont to build, a pair of high-holes, or golden-shafted woodpeckers, took up their abode. A knot hole which led to the decayed interior was enlarged, the live wood being cut away as clean as a squirrel would have done it. The inside preparations I could not witness, but day after day, as I passed near, I heard the bird hammering away, evidently beating down obstructions and shaping and enlarging the cavity. The chips were not brought out, but were used rather to floor the interior. The woodpeckers are not nest-builders, but rather nest-carvers.

The time seemed very short before the voices of the young were heard in the heart of the old tree,—at first feebly, but waxing stronger day by day until they could be heard many rods distant. When I put my hand upon the trunk of the tree, they would set up an eager, expectant chattering; but if I climbed up it toward the opening, they soon detected the unusual sound and would hush quickly, only now and then uttering a warning note. Long before they were fully fledged, they clamored up to the orifice to receive their food. As but one could stand in the opening at a time, there was a good deal of elbowing and struggling for this position. It was a very desirable one aside from the advantages it had when food was served; it looked out upon the great, shining world, into which the young birds seemed never tired of gazing. The fresh air must have been a consideration also, for the interior of a high-hole's dwelling is not sweet. When the parent birds came with food, the young one in the opening did not get it all, but after he had received a portion, either on his own motion or on a hint from the old one, he would give place to the one behind him. Still, one bird evidently outstripped his fellows and in the race of life was two or three days in advance of them. His voice was loudest and his head oftenest at the window. But I noticed that

when he had kept the position too long, others evidently made it uncomfortable in rear, and, after "fidgeting" about a while, would be compelled to "back down." Retaliation was then easy, and I fear his momentary few easy moments at that look. They would close their eyes and slide backward into the cavity as if the world had suddenly lost all its charms for them.

This bird was, of course, the first to leave the nest. For two days before that event kept his position in the opening most of time and sent forth his strong voice incessantly. The old ones abstained from feeding him almost entirely, no doubt to encourage his exit. As I stood looking at him one afternoon and noting his progress, he suddenly reached a resolution,—seconded, I have doubt, from the rear,—and launched forward upon his untired wings. They served well and carried him about fifty yards upon the first beat. The second day after, the nest in size and spirit left in the same manner than another, till only one remained. The parent birds ceased their visits to him; for one day he called and called till our ears were tired of the sound. His was the faint heart of all. Then he had none to encourage him from behind. He left the nest and climbed to the outer bough of the tree, and yelped as if for one hour longer; then he committed himself to his wings and went his way to the rest.

A young farmer in the western part of State (E. S. Gilbert, of Canasraga, N. Y.) who has a sharp, discriminating eye, sends some interesting notes about a tame high-hole once had.

"Did you ever notice," says he, "that a high-hole never eats anything that he can pick up with his tongue? At least this was the case with a young one I took from the nest and tamed. He could thrust out his tongue two or three inches, and it was amazing to see his efforts to eat errands from the hand. He would run out his tongue and stick it to the currant; failing in that, would bend his tongue around it like a beak and try to raise it by a sudden jerk. But never succeeded, the round fruit would roll and slip away every time. He never seemed to think of taking it in his beak. His tongue was in constant use to find out the nature of everything he saw; a nail hole in a board any similar hole was carefully explored. When he was held near the face he would soon be attracted by the eye and thrust his tongue into it. In this way he gained the respect of a number of half-grown cats that were around the house. I wished to make them familiar to each other, so there would be less danger of their killing him. So I would take them both on my knee, when the bird would soon notice the kitten's eyes, and lyeing his tongue as carefully as a marksman levels his rifle, would remain so a minute when he would dart his tongue into the cat's eye. This would hold by the cats to be very mysterious; being struck in the eye by something invisible to them. They soon acquired such a terror of him that they would avoid him and run away whenever they saw his bill turned in that direction. He never would swallow a grasshopper even when it was placed in his throat he would shake himself until he had thrown it out of his mouth. His 'best hold' was on the eye. He never was surprised at anything, a never was afraid of anything. He would

the turkey gobbler and the rooster. He did advance upon them holding one wing as high as possible, as if to strike with it, I shuffle along the ground toward them, holding all the while in a harsh voice. I tried at first that they might kill him, but I found that he was able to take care of himself. I would turn over stones and dig to ant-hills for him, and he would lick up ants so fast that a stream of them seemed into his mouth unceasingly. I kept in till late in the fall, when he disappeared, probably going south, and I never saw him again."—*Scribner's Monthly*.

For "The Friend."

Incidents and Reflections.—No. 26.

(CONFESSION AND RESTITUTION.)

A lad, who was employed about the store of a mercantile firm, was once tempted to take a few cents belonging to his employers, to obtain the means of procuring some gratification which his appetite craved. He knew that the act was wrong, but endeavored to quiet his conscience by determining to replace the money at a future time. The same thing was frequently repeated, until his indebtedness had increased from a few cents to a few dollars, and if it had not been for the preserving care of his Heavenly Father, whose tender mercy covers all His works, and who seeks to reclaim His wandering children from the paths sin, the erring boy might have gone to still greater lengths in the way to ruin. He still kept in his mind the sum which he had clandestinely taken, and never lost sight of the prospect of restoring it. Coming more under the influence of serious impressions, his convictions for the wrong step he had taken were strengthened; and the feeling gradually settled on his mind, that before he could hope to experience Divine forgiveness and the return of true peace, he must humble himself so far to make confession of his fault to the person wronged. He clearly saw, that it would not be sufficient secretly to restore the money, he naturally struggled strongly against arising this cross; but he found there was no other way to obtain relief than to submit to the judgments of the Lord, and to lie as with his mouth in the dust, so that he might obtain peace. He was strengthened to yield up his ill in this matter, and to resolve that as soon as he was able, he would return the money, with an open acknowledgment of the cause which required it. Some years elapsed before he was in a position to earn anything by his own labors—and the discharge of this obligation was one of the earliest uses to which his earnings were applied. He received a kind letter in response from one of his former employers, acknowledging its receipt. During many years in which this load rested upon him, before it was thus happily thrown off, he kept among his papers a written statement of the transaction; so that it might be made known to those interested, if any accident should prevent the fulfilling of his resolution.

This anecdote is by no means a singular one; but simple as it is, it has seemed to the writer to be instructive, and to furnish an illustration of the Scripture declaration, "He that covereth his sins shall not prosper: but who confesseth and forsaketh them shall have mercy."

In the Acts of the Apostles it is said that Paul continued on one occasion for two years

in Ephesus, "disputing and persuading the things concerning the kingdom of God."—Special miracles were wrought by his hands, and the word of God mightily grew and prevailed. One effect especially noticed of this work of Divine grace was, that "many that believed came, and confessed, and showed their deeds."

An interesting case of this kind is mentioned in the Memoirs of the late Charles G. Finney, the President of Oberlin College. On one occasion, he resided for a time in the city of New York; and while there, was visited by a young woman, whose conscience had been awakened. She had been in the habit of pilfering, from her childhood; taking from her schoolmates and others handkerchiefs, breast-pins, pencils, and whatever she had an opportunity to steal. She made confession respecting some of these things, and asked what she should do. He told her she must return them and make confession to those from whom she had taken them. Her convictions were so deep that she dare not withhold, and so she began the work of making confession and restitution. As she went forward with it, she continued to recall more and more instances of the kind; for her thefts had extended to almost every kind of article that a young woman could use. From time to time she would call on her friend, and report what she had done. He relates what took place in one particular instance, as follows:

"One day she informed me that she had a shawl which she had stolen from a daughter of Bishop Hobart, then bishop of New York, whose residence was on St. John's Square, and near St. John's Church. As usual, I told her she must restore it. A few days after, she called and related to me the result. She said she folded up the shawl in a paper, and went with it, and rung the bell at the bishop's door; and when the servant came, she handed him the bundle directed to the bishop. She made no explanation, but turned immediately away, and ran around the corner into another street, lest some one should look out and see which way she went, and find out who she was. But after she got around the corner, her conscience smote her, and she said to herself, 'I have not done this thing right. Somebody else may be suspected of having stolen the shawl, unless I make known to the bishop who did it.'

"She turned around, went immediately back, and inquired if she could see the bishop. Being informed that she could, she was conducted to his study. She then confessed to him, told him about the shawl, and all that had passed. 'Well,' said I, 'and how did the bishop receive you?' 'Oh,' said she, 'when I told him, he wept, laid his hand on my head, and said he forgave me, and prayed God to forgive me.' 'And have you been at peace in your mind,' said I, 'about that transaction since?' 'O yes,' said she. This process continued for weeks, and I think for months. This girl was going from place to place in all parts of the city, restoring things that she had stolen, and making confession."

The result of this thorough work was what might have been expected—humility, brokenness of heart, contrition of spirit, and finally love, joy and peace. When the time drew near for C. G. Finney to leave New York, he mentioned the case to his friend A. G. Phelps, who promised to watch over her for good. She subsequently married, and appears to

have maintained a consistent Christian character.

The same author gives the experience of a young man who resided in Oneida county, New York, which strikingly portrays the pernicious effects produced on the minds of young and excitable people by reading works of a sensational character. This young man having been visited by Divine grace, and brought under deep conviction for sin, made the following statement: 'Several years ago a book was put into my hands called, 'The pirate's own book.' I read it and it produced a most extraordinary effect upon my mind. It inspired me with a kind of terrible and infernal ambition to be the greatest pirate that ever lived. I made up my mind to be at the head of all the highway robbers and bandits and pirates, whose history was ever written. But my religious education was in my way. The teaching and prayers of my parents seemed to rise up before me, so that I could not go forward. But I had heard that it was possible to grieve the Spirit of God away, and to quench His influence so that one would feel it no more. I had read also that it was possible to sear my conscience, so that that would not trouble me. After my resolution was taken, my first business was to get rid of my religious convictions, so as to be able to go on and perpetrate all manner of robberies and murders, without any compunction of conscience.

"After a little while I made up my mind that I would commit some crime, and see how it would affect me. There was a school-house across the way from our house; and one evening I went and set it on fire. I then went to my room, and to bed. Soon, however, the fire was discovered. I arose, and mingled with the crowd that gathered to put it out; but all our efforts were in vain, and it burnt to the ground."

The first step which the awakened sinner felt impelled to take, was to call on one of the trustees of the property that had been so wantonly destroyed, and make to him a full confession. He was a religious man, and was deeply affected by the recital. He undertook to inform the other trustees of the circumstance; and told the penitent youth, that he believed they would all unite in forgiving him for what had been done.

But the mind of this returning prodigal was not yet at ease. A public meeting for religious worship was to be held in the evening. To this he went, and meeting Finney at the door of the house, told him that he must make a public confession: that several young men had been suspected of this thing, and he wished the people to know who had done it, and that he had no accomplice. He added, "Mr. Finney, wont you tell the people? I will be present and say anything that may be necessary to say, if any body should ask any questions; but I do not feel as if I could open my mouth. You can tell them all about it." His family were well known and much beloved in the community; and the statement of the facts made a great impression. The people sobbed and wept all over the congregation.

The experience of the awakened sinner in all ages, is typified by the parable of the Prodigal Son. The work of the Holy Spirit on his heart ever leads him to adopt the language, "I will arise and go to my Father, and say unto him, Father, I have sinned against Heaven, and in thy sight, and am no more

worthy to be called thy son." And those who have submitted to the government of the Prince of peace, and have enrolled themselves under His banner, when they see such returning wanderers, will still partake of that joy which is felt in Heaven over every sinner that repenteth.

For "The Friend."

William Penn's Travels in Holland and Germany, in 1677.

(Continued from page 126.)

On the 21st of the Tenth month these Friends left Briel, and on the 24th landed at Haarwick.

"Wonderfully impressive and winning must have been Penn's dealings with men. Being cast among people, who from high to low were prepossessed against Quaker doctrines and Quaker habits, he readily secured, wherever he went, a respectful hearing, cowed by his calm and dignified presence the British instincts of adversaries—the Count of Falkenstein only excepted—charmed strangers in spite of themselves with his gentle power, and nightly stirred the souls of those over whom he gained control. Not a few persons were drawn to him by strange sympathy. Docentius, of Cologne, followed him to Rotterdam, the Hague, and finally to Briel, the port where Penn embarked. A gentleman in Leyden, formerly professor at the university, was equally fascinated. 'The men felt our spirits, and therefore, loved us.' Many other instances of this magnetic power exerted by Penn are recorded in his account.

"We cannot think too highly of the noble stand which Penn took as the champion of toleration and religious liberty in a country where he was a stranger, or, as he himself expresses it, 'a lonely pelican in the wilderness.' He undertook this difficult task with consummate tact, tempering the strength of his arguments with gentleness of tone, and resting his appeals on the highest conception of Christianity. It does not detract from his merit, that he was in advance of his age, that the epithets Quaker and Schwärmer outweighed all argument, and that persecution of all dissenting Christians continued to be the rule with Church and State.

"But there was reserved to him a satisfaction which rarely falls to the lot of reformer and theorist, the privilege of having a field of action placed under his control, upon which to carry out, and test by experiment the principles that he had advocated. Already West Jersey had, at his advice, inserted in her fundamental law the provision which sounds like a pean to liberty, that no one should 'in the least be punished or hurt in person, estate, or privilege for the sake of his opinion, judgment, faith, or worship toward God in matters of religion; for no man, nor numbers of men upon earth have power to rule over men's consciences.' In giving to Pennsylvania the 'Great Law,' he establishes here that freedom of conscience, which he had pleaded for in court, which he had advocated in prison, and which he had urged with eloquent appeals on the King of Poland, the Elector Palatine, and the City Councils of Emden.

"And in Pennsylvania it was also where the seed he had scattered in Holland and Germany came to a rich harvest, though in a form not foreseen or intended. If by his words 'the great and notable day dawning in Germany,' he meant a prospective growth of the

Friends' religious views in Germany, his hopes were destined to be disappointed. The feeble sparks which the Friends had left here and there were soon trodden out, and the yearning after a more intense and spiritual religious life sought for itself different channels.

"But William Penn of 1677 was not forgotten in 1682. I have already dwelt upon the fact that the grant of a vast tract of land in the western hemisphere to the travelling missionary from England was in Germany hailed with joy by those who had seen and heard him, that the Company founded in Frankfurt, which brought five shares, or 25,000 acres of Pennsylvania land, originated with his personal friends, and that the Quakers of Krisheim, who in 1677 had listened to his discourses, belonged to the first settlers of Germantown. Creffeld, also, where, as we learn of Stephen Crisp, the principles of the Friends had found entrance, furnished a number of purchasers and settlers. Benjamin Furly, of Rotterdam, Penn's travelling companion, was the agent through whom the land purchase was negotiated, and passage procured. Furly, applying to James Claypole, engaged passage for them on the Concord, master William Jeffries, a staunch vessel of 500 tons burthen. It was to sail on the 17th of July, but, as the Creffelders were delayed, did not leave till the 24th. This pioneer guard of German emigrants to America consisted of thirty-three persons forming thirteen families, the heads of which were: Dirk op den Graeff, Herman op den Graeff, Abraham op den Graeff, Lenert Arden, Tunes Kanders,* Reinert Tison, Wilhelm Strepers, Jan Lensen, Peter Kouris, Jan Simens, Johannes Bleickers, Abraham Tunes, Jan Lücken. The Concord had a rather long, but otherwise pleasant passage, arriving in Philadelphia on the 8th of October, 1683. James Claypole, who was himself a passenger, thus reports in his first letter from Philadelphia: 'The blessing of the Lord did attend us, so that we had a very comfortable passage, and had our health all the way.' There was, in fact, a gain in the number of passengers when the Concord arrived, Peter Bleickers being born on board.

"Francis Daniel Pastorius, the agent of the Frankfort Company, came over a few weeks before the rest, in the America, Captain Wasey. He at once reported to Penn, who received him with the greatest kindness, and repeatedly drew him to his table. What a joyous meeting it must have been when Penn welcomed his Krisheim friends on the free soil of Pennsylvania, where the freedom to worship God was as untrammelled as the air and the sunlight. They lost no time preparing new homes for themselves in the 'German town,' and it was there, in Peter Shoemaker's house, that Penn again odified them with discourse and exhortation.

It was thus William Penn himself who opened the gates through which Germany poured a continuous and widening stream of emigration into the new province. For it so happened, that the very parts which he had visited were soon afterwards overrun by the armed hordes of Louis XIV. In bold defiance of treaty stipulations, the French King laid violent hands on whole provinces of Western Germany, and the warfare against the un-

* Tunes Kanders, afterwards known as Dennis Conrad, was the Friend at whose house the first Friends' meeting was held in Germantown.

happy Palatinate was carried on with unparalleled cruelty. Spier, Worms, Mannheim, Heidelberg, with many other cities, and hundreds of villages, were devastated with fire and rapine. Those that could escape to Pennsylvania, blessed the asylum prepared in kind, and twice blessed its enlightened a kind-hearted founder.

"Not only the Pennsylvania pioneers—English nationality recognize in William Penn their head and leader; the standard of religious liberty that he planted here, shone a beacon sign, also, to the oppressed multitudes of Germany, and gladly they flocked, the fertile vale, whither the gentle Friend invited them."

For "The Friend."

John Croker.

(Continued from page 126.)

In course of time John Croker heard from his father, who desired him to return home, preparations were therefore made by his friends, and passage engaged for him on a vessel bound for Newcastle-upon-Tyne, in England. They also saw that he was sufficient provided with those things which would be necessary for his accommodation after reaching England, as well as to enable him to go to his father, who resided a considerable distance from Newcastle. After having been in America four years, he embarked for his native land, in the hope of rejoining his parents and relatives.

They were preserved upon the boisterous seas until, as they judged, they were within one hundred leagues of England, when the met with three ships. The master of the vessel (who was a Friend) desirous of obtaining news from England, spoke with one of these vessels; but to their trouble and sorrow they proved to be three French privateers (being a time of war), who made them stop went on board their vessel, stripped them of most of their clothing, separated them, putting some on one vessel and some on another. Each vessel then started on a separate course.

We give in John Croker's own words, the following account:—"This fresh exercise brought more than a common fear upon me (I being in one of those ships that remaine at sea), fearing how I should be dealt with and what sufferings I should undergo. I was, in respect to clothes, almost naked, and destitute of relief beyond what our emic would be pleased to bestow, whose heart God so far opened towards us that we did not want for bread or water, and sometime were allowed pork, beef, peas, and beverage and at certain times a draught of sour wine yet still I was in fear, not knowing whither we should be carried.

"The ship in which we were, being a privateer of twenty-six guns, and out at sea on the account, she sailed far northward, until we fell in amongst islands of ice, and were forced to lie by in the night, for fear we should run amongst some of these islands, or great rocks of ice. For about six weeks I took my rest on the boards in the ship's hold, in which time they chased one vessel; but they thinking it too large and mighty for them, our ship being a better sailer, they let her pass. Soon after they took a Dutch ship bound for Newfoundland; this vessel they took with them to Newfoundland; and as we drew near it, they put us on shore upon a small island or rock, (which lay between some other islands, upon

which there was no house, nor any fresh water, or shelter. Being twenty-eight of us number, they gave us a sail and some oar-poles to make a tent; in which we all lived without any beds, having only some straw, which they brought us, and stones for our lulls with which we were forced to be contented. Yet I found God's providence was ever so, that I was preserved healthy and unharmed. Oh! the great goodness of God is fresh in my mind, now at the time of my writings, and I hope the impression of it will remain as long as I live; so that I may never forget what I met with in my youth, and how the Lord preserved me through it all.

"The French used once or twice a week to visit us, and bring us some spruce beer, water, pork, peas, and plenty of bread. Of the bread we ate sparingly, laying up some in store to sustain a time of scarcity, fearing such might come; the bread we hid in some of the hollow rocks, that it might not hinder or stop them from bringing or supplying us with more, as usual. There were also, about our rock, or little island, plenty of lobsters, of which we caught some, and boiled and ate them, which were a great help to us. Although we were not in any great want, considering our circumstances, yet we were but thinly clothed, and the season not very hot; I having left me only one shirt, one pair of breeches, and a hat; until some taking compassion on me, gave me a thin linsy-woolsey neck, one old shirt, and an old pair of stockings and shoes, for which I was very thankful.

"In this mean condition, I with the rest, returned upon this island about six weeks, in which time we contrived our escape. There was an island at about half a mile distance from us, which was inhabited by the French for the fishing, whose boats went to and from us almost every day; and there were also about our island, some pieces of boards and wood, which had been used, I suppose, by the Frenchmen, at times when they dried fish there, and were by them left; their boats were also lying at a wharf on the said inhabited island, which I guarded as we afterwards understood, though then unknown to us. One day I took particular notice of one of their boats, which, with several others, lay near the said wharf; and our men proposed in the night to take a float, to endeavor to swim out and get it, and, therefore, made a raft, by tying together thick rope-yarn, such wood and boards as we found on the island, and two of our men, notwithstanding several privateers were lying by as a guard, were so courageous, that they ventured in the night to stand on this raft which we had made, and put off towards the boat which we had observed. Having got to her, they found nobody in her, and the watch or guard lying in their lurs very busy in discourse, these two men went the moorings of the boat and let her fall off with the tide, which was blowing out, and brought the boat towards us, by their help we attained the same, which we had so rejoiced.

"There happened, far beyond expectation, to be in the boat, oars, sails, a compass, some pork and butter, a tinder-box and candle, and materials for striking fire; also some of the Frenchmen's jerkins, made of lamb skins, with the wool inward; a potage pot, an axe and some fishing tackle, all which were very valuable and serviceable to us. We soon got what we had into the boat, having

in six weeks time saved about two hundred weight of bread, which was now of great service; and such of us as were willing, being in number twenty five, got into the boat, leaving seven, who were of fearful hearts, behind us; our number having been increased. And trusting ourselves to Divine Providence, we put off for the main ocean, amidst the mighty waves of a troublesome sea, not without divers fears lest we should be taken again by our enemies, or swallowed up by the great waters, the waves of which grew very high and terrible. Although it did not rain, yet we could not keep ourselves dry, and some of us were forced, with our hats, to dip out the water which broke over the boat."

(To be continued.)

Selected.

"I WAS A STRANGER, AND YE TOOK ME IN."

"Neath skies that winter never knew
The air was full of light and balm,
And warm and soft the Gulf wind blew
Through orange bloom and groves of palm.

A stranger from the frozen North,
Who sought the fount of health in vain,
Sank homeless on the alien earth,
And breathed the languid air with pain.

God's angel came! The tender shade
Of pity made her blue eye dim;
Against her woman's breast she laid
The drooping, fainting head of him.

She bore him to a pleasant room,
Flower-sweet and cool with salt sea air,
And watched beside his bed, for whom
His far-off sisters might not care.

She fanned his feverish brow and smoothed
His lines of pain with tenderest touch,
With holy hymn and prayer she soothed
The trembling soul that feared so much.

Through her the peace that passeth sight
Came to him, as he lapsed away
As one whose troubled dreams of night
Slide slowly into tranquil day.

The sweetness of the Land of Flowers
Upon his lonely grave she laid:
The jasmine dropped its golden showers,
The orange lent its bloom and shade.

And something whispered in her thought,
"More sweet than mortal voices be:
"The service thou for him hast wrought,
O daughter! hath been done for me."

John G. Whittier.

For "The Friend."

Teaching the Dumb to Speak.

For some years past there has been in operation at Mystic, Conn., a school for the instruction of deaf and dumb children, in which they are taught to speak, by imitating the motions of the mouth. From an account of this institution, known as the "Whipple Home School for Deaf Mutes," written by a person who has recently visited it, published in the *Zion's Herald*, the following is condensed:—

It seems that three generations ago, Jonathan Whipple, of this village, set himself to teach his son, utterly deaf from infancy, to read the lips of those about him, and by imitating their movements and the movements of all the vocal organs, to speak as well as understand. The task was one requiring labor and patience, but the father was so successful that will-nigh incredible anecdotes of his son's proficiency are vouchsafed for by his family.

The facility with which this man could read the lips, is illustrated by the following anecdotes:—When he was quite young he had occasion to make a journey. Part of it was performed in a stage. As he was sociable and

well informed, the stage-driver seemed to be much interested in talking with him. They rode together nearly a whole afternoon, and never once did the stage-driver suspect that his companion was deaf. As it began to grow dark, however, the truth had to be revealed, and never was a man more astonished than was the stage-driver to find that he had been conversing for hours in his natural tone of voice with a deaf man.

During the winter he followed the occupation of butchering, and was employed within a circuit of several miles. He was one day working at a distance from home when he cut his finger, and went into the house to get it wrapped up. There were two women in the room when he entered, and instead of speaking he simply held up his wounded finger with a smile. The woman of the house knew that he was deaf and naturally supposed him to be dumb.

With much sympathy she found a piece of cloth, and wrapped up his finger. While doing so she remarked to her companion that it was a pity that this poor deaf man had cut his finger so badly. What was her surprise when, with a perfectly natural tone and accent, — "Whipple, who read her lips, said, 'Never mind; accidents will happen!' The woman afterwards said that she came near fainting, for she thought he spoke for the first time in his life.

He said that when people speak loudly they articulate more plainly, and when strangers with whom he was conversing spoke with mouths half shut, he sometimes told them he was deaf. They raised their voices, thinking to make him hear, and in so doing opened their mouths, thus giving him a better view of the organs of speech.

One day he was shingling the roof of a house when a man went by, and seeing him there asked him the way to a neighboring place. The man scarcely looked at him, and though he knew by his stopping that he was saying something, he could not catch a word of it. Putting his hand to his ear in a listening attitude, he said, "Please speak a little louder; I'm hard of hearing." The man then turned straight towards him and opened his mouth, and though — Whipple heard not a breath of noise, he answered his question without difficulty.

It was natural that with such an achievement before them, the Whipples should turn their attention to the novel line of teaching, in which their ancestor had been so successful. Hence the "Home School," where we found children of different ages and widely-varying degrees of capacity, all being taught to read the lips and use the voices they themselves had never heard, in such a way as to be clearly understood by those around them. For the latter purpose they are drilled in the most minute observation of the movements of their teacher's throat, tongue, teeth, and lips. Their hands are placed against his throat when he articulates a given word, and then against their own, which they must cause to assume the same shape and motion. Zerah C. Whipple, an exceedingly intelligent young man, is the chief instructor, and most curious it was to study the hieroglyphic alphabet invented by him, in which are pictured out the positions, both absolute and relative, of the vocal organs in forming the different letters and words. This, being placed on the black-board, greatly facilitates the pupil's knowledge of "going through the motions" of speech.

A little girl of seven years was called to the board. She had been but a few weeks in the school, yet when Z. C. Whipple would pronounce a letter, she, who had never heard a single sound, would imitate very successfully his articulation, and then place on the board the word or letter she had spoken. Her eagerness of expression and the sounds issuing from the little throat of one who had no idea of articulation, a few weeks since, were not a little startling.

Willie Downing was the greatest curiosity. He is a congenital mute, who, until eleven years of age, had not only never spoken a word, but had no idea of language, and did not even know that the most common objects had names. He is now seventeen, and speaks considerably, and reads surprisingly well. As he stood before us and read the twenty-sixth Psalm, pronouncing with the greatest distinctness its polysyllables, and its aspirates and final consonants, and I remembered that this young man had no more idea of sound than I have of a sixth sense, the performance seemed to me one of the most wonderful I had ever seen, and in any other age than ours altogether impossible. In no country save one where Christ's Gospel has mellowed men's hearts with a sense of brotherhood, can we look for such luminous 'evidences of Christianity' as are afforded by the pains bestowed upon this boy.

The tears were in my eyes, as turning to Zerub Whipple, I said, 'Your patience is as pathetic as Willie's voice.' 'You appreciate it the more from having been a teacher,' said the young man with a grateful smile, and he added: 'You think, perhaps, I am not moved by that voice he never heard, because I have so long been with him, but I can hardly listen with composure. As he read just now, my thoughts went back eight years to our first lesson, when I took him by the hands, getting him to watch my lips while I articulated the simplest sound. But the poor child thought it was only my peculiar way of breathing, and after an hour of effort he became angry, and putting his curved hands to his eyes to indicate spectacles, and grasping his chin, to indicate a beard, he puffed savagely at me, this being his method of declaring that his father, who wore glasses and a beard would take his part, if I did not let his son Willie alone. But I knew that it was the crisis hour, so I held on to him, with my feet grasping his so that he could not kick, with his hands in mine, and the perspiration streaming down both our faces, as I watched the clock four hours, at the end of which time his head fell on my shoulder, and he was fast asleep.'

For "The Friend"

There are few, if any, who will not acknowledge that health is a great blessing, and that its preservation or promotion, is a legitimate object of careful attention; though like many other right things, either may be pursued zealously or in a wrong way. The ancients estimated courage as a prime virtue, and therefore set a high value on bodily strength, with fearlessness in using it. Notwithstanding the clearer views of the moderns in relation to the true constituents of courage, and their possession of a more elevated criterion of moral and intellectual worth, we seem to have inherited from our uncivilized progenitors, a strong desire for—or at least it appears to be a natural object of ambition to possess—great physical

power, or to be capable of enduring large, or long continued drafts on our bodily strength.

Physical vigor may be said to be highly prized by the great majority, not only because necessarily for its employment is generally more frequent and continuous, but also from the supposition that its active exercise increases the vital force and tends to secure longevity. But mental culture has become far less limited than formerly; a much longer portion of early life is devoted to the development of the intellectual faculties, and various means are resorted to to incite the student to close and wearisome study of the various branches of literature and science, embraced in what is considered a good modern education.

Great evils, though not always recognized by those who ought to be on the watch to prevent them, attend the overstraining of the mental faculties or the physical organs, and life-long diseases arising therefrom, are not infrequently wondered at and mourned over, while the cause producing them may be undiscovered and even unsuspected.

It is necessary to keep in remembrance that both mental labor and corporeal activity involve the development of forces appertaining to the organisms of a body that is "wonderfully and fearfully made;" that these forces are limited and mutable, and those organisms of exceeding delicacy in their structure, and liable to derangement and disease, when overworked themselves, or made to suffer in sympathy with others too severely tasked. If then the demand on the action of an organ is greater or longer continued than its innate force or capacity for endurance is fitted properly to meet or bear, the extra force expended will probably damage the organ in its structure, and thus render it less competent to perform its functions in the future. Such deterioration may not be so speedily manifested in those parts of the system which are subject to the government of the will, as in those parts which may be said to act automatically and never have entire rest, and on which the involuntary phenomena of life depend; such as the heart which circulates the blood, the lungs by which we breathe, the stomach and intestines by which digestion is carried on, and the various secretory and excretory glands, &c.

The occupations in which many men have to engage, in order to obtain the means for subsistence, compel great physical exertion, and in such cases, if pure air and suitable nourishment are supplied, the organs brought into requisition—generally the muscles—accommodate themselves to the demand made upon them, and may increase in size and strength. But this does not render the system any more tenacious of life, and indeed it is from among the class of hard workers—if we except the intemperate—that the most deaths occur in what is called middle life. Athletes and young men who frequently engage in games which require violent muscular exertion, expose themselves to some lesion of the heart or lungs, and not a few of them pay for their sport by impaired health during the remainder of life.

Dr. B. W. Richardson, Fellow of the Royal College of Physicians, who, with large capacity for investigating the subject and forming a correct judgment, together with unusual opportunities for its study, makes the following remarks in a recent work, "We hear men, and statesmen speaking enthusiastically of competitions of strength, as though they were

the back-bone of the physical life of England. The assumption is a foolish error. By skillful training it is quite true that men may, and are, brought to a fine external standard; but the external development is so commonly the covering of an internal and fatal evil, that I venture to affirm there is not in England a trained professional athlete, of the age of thirty-five, who has been ten years at his calling, who is not disabled."

The heart, sometimes spoken of as the citadel of life, is complex in its structure, liable to derangement in its several parts, and in its deterioration, implicating more or less the functions of all other organs. In the ordinary performance of its duty, it undergoes over 4,000 beats, or expansion and contraction of its ventricles, in an hour, which amounts to about 100,000 beats in a day, and in a body of common size, drives about 18,500 pounds of blood through the whole extent of the circulatory tubes in the same time. This is no light task for the little hollow muscle, even when it is in a healthy condition and the body at comparative rest, and it is marvellous that while so "fearfully made," it holds on in its incessant work so long. Of course, violent or long continued muscular exertion imposes extra duty on it and on the lungs; which latter must work in harmony with it, in order to purify the crimson stream, while the heart drives it to the remotest portion of the system. For perfect health its muscular fibres must retain their normal size and strength, while the delicate valves, placed in the walls that separate one department from another, must fit accurately the aperture they are intended to close, and respond instantly when required to open or shut.

Properly regulated exercise may be said to be indispensable to health, and for none is more loudly called, than those who are engaged for a considerable time in mental labor. Especially is this the case in school life, when the pupil is required to breathe the atmosphere of the class room for hours, studying closely and thus putting a strain on the brain which it and the other vital organs are immature and highly sensitive in the performance of their functions, and demanding time, pure air and proper nourishment for their growth. Great mistakes are often made by teachers and others having charge of growing boys and girls, in forgetting that physical development ought to be nurtured as well as intellectual culture, and that both can be safely promoted without allowing one improperly to interfere with or override the other. There are some with phlegmatic temperaments who require frequent stimulation to induce them to overcome the inertia natural to them, but more who are indisposed to active exercise from the exhaustion of nerve force, incident to overtaxing the brain. The latter is more frequently seen in girls than in boys; but in every case, unless there is a special reason for the contrary, properly regulated exercise should be enforced.

Among boys and young men whose amusements or sports are usually more or less rough and requiring greater muscular effort, care ought to be exercised by those who are expected to guard against children's want of judgment, to restrain them from inaction or too long continued exercise, imposing on the heart and lungs struggles which may sooner or later end in organic injury. The games of foot-ball, base-ball, and cricket, &c.

ayed in moderation, may tend to promote and confirm health. But it has become the fashion to convert them into occasions for more competitive contests of exertion as well as of skill, and it is no worthless evidence of the ineffectiveness of those trusted with training of children, when they encourage them to engage in such contests. To become thus distinguished for physical prowess or dexterity, while it adds nothing to the honorable characteristics of the man, may—as it not unfrequently has—entail irremediable disease, crippling the heart or lungs in the performance of their functions, and sometimes abbreviating life.

Often when one of these exciting games is over, one or more of the players may be seen crowing himself on the ground or other place for rest; his face pale, or unnaturally flushed. He complains of nothing but weariness, or it may be of a slight catch in his breathing, and says he will soon be "all right." But if an expert lays his ear on the chest, or a finger on the wrist, he will find the heart irregular in its action, sometimes intermitting a stroke, and again struggling preternaturally to force the blood out of its overtaxed apartments and through the lungs, a portion of which may be congested. With rest these symptoms of functional derangement generally pass off, leaving however the natural sensitiveness of the heart changed into an unhealthy irritability, rendering it more readily perturbed and deranged; and if the same or a similar abuse is allowed, soon or frequently to call it into excessive action, the foundation is laid for a fearful cardiac disease, or some other malady in which the individual may be constitutionally predisposed, as epilepsy, paralysis, &c. The evil effects of overstrained muscular effort are hastened and made worse where the passions are called into play, as anger, fear or hate, each of which act injuriously on the system through the brain and organic chain of nerves.

Certainly within the last few years there has been a striking increase of deaths attributed to "heart disease." This may in part be occasioned by the physical and mental strain, so commonly attending the everyday life of our impulsive population; but not less probably may no inconsiderable portion of it be the final termination of injuries commenced by the excessive physical exertions so irrationally called forth in athletic sports, such as rowing and other games which we have mentioned. Overstraining muscular exercise may be considered as a bodily sin, clothed in outward acts and connected with chosen times and places. It should be regarded as such and avoided, especially by the young and immature, and those having charge of them should impress on them the substance of the advice of the Apostle, "Let your moderation be known unto all men." C. E.

For "The Friend."

The Chemistry of Plant Growth.

(Concluded from page 123.)

But suppose all the various materials necessary to nourish the plant, are in the soil and air, how is it that they are taken up, and converted into wood and bark, leaf and stem, flower and seed? For however little we know of the processes of selection and secretion, we now that all growth is the result of the addition of little particles of external matter,

taken in by the roots and leaves, and deposited in their proper places. The oak-spout has, in order to form its woody tissue, taken carbon from the air, hydrogen from the rain water, and oxygen from some of the many sources of that article, and piled their little atoms, one on another, in a definite and unchangeable form, and thereby slowly and silently built up, the immense trunk of the mature oak. But wherever it grows, whether in the light or shade, on the barren hill-side, or the rich valley, it invariably takes just eighteen of these atoms of carbon, and adds to them thirty of hydrogen, and fifteen of oxygen to form each little particle of woody fibre.

A seed is placed in the warm moist ground. The germ which was matured within it while it was still a portion of the parent plant, is incited by the sun's rays to take to itself little particles of the rich material, which it finds supplied in abundance in immediate proximity, in other parts of the seed. Thus it grows—sending downward an organism adapted to supplying its future wants from the soil,—and upward a different organism, which develops stem and leaves, and drinks in nourishment from the air. These continually draw to it, those peculiar elements which it requires; it grows by them, flowers, forms its seed for its successor, and, in the fulness of its time, dies. Much of this process is mystery to us. But however much we may find out concerning it, we cannot but admire the greater than human wisdom, which planned the beautiful laws of its growth, and watches over their operations.

The roots grow downward and sideways into the soil. When they come in contact with proper food, they absorb it, and with the rest of the plant are nourished by it. If in any direction the earth is a desert to them, they die. Thus we see such a mat of roots around decaying matter, that feels them; thus willow roots follow the water courses. The extremity is a bud, which is continually pushing itself on. This point has no power to absorb nourishment, as may be proven by immersing it alone in the soil, when the plant will die. The real absorbents are on the side of the root, consisting usually of little hair-like rootlets, that branch from the main stem. These take up by endosmosis in a dissolved, fluid state, whatever the plant requires, selecting with wonderful accuracy, its peculiar food. The juices rise in the stem, whether as a result of propulsion from below, or suction from above due to evaporation from the leaves, or a union of both, is not certainly determined. Whatever it be, there is very considerable upward pressure exerted. A column of mercury 30 inches high has been held up, by the pressure of the ascending sap of a grape vine in the spring. It need not be supposed when we see the juice flowing from a cut in the bark, that under normal conditions there is such a rapid current. The vessels are kept full of sap. Where any vent is found, a flow is set up, and the deficiency is supplied from below. A plant in the sunshine in dry air, is rapidly losing water by evaporation. Hence such a plant has a more rapid flow of sap, than one in the shade, or in moist atmosphere. If this evaporation becomes greater than the roots can supply, wilting takes place, though enough material is deposited in stem and root, to keep it alive for some time after absorption ceases. Plants like the beet and turnip have a great magazine of food stored away for the

needs of the second year, when flower and seed are to be perfected.

A series of interesting and complete experiments, has just been published in Paris by Prof. J. Boissingault, on the office of the leaves in transpiring water and absorbing food. Healthy plants were placed in glazed pots, which were covered on top by a sheet of india rubber, so that no water could escape by evaporation, or otherwise, from the pot. The whole was then repeatedly weighed, and the loss of water by evaporation of the leaves noted. In the case of a Jerusalem artichoke, it was found that the plant lost hourly, for every square metre of surface, 65 grammes in the sunshine, 8 grammes in the shade, and 3 during the night. When the roots were withdrawn from the soil, the loss from the leaves was only about half as great. To determine which side of the leaf transpired the most rapidly, the opposite sides of two leaves were coated with tallow, and the loss by evaporation noted, when it was found that the under side lost more than four times the upper.

The ability of leaves to take the place of roots in absorbing food, was investigated with great care. A forked branch of lilac, was arranged, so that one branch was immersed in water, while the other was exposed to the open air. Evaporation went on as usual from the latter, and its foliage was fresh and green after the lapse of two weeks. Other plants lived for months in this way; with some it was necessary that the immersed portion be much greater than the exposed portion, in others they were equal. It was thus found that in the one office of taking in water, the leaves may replace the roots.

Then the ability of the leaves to absorb mineral matter, which was formerly supposed to belong to the roots alone, was tried. Drops of water, holding in solution various mineral fertilizers, were placed on a leaf, and covered with watch glasses having greased edges to protect from dirt and evaporation. Land plaster was found to be completely absorbed. Solutions of sulphate and nitrate of potassium, of common salt and some ammonia salts, were also wholly or partly taken into the circulation of the leaf. These show that leaves may have a more extensive use in the vegetable economy than is usually supposed, in absorbing the various ammonia salts that exist in the atmosphere, the dust that may settle upon them, and the mineral matter which the rain has dissolved out of the air.

Such is a brief and imperfect summary of what is known as to the chemistry of plant growth. But behind all this, exists the unexplained mystery of life. Why does the particular combination of Carbon, Hydrogen and Oxygen, which we call the germ of an acorn, have the power to develop into an oak tree and nothing else? How do its rootlets absorb food, fitted only to its peculiar wants? When absorbed, what determines its placing in the plant, and the kind of tissue which it may form, wood, leaf, flower, or seed? In the face of the discoveries of the present day, which to our fathers would have seemed impossible to achieve, and irrelevant to claim, we may well hesitate to say what may not be done in the future. But properly looked at, any discovery in this mysterious field, would not cause us less to reverence the inscrutable Being who ordained it all, and permits man, with his limited powers, to see but a little of its wonders. I. S.

THE FRIEND.

TWELFTH MONTH 7, 1878.

A letter was received on one occasion by the pious William Law, from a person who proposed to visit him in order that he might receive instruction from his conversation on the spiritual life. In his reply declining such a visit, William Law points the attention of his correspondent to the true source of spiritual knowledge, telling him that "The spiritual life is nothing else but the working of the Spirit of God within us, and therefore our own silence must be a great part of our preparation for it, and much speaking or delight in it will be often no small hindrance of that good which we can only have from hearing what the Spirit and voice of God speaketh within us."

He further adds, "To speak with the tongue of men or angels on religious matters is a much less thing than to know how to stay the mind upon God and abide within the closet of our own hearts, observing, loving, adoring and obeying His holy power within us."

These sentiments are in unison with those which the Society of Friends has ever held; and it was their conviction of the truth of the scripture declaration,—"That which may be known of God is manifest in [men], for God hath shown it unto them,"—that led our predecessors so earnestly to turn the attention of all to the Light of Christ in their hearts, as the appointed Teacher, Leader and Guide of His people. When assembled for Divine worship, they taught, as Robert Barclay declares, that "The great work of one and all ought to be to wait upon God; and returning out of their own thoughts and imaginations, to feel the Lord's presence." He says it "hath often fallen out among us, that divers meetings have passed without one word; and yet our souls have been greatly edified and refreshed, and our hearts wonderfully overcome with the secret sense of God's power and spirit." And he further testifies from his own experience, "When I came into the silent assemblies of God's people, I felt a secret power among them, which touched my heart, and as I gave way unto it, I found the evil weakening in me, and the good raised up, and so I became thus knit and united unto them, hungering more and more after the increase of this power and life, whereby I might feel myself perfectly redeemed. And indeed this is the surest way to become a Christian, to whom afterwards the knowledge and understanding of principles will not be wanting, but will grow up so much as is needful, as the natural fruit of this good root."

We do not doubt that in other religious professions than our own, there are many sincere, seeking souls, and earnest Christians, who go to their meetings with desires to offer true worship to Him who is "glorious in holiness, fearful in praises, doing wonders." And we believe that the Lord, who looketh upon the heart, often answers the sincere desires of such true worshippers by bestowing a measure of spiritual comfort and refreshment. But the regular routine of reading, singing, praying and preaching, which such think must be gone through with, although "the life, power and virtue," which alone can make them effectual may be wanting; most often

be a great hindrance to that communion with God without which there is no worship.

Let us then highly value our simple and unceremonious way of meeting together and waiting upon the Lord; and, when so convened, be fervent in spirit, wrestling for a blessing. When Abraham Shackleton was on his death-bed, that worthy elder exclaimed with much feeling, "Oh the elders, the elders! they should dig for the arising of the well of life, as with staves in their hands!" If this earnest concern prevailed among all our members, we believe our meetings would be more eminently seasons of Divine favor; and that the Lord would hear and answer the secret petitions of His people, and pour out of His gifts upon them, so that sons and daughters would be raised up to bear testimony to His goodness, and to call on the wandering sheep to come into the fold of Heavenly rest and peace.

SUMMARY OF EVENTS.

UNITED STATES.—The additional lifesaving stations on the Atlantic coast, having been completed and ready for use, a circular has been issued, renumbering the stations, giving the district, boundaries, &c. It is stated there are 112 stations on the Atlantic coast; 6 on the Gulf coast; 40 on the Lakes, and 8 stations on the Pacific coast.

An order has recently been received at the Baldwin Locomotive Works in this city, for the construction of two locomotives for a railway in Nicaragua, which are intended for the first line of railway in that country.

The total population of the earth is given as 1,139,145,300, divided among the continents as follows: Europe, 312,398,480; Asia, 831,000,000; Africa, 205,219,500; North and West Polynesia, 4,411,300; America, 88,116,000.

The total number of standard silver dollars coined since their reauthorization to the 23d mill, inclusive, is 19,814,551. Of this number about ten and a half millions are in the United States Treasury; some four million two hundred thousand are in the mint vaults, and a little over one million in general circulation.

The yield of precious metals during the 10th month is stated to be the lightest for years, the estimate being \$2,250,000.

The financial report of the Register of the Treasury, for the fiscal year 1878, shows the total receipts from customs duties during the year were \$130,170,680; from internal revenue taxes \$110,581,024—making together \$240,750,394. The total cost of collecting the customs was \$5,826,974.

The Chicago elevators contain at the present time about 6,288,942 bushels of grain.

Mortality in this city last week 299.

The average temperature for the Eleventh month is given as 41.9 degrees, which is 2.6 degrees above the average for the past eight years. The lowest temperature was 28 deg. on the 5th. Thin ice was observed on the 5th and 9th. No snow during the month. The rainfall was light, being 2.19 inches. Prevailing direction of wind, west. Maximum velocity of wind 38 miles per hour.

Wheat.—The following were quotations on the 30th. Good 100 lb. U. S. sixes, 1881, 109 1/2; 5-20 cents, 1865, 104 1/2; do. 1867, 106 1/2; do. 1868, 109 1/2; new 5's, 106 1/2; new 4 1/2 cents, registered, 104 1/2, coupons, 105 1/2; new 4 cents 100 1/2.

Cotton, 94 a 95 cts. per pound for uplands and New Orleans.

Petroleum.—Crude 7 1/2 cts. in bbls., and standard white 8 1/2 cts. for export, and 11 1/2 a 12 1/2 cts. per gallon for home use.

Flour.—Penna. and Minnesota extra, \$1.25 a \$1.75; southern and western, \$1.62 a \$2.25; patent, \$5.50 a \$7.50. Rye flour, \$2.75 a \$3.60.
Grain.—Wheat, red, \$1.05; amber, \$1.06 a \$1.07; and white, \$1.00 a \$1.08. Corn, 43 a 49 cts. Oats mixed, 27 a 29 cts. and white, 30 a 31 cts. per bushel.
Hay and Straw.—Prime timothy, 60 a 70 cts.; mixed, 45 a 60 cts. Straw, 65 a 80 cts. per 100 pounds.

Beef cattle were in demand, but prices unchanged. Extra Penna. and western steers, 3 1/2 a 5 cts.; fair to good 3 1/2 a 4 1/2 cts. Sheep, 4 1/2 cts. per pound, as to condition. Hogs, 3 1/2 a 4 1/2 cts. per pound.

The value of exports from this city during the past week was \$252,684. The leading articles were wheat, petroleum and corn.

The final session of the Forty-fifth Congress began on the 23d inst. Some resolutions and bills were introduced into the Senate, and the President's Message was received and read in both Houses. The message said to give to Congress and the country, plain, business-like accounts of the "state of the Union." He says we are at peace with all other nations—our public credit has greatly improved, our manufacturing industries are on the advance. The cabinet department affairs are treated as briefly but in a comprehensive manner.

FOREIGN.—The steamer Pomerania which left New York on the 14th ult. for Hamburg, was sunk by collision with the Welsh bark Moel Eilian, near Folkestone, in the English Channel, on the night of the 20th. There were about 220 persons on board, including crew and passengers, and 1000 tons of cargo. The passengers are reported lost. The Pomerania was a first class steamship, of 3500 tons register, built on the Clyde in 1873, at a cost of about \$550,000. Her cargo was valued at \$250,000. In addition to her cargo, a mail consisting of 17 bags of letters, and 25 bags of papers, for France, Germany, Austria and the Scandinavian countries, were on board.

The condition of the coal and iron trades of South Staffordshire district is growing worse. One of the largest and oldest coal and iron companies has given notice of the closing of the greater part of its works, because it does not wish to continue operations at a loss. Other companies engaged in the iron business have given notice that they must reduce the wages of their hands.

Dispatches received from the English army invading Afghanistan, indicate that they have not met with an serious resistance to their progress. The hill tribes are said to be friendly, and are supplying the forces with provisions. The reported trouble in the Khyber Pass and in the Punjab, was greatly exaggerated. It is not expected the armies will attempt to advance much further than present winter.

Of 59,100 Russian soldiers that entered Turkey during the last war, it is said 58,800 were sent back by the wounded, and 62,510 ill; 31,000 sick went home to their homes, and 29,000 are in the hospitals, 31,000 perished in Romania, and 99,000 in China.

Late advices from China say that 50,000 troops in the province of Kwangsi have revolted, and it was feared that, owing to poor pay and rations, the revolt would extend throughout the army. Complications with Russia are also apprehended. The opposition to Governor Hennessey, in Hong Kong, was increasing, and petition for his removal were in circulation.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty third Ward,) Philadelphia.
Physician and Superintendent—JOHN C. HALL, M. D.
Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board of Managers.

DIED, on the 9th of 10th mo. 1878, at his residence near Upland, Delaware Co., Pa., MARY MARIS, widow of the late Jesse J. Maris, in the 84th year of her age, a beloved elder of Chester Monthly Meeting. A paralytic attack, which occurred more than a year before her decease, affecting her speech and left side, soon passed off—but left a realizing sense of the great uncertainty of life. She was anxiously concerned that the wedding garment of righteousness might be fully completed. A feeling of such quietness and assurance was granted her looking to the close of life, as to lead her, in humility favored to be heard, not to be deceived. She was not suffered long to remain in doubt. Her soul, as she had shown her love by faithfully maintaining his testimonies, was graciously pleased to manifest himself as her Redeemer and her portion forever. She felt resigned to his holy will, whether life or death, health or suffering might be dispensed. The last she was permitted to see, was the bright sun passing over the second unusually bright and cheerful, in the morning spending a half hour longer than usual with the family. Before morning she had an apoplectic seizure, which soon deprived her of all feeling, and at the end of six days terminated her valuable life.

She resided in Wilmington, Connecticut, Co. Ohio, and the 23d mo. of 1810, on Col. J. Kirt, M. D. In the 82d year of his age, an esteemed member of New Garden Monthly and Particular Meeting, Ohio.

From the "American Journal of Science and Arts,"
Forest Geography and Arthrology.

BY ASA GRAY.

(Continued from page 120.)

From the Gulf of Mexico to the Gulf of St. Lawrence, the amount of rain decreases moderately and rather regularly from south to north; but, as less is needed in a cold climate, there is enough to nourish forest throughout. On the Pacific coast, from the Gulf of California to Puget Sound, the southern third has most no rain at all; the middle portion less than our Atlantic least; the northern third as about our Atlantic average.

Then, New England has about the same amount of rain-fall in winter and in summer; Florida and Alabama about one-half more in a three summer than in the three winter months,—a fairly equable distribution. But the Pacific coast there is no summer rain at all, except in the northern portion, and there is little. And the winter rain, of forty inches on the northern border, diminishes less than one half before reaching the Bay San Francisco; dwindles to twelve, ten, and eight inches on the southern coast, and to six inches before we reach the United States boundary below San Diego.

Taking the whole year together, and comparing ourselves to the coast, the average rainfall for the year, from Puget Sound to the order of California, is from eighty inches at the north to seventy at the south, i. e., seventy on the northern edge of California; thence it diminishes rapidly to thirty-six, twenty (about San Francisco), twelve, and at San Diego to eight inches.

The two rainiest regions of the United States are the Pacific coast north of latitude thirty-five, and the northeastern coast and orders of the Gulf of Mexico. But when one rainy the other is comparatively rainless, or while this Pacific rainy region has only on twelve to two inches of its rain in the summer months, Florida, out of its forty to fifty, has twenty to twenty-six in summer, and only six to ten of it in the winter months. Again, the diminution of rain-fall as we proceed inland from the Atlantic and Gulf shores, gradual; the expanse that is or was forested is very broad, and we wonder only that it did not extend farther west than it does.

On the other side of the continent, at the north, the district so favored with winter rain but a narrow strip, between the ocean and the Cascade Mountains. East of the latter,

the amount abruptly declines,—for the year from eighty inches to sixteen; for the winter months, from forty-four and forty to eight and four inches; for the summer months, from twelve and four to two and one.

So we can understand why the Cascade Mountains abruptly separate dense and tall forest on the west from treelessness on the east. We may conjecture, also, why this North Pacific forest is so magnificent in its development.

Equally, in the rapid decrease of rain-fall southward, in its corresponding restriction to one season, in the continuation of the Cascade Mountains as the Sierra Nevada, cutting off access of rain to the interior, in the unbroken stretch of coast ranges near the sea, and the consequent small and precarious rain-fall in the great interior valley of California, we see reasons why the California forest is mainly attenuated southward into two lines,—into two files of a narrow but lofty procession, advancing southward along the coast ranges, and along the western flank of the Sierra Nevada, leaving the long valley between comparatively bare of trees.

By the limited and precarious rain-fall of California, we may account for the limitations of its forest. But how shall we account for the fact that this district of comparatively little rain produces the largest trees in the world? Not only produces, alone of all the world, those two peculiar *big trees* which excite our special wonder,—their extraordinary growth might be some idiosyncrasy of a race,—but also produces pines and fir-trees, whose brethren we know, and whose capabilities we can estimate, upon a scale only less gigantic. Evidently there is something here wonderfully favorable to the development of trees, especially of coniferous trees; and it is not easy to determine what it can be.

Nor, indeed, does the rain-fall of the coast of Oregon, great as it is, fully account for the extraordinary development of its forest; for the rain is nearly all in the winter, very little in summer. Yet here is more timber to the acre than in any other part of North America, or perhaps in any other part of the world. The trees are never so enormous in girth as some of the Californian, but are of equal height—at least on the average—three hundred feet being common, and they stand almost within arms' length of each other.

The explanation of all this may mainly be found in the great climatic differences between the Pacific and the Atlantic sides of the continent; and the explanation of these differences is found in the difference in the winds and the great ocean currents.

The winds are from the ocean to the land all the year round, from northwesterly in summer, southwesterly in winter. And the great Pacific Gulf-stream sweeps toward and along the coast, instead of bearing away from it, as on our Atlantic side.

The winters are mild and short, and are to

a great extent a season of growth, instead of suspension of growth as with us. So there is a far longer season available to tree vegetation than with us, during all of which trees may either grow or accumulate the materials for growth. On our side of the continent and in this latitude, trees use the whole autumn in getting ready for a six months winter, which is completely lost time.

Finally, as concerns the west coast, the lack of summer rain is made up by the moisture-laden ocean winds, which regularly every summer afternoon wrap the coast-ranges of mountains, which these forests affect, with mist and fog. The Redwood, one of the two California big trees—the handsomest and the most abundant and useful,—is restricted to these coast-ranges, bathed with soft showers fresh from the ocean all winter, and with fogs and moist ocean air all summer. It is nowhere found beyond the reach of these fogs. South of Monterey, where this summer condensation lessens, and winter rains become precarious, the Redwoods disappear, and the general forest becomes restricted to favorable stations on mountain sides and summits. *

* * * The whole coast is bordered by a line of mountains, which condense the moisture of the sea breezes upon their cool slopes and summits. These winds, continuing eastward, descend dry into the valleys, and warning as they descend, take up moisture instead of dropping any. These valleys, when broad, are sparsely wooded or woodless, except at the north, where summer-rain is not very rare.

Beyond stretches the Sierra Nevada, all rainless in summer, except local hail-storms and snow-falls on its higher crests and peaks. Yet its flanks are forest clad; and, between the levels of 3,000 and 9,000 feet, they bear an ample growth of the largest coniferous trees known. In favored spots of this forest—and only there—are found those groves of the giant *Seymouria*, near kin of the Redwood of the coast-ranges, whose trunks are from fifty to ninety feet in circumference, and height from two hundred to three hundred and twenty-five feet. And in reaching these wonderful trees you ride through miles of sugarpines, yellow pines, spruces and firs, of such magnificence in girth and height, that the big trees, when reached—astounding as they are—seem not out of keeping with their surroundings.

I cannot pretend to account for the extreme magnificence of this sierra-forest. Its rainfall is in winter, and of unknown but large amount. Doubtless most of it is in snow, of which fifty or sixty feet falls in some winters; and—different from the coast and in Oregon, where it falls as rain, and at a temperature which does not suspend vegetable action,—here the winter must be complete cessation. But with such great snow-fall the supply of moisture to the soil should be abundant and lasting.

Then the Sierra—much loftier than the coast ranges—rising from 7,000 or 8,000 to 11,000 and 14,000 feet—is refreshed in summer by the winds from the Pacific, from which it takes the last drops of available moisture; and mountains of such altitude, to which moisture from whatever source or direction must necessarily be attracted, are always expected to support forests—at least when not cut off from sea winds by interposed chains of equal altitude. Trees such mountains will have. The only and the real wonder is, that the Sierra Nevada should rear such immense trees!

Moreover, we shall see, that this forest is rich and superb only in one line; that, beyond one favorite tribe, it is meagre enough. Such for situation, and extent, and surrounding conditions, are the two forests—the Atlantic and Pacific—which are to be compared.

In order to come to this comparison, I must refrain from all account of the intervening forest of the Rocky Mountains,—only saying, that it is comparatively poor in the size of its trees and the number of species; that few of its species are peculiar, and those mostly in the southern part, and of the Mexican plateau type; that they are common to the mountain-chains which lie between, stretched north and south *en echelon*, all through that arid or desert region of Utah and Nevada, of which the larger part belongs to the great basin between the Rocky Mountains and the Sierra Nevada: that most of the Rocky Mountain trees are identical in species with those of the *Pacific* forest, except far north, where a few of our eastern ones are intermingled. I may add that the Rocky Mountains proper get from twelve to twenty inches of rain in the year, mostly in winter snow, some in summer showers.

But the interior mountains get little, and the plains or valleys between them less: the Sierra arresting nearly all the moisture coming from the Pacific, the Rocky Mountains all coming from the Atlantic side.

(To be continued.)

For "The Friend."

Incidents and Reflections.—No. 27.

(CONFESSION AND RESTITUTION.)

The duty of confessing our sins and making restitution when we have wronged others, is so strongly impressed upon the heart of him who truly repents, that where we find persons unwilling to submit to it, there is room to doubt whether they have yet fully yielded their hearts to the convicting power of Divine Grace. There may be and probably are, many cases in which the awakened sinner is not led to make open confession of his former evil deeds; because there may be many reasons which would render it improper; yet he ought in every instance to be so humbled under the power of God, as to be made willing to take shame to himself, and to do whatever he is convinced is called for at his hands. This humility and surrender of self are essential to enable any one to go through the narrow, "strait" gate which is the only entrance to the highway that leads to the Kingdom of Heaven.

Among the hills of northern New England were two infidel neighbors. One of these heard the gospel message, was impressed therewith, and enabled to bow in heart to the visitations of that Grace which hath appeared unto all men, and which bringeth salvation

to those who are guided by it. This Grace, the apostle says, teaches us, among other duties, to live *righteously*; and the convicted sinner felt that he had wronged his neighbor. No doubt his pride rebelled against making the acknowledgment of his fault; but the terrors of the Lord for disobedience are a fearful burthen to an aroused conscience—as the Scriptures query, "A wounded spirit who can bear?" So he visited his infidel neighbor and informed him of the change that had taken place in his feelings as to religion. The other replied that he had heard of it, and was surprised, because he had thought him about as sensible a man as there was in town.

"Well," said the Christian, "I have got a duty to do to you, and I want you to stop talking and hear me. I haven't slept much for two nights for thinking of it. I have four sheep in my flock that belong to you. They came into my field six years ago; and I knew they had your mark on them, but I took them and marked them with my mark; and you inquired all around and could not hear any thing of them. But they are in my field, with the increase of them; and now I want to settle this matter. I have lain awake nights and groaned over it, and I have come to get rid of it. And now I am at your option. I will do just what you say. If it is a few years in State's prison, I will suffer that. If it is money or property you want, say the word. I have a good farm and money at interest, and you can have all you ask. I want to settle this matter up and get rid of it."

The infidel was amazed. He began to tremble.

"If you have got them sheep you are welcome to them. I don't want nothing of you, if you will only go away; a man that will come to me as you have—something must have got hold of you that I don't understand. You may have the sheep, if you will only go away."

"No," said the Christian, "I must settle this matter up and pay for the sheep; I shall not be satisfied without. And you must tell me how much."

"Well," said the skeptic, "if you must pay me, you may give me what the sheep were worth when they got into your field, and pay me six per cent on the amount, and go off and let me alone."

The man counted out the value of the sheep and the interest on the amount, and laid it down, and then doubled the dose, and laid as much more down beside it, and went his way; leaving a load on his neighbor's heart almost as heavy as that which he himself had borne.

One result which followed from this honest confession and restitution, was the conviction forced on the mind of the man who had lost the sheep, that there was something real in the power of religion; and he himself was afterwards frequently seen in the assemblies of those met to worship the Lord.

It is related of—Nott, a missionary to one of the islands in the Pacific Ocean, that he preached a sermon one day on the words, "Let him that stole steal no more." In the sermon he said that it was a duty to return things that had formerly been stolen.

The next morning when he opened his door, he saw a number of natives sitting on the ground around the house. He was surprised to see them there so early, and asked why they had come. "We have not been able to sleep all night," they said. "We were at the

chapel yesterday, and heard you say that Jehovah commanded us not to steal; where we used to worship a god who we thought would protect thieves. We have stolen, as all these things we have brought with us, a stolen goods." Then one of the men held up a saw, saying, "I stole this from the carpenters of such and such a ship." Others held up knives and various tools.

"Why have you brought them to me," asked the missionary. "Take them home and wait till the ships from which you stole them come again, and then return them, with a present besides." Still the people begged him to keep the things until they could find the owners. One man, who had stolen from a missionary, then being on another island, took a voyage of seventy miles, to restore the goods.

That is the only way to improve by preaching—doing what it says. How many people form good resolutions when they hear a sermon which touches the heart and conscience, but how few such resolutions are *set to action*!

"Be ye doers of the word, and not hearers only, deceiving your own selves."

A recent writer speaks of a friend, naturally of a gloomy turn of mind, who had much peace and joy during a long illness that ended in death. Speaking to his widow as to the cause of this, which seemed in one of his temperaments somewhat remarkable, she said that her husband gratefully noticed the fact, and next to the hope of salvation which he had through Jesus Christ, he thought that it was because he had never once *knowingly cheated any one of a lump of coal*, his business being that of a coal-merchant.

Reasoning in Arctic Foxes.—For some good instances of reasoning in animals I am indebted to Dr. Rae. Desiring to obtain some Arctic foxes, he set various kinds of traps, but, as the foxes knew these traps from previous experience, he was unsuccessful. Accordingly, he set a kind of trap with which the foxes in that part of the country were unacquainted. This consisted of a loaded gun set upon a stand pointing at the bait. A string connected the trigger of the gun with the bait, so that when the fox seized the bait he discharged the gun, and thus committed suicide. In this arrangement the gun was separated from the bait by a distance of about 20 yards, and the string which connected the trigger with the bait was concealed throughout nearly its whole distance in the snow. The gun-trap thus set was successful in killing one fox, but not in killing a second; for the foxes afterward adopted either of two devices whereby to secure the bait without injuring themselves. One of these devices was to bite through the string at its exposed part near the trigger, and the other device was to burrow up to the bait through the snow at right angles to the line of fire, so that, although in this way they discharged the gun they escaped without injury, the bait being pulled below the line of fire before the string was drawn sufficiently tight to discharge the gun. Now, both of these devices exhibited a wonderful degree of what I think must fairly be called a power of reasoning. I have carefully interrogated Dr. Rae on all the circumstances of the case, and he tells me that in that part of the world traps are never set with strings, so that there can have been no special association in the foxes' minds between string

id traps. Moreover, after the death of fox number one, the track on the snow showed at fox number two, notwithstanding the temptation offered by the bait, had expended great deal of scientific observation on the in before he undertook to sever the cord, astly, with regard to burrowing at right angles to the line of fire, Dr. Rae and a friend whom he has confidence observed the fact sufficient number of times to satisfy themselves that the direction of the burrowing was really to be attributed to thought and not to chance.—*The Nineteenth Century.*

For "The Friend."

The following, from Fothergill's Discourses, is hoped will be appreciated by parents in the younger walks and meridian of life, who are entrusted with the care and training of their beloved offspring.

"O ye parents and heads of families, who are placed as delegated shepherds over them; be ye beware lest the blood of your children, or any part of your charge fall on your heads, if through your misconduct they become corrupted, and their souls perish.) Know thatquisition for blood will hasten from the Supreme Judge, who divideth the classes of mankind; and hath, as it were, separated from the rest those who are parents and have children; his call is to these, 'Go work in my vineyard.' The precious gifts which he hath given as pledges of his love, are to be led and instructed by them with a proper authority. If the parents experimentally felt the advantages of spiritual health in themselves, then could they be concerned that the tender minds of their children should be properly cultivated with the knowledge of the Lord, and a fearful apprehension of transgressing its supreme commands. They would teach them to look further than mere temporal acquisitions; even to God their Creator. They would bring them up in the nurture and fear of the Lord; in order that their minds might be filled from the storehouse and magazine of boundless good, and early enriched with the joys of God's salvation.

And this would naturally diffuse the greatest satisfaction to the parents themselves, to see their children become the delight and ornament of human nature, and fitted for a glorious change! the company of angels, and the joys of just men made perfect. The ties of nature, and the stronger ties of gratitude to Him who gave the blessing, call aloud for teaching the tender minds of your children, to walk in the safe and delightful paths of virtue. With what satisfaction and composure of mind will such parents be enabled to answer the great God, upon his awful examination to this purpose: "What have you one with those tender sheep which I committed to your care in the wilderness? have you trained them up in safety?"

How will such parents be supported by a consciousness of having done their duty, in that solemn hour! They then may truly say, "I have done my utmost within my contracted sphere, within the narrow precincts of my allotment in life, to fill up my stated duty. Then the Supreme Judge will set at his right hand such parents, and they shall be united to him in glory.

I wish all parents and heads of families would continually walk hand in hand with their children and families, in the path which leadeth to life eternal; daily watching over,

and improving their rising judgments, with the wisdom which cometh from above; instructing and encouraging them in the contemplation of divine things: persuading them to believe, as the truth is, that the things of this world are all uncertain and fading away; that they have everlasting mansions created for them in the city of their God; where (if they fall not short, or turn not aside) they shall enjoy the company of saints and angels for evermore. Exercise yourselves in this your present state, differently from those whose faculties are bounded within the narrow limits of this world; cultivate, continually cultivate the minds of your offspring; endeavoring to raise in them a proper comprehension of the dignity of their natures, and to fix in them early a steadfast belief of their immortality; which is of the utmost importance to all. The hearts of those are unsteady, who live in a perpetual attachment to the pride of life; who are contaminated with the love of the world, wherein their chief-happiness appears to be placed. How can such point out the way to the city of God? How can they say to their children, 'Let us retreat from the world, from this scene of corruption; let us withdraw from the cares and solitudes of this life: let us contemplate the joys of eternity; let nothing separate us from that blessed hope!' How can parents thus address their children when they have, perhaps for a long course of years, ceased to consider the awful importance of the subject; and their own minds continue fixed, and tied down to the fading enjoyments of life; alas! that folly and vanity of the superficial pleasures of the world should so entirely engage and engross the attention of any one immortal individual, as to take up almost every moment of their precious time! Hence, sometimes parents, instead of instructing the minds of their children, have so totally corrupted their own, that they have laid obstructions in the way to the immortal happiness of their offspring, and have thereby aggravated their own guilt beyond expression; alas! what will their punishment prove, when convicted of so great a neglect and violation of their duty? When He that is judge of the quick and dead shall appear in judgment to render to every man according to his works? May all parents who are negligent in the discharge of their duty, lay it seriously to heart!

In the mean time may you, my brethren and sisters, in a spiritual relation, continue in a state of lively, active health—laboring in the sure ground of hope; that when the great Shepherd himself shall appear, you may also appear with him in glory. If you so persist, I cannot but yet hope that your steadfast continuance will prove the means of spreading spiritual health in an eminent degree. O fathers and mothers! I beseech you, by the mercies of God, and the solemn account you must one day close with Him, that you lay this charge seriously to heart; still offering up your humble petitions to the Father of light, that he would enable you more and more to instruct the children he hath blessed you with, in the one thing needful, in order that being thus favored, thus enlightened and enlarged by his power, you may have nothing to do but die, when that time shall arrive; nothing to charge yourselves with in relation to the neglect of this great duty, when the measure of your days shall be accomplished, but may render up your accounts with joy,

and receive the beatific sentence of "Well done, good and faithful servant; thou hast been faithful in a little, I will make thee ruler over more, enter thou into the joy of thy Lord."

West Chester, Pa., 12th mo. 1st, 1878.

For "The Friend."

TO THE EDITORS OF "THE FRIEND."
After reading the interesting description of the late Eclipse, in "The Friend" of last week, I was reminded of letters in my possession, from Burlington, Iowa, describing the Eclipse of 1869, that I thought would be interesting to the readers of "The Friend."

"Yesterday I mailed papers, giving some account of the great eclipse, which came off promptly and according to prediction, Saturday p. m. The weather was remarkably clear, not a cloud in sight. I made some simple preparations and saw it under very favorable circumstances, and must say, was deeply impressed with the majesty of the event—having a very good marine opera-glass, and found by covering the eye sight with smoked glass, that the sun could be looked at. I rigged it up and made ready in the forenoon; with the glass the sun looked like a sphere and not a flat disk, and with it I could see a spot on the sun. Thinking I should never have another opportunity to see a total eclipse, I determined to make the most of this, and shut up the store at 3 p. m., and in company with a few friends, went up on the bluff overlooking the river, where we could have an extended view of the surrounding country. There we met a party of six gentlemen, from Aurora, Ill., who had come over to see the show, there were a great many strangers in the town, beside the professional astronomers. We took our stations; occasionally looking up at the great luminary, and observed the first contact at 3.57, and concluded the astronomers were correct in their calculations, we watched the moon's gradual movement with intermissions to view the shadows and change of tints on the landscape around us—the swallows, sailing about in the air, appeared to get excited, as the shadow increased, and finally retired—the birds and beasts were generally impressed with the idea that it was time to go to roost, or move homeward. The sun was about half covered at 4.30, and just before the total we discovered Venus shining brightly, north and east of the sun, and after, we saw the planet Mercury, a few degrees west of the sun; this planet I believe is seldom seen, being always so near the sun. The great event, the totality, came on just before 5 o'clock, and was a grand sight to behold; as the last rays of the sun were being shut off, the beautiful Corona burst forth, appearing like a bright silver ring, with rays of glory, of irregular length, some of them extending much farther than others, surrounded the moon; this effect is produced, I believe, by the illuminated atmosphere around the sun. This lasted nearly three minutes, (I wish it had been fifteen or more,) during which time we observed at the lower and also at the right limb, ruby colored protuberances of exceeding brilliancy, one of them said to be 45,000 miles high—it looked to me about the size of an egg plum—not being acquainted with astronomy, I cannot explain the nature of these ruby-colored projections, nor have I as yet heard any satisfactory explanations, but would like to know more about them. The landscape looked grand during totality, there was a general glow

around and over head, that was very impressive, but an orange-colored brightness around the horizon, not so brilliant as we often see at sunset, but very rich tints. It was not very dark, not so much so as I expected—it was a peculiar darkness, objects could be seen clearly and seemed to be drawn nearer; I looked for the bridge, down the river about a mile, and could see it distinctly. J. Fennimore Cooper, in speaking of the eclipse of 1806, said it was very dark, so much so that the blades of grass by his feet were invisible. I am satisfied he was mistaken; his account was written many years after the event, and his memory failed him; the length of time being so short in which the moon obscures the sun, is insufficient to expel the light. My theory is, it would increase in darkness if the obscuration lasted longer; do you think I am correct?

"As the moon passed off and the sun again burst forth, our Aurora friends broke out into cheers, which I believe was the feeling of the people generally—and the grand exhibition was over.

"I regretted two things, that the totality did not continue longer, and that I had not a powerful telescope to view it with; but it was a sight ever to be remembered.

J. P. B."

Remarks of an Indian relative to singing in meetings for worship and regarding preaching, as related to a Friend who devoted many years of his early life in teaching, and in laboring for the good of the natives.—1821.

"He began to speak to us respecting the manner those of the natives had proceeded who pay attention to the First day of the week, in having singing introduced among them; said he had considered of it and his mind was not quite satisfied therewith, as he could not think of the Great Spirit whilst engaged therein, as he wished to, on account of his mind being occupied with the music, but when he sat down and meditated, he then could remember all the mistakes he had made, and could reflect upon the Great Spirit; he approved of having preaching or advice amongst them, by some of their people, but it should be given freely, or else he did not think it was quite right."

Outdone by a Boy.—A lad in Boston, rather small for his years, works in an office as errand boy for four gentlemen who do business there. One day the gentlemen were chaffing him a little about being so small, and said to him:

"You never will amount to much, you never can do much business, you are too small."

"Well," said he, "as small as I am, I can do something which none of you four men can do."

"Ah, what is that?" said they.
"I don't know as I ought to tell you," he replied. But they were anxious to know, and urged him to tell what he could do that none of them were able to do.

"I can keep from swearing!" said the little fellow. There were some blinches on four manly faces, and there seemed to be very little anxiety for further information on the point.

Some one has beautifully said that "sincerity is speaking as we think, believing as we pretend, acting as we profess, performing as we promise, and being as we appear."

THE FOREST RAMBLE.

Selected.

One golden autumn day we gathered leaves,
My little friend and I, from forest trees;
So leet was he, that with my sober pace,
I could of my young friend scarce keep a trace;
A soft sun beamed here,—a red one there,
He spied, and off he bounded like a deer,
O'er rock and hillock, or perchance a wall,
He clambered for the fairest of them all;
In forest deep he saw a shrub at last,
And quickly forward to the spot he passed;
I hastened on, till from a gentle rise,
I saw him, limbs outstretched to seize the prize.
Above his head in colors dazzling bright,
The poisonous sunbeetle my startled sight,
"This poison, child," I cried, "a moment wait,"
But ere I reached the place it was too late;
For, lest to pick them I would not allow,
He quickly gathered them, bough after bough;
So 'tis, I thought, with children older grown,
They cannot let forbidden fruit alone;
And though the Lord himself should say "Forbear,"
They grasp the dazzling prize as false as fair,

"THE MAN OF MACEDONIA."

Acts xvi. 6-10.

O, for a vision and a voice to lead me,
To show me plainly where my work should lie,
Go where I may, fresh hindrances impede me,
Vain and unawares seems my earnest cry.

Hush! unbelieving one, but for thy blindness,
But for thine own impudence and self-will,
Thou wouldest see, thy Master's loving kindness
Who by those hindrances is leading still.

He who of old through Phrygia and Galatia,
Led the apostle Paul and blessed him there,
If He forbid to preach the word in Asia,
Must have prepared for thee a work elsewhere.

Courage and Patience! Is the Master sleeping?
Has He no plan, no purposes of love?
What thought awhile his counsel He is keeping,
It is maturing in the world above.

Wait on the Lord, in His right hand he hid den,
And go not forth untaught to strive alone,
Shun like a sin the tempting word forbidden,
God's love for souls be sure exceeds thine own.

The Master cares! Why feel or seem so lonely?
Nothing can interrupt real work for God,
Work may be changed, it cannot cease; if only
We are resolved to devote unto the Lord.

None are good works for thee, but works appointed,
Ask to be filled with knowledge of His will
Cost what it may; why then, if He disquiet?
One work throughout, God's pleasure to fulfil.

But if indeed some special work awaits thee,
What cost afford this waiting time to lose?
By each successive task God edifies thee,
What if the iron be too blunt to use?

Can walls be builded with untempered mortar?
Can fish be caught in an unended snare?
Must not the metal pass through fire and water,
If for the battle field it would prepare?

Oh! thou unpolished shaft, why leave the quiver?
Oh! thou blunt axe, what forest canst thou hew?
Unsharpened sword, canst thou the oppressed deliver?
Go back to thine own maker's forge anew.

Submit thyself to God for preparation,
Seek not to teach thy Master and thy Lord,
Call it not zeal; it is a base temptation
Satan is pleased when man dictates to God.

Down with thy pride! With holy vengeance trample
On each self-flattering fancy that appears,
Did not the Lord himself for our example,
Lie hid in Nazareth for thirty years?

Wait the appointed time for work appointed,
Lest by the tempter's wiles thou be ensnared,
Fresh be the oil wherewith thou art anointed,
Let God prepare thee for the work prepared.

Kindness is an invisible force of unmeasured power.

A Railway Incident.

[A correspondent in Iowa sends us the following touching incident, written by J. I. Dow, a member of the United Brethren Society, with whom he was personally acquainted, and whom he represents as a man whose statements may be relied upon as correct.]

In travelling, we often meet with persons of different nationalities and languages. We also meet with incidents of various character, some sorrowful, and others joyful and instructive. One of the latter character I witnessed recently, while travelling upon the cars. The train was going west, and the time was evening. At a station a little girl about eight years old came aboard, carrying a little budger or her arm. She came into the car and deliberately took a seat. She then commenced an eager scrutiny of faces, but all were strange to her. She appeared weary, and placing the budget for a pillow, she prepared to try to secure a little sleep. Soon the conductor came along collecting tickets and fare. Observing him, she asked if he might lie there. The gentlemanly conductor replied that at night, and then kindly asked for her ticket. She informed him that she had none, where the following conversation ensued. Said the conductor:

"Where are you going?"
She answered: "I am going to heaven."

He asked again, "Who pays your fare?"

She then said, "Mister, does this railroad lead to heaven, and does Jesus travel on it?"

He answered, "I think not. Why did you think so?"

"Why, sir, before my ma died, she used to sing to me of a heavenly railroad, and you looked so nice and kind I thought this was the road. My ma used to sing of Jesus of the heavenly railroad, and that he paid the fare for everybody; and that the train stopped at every station to take people on board but my ma don't sing to me any more. No body sings to me now, and I thought I'd take the cars and go to ma. Mister, do you sing to your little girl about the railroad that goes to heaven? You have a little girl haven't you?"

He replied, weeping, "No, my little dear, I have no little girl now. I had one once, but she died some time ago, and went to heaven."

Again she asked, "Did she go over this railroad; and are you going to see her now?"

By this time all persons in the coach were upon their feet, and most of them were weeping. An attempt to describe what I witnessed is almost futile. Some said, "God bless the little girl." Hearing some person say that she was an angel, the little girl earnestly replied, "Yes, my ma used to say I would be an angel some time."

Addressing herself once more to the conductor she asked him, "Do you love Jesus? I do, and if you love Him He will let you ride to heaven on his railroad. I am going there, and I wish you would go with me. I know Jesus will let me into heaven when I get there, and He will let you in too, and everybody that will ride on his railroad—yes, all these people. Wouldn't you like to see heaven, and Jesus, and your little girl?"

These words, so innocently and pathetically uttered, brought a great gush of tears from all eyes, but most profusely from the eyes of the conductor. Some who were travelling on the heavenly railroad shouted aloud for joy.

he now asked the conductor, "Mister, may be here until we get to heaven?" He answered, "Yes, dear, yes." She then asked, "Will you wake me up, so that I may see my ma, your little, and Jesus? For I do so much want to see 'em all."

The answer came in broken accents, but in words very tenderly spoken, "Yes, dear angel. God bless you!" "Amen!" was sobbed more than a score of voices.

Turning her eyes again upon the conductor, she interrogated him:

"What shall I tell your little girl when I hear? Shall I say to her that I saw her on Jesus' railroad? Shall I?"

This brought a fresh flood of tears from all present; and the conductor knelt by her side, and, embracing her, wept the reply he did not utter. At this juncture the brakeman called out "H—s." The conductor rose and requested him to attend to his (the conductor's) duty at the station, for he was gaged. That was a precious place. I think that I was a witness to this scene, but I am sorry that at this point I was obliged to leave the train.

A few months after the above occurrence, the writer of the narrative received a letter from the conductor, acknowledging that the circumstance had been a blessing to him spiritually; and giving some additional information respecting the little girl. The letter says:

"I had proposed adopting her in the place of my little daughter, who is now in heaven. At this intention I took her to C—B—, on my return trip I took her back to —, where she left the cars. In consultation with my wife in regard to adopting her, she replied, 'Yes, certainly, and immediately, for there is a Divine providence in this.' She said she, 'I never could refuse to take her my charge the instrument of my husband's salvation.' I made inquiry for the child at S—, and learned that in three years after her return she died suddenly, with any apparent disease, and her happy soul is gone to dwell with her ma, my little girl, and the angels in heaven."

From the "National Farmer."

Our California Letter.

THRASHING.

We had ten stacks of grain, making five bittings. They had cost us a great deal of labor and money. We bought seed last November. We plowed our fields, sowed the grain, and harrowed it in. We watched it while it grew; when it was ripe we reaped it. We stacked it. We knew just how much use our stacks had cost us, but their value was a matter of conjecture merely. Indeed, they had no market value as they stood. They must be threshed. The golden grain must be separated from the comparatively worthless chaff and straw. So we engaged a man to come with a separator, a steam engine, eight horses and twenty-two men to thresh for us. We had to furnish fuel for the engine and food for the horses and men. For a week our house was turned into a hotel. We employed a Chinaman to cook. He had to get breakfast ready for the threshers at 5 o'clock in the morning, for they wanted to be out in the field at work as soon as they could see. The amount of provisions that those threshers consumed away during that week was astonish-

ing. Twenty pounds of beef, a wash-boiler full of hot coffee, and other things in proportion, three times a day. The engine did not work well. They would have to stop every hour or two for repairs. On the third day the cylinder burst, and it had to be sent to San Jose and another brought out in its place. The result was that the threshing required twice as long and cost nearly twice as much as it should; for the farmer has to board the threshers whether they work or not, and he has to pay the wages of sixteen out of the twenty-two. Well, at the end of the week we knew just what our stacks were worth. We had the grain in sacks ready for market. We were disappointed. We expected two thousand sacks, and we obtained only fourteen hundred. But all our neighbors are disappointed in the same way. The winter was too wet. The growth was too rank. There was a superabundance of straw, and a light yield of grain. This threshing week will be a memorable one in our lives. It is a new experience for us, and one that we have resolved shall never be repeated. We will manage hereafter to raise something else instead of grain, or to devise some more civilized way of threshing it.

But enough of our personal experience. Let me add some reflections:

1. A great many people are like our grain. Nobody can tell what is in them until they are threshed. The trials of life test our characters. They show just what we are worth. A man may carry his head high, like a head of shrunken wheat (and the lighter the head the higher it is carried), until temptation or affliction comes. Then he is blown away like chaff.

2. Threshing is the hardest work of the year. It is the time most dreaded by the farmer and his family. It is an operation that they regard as necessary, and yet shrink from, and rejoice when it is over. So with the discipline which we all need; which shows us what we are. We know that it is for our good, and yet we do not love it! It is hard for us to kiss the rod.

3. As most farmers are dependent on others for their threshing; so we secure from others, largely, the discipline which tests us. Some one has written both wittily and wisely upon "The uses of an enemy." Another cried, "Save me from my friends." In our intercourse with the world there is constant friction and collision. Those we trust are ever disappointing us. And this "tribulation worketh experience." This threshing teaches us to know ourselves.

4. Most farmers are disappointed when their grain is threshed. It seldom turns out as well as they expected. From the stack that they thought contained five hundred bushels the thrasher gets but three. So men, when tried, find themselves weaker than they thought they were. They have not the moral stamina they supposed they had. They are disappointed in themselves—humbled and ready to look to God for strength. Nothing does a man so much good as taking the conceit out of him. This is one of the earliest and best results of our disappointments in life. This is the preparation for seeking the grace which is made perfect in our weakness.

5. The result of threshing, even in the most favorable circumstances, is a great deal more straw and chaff than grain. And so the Christian finds when afflictions come, that the

dress in him far exceeds the gold—that there is an immense amount of "wood, hay and stubble."

Finally, as we rejoiced when our threshing was over, so there will be joy when the saints come out of great tribulation, with robes washed and made white in the blood of the Lamb. There is a great deal of trouble in this world. We often feel as if God dealt harshly with us. But when we see how necessary and how merciful the discipline was, we shall thank him most for what now seems most unkind.

For "The Friend," Thoughts and Feelings, THE LIGHT OF CHRIST.

"This is the condemnation," saith our Holy Redeemer, "that light is come into the world, and men love darkness rather than light because their deeds are evil." It is surely one of our greatest privileges and mercies, that our Heavenly Father has enlightened His creature man—and this as wide-reaching as the fruits of the fall—with a measure of saving light; which as it is believed in, yielded to, and followed, will lead out of darkness into fellowship and sweet communion with the dear Son and Son of the Father, who said "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." Again it is written of the Word made flesh, "In him was life; and the life was the light of men." "That was the true light, which lighteth every man that cometh into the world."

This light, while greatly increased to us of a new covenant and more glorious gospel day, hath ever been more or less distinctly the illuminating power in all, and guide of the children of the Lord in every age of the world. Thus it is written that in the beginning of the creation, God said, "Let there be light, and there was light." We read also that in the manifold mercies of the Shepherd of Israel, He foresook them not in their wilderness journeyings. For "The pillar of the cloud departed not from them by day, to lead them in the way; neither the pillar of fire by night, to show them light, and the way wherein they should go." It is recorded by the patriarch Job in relation to the wicked: "They are of those that rebel against the light; they know not the ways thereof, nor abide in the paths thereof." While to that Patriarch, by the Lord himself, it is said: "From the wicked their light is withholden." &c. It is declared by the Psalmist: "The Lord is my light and my salvation." &c. Again, "In Thy light shall we see light." And again: "God is the Lord, which hath shown us light; bind the sacrifice with cords to the horns of the altar." Isaiah testifies: "He shall be unto thee an everlasting light, and thy God thy glory." And again, "O house of Jacob, come ye, and let us walk in the light of the Lord."

These testimonies from an earlier dispensation point no less richly than conclusively to the heavenly authority, the illuminating power, and saving efficacy of the light of Christ in every heart, which under this more perfect covenant is thus emphatically spoken of, viz: "All things that are reposed are made manifest by the light: for whatsoever doth make manifest is light. Wherefore he saith, 'Awake thou that sleepest, and arise from the dead, and Christ shall give thee light.'" Again, "Through the tender mercy of our

God" "the day-spring from on high hath visited us, to give light to them that sit in darkness and the shadow of death, to guide our feet in the way of peace." Again, "Yet a little while is the light with you. Walk while ye have the light, lest darkness come upon you." * * "While ye have the light believe in the light, that ye may be the children of the light." Again saith Paul, "Let us put on the armor of light." Again, "God, who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face (appearance) of Jesus Christ." Peter exhorts to "show forth the praises of Him who hath called out of darkness into His marvellous light;" and John declares, that "God is light, and in him is no darkness at all." "If we walk in the light," he continues, "as He is in the light, we have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin." In accordance with this it is a testimony of George Fox, that "None know Christ as a Mediator and Lawgiver, nor as an offering, nor his blood that cleanseth them, but as they know him working in them." Again, "The Quaker foundation is the Light of Christ." And again, "No man sees salvation, or hath salvation, but with the light that comes from Christ Jesus, the salvation."

Would that our members might rally, with true-hearted obedience, to this fundamental Quaker doctrine—the light of Christ in the heart, as "God's gift for man's salvation." This it is that brings hope, and joy, and peace to the soul; and that leads on to the incorruptible birth of the new creation of God. For all we can know of the true and saving knowledge which is life eternal, must be opened and taught by the Light and Spirit of Christ Jesus in the heart. For the Spirit searcheth *all things*, yea, the deep things of God. For what man knoweth the things of a man, save the spirit of man that is in him; even so the things of God knoweth no man, but the Spirit of God." To which, in conclusion, we would add the testimonies of two worthy ministers in the church, Francis Howgill and Alexander Parker. The first writes: "The Light of Christ in thy conscience, which shows thee thy sin, is that which will save thee from thy sin." The second: "Every one is accepted, as they are faithful to God, in that light and grace which God hath freely given to them."

Narcotics and Stimulants.

Professor Henry D. Didam, M. D., spoke on the subject of narcotics and stimulants, at the hall of the Young Men's Christian Association, Syracuse, New York, recently, and the following is condensed from a report of the address in the *Daily Journal* of that city:

Nature provides for the rest as well as the stimulation of man. And he who knows and observes nature's laws, who uses properly the means which nature has provided to secure stimulation and repose, should never need any other. But man does not observe these laws. He takes upon himself extra burdens, and then resorts to unnatural stimulation for the strength to bear them. The extra burdens and the extra stimulation irritate the nervous system, so that nature's provisions to secure rest are insufficient, and man resorts to drugs which are called narcotics.

Opium is at the head of the list. It quiets

as a sedative, induces sleep and relieves pain, it is soporific and narcotic. In the hands of the physician it can do great good. It not only palliates, but in many cases radically cures. There is little wonder that one who has experienced its effect should have recourse to its soothing powers when pain pays him a visit. But the opium habit is soon formed. The drug which was an occasional luxury becomes a daily necessity, a pain worse than the original neuralgia being felt whenever the effect of the drug wears off. Larger and larger quantities are needed to relieve the artificial pain, till at length the victim is a helpless captive. If he tries to break away, he is followed by indescribable wretchedness. If he yields he is wretched forever. The opium habit impairs digestion, produces emaciation or bloating and sallowness; it gives a dead-ale look, it destroys ambition and weakens that mental power which is so essential to success; it makes its victim irritable and often morose, and it blots out all regard for truth. As a rule the opium eater is a liar. The amount of opium taken by the men and women of Syracuse is simply enormous. Your druggist may in confidence tell you how great it is if you ask him. If there be any person in any degree addicted to the use of opium let him or her stop it at once. Make a strong resolution, and fight it out. The battle is half won when the resolve to stop is taken. The uniform testimony is that no harm comes from stopping. It is easier and better to break right off than to dally with the evil. Stopping by degrees is deceptive, and the old appetite returning, it is irresistible.

Tobacco is the connecting link between sedatives and stimulants. It deserves a word in this connection. Its effect is at first to excite and then to soothe. A good cigar, it must be confessed, has many attractions. It gently warms the social nature and then lubricates and lulls the nervous system to a delicious repose. But the tobacco habit is an evil. Whether smoked or chewed, tobacco habitually used irritates the nervous system, it induces dyspepsia, pain in the side and palpitation of the heart. Its warmest advocates admit that it is "a nasty habit." It is usually associated with, if it does not beget, a taste for strong drink.

I do not care to waste much time upon tobacco. I believe nobody claims that it is a necessity. I know that it does harm in many cases. When I advise its discontinuance, I am met by the plea, "I know it hurts me, but I can't do without it!" Young man! ask your mother, she certainly is your friend, and your sister, whether they would not be glad to have you stop this useless and dirty practice? I used it moderately for many years. I found great comfort in my evening cigar. But in the morning there was the depression, the stale odor, the bad taste in the mouth, and the resolution to quit, which somehow wore away before night. I stopped for good one day, and for eight years I have not touched the weed once. I have none of the exhilaration born of the tobacco habit, which, at best, was a temporary excitement; but I have a steady, good feeling, no rank odor, no bad taste in the morning, no palpitation, and no trembling of the hands. And I am able to do, without harm, an amount of work which I could not have done had I continued the use of the sedative weed. Young gentlemen, suppose you go and do likewise!

Coming back to stimulants: In a narrow sense they are those substances which rouse flagging energies, excite the nervous system, and, through this system, various organs of the body. The list is large, including ammonia, alcohol, camphor, ginger, pepper, tea, coffee, &c. I have no time to count any but the most prominent. Alcohol stands at the head of the list. It is the active principle of many beverages. Beer, wine, whiskey, brandy, gin, all contain from four to ten per cent. of alcohol. Taken in moderate quantities the primary effect of any of these is to excite the brain, rouse imagination, provoke hilarity and loquacity. They quicken heart action, give lustre to the eye, flush the face, and break down the barriers of emotion and reason which judgment had erected and make one confiding and communicative. They have been used from the remotest antiquity as stimulants to satisfy a universal craving. I need but speak of the multiple use of alcohol in medicine. It mitigates the flat of fever, invigorates the failing pulse, it bridges over the chasm between disease and health. These are only a fraction of the good done, or claimed to be done, by the fascinating drinks. But there is another side to the picture, and let us examine that. Grant almost all that is claimed for alcoholic drinks. Admit that they drown the sorrows of the wretched, that they refresh the weary, that they overwork, and that they are a foe to health. There are these objections:

First. They are expensive. The old saw that anything desirable is either expensive, wicked or unhealthy. It is not true. The cold water bubbling from the spring, the pair of heaven, God's blessed sunlight, are as expensive nor unhealthy nor wicked.

Second. Are they necessary? Ask the multitude of men and women with clear eyes, fresh faces and healthy bodies, who do not use them. Ask those who have given up their use. Ask those who daily use them. Experience in the Russian campaign showed that with the use of alcoholics came disease. In Kane in the Arctic regions, found that when men best withstood cold and exposure withstood them. More work can be done with health and brain without them.

Third. They are unsafe. There is danger in the alcohol habit. Stronger and better men than you and I have fallen under it. Look around, see its victims among the bright in all professions and pursuits, and take warning of their fall.

Fourth. They are hurtful. They impair the resisting power against disease, exposure and hardship. The drinker is more liable to disease, and has disease worse. The physician dreads to be called to a whiskey-soaked patient, whose recuperative power is overtaken and feeble. They bring on many disease—gastric catarrh, hoarseness, whiskey congested liver, dropsy, fatty degeneration of organs and blood vessels, Bright's disease of the kidneys. The victims all regret the course they have taken, all promise to be total abstainers, but it is too late. However it may be in the moral world, there comes a time when some self-inflicted diseases when the door of mercy is closed by the victim, and closed forever. In bad cases, and every one may become bad, the intellect is beclouded, nervous affections intervene and the patient is bestialized. Now, it is not the drugs in the liquor that produce these results. He is deluded

o thinks that if he can get pure liquors he drink them without danger of harm. Alcohol itself is the drug. Pure liquors, if obtainable, do all the evils I have mentioned. Get out the alcohol, and all the drugs left in liquors would do no harm. Now, in conclusion, I submit that if anything which has seems to have many good qualities, be unnecessary, if people are better off without it, it be unsafe and dangerous and hurtful, is not better to let it wholly alone?

For "The Friend."

John Croker.

(Continued from page 133.)

After being three nights and two days in his open boat, through the good hand of Providence, we arrived at the wilderness part of Newfoundland, (where were no inhabitants,) wind almost wearied out; but before we went ashore we cast our hook and line, and it proved to be on the right side of the boat, we soon caught some famous codfish, which carried ashore, and making a fire dressed them, and there we satisfied our hunger. We made a great fire on the beach, and laid ourselves down to rest; for my part, I think may say, I never slept more sweetly in my life, than I did on those stones, notwithstanding the impression of them remained in my eyes for some time afterwards. I cannot forget to bless God for this deliverance, and to admire his wonderful providence, who had preserved us, and given me strength and health to undergo such hardships,—who, when with my parents, had been brought up in full and plenty of all things needful.

"O! Lord, keep me in the remembrance of these things, that I may ever trust in thee. This, I believe, was a day of tender love to my soul, whereby I was to be humbled and brought to a sense of my former mispent time; that I might no more seek my own ways, but give up in obedience to the leadings of God's Holy Spirit, which leads out of the broad way into the narrow way of life and peace; and this sweetens afflictions, and adds to glorify the name of the Lord, who is worthy for ever.

"In the morning we got into our boat again, and committed ourselves for direction to George Stidson, who was mate of our former ship, and had formerly been in these parts. I knew most of the places of fishing in Newfoundland. About the middle of the day, we came to the entrance of a small fishing place, which was called Renne. It being war time, the inhabitants, (who were but few,) were greatly surprised by reason of our number. Thinking we were come to rob them; and I with all my men and arms they had, they appeared very furiously against us, to oppose our landing; so we were afraid they would, without mercy, have fired on us and taken away our lives, before they knew what we were. At length, with signs and loud words, to let them know what we were, we stopped their intentions; and they sent a single man to us in a small boat, who finding we were all English, I had no arms, but were poor, ragged, and dressed men, invited us kindly ashore, by the name of brothers! This I looked on as a fresh deliverance from the point of death; if they had fired on us, no doubt but some of us had been killed. When we came on shore, they treated us with a good fire, spruce bark, and boiled fish; this was grateful to our hungry stomachs and weary bodies, and the

best return we had to make them for the favors we received, was our thankful acknowledgments, and to give them an account of what we had met with; which so far opened their hearts, that they desired our stay awhile with them.

"We stayed with them two or three days, and then with return of thanks took our leave of them, and went into our boat again, intending to keep along near shore, until we came to some place where we might meet with shipping. So, like wayfaring men, we called at a place or two, and tarried a night, when the people hearing of us before we came, entertained us cheerfully, for which we were thankful. At length we came to a cove, called Todes Cove, where they had not heard of us before, and our coming surprised them, that they repaired to their arms; but they became soon sensible what we were, and let us come on shore. There was but one dwelling at that place, the master's name, as I remember, was Dier; he had many servants, and cured much fish; he entertained us with much civility, and we stayed and helped him about his fish several days. Here our mate (the chief amongst us) fell dangerously ill, which proved an exercise to us all, and to me in particular, for I had a kindness for him, he being always civil to me, both before we were taken by the French, and after, during the time we were together. We took the best care of him we could, and wrapping him very warm laid him on a hand-barrow, and carried him to the boat; and taking leave of our noble landlord, we made what haste we could to the Bay of Bulls, where he had an aunt, to whose care we left him, and hastened to a place called St. Johns, (where we understood lay a fleet of ships,) hoping to meet with a passage for England; but when we came there, we found they were bound to Cadiz and Bilbao.

"Now my sorrow began afresh, and as great as ever, for I, not being a sailor, and but about seventeen years of age, not any of the ships would admit me as a passenger, fearing they should not be paid for my passage, and a sailor they did not look upon me to be. My fellow prisoners and companions dispersed themselves, some in one ship and some in another, and disposing of the boat and materials, turned all to their own use, leaving me destitute of friends, relations, acquaintances, and money, in a strange country,—having nothing wherewith to make friends, unless the Lord was pleased to raise some up for me. To Him therefore I made my complaint in secret; and I was willing to be as contented as I could, taking long walks amongst the inhabitants, who were generally kind, and gave me at their houses bread and fish when I looked for it. When night came, I lodged in an open boat, or in a bay-loft, such as I could most conveniently meet with. I was but thinly clothed, and dirty for want of change. The cold winter was coming on, which is grievously hard in those countries; the ships were hastening away for fear of the frost, and no more were expected that season. All these circumstances increased my sorrow, and my near approach to God in these great straits,—that He would be pleased to spare me and work a way for my deliverance out of that country; and I would serve Him according to the strength and wisdom, which He might in his love be pleased to bestow on me. At these times I brought myself under promises which I desire at the writing of this, the Lord would please

bring to my remembrance,—that if I have not performed them, I may strive with all diligence to the performance of them; for He is good and worthy to be served by all who have received the least of his mercies and favors. Lord, humble the hearts of the people;—bring them to see their own outdoings, and what any of us are without thee, who art the alone help of thy people; when all men forsake thee, thou hast worked a way for them thou thought of, as thou didst for the least of many thousands.

"Before the fleet sailed, I heard that there was one vessel that was bound for Bristol, with train oil and fish, one Barrister being owner or master. To him I made application, laying before him my distressed condition, which I believe he was not insensible of; but like one of a hard heart, he would not admit me a passage in his vessel, unless I paid him three pounds before I went, which I could not do, being not worth three farthings. This made me mourn to see him so hard, and with a heavy heart I went on shore; but being still earnest to try the second time, I entreated him again for a passage, desiring him to consider my condition, and that he was sensible I had not then wherewith to pay him, but he should be faithfully paid when I came to England. All this seemingly made no impression on him; so that my countenance began to show the sorrow of my heart, and tears began to fall from heavy eyes; and I passed from his presence without any hope. But in an unexpected manner, the Lord was pleased to order it thus:—there was a merchant on board with this Barrister, who perceiving the sorrowfulness of my countenance, came after me with compassion, as one sensible of my grief, and desired to know my name, and the place of my birth, which I readily told him; he then inquired my father's name and trade, and in what part of the town of Plymouth he lived, which I told him likewise. It so struck him, that he said, 'What are you his son?—how came you in this condition? I am sorry to see you thus; for I know him,' (meaning my father.) 'Well, I would not have you trouble yourself, for you shall go to England, if I pay your passage; and my wife,' said he, 'is going on the same vessel, and whatever you want apply to her, and she shall assist you.'

(To be continued.)

Whoever sincerely endeavors to do all the good he can will probably do much more than he imagines, or will ever know to the day of judgment, when the secrets of all hearts shall be made manifest.

THE FRIEND.

TWELFTH MONTH 14, 1878.

In reading the Journals of our Friends of former years, frequent reference is made to the long tedious journeys they made through wilderness countries to visit the scattered churches, or to proclaim the glad tidings of salvation to those who were as sheep without a shepherd. These journeys were often performed on horseback, and the travellers were subjected to much hardship and exposure from stormy weather, poor accommodations and hard fare. William E. Mumford mentions that he was overtaken in the woods, in the South-

ern States of America, by a heavy rain storm, and spent the night walking to and fro between two trees, till the break of day enabled the party to journey forwards. Such experiences could not have been very rare to those who were similarly engaged in such services, as they often speak of passing a night in the wilderness without shelter.

These hardships were no doubt willingly endured in the effort to serve their gracious Lord, by doing the work which He pointed out to them; and we do not doubt that there are many at this day who would not dare to withhold obedience to the Divine requireing, even if they should lead them to labors involving equal trials. For it is one of the blessed characteristics of the Lord's service, that to those who are called to labor in His cause, and are obedient thereto, He not only gives the requisite strength, but also "the will to serve." But the length of time which was then required to visit a distant country, or a remote part of a State or province, is in striking contrast with what is needed in these days of rapid transit; when crossing the ocean may be accomplished in ten days instead of three months, and the railroad enables the traveller to reach in a day's time points which were formerly weeks apart.

One result of these increased facilities of communication, is the ability which it gives to ministering Friends to come into contact with many more individuals, communities and congregations than was possible for them to do even one hundred years ago. While we believe a corresponding responsibility rests upon the church for this increased possibility of exerting an influence for good; yet by no means consider the time as altogether wasted which was spent in the lonely rides of our worthy forefathers in the Truth through the forests and wilderness. They were doubtless seasons of waiting on the Lord for the renewal of strength, and for a faithful baptism of his Holy Spirit, to fit them for faithfully performing their allotted portion of labor. Thus prepared and anointed, they were often enabled, on reaching the settlements they were led to visit, to proclaim the Lord's cause with a degree of power, wisdom and authority, which produced remarkable fruits in the awakening of the careless, convincing the erring, and leading their hearers to the Spirit of Christ in their hearts, as their guide and helper in the path that leads to eternal blessedness. It is the renewed anointing received from the Lord, which only enables His ministers in any age of the world to minister grace to their hearers, and to be truly helpful to them in promoting their salvation.

An instance occurs to us where a Friend under religious concern entered a railroad car at Philadelphia, late in the evening, prepared himself for a night's rest in the comfortable accommodations provided, crossed the territory of two intervening States, and awoke in the morning of the following day at a city in the interior of a fourth State, where arrangements for religious meetings were made, and which were held during the course of the day. But while the hardships of travel have thus been greatly lessened the same necessity exists as ever before for the patient dwelling under religious exercise, the waiting for the clear pointing to the work to be accomplished, the stripping of self confidence, and the earnest wrestling with the Lord that His power and blessing may attend the labor.

SUMMARY OF EVENTS.

UNITED STATES.—The Mayor of this city has received an appeal, soliciting contributions on behalf of the sufferers by the failure of the City of Glasgow Bank (Scotland). It states that at a meeting held at Glasgow last month, it was resolved to raise £300,000 for this purpose, but it was found this sum would fall far short of the necessities of the case. According to the investigator's report there was a deficiency of £5,190,883. The relief fund projected, which is now receiving contributions from all parts of the United Kingdom, which it is hoped Americans will assist in swelling, is not for the purpose of assisting shareholders to pay calls made, but to relieve those deprived of their means by reason of such calls.

A resumption of coal mining in the Schuylkill region commenced on the 30th inst., to fill the quota of 286,250 tons, that region of the United Kingdom, amounting to 1,000,000 tons for the present season. The prospect is said to be unfavorable to a renewal of the coal combination in 1879.

Vermont is said to stand at the head of the New England States in the relative proportion of her agricultural population. Over fifty per cent. of all who are engaged in agriculture in that State are engaged in it, while the percentage thus engaged in Maine is less than forty, in New Hampshire thirty-eight, in Massachusetts less than thirteen, in Connecticut about twenty-two, and in Rhode Island about thirteen per cent.

The Pacific flour, grain and feed mills, with the stores, grain elevator and drier attached, on Columbia street, at Portland, Me., are engaged in being destroyed by fire. The loss is estimated at about \$175,000.

A prairie fire near Crook City, Dakota, has destroyed a number of ranches, and all the hay cut and stacked for the military post at Bear Butte. The military quarters and Sturgis City narrowly escaped.

Many buildings in the business portion of Macon, Mo., were destroyed by fire on the 14th inst. The loss is estimated at \$200,000. The public school building at Albion, Iowa, was burned on the 6th inst.

Encouraging reports are received of the revival of trade at New Orleans since the disappearance of the yellow fever. The wharves and depots are thronged with merchandise, and the number of sea going vessels is daily increasing. There are engaged in agriculture.

The Constitutional Convention of California have adopted a memorial to the President and Congress protesting against the proposed Franco-American Commercial Treaty as prejudicial to the interests of that State.

The first steamship of the Blue Star line, "The Devonian," is to sail on the 10th inst. Her cargo consists of 1600 quarters of beef, 150 hogs, besides grain, cotton, and provisions generally.

There were 295 deaths in this city during the past week.

Markets, &c.—Gold 1001. U. S. sixes, 1881, registered, 100½, coupon 109½; 5-20 coupon, 106½, 103½; 10-20 coupon, 104½; 1868, 109½; new 7½, 106½; new 4½ per cent, 104½; new 4 per cent, 100½.

Cotton.—The demand continues limited. Sales at 91 92 cts. per pound for uplands and New Orleans.

Petroleum.—Crude 7½ cts. in bids., and standard white 8½ cts. for export, and 1½ 12 cts. per gallon for home use.

Wool, and Minnesota extra family, \$1.75 a \$5; Ohio and Indiana, \$3 a \$5.25; Patent, \$1.75 a \$3. Rye flour, \$2.75 a \$3.00. Corn meal, \$2.60. Bran, \$15 a \$15.50 per ton.

Grain.—Red wheat, \$1 a \$1.05; amber, \$1.05 a \$1.06; white, \$1.07 a 1.08. Rye, 50 a 58 cts. Corn, 45 a 48 cts. Oats, mixed, 28 a 29 cts., and white, 30 a 33 cts. Hay, 100 a 110. Prime timothy, 60 a 70 cts. per 100 pounds; mixed, 45 a 60 cts. Straw, 70 a 80 cts. per 100 pounds.

Seeds.—Clover, 54 a 61 cts. per lb. Flaxseed, \$1.35 a \$1.37.

Beef cattle sold at 5 a 5½ cts. for extra Penna. and western steers; 4 a 4½ cts. for fair to good, and 3 a 4 cts. for poor grades for common. Sheep, 3½ a 5 cts. per pound, and to condition. Hogs, 3½ a 4½ cts. per lb. as to quality.

FOREIGN.—Parliament assembled on the 6th inst. The Queen in her speech says: "The hostility towards my Indian Government manifested by the Amerer of Afghanistan, and the manner in which he repulsed my friendly mission, left me no alternative but to make pre-emptory demands for redress. This demand having been disregarded, I have directed an expedition to be sent into his territory, and have taken the earliest opportunity of calling you together, and making to you the communication required by law." In the debate a

few members in each house condemned the course the Government in the prosecution of the war.

A despatch from Lahore on the 3th insts. states that a battle was fought on the 2nd between General Roberts' division and the Afghans, in which the latter were utterly defeated with heavy loss. It is stated, there was no considerable force between him and Cabul.

The Caledonia Bank, Scotland, has concluded to into liquidation in consequence of its holding some of the stock of the City of Glasgow Bank. The West England and South Wales District Bank has also suspended. This bank had forty-two branches. Its liabilities are \$17,500,000. The share-holders number 12 thousand, and their liability is unlimited.

There were landed at Birkenhead on the 4th inst. a large consignment of American cattle and sheep in satisfactory condition as to seem to settle the question whether the transatlantic trade in live stock can be carried on safely during winter.

The emperor and empress returned to Berlin on the 4th, and were warmly welcomed by the people. The emperor resumed the government.

The Russians have notified the foreign consuls that they are about to evacuate Kustendji. The Porte has announced its readiness to disens-a defensive treaty pending with Russia, whose attitude appears to be conciliatory.

RECEIPTS.

Received from Joseph Armfield, Agent, England 22, 23, 5 copies, value 53 1/2
Samuel Alexander, John E. Baker, Henry Bell, Wm. L. Bellows, Samuel Bradburn, James Boorn John Buttonley, Samuel Buttonley, Robert Carl Jane Palmer Crisp, Charles Elcock, T. W. Nash, Daniel Pickard, Samu Pickard, George Pitt, Clement Porter, Richard Rickman George Smithson, Major Stout, Ann Switthenbank, Joh Walker, William Wilson, and William Wright, 11 each, vol. 52, for Henry Chalk and Ellen Watkins, 12 each, vols. 51 and 52, and for John Wood, 16s., to N 52, vol. 51.

WANTED

A well qualified teacher for Friends' Select Scho for Girls, in this city. To enter upon duty early practicable. Apply to

Thomas Lippincott, 920 Franklin St.
John W. Biddle, 726 Eatonwood St.
Anne Rhodes, 224 North Twelfth St.
Rebecca W. Kite, 459 North Fifth St.
Philada. 12th mo. 1878.

FRIENDS' ASYLUM FOR THE INSANE,

Near Frankford, (Twenty-third Ward), Philadelphia
Physician and Superintendent.—JOHN C. HALL, M.D.
Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on the 7th of 11th month, 1878, ELIZABETH widow of the late Carleton P. Stokes, in the 65th year of her age, a consistent member of Woodbury Month Meeting of Friends, N. J. Though called from this world in a moment, in the twinkling of an eye, yet her relatives and friends were excited, because she was concerned to obey the Divine injunction, "I ye also ready, for in such an hour as ye think not, the Son of man cometh."

—, near Lawrence, Kansas, on 12th of 11th month 1878, MARGARET, wife of Richard A. Cox, a beloved minister of Lawrence Month Meeting, in her 60th year. The gift of this dear Friend was excelled by such earnestness and love, yet with becoming modesty. There are many witnesses that she was enabled to make full proof of her ministry to the edification of the Church. Her solid religious character adorned the doctrine which she preached. Her meek and loving spirit and evident care to the Lord's guidance and blessings rendered her example instructive and helpful to many.

For "The Friend."

Friends held as Captives in Foreign Lands,
A. B. 1680-1702.

Having had occasion recently to consult early records of Haverford Monthly Meeting of Woman Friends, my attention was arrested by a minute, bearing date the "20th of the 9th mo. 1691!"—in these words:

"Delivered towards the Relief of Friends, captives at Makkenos, under the Emperor of Morocco, from our Monthly Meeting of Haverford, 22. 098. 041!"

That these women Friends, so soon after their arrival on a foreign shore, amid all the vicissitudes incident to a new settlement, and with the claims of their immediate friends and neighbors pressing upon them, should so indly remember and even, "out of their enmity," contribute to the relief of prisoners so distant from them, was to the writer a remarkable, he had almost said an affecting circumstance.

A desire to know something more of the subjects of this extraordinary charity led to enquiries, the results of which are given below, and which, should they prove as interesting and instructive to others as they have to him, may not be out of place in the columns of "The Friend."

The Barbary States, viz: Morocco, Algiers, Tunis, Tripoli and Barca, though at one time the seat of learning and the arts, were, for many centuries later, the abode of unprincipled barbarians, who by piracy and pillage became the destroyers of commerce and the terror of navigators. Their captives, whether taken in war, or from ships engaged in the peaceful pursuits of commerce, were speedily sold into slavery of the most cruel and degrading character. So early as the fifteenth century, it is said, they numbered their Christian slaves by thousands, and in the years 1509, '35 and '41, many hundreds of their fellow countrymen were liberated by men of war sent out by the British government for that purpose.

By these formidable expeditions of Great Britain, not only were the slaves liberated, but treaties were made, in which the people of Barbary pledged themselves to refrain from such treatment of captives, for the future.

With an insincerity which, centuries before, had made "Punic faith" a synonyme of treach-

ery, no sooner were the fleets gone and danger from them passed, than the same illicit traffic was resumed and the same system of cruelty enacted. So grievous to the English people had these outrages become, that Oliver Cromwell, on assuming the Protectorate, dispatched a fleet of thirty ships, under Admiral Blake, who in his turn liberated all the English, and some Dutch captives, the first of whom were numerous.

But none of these measures were permanently effective. Emboldened by success, and encouraged by their skill as navigators, they penetrated distant seas and brought their captives, it is said, in some few instances even from the English Channel itself.

Towards the close of the seventeenth century, though fewer in numbers and less skillfully organized, these pirates still spread terror over the sea, and did much towards increasing the perils of that current of travel which was now setting so strongly in the direction of the new world.*

Among other British subjects, who at this time were captured by these pirates, were several members of the religious Society of Friends, who either in their religious services or in their secular pursuits were compelled to visit distant ports, and thus easily became their prey.† There is indeed, little or no positive evidence that, of those taken prisoners by the Turks, any of the Friends were engaged in other than their ordinary business. They are never referred to as Friends traveling in the ministry, in the epistles heretofore quoted, and this inference appears confirmed by the statement in the epistle of 1682, that "one of the prisoners at Algiers has a public testimony among them."‡ But they were earnest, devout, consistent Friends, and their sad condition deeply affected their fellow members, who seem to have left nothing undone that could be done to effect their release.

It is true that William Ames, in Poland, George Bailey, in France, Catharine Evans and Sarah Cassevers, in Malta, underwent a long and sore captivity, but these were not taken prisoners at sea, and are not, at the time quoted, included in the concerns of the Yearly Meeting.

Again, in the year 1696, a vessel loaded with banished Friends, among whom were not a few in the ministry, was captured by a Dutch privateer. But they soon after were set at liberty in Holland and never became enslaved.

Among those who were taken captive by corsairs, and whose history has become well known to the Society, was Thomas Lurting, then mate of a ship whose master was also

* John Richardson, a minister among Friends, relates in his Journal A. B. 1702, that when within a few leagues of Barbadoes, their vessel was chased by a Turkish frigate, from which they escaped with great difficulty.

† In the early days of the Society quite a large number of Friends were engaged in maritime pursuits.

a Friend, and who having been captured by the Algerines, so triumphed over their captors that without, on their part, shedding blood, they recaptured the vessel, and, with a magnanimity unprecedented, landed the Turks (as they were called) on their own shores, and then, with continued safety, sailed away to their own homes.*

Sewell in his "History of the People called Quakers," states that several years after this occurrence, George Fox wrote a book to the grand Sultan, and the King at Algiers, wherein he laid before them their indecent behavior and unreasoning dealings, showing them from their Alcoran, that Mahomet had given them other directions. To this he added a succinct narrative of what hath been related here (of Thomas Lurting) * * * and how the Turks were set at liberty without being made slaves; by which the Mahometans might see what kind of Christians the Quakers were, viz., such as showed effectually that they loved their enemies, according to the doctrine of their supreme lawgiver, Christ."

In the Epistle of the Yearly Meeting begun and held in London, the 5th of 4th mo. 1682, (the fifth epistle issued), appears the following:

"Finally, dear friends, we have great cause to magnify the name of the Lord our God for this blessed opportunity, * * * being greatly comforted and refreshed in the many good accounts and lively testimonies given by Friends * * * as also of a new meeting even among the captives in Algiers, where one Friend has a public testimony among them." Again in that of 1683:—"Here were some tender Friends from Dantzick, Frizeland, Holland, Norway, Scotland, and some from America. And we understand that Friends keep up their meetings in Algiers and Turkey."

1684. "An account being given by a meeting here ordered to inspect the accounts of Friends that are captives at Algiers, &c., intimating that what was charitably contributed formerly towards their redemption and left for that service, is in a great measure expended for the redemption of many, and the rest thereof is well nigh engaged for the redemption of several Friends more, that have remained captives; some whereof have indeed been under extreme hardships, as violent beating and other cruelties by their patronesses. These things tenderly considered, a collection for their redemption was proposed, and unanimously agreed upon by this meeting, that the same should be and hereby is recommended to the Quarterly Meetings of Friends in their respective counties throughout England and Wales, and that the same be and hereby is recommended to Friends in Ireland, Scotland and Jamaica, to afford their Christian and friendly assistance in contributing to the same service."

* Sewell's History, Am. edition, vol. 2, pp. 60-66.

* "White Slavery in the Barbary States," by Charles Sumner. Boston, 1853.

1686. "And whereas divers Friends and brethren do now, through the good hand of God, enjoy their liberty and more freedom than formerly, we hope the Lord will open their hearts to extend their charitable help and assistance to their fellow members in Christ Jesus, who still remain in suffering for the testimony of a good and upright conscience towards God. * * * And as concerning Friends that were captives at Algiers, we let you know they are all redeemed except one whom we hope will shortly be here also. But several Friends are now captives in Sally;* for whose redemption Friends are also taking care, and hope in time to effect it. 1687. But as concerning the Friends who are captives at Mequinez,† (taken by the Sally men), although a great concern and care hath been and is upon Friends here about them, and great endeavors used for their redemption, yet no way is found at present for the accomplishment thereof; only Friends here have found means to convey some relief to them in their necessities. The number of the captive Friends in Mequinez is now ten, that is to say, Joseph Wasey, John Bealing, and Joseph Harbin, who being taken and carried captives thither, found two English captives there who were convinced of truth in their captivity before the said Friends came thither. And five more English captives are convinced since; and they live in great love and unity one with another. The said two Friends have wrote over to Friends here, a large, tender and sensible letter, testifying their fellowship and unity with Friends, and acknowledging their love and charity to them in their bonds and necessities. We understand that the people they suffer under are more barbarous than the Turks in Algiers. From whose great oppression and cruel hands we pray God in mercy deliver them, if it be His blessed will."

(To be concluded.)

For "The Friend."

Thoughts and Feelings.

PRACTICAL OBEDIENCE.

True religion consists not only in knowledge but practice. Not only in hearing and knowing the words and will of Christ, but in heeding and doing them. Thus those who built upon the Rock formerly, were such as heard the words of our Divine Lawgiver and did them. And what is a profession of religion unconnected with obedience to its Author? What an acknowledgment of Christ by the lips, without the underlying consistent, godly practice? Unless the life and conversation become renewed through the power of an endless life, our profession of the truths of the Gospel will avail but little more in the great work of regeneration unto wholeness of life, than things comparable to sounding brass or a tinkling cymbal. It is written for our admonition, that king Sennacherib for his disobedience and rebellion finally perished on Mount Gilboa—the barren mountains of an empty profession—where there was neither dew nor rain nor fields of offering.

It is declared that the kingdom of God is within man, and standeth not in word but in power. This points to introversion, to sweep

* Saltee was a seaport town on the west coast of Morocco.

† Mequinez is a city of Morocco, seventy miles from Saltee, and two hundred and thirty-five from Morocco. Population 100,000.

ing the house of the heart for the lost piece of silver; and to digging deep, in order that we may become *thoroughly grounded* in the Christian faith; that from thence may proceed the fruits of this transforming power—from on high,—the consistent living practice—the true-hearted obedience; and not the mere say so of "Lord, Lord," without doing His will, which, obeyed, is our sanctification. Because if the tree be good, the fruit will be good. If we be engrained into Christ the Living Vine, we must bring forth the practical fruits of righteousness and true holiness to His praise and glory.

The dear Saviour is not an hard master; but one of whom it is declared, that He will not break the bruised reed, and whose rod and whose staff comfort the soul. But having revealed himself to us as a teacher in the heart, and as a guide into all truth,—having given knowledge, He does require obedience; of whom it is written, that he "became the author of eternal salvation unto all them *that obey him*." To such as these, His obedient followers and children, He maketh His peace to flow as a river, and His righteousness as the waves of the sea. Then while the living sacrifice of practical obedience to the law written on the heart, cost what it may of sacrifice, of service, or of suffering, must be kept to—for, as testified by one of the early Friends, "He who comes into the new covenant must come into the *obedience* of it—we at the same time have a Redeemer that is strong, a most compassionate and loving High Priest, being eminently touched with the feeling of all our infirmities. Tempted in all points as we are, yet without sin." He is, with paternal omniscience, all-sufficient to administer the oil and the wine, with Samaritan discrimination and tenderness, into our wounds and bruises; to help over the bleak exposures, the hard places, the wave after wave of close besetting crosses and temptations, which so prevail and assail in this pilgrimage journey of oftentimes sore conflict and sorrow unto the harbor of rest. Then after resigning all to His disposal and government who gave himself for us, may we say in the language of conduct, in the obedience which is of faith, and in the simplicity of little children, what Thou wilt, when Thou wilt, and how Thou wilt; for the kingdom, and the power, and the glory, are all and forever Thine.

Japan.—Several copies of the Japanese Scriptures, and other Christian books, were sometime since given to the officer of the prison at Otsu. He passed them over to one of the prisoners, a scholar, whose crime was that of manslaughter. About six months ago a fire took place in the prison, when the entire body of prisoners, numbering nearly 100, instead of improving the opportunity to make their escape, assisted in putting out the flames, and remained to a man to be again imprisoned. Such a remarkable circumstance occasioned inquiry as to the cause, when it appeared that the scholar among them had been so impressed and convinced of the truth of Christianity, that he had taught it to his fellow-prisoners; and Christian principles, combined with his personal influence, had such power over them as to restrain them from fleeing when the doors of their prison were opened. The scholar was consequently pardoned, but he remained in Otsu to still teach the prisoners. He has opened a Chinese

school for young men, where Christianity is taught, and it is said he is now preparing reprint a Chinese Commentary on the Gospel of John, with Japanese connectives, to render it more readable to Japanese scholars!—*Ed Society Record.*

John Croker.

(Continued from page 143.)

"This sudden alteration brought renewed thankfulness upon my heart to God, the author of all these favors and deliverances, though in such an unthought of way, when my expectations were laid aside, He should raise a friend to make way for my returning to England. I have cause to remember these things; although I had another sharp season to pass through, before I set my foot on my native land, which was then hid from me, but was after the following manner. After this my great friend (whose name was Strong, brother to one of the same name, a school master in Plymouth,) had made way for me by promising payment for my passage, and was got on board the ship; the master being a wicked base fellow, after we were out at sea, would not let me have a cabin, but I was forced to lie between two hogheads of train oil. This was hard lodging,—yet necessity obliged me to be as contented as I could; and I can truly say my lot was often made sweet to me; for the thoughts and meditations of my heart were very often upon the law of my God, and I had comfort, and delighted myself therein. Yet having nothing but my wearing clothes day or night to keep me warm, which had not been washed or changed for two months, I need not relate how it was with me. But not to leave the reader without some charity towards the master, I may let him know that he afterwards dealt with me somewhat more favorably; for having lodged some nights in this condition, he gave me an old sail to lay under me, or partly over me as I pleased, for which I was thankful to God, being a favor I wanted, and also thankful to the master for showing some good nature.

"The sense of what I had met with, and the goodness of God which I had experienced with it, with the consideration of my former transgressions, drew me into tenderness of heart and brokenness of spirit, so that my very head and hair would be wet with tears; and the Lord was often near me in his goodness. Oh! that I may never forget that day! but that it may be imprinted upon my mind, and engraven on my heart, as with the point of a diamond, that I may always have it in my view; that when I may meet with afflictions in my older years, I may look back to the days of my youth, like Job,—who desired it might be with him as in the days of his youth, when the secret of God was upon his tabernacle, and in whose light he walked through darkness; which dark ways the Lord hath in some measure now given me to see, by the lifting up the light of his countenance upon me. I am not able to express the seasons

I had upon the mighty waters during that great affliction, which makes me say, it was good for me that I was afflicted, or else I had gone astray; for now I know of thy judgment, O Lord, and I can praise thee for thy manifold mercies, which are lengthened out beyond my deserts; and what shall I render to thee, O Lord, for them all, but holy praises and high renown for ever!

For "The Friend."

"After about ten or twelve days sail, having had pretty good weather and wind most of the time, we unexpectedly in the night, fell with the Land's End of Cornwall, on the north side of it: the wind increasing blew us very near shore, which put the seamen in a fright, believing they should all be drowned, did the vessel wrecked; for the wind rent our sails in pieces, which occasioned a great trial and trouble to get another to the yard, during this I lay still, believing it not fit for me to appear amongst them at that time, their cry being great towards each other. I lay much retired as I could, with my mind fully given up to death if the Lord did so please; at which time I thought I enjoyed a measure of sweetness in my heart, and the thought of death was nothing, the sting being long away. I heard the master say, there was not a soul likely to be saved, and that he did another would get into thy long boat, and I rest should shift for themselves; this he said several times. But it pleased God, who commandeth both wind and sea, and sayeth, thus far and no farther shalt thou come," at the wind began to turn easterly; so that with some nicety as well as Providence, (day being on), we weathered the Land's End, now there being some hopes, I was willing to see what danger we had been in, therefore got upon the deck and I think, had I thrown stones, I might have struck the rock; this I counted a great deliverance.

"The wind still continuing high, we came up the South Channel, before Plymouth, my native town, as far as Dartmouth in Devon, and we ran in there. The wind being very strong, before we could come to anchor, our breastrail arm broke, and we went ahead of all the ships which were then in that road, at length we dropped our anchor, but it did not hold, so that we drove until we were stern of all those ships, that some cried out we must go. At last the anchor held, and we weathered it that night, and the next morning the wind ceased, so that the boats came to us and helped us in, where we lay safe, and seemed to be out of danger of the sea, and of the privateers which were on it. Thus I was likely to put my feet again on English ground, and about thirty miles from my father's house. Before this my father had heard of my being taken, but could not understand where I was, and had sent several letters to France, and supplies were ordered for me there, but he could not hear of me; so he concluded I was not on the land of the living. This was cause of sorrow to my parents to think, if they had not sent me away, I might have been living; but however it all worked together for my good, and I believe God had a hand in it.

Now being come ashore, and having escaped from being impressed by reason of my being but a youth (for most of the men were impressed into the king's service, to help to man out the fleet which lay then at Plymouth), the master took me to one Lane, a merchant, at Dartmouth, to whom I gave a bill on my father for my passage. As soon as the merchant understood on whom I could draw the bill, he began to look at me, and compassion was opened in him towards me; and he offered me what money I would have, being sorry to see me in such a condition, for he said he knew my father well. So I took some money of him, and some of another man who was going with me to Plymouth; at which place

I now, indeed, longed to be, having called to mind my father's house, like a prodigal son now returning thither. Therefore after I had bought a few things to shift me, which I soon did to my great refreshment, I, in company with the seamen that were impressed, set out and went for Plymouth, and unexpectedly came to my father's door; where I found my mother first, to whom there was not a quick discovery; but after some discourse, I made myself known to her, who with open arms received me, being as one that had been dead, and was now alive again, and hoping this trial would work for my future good. This I am sensible it did; for it so humbled me, that I am often thinking on what I had met with, and how the Lord had preserved me, which made me very humble and low in my mind, taking heed to the commands of my parents; and I feared to rebel against them, and I minded what company I kept, being now willing to be as good as I could.

"I spent some time in reading alone, and frequented meetings both abroad and at home, sometimes going ten miles to a meeting, and home again at night, on foot, with much satisfaction."

From the "American Journal of Science and Arts,"
Forest Geography and Archeology.

BY ASA GRAY.

(Continued from page 138.)

Forests being my subject, I must not tarry on the woodless plain—on an average 500 miles wide—which lies between what forest there is in the Rocky Mountains and the western border of our eastern wooded region. Why this great sloping plain should be woodless—except where some cotton-woods and their like mark the course of the traversing rivers—is, on the whole evident enough. Great interior plains in temperate latitudes are always woodless, even when not very arid. This of ours is not arid to the degree that the corresponding regions west of the Rocky Mountains are. The moisture from the Pacific which those would otherwise share, is—as we have seen—arrested on or near the western border, by the coast-ranges and again by the Sierra Nevada; and so the interior (except for the mountains), is all but desert.

On the eastern side of the continent, the moisture supplied by the Atlantic and the Gulf of Mexico meets no such obstruction. So the diminution of rain fall is gradual instead of abrupt. But this moisture is spread over a vast surface, and it is naturally bestowed, first and most on the seaboard district, and least on the remote interior. From the lower Mississippi eastward and northward, including the Ohio River basin, and so to the coast, and up to Nova Scotia, there is an average of forty-seven inches of rain in the year. This diminishes rather steadily westward, especially northwestward, and the western border of the ultra Mississippian plain gets less than twenty inches.

Indeed, from the great prevalence of westerly and southerly winds, what precipitation of moisture there is on our western plains is not from Atlantic sources, nor much from the Gulf. The rain-chart plainly shows that the water raised from the heated Gulf is mainly carried northward and eastward. It is this which has given us the Atlantic forest region; and it is the limitation of this which bounds that forest at the west. The line on the rain-

chart indicating twenty-four inches of annual rain is not far from the line of the western limit of trees, except far north, beyond the Great Lakes, where, in the coolness of high latitudes, as in the coolness of mountains, a less amount of rain-fall suffices for forest growth.

We see, then, why our great plains grow bare as we proceed from the Mississippi westward; though we wonder why this should take place so soon and so abruptly as it does. But, as already stated, the general course of the wind-bearing rains from the Gulf and beyond is such as to water well the Mississippi valley and all eastward, but not the district west of it.

It does not altogether follow that, because rain or its equivalent is needed for forest, therefore wherever there is rain enough, forest must needs cover the ground. At least there are some curious exceptions to such a general rule,—exceptions both ways. In the Sierra Nevada we are confronted with a stately forest along with a scanty rain-fall, with rain only in the three winter months. All summer long, under those lofty trees, if you stir up the soil you may be choked with dust. On the other hand, the prairies of Iowa and Illinois, which form deep bays or great islands in our own forest-region, are spread under skies which drop more rain than probably ever falls on the slopes of the Sierra Nevada, and give it at all seasons. Under the lesser and brief rains we have the loftiest trees we know: under the more copious and well-dispersed rain, we have prairies, without forest at all.

There is little more to say about the first part of this paradox; and I have not much to say about the other. The cause or origin of our prairies—of the unwooded districts this side of the Mississippi and Missouri—has been much discussed, and a whole hour would be needed to give a fair account of the different views taken upon this knotty question. The only settled thing about it, is, that the prairies are not directly owing to a deficiency of rain. That, the rain charts settle, as Professor Whitney well insists.

The prairies which indeed are enclosed in our Atlantic forest-region, and the plains beyond this region, are different things. But, as the one borders—and in Iowa and Nebraska passes into—the other, it may be supposed that common causes have influenced both together, perhaps more than Professor Whitney allows.

He thinks that the extreme fineness and depth of the usual prairie soil will account for the absence of trees; and — Lesquerex equally explains it by the nature of the soil, in a different way. These, and other excellent observers, scout the idea that immemorial burnings, in autumn and spring, have had any effect. Professor Shaler, from his observations in the border land of Kentucky, thinks that they have,—that there are indications there of comparatively recent conversion of oak-openings into prairie, and now—since the burnings are over—of the reconversion of prairie into woodland.

I am disposed, on general considerations, to think that the line of demarcation between our woods and our plains is not where it is drawn by nature. Here, when no physical barrier is interposed between the ground that receives rain enough for forest, and that which receives too little, there must be a debatable border, where comparatively slight causes

will turn the scale either way. Difference in soil and difference in expo-sure will here toll decisively. And along this border, annual burnings—for the purpose of increasing and improving buffalo feed—practiced for hundreds of years by our nomadic predecessors, may have had a very marked effect. I suspect that the irregular border line may have in this way been rendered more irregular, and have been carried farther eastward wherever nature of soil or circumstances of exposure predisposed to it.

It does not follow that trees would re-occupy the land when the operation that destroyed them, or kept them down, ceased. The established turf or other occupation of the soil, and the sweeping winds, might prevent that. The difficulty of reforesting Bleak New England coasts, which were originally well wooded, is well known. It is equally, but probably not more difficult to establish forest on an Iowa prairie, with proper selection of trees.

Manchester, 1st mo. 15th, 1791.

My Dear Friend,—There is, I believe, an obligation to duty above the fear of punishment or expectation of reward; and because I wish thee the most perfect state, I wish thee this experience: a state wherein all selfishness, both in spiritual and temporal things, are lost and swallowed up by divine, universal, disinterested love, as a drop of water in the ocean. And though I do most assuredly believe that virtue is its own reward, that a cup of cold water, given to a disciple in the name of a disciple, shall not go without a reward; yet I have often thought it a subject worthy the consideration of those who are stewards, and desire to be faithful, that this is neither the time nor place of rewards or punishments, though perhaps the earnest of both is frequently felt. I apprehend that many, even of the wise in heart, have been ready to stumble here, thinking that their faithfulness and piety should have engaged the Divine interposition to exempt them from the sufferings of the present life. How much of this appears in the book of Job, whose trials were as singular and great, as his conduct had been upright and approved; and David tells us "That his steps had well nigh slipped because he envied the prosperity of the wicked." When he saw how they flourished like a green bay-tree, and contemplated the severe trials that were permitted or appointed unto him, he was ready to conclude he had washed his hands in innocency for nought. Nay, time would fail to recount the sufferings, the trials and probations that have attended the peculiar heritage of God in all generations; yet great privilege, it is plain, hath ever been, *Divine support and preservation* under trials, and not exemption from them. How great and various were the troubles and trials that attended the good old patriarchs, and how singular and proving those that were experienced by the man after God's own heart, whose son even conspired to take away his life; but He, who is a God keeping covenant and mercy, vouchsafed His protection and sure support, and was to him, in all his troubles, a rock and refuge, a sure hiding-place. Whilst I am writing I wish for thee, my dear friend, beyond all that can be expressed, that this may be thy happy experience, if trials of any sort be permitted to attend thee; for

though I know not how applicable or otherwise any thing of this sort may be to thy present state, yet this I know, that there is no combination of outward circumstances can exempt us from trouble, though we tread upon the high places of the earth and dip our feet in oil; but in the most proving situations, though some encouragement, instruction and consolation may be derived from considering what hath been the lot and what the support of many elder brethren in the family, who, through many tribulations, have entered the kingdom, yet the most sovereign help and comfort is obtained by looking unto Jesus, who was "a man of sorrows and acquainted with grief;" whose "visage was so marred, more than any man, and his form more than the sons of men;" who being "touched with the feeling of our infirmities," and having been tempted, knows how to succor those who are tempted.

Let us then, my dear friend, in our varied allotments, lay aside every weight and burden, and "run with patience the race that is set before us, looking unto Jesus, the author and finisher of our faith, who for the joy that was set before Him, endured the cross, despising the shame, and is set down at the right hand of the throne of God."

I would not make any unnecessary addition, but I am so fully satisfied that it is not the will of our Father who is in Heaven that any of His children should be discouraged under whatever disadvantage, in their own apprehension, they may be placed, or whatever cup they may have to drink, or baptism to pass through; but that they should be encouraged to put their trust in Him, to cast their care upon Him. None who ever did so, ever were or ever will be confounded. Oh! let nothing move us from this foundation and we shall be safe. Oh! how memorable is that declaration of David, "The Lord is my shepherd I shall not want;" and again, "Thou art with me, thy rod and thy staff, they comfort me." Thus in heights and in depths, in seasons of trial and of rejoicing, let our whole dependence, our humble trust and confidence be in and upon the sure mercy of God in Christ Jesus; and then, I am sure, He will sanctify all His dispensations to thee; that He will bless thee indeed; and that as it hath pleased Him to appoint thy lot as in "a south land," so He will also continue, as He hath in mercy hitherto at seasons done, to give thee "springs of water," yea, the sure water, inexhaustible springs of consolation that flow from his presence.

I am thy sincere, affectionate friend,
JOHN THORP.

What a sweet feeling spreads over the mind when, through the ever-watchful Shepherd, we are enabled to maintain a steadfast guard over our spirit under provocation, and to stifle the rising disposition to anger and resentment; to suppress even an unkind remark, and to bear in the meek spirit which the Lord alone can give, whatever is calculated to irritate, even in the small incidents of life. "He that rules his own spirit is better than he that taketh a city." It is only through humble watchfulness and secret breathing for preservation from day to day that we gain the victory.—*William Evans.*

A man is sometimes more generous when he has little, than when he has much.

Address to Parents, from the Committee on Education of the Yearly Meeting of Friends at Philadelphia.

Dear brothers and sisters, who have children committed to your keeping, fellow-members of a Society that has been highly favored of the Lord, we feel drawn to invite you to join with us in a consideration of our privileges and responsibilities. The care which has been committed to us, by the Yearly Meeting, has brought us into more intimate acquaintance with the advantages which some have, and the difficulties with which others are surrounded, in the education of their children; and we address you in near sympathy, and a humbling sense of our own short comings and failures.

When an immortal being is born into the world, there is awakened in every right-minded parent a deep sense of responsibility; and the best feelings of even the least thoughtful should be quickened. Happy are those parents who close in with this visitation of tender feeling, accept the trust with the gift, and make covenant with the Lord, that, looking to him for daily help and guidance, they will endeavor to bring up the child he has put in their charge in his holy fear, and in his nurture and admonition; that it may come to love to walk with him during the short time allotted to man on earth, and so be fitted to live with him forever in joy unspeakable and full of glory.

The innocence and feebleness of an infant seem naturally to repel the thought of the power of evil, and there is so much in the first unfoldings of intelligence and affection that is pure and lovely, that parents are tempted to forget that there is any need of watchfulness. But if they have kept their covenant with their God, he will not be unmindful of them, and will make them quick of understanding in his fear, to perceive otherwise unseen dangers. Dear friends, it is our great privilege to have been brought up in the belief of this immediate divine guidance in the every-day walks of life; and blessed are they who put their trust in it; for the dealing in heavenly wisdom with the first appearances of evil in children, may be of inestimable consequence to the future life. A knowledge of good and evil, and of the duty of obedience to parents is often evidenced very early, long before there is any power of expression in words.

When they are able to talk, while requiring deference to the presence of older persons, let us, with ready and hearty sympathy, listen to their little recitals, guarding them against exaggeration in statement or in expression of feeling, or any other approach to untruthfulness. Let us teach them by precept, by example, and by shaping their duties in life for them, that self-denial and not self-indulgence, is the appointed way to happiness. Let us be watchful over ourselves, that we do not, by our injudicious fondness or careless talking, sow the seeds of vanity, selfishness or insincerity in their susceptible hearts.

Let us treat them with confidence, intrust them with responsibility suited to their years, and encourage them by appreciation of their efforts to do right; and let us not unnecessarily disturb the peaceful flow of what should be their happy lives, nor vex their spirits with injudicious requireing, nor in any way provoke them to anger, or betray them into disobedience; for disobedience from any cause,

however slight or qualified in form, should always receive adequate correction. Permissiveness is followed by disrespect, and together eat into the very heart of all else.

There is a natural affection of parents which fosters selfishness in their children, and a natural filial duty; and there is a natural affection of children which is not founded in duty or accompanied by obedience; and one of them will prove but as a reed which pierces the parent's hand that leans upon

it above all, let us seek to walk so closely on our God, that when they come to us with their questions about heavenly things, we may not have to call our spirits back, as if, from the ends of the earth, and give a unsatisfying answer to what may have a craving for spiritual bread.

No man can see the kingdom of heaven as he realizes that change of heart which the blessed Redeemer describes as being born of the Spirit; and as man in his natural state cannot comprehend the things of the Spirit of God, because they are foolishness unto him, it is evident that the very foundation of true wisdom and happiness, both in parents and children, must consist in a teachable submission to the Grace of God that bringeth into the world Him who died that we might live; and which inspires new desires, principles, and affections in those who receive the meekness of the engrafted word which is to save the soul. The parents who have realized a new heart and spirit to be given to us, are prepared, by a living experience, to commend their children to the word of that life in their own hearts which convinces of sin, causes them to feel their need of pardon, and will lead them to the Lamb of God that taketh away the sin of the world; such a training in the school of Christ is to be the true qualification for the solemn duties of the parental office.

As many of us have had to feel, to our sorrow and condemnation, our inability to help our children on their heavenly way, use of our own unfaithfulness! Dear friends, it is good for us to feel it deeply; and must dwell under the condemnation till it brings us back to the Father's house, where we are bread enough and to spare for us and our children. Our love for them is often a sin of heavenly discipline to ourselves, in sending us home from our wanderings, for their sakes.

When we come to give an account of our stewardship, we cannot credit ourselves with having done our duty in the religious education of our children, because we have found one to do it for us; nor will our want of qualifications cancel the charge that will stand against us; nor can we claim that there has been a deficiency on our Lord's part; for if man lack all wisdom, let him ask of God, and give to all men liberally and ungrudgingly, and it shall be given him." If we found "watching daily at wisdom's gates," children, as well as ourselves, will partake the promised blessing; and we will be quick to receive, and ready to follow, every divine invitation for their spiritual good. Feeling our own helplessness to do them any good of ourselves, we will carry them oftener than the morning day, on our hearts, before the throne of Grace, committing them to the Lord's keeping, and desiring to be made helpful to them under his hand.

If earthly-mindedness, in its more refined or more sordid forms, has place in the hearts of parents, children will be quick to catch the same spirit. And when such parents come to desire better things for their children than they have themselves, and endeavor to turn them from temptations or evil ways, they have but little influence with them, except by appealing to secondary or unworthy motives. But when children see that their parents walk humbly with their Creator, daily asking and receiving counsel of him, there is a sense of delegated divine authority accompanying their admonitions and injunctions, which is seldom disregarded.

Education neither begins nor ends with school, home influence has a most important part in it. Much depends on the readiness and patience with which a child's first questions in the fields of knowledge or of thought are answered. An encouraging answer will stimulate thought and investigation; and an unsympathizing and indifferent answer will leave the child to choose inferior ways of finding pleasure, and so begin to form the bias of its life. True christian tenderness and self-denial cannot be better exercised often, than in trying to understand the mental difficulties of children who are not naturally quick of apprehension. It is in the very early years of life, generally, that the habit is formed of loving to think, or of disliking to think; and no doubt the scale has often turned in favor of disliking, on account of some difficulty which the child might have been helped to master by a sympathizing parent; but failing in its efforts, it becomes discouraged, grows tired of repeated endeavors without the pleasure of success, takes up the depressing belief that it cannot think anything out, and goes on through life under this disability; and thus a loss of intellectual pleasure, and a turning to less profitable sources follows, as well as a failure to fill up the intended measure of usefulness.

Parents who are in the habit of numbering their blessings, and whose hearts, through the power of Divine Grace, are filled with thankfulness, will, by the overflowings of its abundance, unconsciously diffuse the same spirit through the family. The contagious disposition to fault-finding, which often originates in the anxiety of parents about unimportant things, spreads from them to their children. The watch that our Lord enjoins will guard us from our natural apathy about the great and eternal things that are not seen, and our natural impatience about the little, temporal things that are seen. It will keep us from disturbing our children needlessly, and give that weight to all our admonitions in their early years which will establish a confidence that we are watching over them in and for the Lord. This only will be able to withstand the shock of those outbreaks of self-will that sometimes burst forth in maturer youth, threatening to carry away all good, and which affection, entreaty, and argument are unable to deal with effectually.

(To be continued.)

War.—It is recorded of an Indian, who had once been a great warrior, but had become a man of peace, that being inquired of as to the cause, he laid his hand upon his breast, and looking upward with a reverent expression, said, "The Great Being has made it known to my heart, that he did not make

men for the purpose of killing one another."—From *Biographical Sketches*, &c.

SWEETLY BENDING TO HIS WILL.

Selected.

Since thy Father's Arm sustains thee,
Peaceful be;
When a Chastening Hand restrains thee,
It is He.
Know, this love in full completeness
Fills the measure of thy weakness;
If He would thy spirit save,
Trust Him more.

Without murmur, uncomplaining,
In His hand,
Lay whatever or things thou can'st not
Understand;
Though the world the folly spurneth,
From thy faith in piety turneth,
Peace thy inmost soul shall fill
Lying still.

Like an infant, if thou thinkest
Thou canst stand,
Childlike, proudly pushing back,
The offered hand,
Courage soon is changed to fear,
Strength does feebleness appear;
In His love if thou abide,
He will guide.

Fearlest sometimes that thy Father
Hath forgot?
When the clouds around thee gather
Doubt Him not.
Always hath the daylight broken,
Always hath He comfort spoken,
Better hath He been for years,
Than thy fears.

Therefore whatsoever beareth,
Night or day,
Know His love for thee provideth
Good away,
Crown of sorrow gladly take,
Grateful wear it for His sake,
Sweetly bending to His will,
Lying still.

Paul Gerhard.

Retrenching.

The great majority of the people of this land have felt often, during the last few years, the duty, if not the stern necessity of retrenchment in ordinary expenses. Many have been compelled to do this. But where does this retrenchment, even with professed disciples of Christ, too often, begin and end?

Now we are obliged to say, as the result of some considerable observation upon this point that this retrenching begins and ends, frequently, even with professing Christians, with their account on benevolence. Or, as another has well stated it: "It is a singular commentary on our average Christianity that our economy begins, not in the larger fractions of our income which are devoted to our living, daily work and comfort, but, first of all, in the smaller fractions which we have devoted to the Lord." In other words, when the "hard times" come and incomes and probably capital, too, are reduced and now expenses must also be cut down, we begin our economy on the Lord's claims and portion, practicing our self-denial on the rendering of what we owe to him and not on what we expend for ourselves. We continually see instances of this around us. There are many, who, through all these "close times" have been living just the same as formerly, having the same home comforts and luxuries, eating just as good food and wearing as good raiment, but meanwhile giving very much less to causes of benevolence.

It may be answered, "All this is but natural,

for retrenchment elsewhere means giving up of ease or pleasure, or comfort, or life, while here it costs the man nothing." True, this is "natural," but, what we complain of, is that it is *not* Christian. Yes, "natural," while we expect the Christian to be *un-*"natural;" "not conformed to this world but transformed;" "a new creation," "old things passed away and all things become new," and therefore that "henceforth we should not live unto ourselves but unto Him who loved us and died for us and rose again."

And how often in these times we find Christians purposely contracting their benevolences because of particular losses they have suffered, promptly charging up their losses all to the Lord's account; and still going right on as before, in all ordinary style of living and expense. This is well illustrated by the little fellow, of whom we have all read, who, by some gift of friends, had come into possession of two five cent pieces. When with joy and pride he exhibited them to his father upon his coming in, and his father asked him, "well, Johnny, what are you going to do with them?" he had promptly replied, "One five cent piece I'll give to the heathen, and the other I'll buy nuts and candies with for myself." The father pleased with this benevolent feature exhibited, said nothing disapprobatory of the proposed use of the latter five cents, and went forth again to business. Upon his next return, his little boy came to him in trouble. One five cent piece was lost. It had slid somewhere away—utterly gone from sight. The father inquired which piece he had lost? Ah! that was the question that tested the child's nature, as there he stood, with one hand in his empty pocket, the other holding the remaining coin in his outstretched palm, looking and thinking. This five cents in hand, meant nuts and candies, or, given to benevolence, it meant no luxuries for him. And the question was not long pending—the human and sensual soon triumphed, as with too many even, that profess "better things," and he answered, with an affected whine, "I've lost the one I was going to give to the heathen!"—*Nat. Bupt.*

The Devastated Northwest.—The Dakota correspondent of the "Cincinnati Gazette," gives a startling disclosure of the misery inflicted by fire and sword in that portion of our land. He writes:

We hear a great deal lately of the "stricken South," but as yet no newspaper has taken up the cause of the "devastated Northwest." And still for one month flame and sword have swept throughout this fresh, young land; the destruction of the crops by the fire making support of life through the winter a hard problem for the settlements which escaped the Indian massacre. A large immigration has crossed the borders of Nebraska and Dakota during the past year, and within these boundaries have staked out their future homes. All over the prairies new roofs are visible and improvements are to be seen. Pioneer settlers they encounter all the hardships of frontier life and build up homes and business upon spots which at first seemed a dreary wilderness. Upon these new homes, upon barns full of just harvested wheat, upon stacks of hay, upon patent reapers and mowers, the costly apparatus of modern farming, the prairie fires swept down with appalling velocity. Some estimate of the rapidity of the flames

can be made from the fact that a threshing machine actually at work when the fire first appeared in the distance had to be abandoned, and the workmen felt they were lucky to escape with their lives and their teams. Women and children have been burned to death in the farm houses, or while attempting to save the cattle. Thousands of bushels of wheat and barley, and tons upon tons of hay have been consumed. The soil of the prairies is for miles black as ink, and bare as a rock in mid-ocean. At night the wolves were howling around the windows, fierce with hunger for want of their usual prey—the smaller animals of the country—which have been suffocated in their holes. Heavy frost covers the ground nightly. What shall become of the farmers and their families? How is their live stock to be fed? Or must they sell their cattle to buy food for the winter, and thus sacrifice their chief means of cultivating their ground next spring.—*Late Paper.*

For "The Friend."

In the third volume of *Piety Promoted*, (Philadelphia edition,) pages 294 to 300, is an interesting though brief account of the life, labors, and death of that devoted servant of Christ, Samuel Emlen, who died at the close of the eighteenth century. Having recently come into possession of an original letter, written by Susanna Emlen to her friend Ann Millin, giving a rather more full description of her father's last hours than that published, it is offered for insertion in "The Friend."

If we could place implicit confidence in all the obituary notices put before the public in the present day, it might be supposed that death was almost universally robbed of its terrors, and welcomed as opening the portals to eternal bliss, even in many cases where the life gave little or no evidence of the departed having been so brought under the government of the Spirit of Christ as to be willing to acknowledge Him before men. Contrasted with this, it is instructive to note the self-abasement and holy awe with which this long dedicated and experienced disciple approached the termination of his earthly pilgrimage, and looked with an eye of faith on the anending realities of the world to come. How closely does it bring home the solemn query of the apostle, "If the righteous scarcely be saved, where shall the ungodly and sinners appear?"

"About the middle of the 12th month, his complaint returned with increased frequency, since which, his son or myself lodged in his room with him. He was very affectionate to his children and others about him, saying, 'I deem their sympathy and affectionate attendance upon me, a blessing from heaven, for which God will bless them.'

"During his waking hours, the attributes of his God, whom he had long served, were almost his perpetual theme. He was frequent in declaration of his power, his mercy, and goodness to his soul, and in acknowledgment of the rich consolations with which his mind was supported, and frequently repeated, 'Their sins and their iniquities will I remember no more; I will cast all their sins behind my back,' and in much brokenness of spirit, 'Ye shall have a song as in the night, when an holy solemnity is kept, and gladness of heart, as when one goeth with a pipe to come into the mountain of the Lord, to the mighty One of Israel.' 'Oh! the tears of holy joy

which flow down my cheeks; sing psalm which praises to my God!' 'I feel nothing my way, although my conduct through has not been in every respect as guarded it might have been, yet the main bent of mind has been to serve thee, O God, who glorious in holiness and fearful in praises am sure I have loved godliness, and hated iniquity; that my petitions to the throne of Grace have been accompanied with faith and that he had a precious evidence that sins were forgiven'; adding, 'I am not sensible of having injured any one, I have not bred up any poor family for rents, but have got up much; which is my great consolation seeing its the merciful who obtain mercy.'

"On First-day, the 29th of the 12th mo he appeared as cheerful and pleasant a any time: his mind being remarkably clear and covered with love, he again frequently repeated, 'Their sins and their iniquities I remember no more, I will cast all their sins behind my back,' and was comforted with calls and sympathy of friends, more or less whom, generally visited him every day during his short confinement within doors. He went to bed about 10 o'clock on First-evening, lay awhile without pain, and fell comfortably to sleep for about an hour, when awoke a little after 12 o'clock, being seized violently. This attack soon appearing more alarming than any before, two of his near relatives and a physician were called in, who took an affectionate leave of his family. No prospect of benefit appearing from further medical aid, he was rather desirous that nothing might be attempted, but wished to do as quiet as possible, saying, 'All I want heaven, Lord! receive my spirit,' and earnest that those about him might pray for his preservation in patience to the end.

"His pain is great,—my God! grant me patience depending patience, and then repeat, 'Call upon me in the day of trouble, I will deliver thee and thou shalt glorify me;' also with great fervency, a considerable portion of the Lord's Prayer. Shortly afterwards 'Oh! how precious a thing it is to feel the Spirit itself, bearing witness with our spirit that we are his.' 'Oh! this soul is an awfully thing—I feel it so; you who hear me, will its an awful thing to die! the invisible world how awful!' His end being now fast approaching, he said, 'I entreat that nothing may be done to me, but what I may request, that my mind may not be diverted, that my mind may be centred in aspirations to the throne of Grace.' Shortly after; 'Almighty Father! come quickly, if it be thy blessed will, and receive my spirit; when he quietly awhile, the conflict being apparent over; but feeling again the clogs of humanity he said in a low voice, 'I thought I was gone and added, 'Christ Jesus receive my spirit. These were his last words; a few minutes after which he departed without sign, groans or struggle, about half past four o'clock, the morning of the 30th of the 12th month 1799.'

Remote Causes of the Indian Outbreak.—all that vast region drained by the Columbia river and its branches, stretching from southern Oregon and southern Idaho to the Brit line, where the Indians are and have been most feverish, the food of the natives has been in winter, principally dried salmon and cam root. The camas is a bulbous plant, rich

and gluten, of which the natives are fond. It furnishes them bread. Recently native canneries of salmon have been established on the Columbia. Twenty-one are in active operation. Thirty-six hundred men, on the river for salmon, day and night, at various places, from the bar at the mouth to the foot of the Cascades. The result is the same as in our own Sacramento. The time when salmon will have to be artificially propagated, or the sources of the Columbia will have them not. The Indians in that broad territory already feel the effect. The plows of the settler in the shape of steel, and the noses of droves of fast increasing hogs, exterminating the bread root of the Indian. His game is shot, his nut trees cut down for fuel, his berries picked by the settlers closing in around him. Why should he be restless, when his food supply is commensurate to a minimum?—*Californian paper.*

For "The Friend."

Incidents and Reflections.—No. 25.

(ILLUSTRATIONS.)

When our Blessed Lord was personally on his, He often explained and enforced his things by parables and illustrations which were drawn from customs or objects familiar to his hearers—such as his comparison of himself to a vine, of which his disciples were the branches. His ministers have often been careful to follow his example in this respect. The trapper of William Bray, mentions that he has heard him address a large congregation of miners in Cornwall, England. In that neighborhood there were two mines, one very prosperous, and the other quite the reverse, the work was hard and the wages low. He represented himself as working at that one, but on the "pay-day" going to the prosperous one for his wages. But had he not been at work at the other mine? the manager inquired. He had, but he liked the wages the good mine the best. He pleaded very justly, but in vain. He was dismissed at length with the remark, from which there was appeal, that he must come there to work, and come there for his wages. And then he went upon the congregation, and the effect was almost irresistible, that they must serve Christ here if they would share his glory there; but if they would serve the devil, to him they must go for their wages by and by.

In another occasion, William visited an invalid; and the sick man expressed a hope that the Lord would take him to heaven, there then, as he felt quite ready for the change. He should not then grieve his best Friend to be carelessness or unbeliever. His wife was standing by the side of the bed, and away, her eyes filled with tears. To Billy immediately turned and said, "So would not like to have your husband proceed, then?" And then he took up his part. "Don't you think that your eye ought to be as much upon the Lord Jesus Christ, as the eye of a worldly woman is upon the Queen? Now if the Queen were to send for her brother, or son, or husband of any such man, would not she say, 'I am sorry to part with him, but it may be the making of him, I must let him go. It is the Queen who has sent for him.' And yet you know," continued, "that it might be a great expense to prepare him to go; or the Queen might soon die, or he offend her, and then

he would be as bad off as ever. But the Lord Jesus Christ is at all the expense of the *gift out*." He provides the robe in which your husband will be clothed, the crown that he will wear, the palm that he will wave; the Lord Jesus Christ will never die, and your husband wants to go because he knows he shall never offend him again: *now ought you not to be willing?*" The distressed wife, who was now smiling through her tears, said she was willing, but she did not want to lose him just yet. "And do you think," said Billy, "that you will ever be willing. If my 'Joey' lives, and if I am to wait until she is willing for me to go to heaven, I shall never get there. The fact is, the Lord has a right to take your husband, or me, or any of his children whenever he pleases."

There are many pleasing illustrations of the Heavenly skill, with which the Christian warrior is sometimes enabled to shoot an arrow into the heart of careless or apparently hardened sinners, and through Divine help awaken in them the earnest inquiry, "What shall I do to be saved?" As Geraldine Hooper was standing on the railroad platform at Norfolk, England, her attention was called to a gamekeeper standing on the other side of the line with a dog by his side. The man had the reputation of being an irreligious character. She quickly crossed the line, went up to him, and stroking his four-footed friend said cordially, "What a beautiful dog you have here!" "Yes!" said the man rather gruffly; "but take care he does not bite you. He is not fond of strangers!" "O he wont bite me. Dogs know who are fond of them; no doubt you are very fond of him?" "That I am." "Do you feed your dog?" "Yes ma'am." "Housethis?" "Yes, of course." "Does your dog obey your word of command?" "Yes ma'am!" "And you would be disappointed if he did not love and obey you?" "That I should," then looking proudly at his dog, "but Rover does love his master," and he patted the dog's head as it looked up trustfully in his face. "Would you be grieved if he followed a stranger?" "Yes," he replied, rather impatient at so many questions. "Ah!" said she, in a sad, tender, reproachful tone, "you ungrateful sinner, what a lesson does that dog teach you! God has fed you, housed you, cared for you, loved you, these many years—but you do not love or obey Him—you do not follow Him! He so loved you that He gave his only begotten Son to die on the cross for your sins, and yet you never have loved Him in return! You follow a stranger. Satan is your chosen master. The dog knows its owner—you know not yours! Truly may it be said of you, 'the ox knoweth its owner, and the ass its master's crib; but Israel doth not know, my people doth not consider!'" She looked sadly, yet kindly, at him as he earnestly uttered these words. His eyes filled with tears, he fixed them on his dog, and in a choking voice said, after a few moments, "Ah, Rover, Rover! thee hast taught thy master a lesson this day! I have been an ungrateful sinner, but by God's help I'll be so no longer."

On another occasion she went into a shop at Norwich to buy a dress, and made use of the opportunity thus afforded to give a lesson of instruction to the young woman who waited on her. After she had selected a dress and was paying for it, they entered into conversation, which she thus narrates: "Now you'll be sure and send me this dress?" "Oh, yes,

ma'am." "You'll send it me now, at once, to-day?" "Certainly ma'am." "You want take it and wear it *out first*, and then send it to me when it's worn out, will you?" The young woman seemed quite hurt and offended. "Why, you surely don't know our house, ma'am; this is one of the first houses in Norwich; of course we should not dream of such disgraceful conduct! I never heard of such a thing!" "My dear young friend," said I, "are you not wearing out your precious life, which He bought and paid for with His own priceless, precious blood, in the service of the world, and self, sin and Satan? Have you given Him what is his own by right of purchase? You are not his own; you are bought with a price! Have you given yourself, body, soul, and spirit to God? The young woman burst into tears."

Whatever may have been the future history of this person, whether the impression made on her heart was abiding in its character, or whether it was like the early dew and the morning cloud that passeth away; the appeal to her conscience was skillfully made, and we may hope that it was inspired by that wisdom which is profitable to direct.

When travelling once with an old general, she entered into conversation with him about his soul, and he asserted that he was all right, because he had been made a Christian when he was baptized in his infancy. She asked him if he was doing or had done anything for Christ. "O no!" he replied. "Now, what would you think, general, of a soldier who, when the order to charge was given on a field of battle, should turn round and say, 'It is true I am a soldier—I was made one when I enlisted, but I never intended to fight! What would you do with such a one, General?'" "Put him up to the cannon's mouth as an example to the rest, to be sure!" "And that is what the Lord will do with you," she solemnly replied, "He will drive you forever from His presence, unless you get a new heart, and lead a new life, through the Grace of God! You say you are a Christian, and yet by your own confession you have never used your tone or talents in the service of Jesus Christ." He was not offended; but looking seriously at her said, "I never thought of it in that light, my young friend, but I will not forget your words." The train stopped, and as he left the carriage he thanked her for her faithfulness.

For "The Friend."

How all important it is that we be as *nothing*; having the strong will subdued, pride laid low, and all within humbled and broken by the mighty and powerful operations of the Holy Spirit upon the heart. This, and nothing but this, can enable any to prostrate themselves at the Master's feet, giving themselves up wholly into his hands, to be formed, fashioned, and made fit vessels for his use.

And this is not all; there must be a *continual* looking unto the same Source, which can alone enable to keep there, to keep little and low, humble and child-like. This is the state needful for all to be in, who would desire to serve the Lord. Then, would He fill the empty with his own righteousness, and send them forth when and where He pleased. Oh! the littleness, the child-like nature of a babe in Christ; being willing to receive all from Him which He may be pleased to dispense, whether of joy or of sorrow, as coming

from One who deals in wisdom, with all of his children, and never errs. 'Tis such as these who are enabled to say, My meat is, to do the Father's will.

THE FRIEND.

TWELFTH MONTH 21, 1878.

We have received a communication respecting an article which lately appeared in our column on novel reading, in which while approving of the sentiments therein expressed, the writer inquires: "Is it enough to keep a child not only from the evil itself, but from a knowledge of the evil of the world, by speaking of sin and temptation in general terms, and trust to the effects of moral teachings to enable him to withstand in the evil day; or is it better to draw near to them in close sympathy, and to speak of particular temptations and special sins and aim to forewarn them by forewarning?"

We believe that there is nothing but the Spirit of Christ in the heart that will enable us effectually to resist temptation and to stand in the evil day, and that this is granted to children even when very young; but it should be the concern of parents so to live under the guidance of this same Spirit, as to be able readily to enter into sympathy with their children in their trials and temptations, and by their example as well as by precept and the influence of their spirits, to strengthen their good, though it may be often feeble resolutions, to deny themselves, and to turn their backs upon the tempter. There may be times when it would be proper to mention to them particular vices to which they are or may be exposed, and to point out the misery which would follow from an indulgence therein. Familiarity with vice, or with suggestions to vice is however always dangerous, and the proneness to yield to its seductive influences is such, that it is not wise to acquaint children with evils of which they are ignorant, unless under the constraining influences of that grace which will overcome it, and impress upon their minds such feelings of abhorrence as may effectually protect them from the disposition to participate in it.

Innocence and purity of mind should be the constant object of attainment, and the preservation of them in the unsullied mind of a child, a subject of the most anxious solicitude by its parents and caretakers. We know that there is a distinction between that state of mind which belongs to a child too little developed to be liable to serious departures from what is right, and the stability of more mature years, when able to "choose the good and refuse the evil," resulting from obedience to the strivings of the Lord's Holy Spirit; by which only any are kept pure and blameless in His sight. But that which shows to the child that which is evil, will also, as it is followed and obeyed, preserve him from it. The duty of parents therefore requires not only that they should guard their children from evil examples and corrupting influences, but that they should early direct their attention to the Light of Christ in their hearts, which condemns them when they do wrong, and which as they obey it, will become their Leader and Protector. If our children are thus trained and strengthened by the righteous example of their parents and caretakers, may we not

confidently believe that a blessing will be poured out upon the children of this people, as was declared respecting the posterity of Abraham, "For I know him that he will command his children and his household after him, and they shall keep the way of the Lord to do justice and judgment; that the Lord may bring upon Abraham that which he hath spoken of him."

In the present number we reprint the "Address to Parents" directed to be issued by the late Yearly Meeting, which points out some of the important qualifications necessary for the right training of youth, and conveys wise counsel and encouragement in relation to the discharge of the weighty duties of parents.

SUMMARY OF EVENTS.

UNITED STATES.—A heavy rain storm visited the Middle and Eastern States on the 9th and 10th insts., causing great floods in many parts of the country. In New England several accidents are recorded of trains running into wash-outs, in some cases attended with loss of life. In many sections, throughout its course, the destruction of property was very great.

CONGRESS.—On the 11th the House passed a bill to regulate inter-state commerce, and prevent discrimination by common carriers. On the 13th, Senator Edmunds' Electoral Bill relating to the Presidential elections, and intended to provide for and regulate the coming of the votes for President and Vice-President, and the decision of questions arising therefrom, passed the Senate by a vote of 35 to 26. The House has also passed five of the general appropriation bills.

The joint commission to consider the advisability of transferring the care of the Indians to the War Department, has been engaged in taking testimony from persons supposed to be informed on the subject, which is generally unfavorable to the change. The present plan is believed to be cheaper to the Government and better for the Indians.

The Agricultural Department reports the cotton crop of 1878, at 5,197,000 bales, of 450 pounds to the bale.

During last year ten vessels of the Gloucester, Mass., fishing fleet, valued at \$40,409, were lost, with 14 lives; and during a gale on the 24th of October and other accidents, making a total of 30 lives.

Since 1874 shipbuilding in the Portland (Maine) district has steadily decreased from 15,575,95 tons that year, to 4,278,83, in 1878. In 1869, it increased from 2,262,82 to 11,997,88 tons, and then fell to an average of about 3900 tons a year.

During last month 5,852 immigrants arrived at the port of New York, an increase of 107 on the number during the corresponding month of 1877. For the eleven months of the present year there were 81,255, against 66,111 for corresponding period of last year.

A New York paper states, the new vault in the United States Sub-Treasury, which has been prepared for the storage of silver dollars, is forty-eight feet in length, thirty feet in width, and twelve feet in height. Should this space be packed solidly with 423 million dollars, the capacity would not fall short of forty million dollars.

The Anchor Mill, at Minneapolis, Minn., was burned recently, the fire originating in an explosion of flour-dust. A man who had a lantern attempted to correct a stoppage in the flour elevator, and discharged the flour which falling in a cloud of dust, instantly burst into flame. The man was seriously burned.

The number of deaths in this city during the past week was 306. Of consumption 52; diphtheria 19; disease of the heart 11; scarlet fever 12; typhoid fever 4.

The English steamship Chancellor, recently arrived at this port, brought nearly 18,000 boxes of fruit from the Mediterranean. This is the largest cargo of fruit ever brought to this place, and is equal to that of four sailing vessels.

Gold.—Gold 100 l. U. S. sixes, 1881, registered, 106½; coupons, 109½; 5-20 coupons, 1865, 103½; do, 1867, 109½; do, 1868, 110; new 5s, 106½; new 4½ per cents, 104½; new 4 per cents, 100.

Cotton.—Sales of middlings at 9 a 9½ cts. per pound for uplands and New Orleans.

Petroleum.—Crude 7½ a 8 cts., and standard white at 8½ cts. for export, and 11½ a 12½ cts. per gallon for home use.

Flour.—Minnesota extra, \$1 a \$1.75; western, \$1.75

a \$5; patent and other high grades, \$5.50 a \$7 Rye flour, 2.70 a \$3.00. Corn meal, 25 cts. per bushel. Grain.—Red wheat, \$1.04; a \$1.05; amber, \$1, \$1.06½; white, \$1.06 a 1.08. Corn, 39 a 41 cts.; grade, oats, mixed, 28 a 29 cts.; white, 30 a 32 per bushel.

Seeds.—Clover, 5 a 6½ cts. for common to clovered, \$1.37½ per bushel.

Hay and Straw.—Prime timothy, 60 a 70 cts. per pounds; mixed, 45 a 60 cts. Straw, 70 a 80 cts, 100 pounds.

Beef cattle were in fair demand, prime lots sold at a 5½ cts.; fair to good, 4½ a 5 cts. per pound \$1. Sheep, 3 a 5 cts. per pound, as to condition. Hogs, a 4½ cts., as to condition.

FOREIGN.—London.—On the 14th inst. U. S. bills were quoted at 108½ for the new 5s, 105½ for 1881 and 106½ for the new 4½ per cents. The *London Economist* says: "That commercial and financial undertakings have felt sharply the effects of the failure of West of England and South Wales District Bank, shares also suffered from further distresses connected with Edison's discovery. The political and financial look is not such as to warrant a recovery of animus. The state of affairs in Roumelia, and the continuance of the Russian mission at Cabul, raise doubts we check recovery in any direction."

In Parliament, resolutions have been introduced directing the Government as to its Afghan policy, we have caused warm discussions, but the resolutions have been rejected by a large majority.

The reports from the army in Afghanistan continue to indicate but little resistance to their progress, inhabitants of the country are said to be very friendly. Princess Alice, wife of the Grand Duke of Hesse and daughter of Queen Victoria, died on the 14th inst. at the age of 35. The princess is said to have possessed much energy of character, devoting much time and interest to the promotion of charitable institutions.

Washington, the French Foreign Minister, had a hopeful view of the fulfilment of the Treaty of Berlin, and France has no kind of engagement concerning its neutrality.

WANTED

A well qualified teacher for Friends' Select School for Girls, in this city. To enter upon duty as practicable. Apply to

Thomas Lippincott, 929 Franklin Street, Philadelphia, Pa.
 H. B. Bidwell, 726 Broad Street,
 Anne Rhoads, 224 North Twelfth;
 Rebecca W. Kite, 459 North Fifth;
 Philada. 12th mo. 1878.

FRIENDS' ASYLUM FOR THE INSANE
New Franklin, (Twenty-third Ward,) Philadelphia

Physician and Superintendent—JOHN C. HALL, M. D. Applications for the Admission of Patients made to the Superintendent, or to any of the Board Managers.

MARRIED, at Friends' Meeting, Concord, Bel Co., Ohio, on the 30th of 10th month last, WILLIAMSON of Parker and Rebecca Hall, of Harrisville, Co., and LYDIA J., daughter of Israel and Rachel B. well, of the former place.

DIED, on the 11th of 10th mo. 1878, at her residence Pennsville, Morgan Co., Ohio, HARRIET M. PENNELL, the late John Penrose, an elder and member of Pennsville Monthly and Particular Meeting, 68th year of her age. She endured with patient protracted illness, often expressing that all was within; and on one occasion the assurance she felt "the everlasting Arms were underneath." "Married man and behold the upright, for the end of man is peace."

At Damascus, Columbia Co., Ohio, 10th 20th, 1878, ABIGAIL WARE, in the 79th year of her age, a member of Salem Monthly Meeting of Friends, 6 a 7th West Chester, on the 2nd of 11th mo.

JOHN SAWBELL, a member of Birmingham Monthly Meeting, Pa., formerly of Robinson, Berks Co., is 72nd year of his age. The life of this dear Friend quiet and unassuming. The failing of his health, yet continued for several months, he bore with cheerful mission to the Divine will, and looked towards the close with calmness and composure, and passed away we trust to a more enduring inheritance.

For "The Friend,"

Friends held as Captives in Foreign Lands.

A. D. 1680—1702.

(Continued from page 14.)

Epistle 1689.—"Our Friends who are captives at Mequinez do remain as before; if not one are come down to Sally, and have liberty go about the town under security for their imprisonment. Great endeavours have been used for their redemption."

1690.—"And as concerning our Friends at Mequinez and Sally, endeavours have not been taken to obtain their redemption; but as it cannot be effected. We hear from them that they are well, and desire their loves might be communicated to Friends in their five land."

Epistle 1691.—"Divers good epistles were read in this meeting from foreign parts, Ireland, Scotland, * * * and two from Friends, captives at Mequinez, in Barbary, under the Emperor of Morocco. * * * There yet remain nine English Friends captives at Mequinez, and three at Murbay; who received a truth there (it being three or four days journey distant) who correspond with each other by letters. One Friend (to wit, Joseph Wasey,) being lately redeemed and newly come over, gave a large account to this meeting of their miserable hard usage in captivity; living no lodging but under arches, in deep caves on the cold ground, winter and summer; only water for drink, and no bread allowed them by the king but of old rotten, stinking barley; and no clothes but a frock one in two years; and forced to hard labor, except three days in the year, and more especially on the sixth day of the week, (which their day of worship) they are compelled carry heavy burdens on their heads, running from sun-rising to sun-setting, with brush black boys following them with whips and stripes at their pleasure." * * * Many of their extreme hardships and want of food to sustain them; as in all likelihood Friends there had, if Friends and their relatives here had not sent them some relief; even hence a month formerly allowed them by the king being now taken from them, their sufferings are lamentable; yet the Lord's power has wonderfully preserved them, and readily restrained the fury and cruelty of that tyrant towards poor Friends there; in whose behalf the said Joseph Wasey did, by an interpreter, speak to the said emperor, giving

him an account of their innocent conversation and religion—which he heard with moderation—though he often kills men in cold blood for his pleasure. Joseph Wasey also signified that Friends' day-time being taken up with hard servitude, they are necessitated to keep their meetings in the night season to wait on God. The aforesaid captive Friends were very thankful for the relief sent from hence, which was very refreshing to them."

1692. "Several letters from Friends who still remain in their long captivity in Mequinez, to divers Friends here, were read; intimating the state of things with them, and that they received our epistles from our last Yearly Meeting; and acknowledged Friends' love and diligence here in laboring for their ransom. And that since the last Yearly Meeting the Lord hath delivered three of them, by death, out of their great misery and servitude, who ended their days in great content and peace. Their names are John Bound, Richard Nereet and Thomas Harrall. The distressed case of the remainder of them (as last year signified) is still before Friends, and divers are engaged in the love of God to use their endeavors for their ransom."

1693. "The Friends yet remaining captives at Mequinez are still held under great severities and hardships by that cruel tyrannical task-master, who is yet suffered cruelly to punish, wound and kill poor captives, at his pleasure. And all possible care of their redemption and relief is by this meeting still recommended to the Meeting for Sufferings to continue their endeavors for the effecting thereof."

1697. "At Barbary there remain several captives, most of whom are such that received the truth in the time of their captivity; the ransom of whom could not hitherto be obtained; although great endeavours have been used for it; but further endeavours are intended to be used as opportunity presents."

1698. "We * * * understand that divers of our Friends who were captives at Mequinez, and suffered great hardships there, are dead. And there yet remain five, for whose ransom great endeavours have been used, but it is not yet effected."

1699. "Earnest endeavours have again lately been used for the liberty of our Friends captives in Barbary, though not as yet obtained; and there being at this time negotiations on foot for the redemption of all the English there; and though the persons in Barbary employed therein by Friends, do wait some time to see the effect of that, yet we shall continue our farther endeavors for their discharge. And in the mean time have and do take care to send them supplies for food; they having little allowance in that country of anything to support their bodies under the great severities of labor, and undesired stripes that captives often endure. Also farther direction by this meeting is given in their behalf."

1700. "Friends care is also continued for

the redemption of our Friends that are captives in Barbary; and (as was hoped) the king has now agreed for the ransom of all the English captives there; and agents are arrived from thence in order to receive the said ransom. And although now, as heretofore, Friends have acquainted the Government that they intend to redeem our Friends at our own charge, nevertheless Friends are so far willing to encourage a public collection for the said service that, when the collectors shall come with the briefs to Friends' houses, we hope Friends will be inclined to extend their charity, in common with their neighbors, towards the redemption of the other English captives."

1701. "The Friends that are in captivity in Barbary are duly taken care of by Friends. And their ransom having been agreed for some time it is hoped will be shortly effected. One young man has been convinced there lately."

Epistle A. D. 1702. "And whereas we formerly gave you some account of the hopes Friends had, and endeavours used, for the redemption of Friends, captives in Barbary; we now let you know that John King, Richard Robertson, Thomas Walke lon, Robert Finley, James Burgoine, Joseph Bigland, (being all of our Friends who remained alive in that long and sore captivity,) have been this year redeemed; whose ransom hath cost Friends upwards of £800, including one George Palmer, a Friend's son of Pennsylvania, recommended from thence; towards whose ransom they also did contribute. Divers of which redeemed Friends have tenderly and gratefully acknowledged Friends' love and care of them."

Thus, after a care of more than twenty years, the last of these poor people were restored to their homes, and the tender concern of the Yearly Meeting was rewarded.

That they were worthy of this care the records themselves show. How touching is the message (1690) "they desire that their loves may be communicated to Friends in their native land;" and again, (ib.), "Friends' day time being taken up with hard servitude, they are necessitated to keep up their meetings in the night season to wait on God!" One can almost picture this little band of captives, under some old heathen "arches, or in deep places on the cold ground," silently waiting on the Lord, or, as the Spirit gave them utterance, telling what good things He had done for their souls. "With what christian boldness and yet in what spirit and with what power must Joseph Wasey, (Ep. 1691) himself but lately redeemed and not yet safe from recapture, have pleaded with the emperor, so to have prevailed with him that he heard him with moderation, though he often kills men in cold blood for his pleasure?"

Nor were they without their effects. Many other captives, as the records tell us, were convinced of the truth, some of whom re-

turned with them to their native land, while others, still captives, "ended their days in great content and peace."

One hundred and fourteen years after this record was made, and after various military and naval expeditions had been sent from almost every European nation, as well as from the United States, whose citizens had been enslaved by the barbarians, on the 27th of 8th mo. 1816, "a British fleet consisting of five line of battle ships, five heavy frigates, four bomb vessels, and five gun brigs, besides a Dutch fleet of five frigates and a corvette, under Admiral Van de Capellan, who had volunteered his aid, anchored before the formidable fortifications of Algiers"—that Algiers whose career presented an almost uninterrupted history of treaties broken and of men brutally enslaved.

What followed is terrifiably told in the words of the historian,* from whom I have already quoted. "It would not be agreeable or instructive to dwell on the scene of desolation and blood which ensued. Before night the fleet fired, besides shells and rockets, one hundred and eighteen tons of powder, and fifty thousand shot, weighing more than five hundred tons. The citadel and massive batteries of Algiers were shattered and crumbled to ruins. The storehouses, ships, and gun-boats were in flames, while the blazings of battle were answered, in a storm of signal fury, by the lightnings of heaven. The power of the Great Slave Dealer was humbled." Two days later the following conditions of Peace were submitted to: 1st. *The abolition of Christian slavery forever.* 2nd. The delivery to the British flag of all slaves in the dominions of the Dey; to whatever nation they may be long. 3rd. The delivery of all money received by him for the redemption of slaves since the commencement of the year. * * On the next day twelve hundred slaves were emancipated, making with those previously liberated by the British commander, more than three thousand. "Thus ended white slavery in the Barbary States. It had already died out in Morocco. It had been quietly renounced by Tripoli and Tunis. Its last retreat was Algiers, whence it was now driven forever."

The punishment and the humiliation of Algiers were not yet complete. Learning little from its misfortunes, its intolerant conduct found an avenger in the power of France, which, after a cruelty of warfare that has scarcely a parallel in history, in the year 1830 took possession of it as a French colony, and thus, as it may be believed, forever blotted out the name of Algiers from the catalogue of independent nations. J. J. L.

John Croker.

(Continued from page 147.)

After an absence of over four years from his native land and home, having been wonderfully cared for, and watched over by the Great Preserver of all mankind, John Croker was now restored to his anxious parents, who had mourned for him as one they should see no more.

He was now in his 18th year, and his father desiring him to learn some trade, set him at liberty to choose for himself. Meeting with a person in Exeter who was a fuller or tucker, (though not a Friend), who traded mostly to

Holland, he agreed to serve him six years, paying him thirty pounds at the time of sealing the indentures, and eight pounds if he sent him to Holland the last two years. With this arrangement his father was pleased, and he entered upon his apprenticeship.

Here he found himself exposed to many temptations, for his master proved to be a dissipated and intemperate man; he had frequently to walk the streets after night searching for him among the taverns and ale-houses, in obedience to the wishes of his master's wife.

Sometimes he could prevail upon him to return home with him, at others he would get into a passion and keep him there, when he would have to sleep in the chimney-corner. Many times was he tempted by him to play at cards with his gambling associates; but he was preserved from evil.

He served his apprenticeship about two years, when his master was put into prison, and his goods seized, he was thus left at liberty to seek other employment.

Being a Quaker but few would employ him; he found work as a journeyman, and lodged with a Friend. This not answering, he returned to his father's, who readily received him, and set to work at his elder brother's trade, who was a serge weaver; he was set to combing wool, at which he earned six or seven shillings a week. His father bought an estate in Cornwall, whither he and his wife removed and resided with their eldest daughter; who was married; here they remained until their death; after which his eldest brother, for whom he was working, removed there.

His father had left him a room at Plymouth, where he lived retired, spending most of his time in reading, and doing a little work at purse-making, the proceeds from which he generally gave away.

He was often desirous that he might be directed into some way of business, not feeling satisfied with this idle way of living, "which," as he says, "often brought sorrow in calling over the actions of the day. For setting them in order before the Judge of my conscience, those things which were done amiss brought trouble, which caused sorrow and tears, as well as prayers that the Lord would pass them by, and open his wisdom more and more in my heart, and that I might not act contrary to his mind. For those, which some call small things and not worth minding, caused me more exercise, so that I found a daily cross was to be kept to, in the management of words and conversation in this world; or else a good state might be soon lost, which I was under the fear of. I found when I had considered of those things which I had done, spoken or acted in the fear of God, it always brought peace; and I took my rest with true content in the will of God, however he might be pleased to deal with me in the night seasons."

His mother died about the year 1695, from his journal we take the following: "The Lord was pleased to deprive me of my dear and honorable mother, who was in her day a noble woman for Truth, and who retained her integrity to God, and love to Friends to the end. I doubt not but she resteth in peace with the Lord. This was a trying time to me, and it made an impression on my very countenance. I then retired into the country to my father, who was soon after brought to his bed by reason of a sore distemper in his feet. So I waited on him, and to keep myself

from idleness and get a little money, I put forward some small business, which was spinning of tobacco, my father's former occupation.

"My dear mother had always been a great help to me in my spiritual exercise, but sensible there was something at work in her heart which wanted to be perfected; and she would be very tender, and help me what she could. I had not courage to make my mother known to any after her decease, although her heart was many times loaded more heavily than I could bear, not knowing the reason; but in private places I sought relief in tears and prayers, which no mortal beside myself did know of, unless it was by the attention in my countenance and deportment, which might visibly appear; although I always behaved as cheerfully when in company as I could; but I am persuaded my dear mother had some sense of it, and that her prayers were heard on my behalf!"

(To be continued.)

From "The British Friend.

A Word to the Thoughtful.

Dear Friend,—Whilst it is almost impossible to read without interest the communication published in the current issue of the Journal, from our dear friends, the deputation to America, it is not a little painful to ponder the oft-recurring thought: What is the pond cause of these divisions, of the charges of unsoundness, of the accusations by one against another? Why should Manchester Friends have to meet and discuss "the decline of sociability in the Society of Friends and its remedy?" Why should the Society dwell either in numbers, power, sociability, spirituality, or in anything but that worldliness which is incompatible with Truth? What the reason that as a spiritual people, Friends have not the influence they formerly possessed? What the cause of meetings being given up, and meeting-houses closed? The must be some cause for these controversies at this lack of vigor; what is it? Having by recently read through George Fox's Journals; Sewel's History, and other early records of the Society, I am in some measure led to believe that the chief difference between the early "Friends of Truth," and those of to-day is just this: they were faithful, we are unfaithful.

Times have changed, and while it may be required of us, perhaps to copy literally, all things the manners or actions of early Friends, we must remember Truth has not changed, and will not, because it is Truth, and under no pretence can we maintain that it is not to be set forth as faithfully by us, as it was by them.

"The seed of God," said George Fox, "do not change;" and Edward Barrrough, in his closing hours of life declared that the spirit which had lived, and acted, and ruled in him should yet break forth in thousands; is it us to-day? Are we subject as he was to the law of the Spirit of life, willing to bear our suffer, given up fully to do our Lord's will?

A Society in that condition can not decline, can not divide, can not be disunited; there is no need in such a company to look to statistics for results; for where all are faithful, they will be power, and life, and increase. We indeed would it be if each one of us would unite on this common ground of faithfulnes

* Charles Sumner.—Op. cit.

by obeying the leadings of Truth in *all* things, both small and great, come to know strength and fellowship which no outside influence could effect or undermine.

And in closing these few words I feel it best to revive the language addressed in v. ii. to the Church in Ephesus. "I know your works, and thy labor, and thy patience, and how thou canst not bear them that are false; and thou hast tried them which say they are apostles and are not, and hast found them false: and hast borne, and hast patience, and my Name's sake hast labored, and hast fainted. Nevertheless, I have somewhat against thee, because thou hast left thy first love. Remember, therefore, from whence thou art fallen, and repent, and do the first works; else I will come unto thee quickly, and will move thy candlestick out of his place, except thou repent."

I remain, thine truly,

AN ATTENDER OF MEETINGS.

(1th mo. 14th, 1878.

Selected.

Address to Parents, from the Committee on Education of the Yearly Meeting of Friends of Philadelphia.

(Concluded from page 149.)

The happiness and cheerfulness of a home ere Christian love gives light and warmth, emulate the development of the mental as well as the moral nature; and that calmness and peace which pervade a household where true consideration prevails, and where that which is set upon the door of the lips which expresses thoughtless expressions, favors in the formation of a well-balanced and judgment. They lead to that constant purity that the fountain shall send forth sweet water and not bitter, which is the source of refreshment in social intercourse. We may also earnestly believe that the practice of waiting stillness before the Lord, and the habit of recollection and meditation which is in it, to promote a calmness of mind which is favorable to the full apprehension of subjects thought, and the reception of clear views of the truth in relation to both spiritual and temporal things.

The faithful members of our Society, from generation to generation, have learned to wait, the silence of their own reasonings, for the shining of the light of Christ, who is their Saviour and Teacher; and in it they have seen and embraced the same spiritual views of worship and holiness of life, that its first founders held. They have been brought to see, as they did, that the rule of fashion and custom founded on the spirit of the world is wholly incompatible with the life which our Saviour's precepts call for; that it thwarts the gracious designs for the well-being of man, and opposes the spread of his kingdom in their arts, and that therefore it is highly offensive in his sight.

We have consequently been called to witness and it for our own safety, and to bear a testimony against it for the good of others. To do this, and to keep out of the way of the many pleasures and pursuits which tend to disturb us of our true peace, requires of us a degree of non-conformity with the world, which calls narrow-minded and inconsistent with our duty to our fellow-men. But that cannot be a narrow-minded which is founded on eternal truth; and that must be the broadest view of which He has given us to see, who is God of

earth as well as of heaven, who designs the good of all, and in his infinite wisdom knows how most efficiently to employ his instrumental means.

As we find need of watchfulness for our own preservation, so also is it necessary to guard our children from temptation to things which tend to alienate them from the Truth. Let us not be induced to think that, as they must one day bear their part in the world, exposure to it in their youth will give them knowledge of its evils and strength to withstand them. The more youth sees of what is good, true, and pure, the more repulsive to them is that which is false and impure. Weak human nature lies open to the influence of much of the evil of the world, because its deceptive presentations are outwardly beautiful, and clothed with refined associations; while on the other hand, familiarity with unlovely vice deadens the sensibility, and at last destroys the perception of its hideousness.

Fearful will be the responsibility incurred by any of us, if by lack of sympathy, or any act of ours, we discourage or prevent our offspring from submission to the tender convictions with which they may be favored, in relation to bearing their testimony against the vain fashions and customs of the world.

Those even who have the most matured strength and experience, find that the world, the things of the world, its spirit, pride, and wisdom, like a mighty tide, bear down heavily upon them, and would carry away from the truth such as have found it, and sweep aside those who are seeking it. We should not leave our children, in their weakness and inexperience, to drift out, or venture out, into its overpowering current. Except under the enlightening influence of Divine grace, our children generally see only the world's pleasures; and if they perceive its dangers, they over-estimate their strength to withstand them. Warm-hearted and unsuspecting, they naturally cannot see any harm in general association with their neighbors, or in doing as those do who are considered respectable among them. But if we are faithful to them, we must not allow them to choose their associates without regard to our sense of what is best for them; and in deciding to what schools we will send them, we shall do them great wrong, if we allow their preference to overrule our best judgment.

How many have profited by this godly care of parents, and have risen up and called them blessed for their faithfulness, even in the restraints that were irksome at the time! From the foundation of this Society, wherever it was bearing most fruit to the praise of the Good Husbandman, this care most flourished.

And we must not forget that the good effect of our watchfulness against harmful association from without may be greatly weakened, or entirely undone, if we are not careful that our children are guarded against hurtful influences from persons of impure morals or irreligious character in our households, our workshops, and on our farms, as well as elsewhere.

Though we have to make the humiliating acknowledgment, that children less favored than those of our Society are sometimes examples to them of correctness and purity of conduct, these exceptions should not turn us aside from the general truth, that our home training makes our children, as regards morals, as well as for other considerations, the

safest companions for one another. The more careful exclusion from demoralizing amusements and worldly ways which prevails among us than exists in general society, is a reason for placing them almost universally in association with and under the care of our own members, in order to keep them from temptation and unsetting example; and in so doing, we save them from a conflict of feeling arising from comparison with others, which we may well desire they should be spared.

If we can, by our own faithfulness, secure the influence of our children over one another on the side of truth and a willing submission to its requirements, what strength they may receive from the association, and how peaceful and happy will their early years be! How greatly is it to the interest of all of us to join hands in this blessed work, "looking not each man upon his own" children "only, but also upon the" children of others, and endeavor to make our schools nurseries of the principles of truth!

The education which looks only to promote knowledge, intellectual pleasure and reputation, and the amenities of society, fails to see and provide for the higher objects of our being. The Giver of every good and perfect gift bestows real refinement; and the true culture is that which is carried on under his hand. We cannot get nearer Him nor help his cause by the culture which is of mere human wisdom; nor will the refinement which has not its root in love to God, as well as in love to man, however beautiful in form, be acceptable in his sight or bear fruit to his praise.

We have thus endeavored to trace out what we believe are the underlying principles of that religious and guarded education, both in the domestic circle and in the school, which is demanded from us as members of a Society making the profession we do. The best and most practicable mode of carrying out these principles may vary in conformity with the particular circumstances which surround the parental home; but we believe there can be no doubt of the injurious influences on their morals, and the future adherence to our principles and testimonies, often resulting from sending our children to schools not under the care of consistent Friends. We would in a spirit of sympathy for the pecuniary sacrifice that some may have to make in placing their children in Friends' schools, appeal to them not to pass lightly away from the consideration of the grave responsibilities they assume by a contrary course. The concern we now have at heart and urge upon you is no new or modern idea. The advices in our Book of Discipline on the subject of schools are replete with similar admonitions, some of which date back as far as the year 1746.

To accomplish the ends we have in view, it is not sufficient merely to provide schools taught by members, and of a more restricted attendance than those belonging to the State systems. Parents and Committees should be vigilant in seeing that corrupt habits and conversation, when manifested among the pupils, be checked; and if continued, the offenders be dismissed. Teachers should enter an account not only for faithfulness in scholastic instruction, but in Christian life and example before the youth, and for the use of all practical means to instil sentiments of piety and virtue. The Holy Scriptures should be read daily among them, and a right qualification sought for to

impress their precious truths on the hearts of the pupils. The reading books used should be carefully selected, and all those which are objectionable in principles or moral tone rejected. We fear that the increased facilities for the perusal of unprofitable literature afforded by the public libraries that are growing up in many neighborhoods, and the cheap magazines and periodicals which so freely circulate, are exposing our children to evil influences that many parents are not fully aware of, and which demand renewed diligence to guard them against.

The time is near at hand to all of us, when, as the world recedes from our view, we shall prize at a low estimate all earthly possession or honors, or intellectual reputation for our selves, and shall lightly esteem them for our offspring in comparison with an inheritance with the saints in light. At that solemn hour, it will be an inexpressible solace to us to feel that we have endeavored to be faithful to our trust as guardians of "the heritage of the Lord." Let us therefore now, in our daytime, seek to walk in that light which will illuminate both their and our pathway to true peace, and reveal the hidden dangers which beset us on every hand. With an humble reliance on his mercy who invited the little children to come unto him and receive his blessing, and who used a child as a type of that lowliness of heart which forms a necessary qualification to enter his kingdom, we may come boldly to the throne of grace for wisdom to direct us in the responsible charge allotted to us, and finally, as we endure to the end, shall render up our accounts with joy, and not with grief.

Sacredness of a Promise.—Charles James Fox is said to have traced his own sense of the sacredness of a promise to a lesson he got from his father, Lord Holland, when he was a boy. When home for the holidays and walking with his father in the garden, his father pointed to a wall which he intended to have pulled down.

"Oh," said the boy, "I should like to see a wall pulled down."

"Well, my boy, you shall," said the father. The thing, however, escaped his memory, and during the boy's absence a number of improvements were made, and among them this wall was torn down and a new one built up in its place. When the boy came home and saw it he said:

"Oh father, you promised to let me see that wall torn down."

Instantly the father remembered his promise, and was deeply pained to think he had seemed careless about his pledged word.

"My boy," he said, "you are right, I did. It is too late now to do just what I said I would, but you shall to see a wall pulled down, and so you want."

And he actually ordered the mason up and made him pull down and rebuild the new wall, that as nearly as possible his promise might be made good.

"It cost me twenty pounds," he said to a friend who was bantering him about it, "but," he said, "if it had cost a hundred pounds, I should have thought it a cheap way of impressing on my boy's mind, as long as he lives, the importance that a man of honor should attach to a pledged word."

Use temporal things but desire eternal.

ONLY.

Only a word for the Master,
Lovingly, quietly said,
Only a word!
Yet the Master heard,
And some fainting hearts were fed.

Only a look of remonstrance,
Sorrowful, gentle, and deep,
Only a look!
Yet the strong man shook,
And he went alone to weep.

Only some act of devotion,
Willingly, joyfully done,
"Sincerely 'twas naught!"
(So the proud world thought)
But yet souls for Christ were won!

Only an hour with the children,
Pleasantly, cheerfully given,
Yet seed was sown
In that hour alone
Which would bring forth fruit for heaven!

"Only"—But Jesus is looking
Constantly, tenderly down
To earth, and sees
Those who strive to please;
And their love he loves to crown,
—*Charlotte Murray, in The Christian.*

GOLDEN ROD.

Sweet ferns within the hollow wave, wild roses climb
the wall,
And forget-me-nots creep near the leaping water-
fall;
The summer days are passing by—slip on the shining
hours;
We read the rubric of the leaves, and tell our beads in
flowers.

Now bloom the lilies white as snow, now flamm the
lilies red;
Now lifts the gladiolus high its sword to beauty wed,
Now o'er the larkens in violet mist, the acent lightly
flots,
And trumpet-flowers seem to fling shrill music from
their throats.

O, rich and rare the loveliness that o'er the land we see,
From meadow's pride, beneath our feet, to vines that
wander free;
From fiery snags' fearless plume, or clover on the sod;
But nothing wears a gladder suite than thine, fair
golden rod.

Brown hands of children hold thee fast, a treasure
preciously won,
And dimpled baby fingers grasp and toss thee in the sun,
Thy glittering wealth o'ersteps the field, and many a
lonely place
Grows cheery 'neath the blessing and the brightness of
thy face.

For thou art on the hillside bare, where scant and
struggling sod,
And patient lichens, toiling slow, adorn the paths un-
trod;

Where sleep the saints of other days, by fickle man
forgot,
But held in tender care by God, whose goodness
changeth not.

The wildling bee sings love to thee; the yellow butterfly,
A moment poised on thy stem, then silent flitteth by;
All things who meet are blither for thy knightly bearing
day;
O gentle flower of Summer's dower, the last to fade
away.

A girl who had been brought under the influ-
ence of religion, when questioned as to the
evidence of the reality of the change which
had taken place in her, made this reply:
"Well! for one thing, I always sweep under
the mats now, and I never used to before!"

From the little acorn comes "the monarch
of the forest, pushing upward ever." Its
lesson is perseverance.

Thoughts and Feelings.

FAITH.

The necessity, virtue, and efficacy of living
saving faith, is impressively set forth in the
words of the Apostle:—"Without faith it
is impossible to please God." &c. And of the
early day, the same inspired writer declares:
"By it the elders obtained a good report."
"By it they subdued kingdoms, wrought
righteousness, obtained promises, stopped the
mouths of lions, quenched the violence of fire,
escaped the edge of the sword, out of weakness
were made strong," &c., while others en-
dured cruel mockings and scourgings, bond
and imprisonment; "being destitute, afflicted,
tormented;" and all "that they might obtain
a better resurrection." How clearly the
Apostle proves this faith to be what, in the
beginning of the chapter to the Hebrews es-
pecially devoted to the subject, he represents to
be "The substance of things hoped for, the
evidence of things not seen."

While this is the faith that overcomes the
world, and robs the dark cold grave of its
victory, it is by no means at our beck or dis-
posal, to be stirred up or put on when and
where we please; but is the gift of God; and fill
all His other gifts must be waited for in the
submissive, reverential bowdown of so
which becomes such frail, dependent pilgrim
of earth unto and before an omnipotent Father
in heaven. If Jesus, without whom we can
do nothing, be the author and finisher of the
faith, then in and through Him alone, indis-
putably, must lie the ability, the wisdom, the
efficacy, the bestowal of saving faith—from
whom is every good and perfect gift.

This faith begets a true-hearted obedience
in life and conversation,—that practical ser-
vice to an invisible, yet omnipotent Holy One.
Through this, by grace, we are saved. Through
this the humble faithful disciple is enabled to
quench all the fiery darts of the wicked. "B-
t"his the just are to live, as Paul testifies: "B-
t"his life which I now live in the flesh, I live by
the faith of the Son of God, who loved me
and gave himself for me." It is through this
faith in Christ Jesus that the Scriptures are
able to make us unto salvation. By virtue
of which, Moses chose "rather to suffer affliction
with the people of God, than to enjoy the
pleasures of sin for a season; and by which
he endured all that was permitted him, a
seeing Him who is invisible." It was and is
by and through this, that forgiveness of sins
and inheritance among them which are sanc-
tified are to be received; and whereby also
the saints of old were kept by the power of
God unto salvation.

Our early Friends must have possessed this
practical faith in an eminent degree; else
they could not have borne up against all the
calumnies, imprisonments, persecutions, some-
times even unto death, which was almost un-
sparingly heaped upon them because of their
adherence to the testimonies and gospel of
Jesus. But looking over this vain and fleeting
world with the keen eye of faith, like
Israel's temporal ruler before spoken of, they
"endured as seeing Him who is invisible; for
like him too, they "had respect unto the re-
compense of the reward."

Would that we, the descendants—shall I
say the representatives—of professedly the
same faith of these sons of the morning
might, in the faith and patience of the Lamb
rally to first principles. Might again lift the

ndard of good old fashioned Quakerism, and plumb with uncompromising fidelity and faithfulness to the banner of the cross, which they so nobly relieved, and to that faith rich then, and now, and ever, is sufficient, though small as a grain of mustard seed, to move mountains; that so, building up oves, through power from on high, on our best holy faith, we may be enabled to build waste places—the dilapidated walls—even troublous times; whereby the church may e more be established in the faith; and nether by the prayers, the tears, the sufferg or the service of sons and daughters, they joyfully be seen coming "up from the wilderness leaning upon her Beloved."

From the "American Journal of Science and Arts"

Forest Geography and Archaology.

BY ASA GRAY.

(Continued from page 148.)

The difference in the composition of the Atlantic and Pacific forests is not less marked than that of the climate and geographical configuration to which the two are respectively adapted.

With some very notable exceptions, the forests of the whole northern hemisphere in the temperate zone (those that we are concerned with) are mainly made up of the same or similar kinds. Not of the same species; for rarely do identical trees occur in any two or more widely separated regions. But all round the world in our zone, the woods contain *Pinus* and *Firs* and *Larches*, *Cypresses* and *Junipers*, *Oaks* and *Birches*, *Willows* and *Poplars*, *Maples* and *Ashes* and the like. Yet with all these family likenesses throughout, each region has some peculiar features, some trees by which the country may at once be distinguished.

Beginning by a comparison of our Pacific with our Atlantic forest, I need not take the time to enumerate the trees of the latter, as all may be supposed to know them, and any of the genera will have to be mentioned drawing the contrast to which I invite your attention. In this you will be impressed most of all, I think, with the fact that the greater part of our familiar trees are "conspicuous by their absence" from the Pacific forest.

For example, it has no Magnolias, no Tulipes, no Papaw, no Linden or Basswood, and very poor in Maples; no Locust-trees—either Flowering Locust nor Honey Locust—nor any leguminous tree; no Cherry large enough for a timber tree, like our wild Black cherry; no Gum-trees (*Nyssa* nor *Liquidambar*), nor Sorrel-tree, nor Kalmia; no Persimmon, or Bumelia; not a Holly; only one Ash that may be called a timber-tree; no Catalpa, or Sassafras; not a single Elm, nor Hackberry, not a Mulberry, nor Plataner tree, nor Jacalra; not a Hickory, nor a Beech, nor a true Chestnut, nor a Hornbeam; barely one Birch tree, and that only far north, where the differences are less striking. But as to Coniferous trees, the only missing type is our old Cypress, the so-called Cypress of our southern swamps, and that deficiency is made up by others.

But as to ordinary trees, you ask what takes the place in Oregon and California of all these missing kinds, which are familiar on our side of the continent. I must answer, nothing, or nearly nothing. There is the *Madroño* (*Arbutus*) instead of our Kalmia (both really trees in some places); and there is the California Laurel instead of our southern Red Bay tree. Nor in any of

the genera common to the two does the Pacific forest equal the Atlantic in species. It has not half as many Maples, nor Ashes, nor Poplars, nor Walnuts, nor Birches, and those it has are of smaller size and inferior quality; it has not half as many Oaks; and these and the Ashes are of so inferior economical value, that (as we are told) a passable wagon-wheel cannot be made of California wood, nor a really good one in Oregon.

This poverty of the western forest in species and types may be exhibited graphically, in a way which cannot fail to strike the eye more impressively than when we say that, whereas the Atlantic forest is composed of 66 genera and 155 species, the Pacific forest has only 31 genera and 78 species.

Now the geographical areas of the two forests are not very different. From the Gulf of Mexico to the Gulf of St. Lawrence about twenty degrees of latitude intervene. From the southern end of California to the peninsula of Alaska there are twenty-eight degrees, and the forest on the coast runs some degrees north of this; the length may therefore make up for the comparative narrowness of the Pacific forest region. How can so meagre a forest make so imposing a show? Surely not by the greater number and size of its individuals, so far as deciduous (or more correctly non-coniferous) trees are concerned; for on the whole they are inferior to their eastern brethren in size if not in number of individuals. The reasons is, that a larger proportion of the genera and species are coniferous trees; and those being evergreen (except the Larches), of aspiring port and eminently gregarious habit, usually dominate where they occur. While the east has almost three times as many genera and four times as many species of non-coniferous trees as the west, it has slightly fewer genera and almost one-half fewer species of coniferous trees than the west. That is, the Atlantic coniferous forest is represented by 11 genera and 25 species; the Pacific by 12 genera and 44 species.

Indeed, the Pacific forest is made up of conifers, with non-coniferous trees as occasional undergrowth or as scattered individuals, and conspicuous only in valleys or in the sparse tree-growth of plains, on which the oaks at most reproduce the features of the "oak openings" here and there bordering the Mississippi prairie region. Perhaps the most striking contrast between the west and the east, along the latitude usually traversed, is that between the spiry evergreens which the traveller leaves when he quits California, and the familiar woods of various-hued round-headed trees which give him the feeling of home when he reaches the Mississippi. The Atlantic forest is particularly rich in these, and is not meagre in coniferous trees. All the glory of the Pacific forest is in its coniferous trees.

We may count the indigenous forest trees of all Europe at 33 genera and 55 species. And those of the Japan-Manchurian region, of very much smaller geographical area, at 66 genera and 168 species. I here include in it only Japan, Eastern Manchuria, and the adjacent borders of China. The known species of trees must be rather given are not exaggerated, and are much more likely to be sensibly increased by further knowledge than are those of any of the other regions. Properly to estimate the surpassing richness of this Japan-

Manchurian forest, the comparative smallness of geographical area must come in as an important consideration.

To complete the view, let it be noted that the division of these forests into coniferous and non-coniferous is, for the

	General Species.	
European non-coniferous,	26	68
" coniferous,	7	17
	33	85
Japan-Manchurian non coniferous, 47	123	
" coniferous,	19	45
	66	168

In other words, a narrow region in Eastern Asia contains twice as many genera and about twice as many species of indigenous trees as are possessed by all Europe; and as to coniferous trees, the former has more genera than the latter has species, and over twice and a half as many species.

The only question about the relation of these four forest regions, as to their component species, which we can here pause to answer, is to what extent they contain trees of identical species. If we took the shrubs, there would be a small number, if the herbs a very considerable number, of species common to the two New World and to the two Old World areas respectively, at least to their northern portions, even after excluding arctic alpine plants. The same may be said, in its degree, of the Atlantic European flora compared with the Atlantic North American, of the North-east Asiatic compared with the northern part of the Pacific North American, and also in a peculiar way (which I have formerly pointed out and shall have soon to mention) of the North-eastern Asiatic flora in its relations to the Atlantic North American. But as to the forest trees there is very little community of species. Yet this is not absolutely wanting. The Red cedar (*Juniperus Virginiana*) among coniferous trees, and *Populus tremuloides* among the deciduous, extend across the American continent specifically unchanged, though hardly developed as forest trees on the Pacific side. There are probably, but not certainly, one or two instances on the northern verge of these two forests. There are as many in which eastern and western species are suggestively similar. The Hemlock Spruce of the Northern Atlantic States, and the Yew of Florida are extremely like corresponding trees of the Pacific forest; indeed the Yew-trees of all four regions may come to be regarded as forms of one polymorphous species. The White Birch of Europe and that of Canada and New England are in similar case; and so is the common Chestnut (in America confined to the Atlantic States), which on the other side of the world is also represented in Japan. A lark in the other direction is seen in one spruce tree (called in Oregon Menzies Spruce) which inhabits Northeast Asia, while a peculiar form of it represents the species in the Rocky Mountains.

But now other and more theoretical questions come to be asked, such as these:

Why should our Pacific forest region, which is rich and in some respects unique in coniferous, be so poor in deciduous trees?

Then the two *Big Trees*, Sequoias, as isolated in character as in location,—being found only in California, and having no near relatives any where,—how came California to have them?

Such relatives as the Sequoias have are also

local, peculiar, and chieflly of one species to each genus. Only one of them is American, and that solely eastern, the *Taxodium* of our Atlantic States and the plateau of Mexico. The others are Japanese and Chinese.

Why should trees of six related genera, which will all thrive in Europe, be restricted naturally, one to the eastern side of the American continent, one genus to the western side and very locally, the rest to a small portion of the eastern border of Asia?

Why should coniferous trees most affect and preserve the greatest number of types in these parts of the world?

And why should the Northeast Asian region have, in a comparatively small area, not only most coniferous trees, but a notably larger number of trees altogether than any other part of the northern temperate zone? Why should its only and near rival be in the antipodes, namely, here in Atlantic North America? In other words, why should the Pacific and the European forests be so poor in comparison, and why the Pacific poorest of all in deciduous, yet rich in coniferous trees?

(To be continued.)

For "The Friend."

Memoranda of Meetings.

6th mo. 15th, 1843. Sannel Battle spoke of the importance of a practical religion; not only of entertaining sound doctrine, but of scrupulously carrying it out in life; and of experiencing a forgiveness of past sins through the mercy of God, in Christ Jesus; and maintaining an upright walking before Him. We are liable to sin daily, unless preserved through the power of God. As a man beholdeth his natural features in a glass, and goeth away forgetting what manner of man he is, so are we liable to forget; to be off our guard in spiritual matters.

Thomas Kite supplicated for some who felt themselves very little in the Divine sight, and conceived it to be a mercy that his regard extended even to them. He prayed the Lord of the harvest in his own time to send forth laborers into the harvest field. He asked that the dark places of the earth, the habitations of enmity, might be made to hear the joyful sound of the Gospel proclaimed to them; and that the meeting might be enabled at this season, to worship the Lord God and the Lamb, who is forever worthy.

6th mo. 18th. Thos. Kite quoted, "Enoch walked with God, and was not; for God took him;" we may all walk with God. When it was said, "I am the God of Abraham, of Isaac and of Jacob," it had allusion to their living, never-dying part; for it was added, God is not the God of the dead but of the living. The Almighty in his dispensations does not retrograde; what was of a spiritual nature among the antediluvians was perpetuated in the patriarchal times, and with any additional, merged into the law; and still farther was not lost, but brought forward to the greater manifestations in the Gospel day: as it were the dim twilight of the morning, opening into the bright blaze of the perfect day. If any of us, like the prodigal son, would go to the Father and say (with the prodigal's feelings), "Father I have sinned against Heaven, and in thy sight, and am now none worthy to be called thy son;" He would mercifully compassionate our state, as He did that of the prodigal, who had spent his substance in riotous living; and when he had his just view of himself and was reduced to

extremity, he was willing to feed on the husks. Thomas encouraged to faithful obedience, and quoted the passage, "Come out from among them and be ye separate; touch not the unclean thing, and I will receive you, and will be a Father unto you, and ye shall be my sons and daughters, saith the Lord Almighty."

In the afternoon T. Kite again spoke, beginning with, Verily thou art a God that hidest thyself, Oh! God of Israel, the Saviour. At times, all the servants of the Lord have their faith tried; the patriarch Jacob wrestled all night for the blessing, and prevailed. Some passages of Scripture had occurred sweetly to him. Some might come and sit the greater part of a meeting through, perhaps the whole of it, or several meetings, without having the access to the living fountain they had once been favored with; still he offered the language of encouragement to them, to persevere in patient waiting.

Guilelm Widdowfield, in a weak voice, encouraged to patient waiting, watching unto prayer, &c. Her mind had been humbled under a sense that there were some present who after the heads of some of the present aged ones were laid low, would have to become judges as at the first, and counsellors as in the beginning, though at present occupying obscure stations. She expressed the desire that the aged ones who had found Christ to be their morning light, might find Him to be their evening song.

The German Military.

A foreign correspondent of the *National Baptist*, thus refers to the military system of Germany, which is a heavy burden on the resources of the country, and a most fruitful source of demoralization and irreligion.

"In Berlin there are about thirty thousand soldiers, considerably more than the whole standing army of the United States—and Germany is at peace. At Potsdam, half an hour from Berlin by rail, the garrison, seven thousand men, is equal to about one-sixth of the population of the town.

Every German, unless specially exonerated, is required to be a soldier for twelve years; three years of active service, four years in the Reserve, and five years in the Landwehr. The service begins at the age of twenty-one years. The first three years are taken solidly out of a man's life; he is a soldier, and nothing else. It is understood that many young men emigrate in order to escape this serious obligation. In the Reserve and the Landwehr, in peace times, the service is hardly more than nominal.

The government looks over the religious welfare of the troops. They are marched to the garrison churches every Sunday morning; and if the churches cannot contain them all, they go in detachments by turns. But the soldiers do not relish this kind of church-going.

At nine o'clock, each evening, the men are drawn up in company line to say their prayers. It must be an edifying sight to see a company praying by word of command, the orders given, perhaps, by an officer who omits no opportunity of cursing the men on other occasions. The length of time to allow for this act of devotion is a delicate point to decide. One officer, after mature consideration, fixed upon thirty-seven seconds, after which it was understood that the car of Heaven would be closed for the night. It would be

of rare interest to know upon what data the officer based his close and critical decision; why, for instance, he threw in the odd seven seconds, instead of stopping with a clean half minute!

I have seen reports of habitual cruelty to the men, on the part of non-commissioned officers. These cruelties are said to be practised especially by Prussian officers in the provincial districts. It is very difficult for the victims to protect themselves. The own unsupported complaints are not sufficient, and would probably only aggravate their trouble. And their comrades hesitate to give their testimony for fear of making serious trouble for themselves. In this situation, some of the victims grow despondent and it is believed that this is a partial explanation of the numerous suicides in the army. Here is an offence that smells to heaven; and it has, I believe, also reached the olfactory of the German rulers, and an investigation has been ordered. These brutal non-commissioned officers probably lead the nine o'clock devotions. What emotions—what dark passions of hate and revenge—what scorn of religion, as thus represented,—must agitate some of the men whose heads are bowed in seeming worship!"

After sitting sometime, and feeling the difference which prevails in many on the subject of religion, I was led to advert to the circumstance, that persons engaging in any business to obtain a livelihood, must be aware that it could not be advantageously conducted without steady attention and diligence. Valuable crops could not be expected from their farms, if they work industriously for a short time, and then leave it; proper system and diligence are necessary to insure good returns, everything being done in its season, and carefully looked after. So in the great work of salvation, which is of far greater moment than the provision for these tabernacles of clay. No advancement can be expected by those who for a short time, give up to the convictions of duty, and then conclude they may forbear, and let the work drop for awhile; perhaps they think, until they have more leisure, or have accomplished some worldly project. They may suppose religion can be taken up when they please; but it is out of our power to command one of the days of the Son of Man, by whom alone the work is begun and perfected. None know whether He will ever again renew those heavenly visitations. There is a day granted in which man may work; but he may out-sin that day. It will then be impossible for him to work, and the things that belong to his peace will be hid from his eyes, as it was declared respecting the people of Jerusalem. They were earnestly labored with, to persuade every one deeply to consider these things, and to lay hold of the offers of Divine Grace; that they may glorify God in their day, and be made partakers of the hope of the gospel, even the salvation of the soul.—*Journal of Wm. Evans.*

In the diary of Jonathan Burnyeat, under date of 1706, he mentions being at Dublin Half-Year's meeting, of which he says:—

"There were some weighty matters recommended to the nation from the chamber meeting (which consists of faithful Friends out of every province, [including] ministers), about the education of Friends' children, as putting

em to trades, not to keep them at school long, nor to put them to high trades over their abilities, but to handicraft [business], as carpenters, weavers, shoemakers, &c.; that so the creation might be supplied, & Friends' children relieved out of idleness & hurtful things. These things were spoken by Friends, but more especially by our aunt and honorable Friend, William Edmunds, who spoke with great authority." Is there not need of the same caution at this day; that in seeking employment for our children, we do not seek "great things" for them in a worldly sense, but rather train them that moderation of their desires, which would make them content with such business it is within their ability to manage?

Carrying Their Own Brimstone.—After a visit in a place where the people had been good deal bewildered by a preacher who boasted only so much of the Bible as suited his whims, a man stepped up to me, and said a cautioning voice:

"Bishop, do you believe in a hell?"

I said, "Are you anxious to know what I think of hell?"

"Yes," said he.

"Well," said I, "the best answer I have ever heard came from a poor negro woman. She had a young niece who sorely tried her for soul. The more she struggled to keep his willful charge in the right way, the more she seemed to wander. One day, after hearing a new preacher, the niece came bounding to the room, and said:

"Aunt, I ain't gwine to believe in a hell no more. Ef dar is any hell I jest wants to know where dey gets all dere brimstone for it place; dat's zactly what I would like to know."

The old woman fixed her eyes on her, and thar a tear on her cheek, said,

"Ab, honey darlin', you look out you don't dare, for you'll find dey all takes dere own brimstone wum'."

I then said, "Is there any other question of theology you would like to ask?"

"No," said he.

And he went home, I hope with a new idea that sin brings sorrow, and that to be saved is need deliverance from sin. Some men cry—"their own brimstone" even in this world.—*Bishop Whipple.*

The *British Friend* for the Twelfth month intentions, that in the last Quarterly Meeting in London, a strong expression took place in favor of replacing Barclay's Catechism in our schools, and in the hands of the young. All who know the work (and some did), spoke of peculiar value and suitability, and how it had been a strength to them.

A letter from a Friend travelling on the continent says, that in Hungary during the last 16 years, there has sprung up a religious party called the Nazarenes, who refuse military service, will not take oaths, and in other respects are very like Friends. He says that the new converts are all from the very lowest ranks of the people, but their great industry & strict integrity quickly raise them in the social scale. Their houses are models of cleanliness. They are greatly respected throughout Hungary for their many virtues and exemplary conduct. There may be in all 10,000 of them in Hungary.

Let us make a stand on the ancient ways, and then look about us, and discover what is the straight and right way, and walk in it.—*From a writer of last Century on Innovation.*

Were all men to bring together their burdens of sorrow to be equally divided, each on reflection would choose his own.—*Socrates.*

THE FRIEND.

TWELFTH MONTH 28, 1878.

We have received two communications from Friends of Bloomfield, Ontario, criticising the article recently published in our columns from the pen of Thomas Clark, in reference to the separation in Norwich Monthly Meeting. The writers reside in a part of the Yearly Meeting quite remote from that in which the separation occurred. With some omissions the communication first received is as follows:

"My attention having been drawn to an article in 'The Friend' of 11th mo. 30th, signed Thomas Clark, I felt unwilling that the numerous readers of that Journal should be led astray by such a one-sided statement. As I have never attended any of the meetings in Pelham Quarter, I shall leave to A. S. and the members of that meeting to explain the causes that have led to the present sorrowful state of affairs there, but shall confine myself, as nearly as possible, to what took place at our Yearly Meetings in 1877, and 1878.

In 1875 a strong effort was made to change the Clerk, Pelham sending no less than eleven representatives, but we were obliged to report we could not agree. In 1876 the same difficulty, I understood, existed, but they proposed the old Clerk. In 1877 they succeeded in getting W. Spencer in as Clerk, he having been Clerk of Pelham Quarterly Meeting, when they decided that Norwich Friends should take no part in the business of that meeting. When the Yearly Meeting convened, a paper was laid on the table, signed by twenty-six men Friends of Norwich Meeting, stating their case and asking relief from the Yearly Meeting, which was couched in respectful, temperate language. When the attention of the meeting was at length drawn to it (either the third or fourth session), one of the members of Pelham Quarter, who has taken a very active part in their difficulties, at once suggested that the Clerk should nominate three Friends to examine it, and report to a future sitting. Before Friends could have proper time to protest against so unusual a proceeding, the Clerk acted upon it by nominating Thomas Clark and two others to that service; but without entering it on the minutes. I can only say that to any one acquainted with the nominees of the Clerk, the result could not be for a moment doubtful. They reported that it was not proper to introduce it to the meeting. T. Clark says, "the attention of the Yearly Meeting not having been called to it in a constitutional way, there was a peculiar difficulty in the Yearly Meeting trespassing upon the jurisdiction of Pelham Quarter, by dealing uninvited with one of its Monthlies." How the Norwich Friends were to bring their difficulties under the notice of the Yearly Meeting in a constitutional way when one Monthly Meeting usurped the authority of the Quarterly

Meeting and would not forward it, T. C. does not tell us.

"In 1878, two sets of minutes from Pelham being produced, a committee of men and women was appointed to examine them. What took place in the committee I cannot tell, not being one of them, but I know the committee did not all attend, and one who did (not one of the seven) told me that so strong were the objections urged against the words 'prevailing sense,' that she thought T. Clark had omitted them, which she considered was more agreeable to the truth. When the report was read in the Yearly Meeting, I asked the meeting to pause before they confirmed the disownment of more than forty Friends (many of them ministers and elders), and proposed that neither set of minutes be received, but the Friends on both sides be allowed the full privileges of the meeting, and a judicious committee be appointed to attend that meeting and try to restore harmony. As the party who controlled the meeting would not listen to any thing of that sort, many of us left in disgust and returned home. Before I left the Clerk mentioned that two epistles were received from Western Yearly Meeting, and nominated two Friends to examine them, who retired for a short time and reported the one signed B. C. Hobbs was the one to read.

"T. C. says, 'he thinks it will be news to Friends of Canada to hear that any portion of their members have adopted any peculiar theory of the Plymouth Brethren, or that the real issue between the Norwich Friends rested wholly upon the use of artificial music.' The latter part of the quotation of the words of A. S. I consider to be mere garbling of what he intends to convey. The former part T. C. may 'think' or believe, he living in the compass of a small indulged meeting where travelling Friends do not always stop, and his health will not permit him to get much from home; but I can assure him that we at West Lake are painfully aware that doctrines are proclaimed and practices introduced into our meetings which are totally at variance with Friends' principles: whether they form any part of the theory of the Plymouth Brethren I know not, being ignorant of their peculiar theories. Not long since one of those Newlights from the West (certified to us as a minister) on entering the meeting-house, and before taking his seat, 'thanked God he did not have to wait for the Holy Spirit to set him to work, as he could go to work of himself at once.' Another told us more than once, 'that if we forsook our sins, which was repentance, and believed in Jesus, our salvation was accomplished.' 'That Christ did not visit the hearts of the unconverted, but only after we went to work Dr him,' &c. 'That salvation did not require days or months or years, but could be accomplished at once.' 'That the converted soul never experienced sorrow or suffering, but was always happy and cheerful,' with more of the like import; and these doctrines were not proclaimed by a few, but frequently by those travelling as ministers. One of our own members, who seems to practise what he preaches in that respect, has told us that 'we had no occasion to sit in silence five minutes, not even one minute, but should go to work at once.' Congregational singing has also been introduced into appointed meetings; and when I remonstrated with a prominent Methodist at his taking part in it, his reply was, that 'he had

been specially invited as having a good voice, and that it was a Quaker lady that led it off." I need not tell thy readers, or even T. C., that such are not the doctrines or way of worship of Friends.

In conclusion I can say, that I also have passed my three score years and ten, and the principles of the Society in which I had a birthright, were never dearer to me than at the present time, and having enjoyed an intimate acquaintance and unbroken friendship with T. C. since we were young, I am deeply grieved that one whom I have ever considered to be one of the ablest exponents of our principles of my acquaintance should, in his declining years, constitute himself the apologist and co-worker of a party who are trying to ignore and trample on the precious testimonies that our forefathers suffered and died for. And I firmly believe, that unless the Church will forsake those false gods that she seems to be now bent on worshipping, and come back to her first love, she will become, like Israel of old, a hissing, and a byword to the nations around her.

WILLIAM VALENTINE.

Bloomfield, Ont., 12th mo. 10th, 1878."

The second communication is signed by Levi Varney, and corroborates the views expressed by Wm. Valentine. It says: "The difficulties existing in Pelham Quarterly Meeting, are not confined to Friends in Canada, but are found in all the Yearly Meetings, and the cause is the same,—a departure from the doctrines and the practices of our religious Society. The trouble in this Yearly Meeting has grown out of the professions and acts of a portion of its members, which are clearly set forth in 'a Statement issued by Norwich Monthly Meeting,' and by which it appears that the remarks of A. S. were correct."

As a member of the Yearly Meeting's committee in the case of Pelham Quarterly Meeting, L. Varney speaks more particularly of T. Clark's account of what took place therein, which he appears to think calculated to "convey to strangers a wrong impression," especially the statement that the report drawn up by T. Clark, was adopted by the committee "without any expressed dissent." In reference to this he says: "By more than one or two of the committee, he was requested to change the wording of [the report], being distinctly told that to say 'it was the prevailing judgment of the committee, &c., was too full. But there was an apparent unwillingness to make any change, or even to hear any objections."

The testimony borne by these two Friends, that a departure from the doctrines long believed in and upheld by the Society of Friends was the fundamental cause of the dissensions which have arisen among Friends in Canada, we believe to be true; and we have no doubt that similar causes are producing similar effects in various other parts of the Church. In saying this we by no means wish to imply that all who take part on one side of a dispute so awakened are doctrinally right, and all on the other side doctrinally wrong in their own sentiments; for a multitude of secondary influences often operate, which materially modify the actions and feelings of individuals, and cause them in many cases to lose sight of the original point of divergence.

We believe a serious responsibility rests upon meetings of Friends which send forth

with credentials of unity ministers holding and preaching such sentiments as William Valentine has heard proclaimed by some visitors. Neither do we see how the elders and concerned members of meetings where such visitors come, can discharge their duty to the flock over which they are overseers; unless they take measures to guard them against such unsound doctrine. Unless more care in these respects is maintained, we fear that division and discord will continue and increase, and that happy day will be put off, when we can from blessed experience adopt the language of the Psalmist, "Behold how good and how pleasant it is, for brethren to dwell together in unity."

SUMMARY OF EVENTS.

UNITED STATES.—During the past week Congress adopted a bill appropriating \$560,000 for the expenses of the yellow fever commission. Also a bill appropriating \$150,000 for the railway mail service. The Senate considered several of the appropriation bills passed by the House, and they were amended and returned; Blaine's resolution of inquiry into the Southern elections also passed with Thurman's amendment, extending the inquiry to some other States. On the 20th both Houses adjourned to the 7th of next month.

The Postoffice General in his last report says, the city free collection and delivery system, pays better than any other branch of the service, it having yielded a profit of \$628,084 for the year. The United States has no foreign mail service, beyond the agreements made with certain lines of steamers, to divide the postage received for foreign mail, paying over to such foreign countries the amount of the postage. The entire sum paid for sea postages for the year was \$197,276.

The Secretary of the Treasury has authorized the payment of the interest due next month on the public debt, in coin or currency at the option of the holder. A call has been issued for the \$10,996,100 of 5-20 coupon bonds, maturing on the 1st of next month, these bonds outstanding, not included in previous calls.

At the close of business on the 16th inst., the Treasury of the United States held \$228,109,201 in coin. The Treasurer expects to have on the first of the year, exclusive of all demands, \$135,000,000 in coin, with which to resume specie payments.

The total cost noted at par on the 17th inst., for the first time since 1862. Since the suspension of specie payments in 1861, the highest price to which gold attained was 285, in the year 1864.

A circular has been issued by the Secretary of the Treasury authorizing the collectors of the several ports to cause an inspection to be made of cattle proposed to be shipped to Great Britain. This is in accordance with a telegram from that country, announcing that cattle imported into Liverpool will be slaughtered at that point unless they are accompanied by a certificate of health from the place of export.

There has been an increase of 439 scholars in South Carolina during the past year. The school attendance is 116,259 of this number 61,113 are colored pupils. The increase in attendance since last year is 13,843. There are 2091 white teachers, and 1026 colored—only 49 of the whole number being Northerners. Male teachers receive average monthly wages of \$121.66, and female the disproportionate amount of \$87.70.

The total cost of education in West Virginia for the past year is estimated at \$869,818.31. There has been a large increase of attendance, and a corresponding reduction in expenses.

The annual report of the Public Printer in Washington, shows the cost to the Government of the printing, binding, engraving, lithographing, &c., for the last fiscal year was \$1,628,740.

The number of deaths in this city for the week ending on the 21st, was 286.

Markets, &c.—Gold 100. U. S. sixes, 1881, registered, 106½, coupon, 109½; 5's, 105; 4½ cents, 101½; 4's 100½; 5-20's, 1867, registered, 102½, coupon, 105½; do, 1865, registered, 108, coupon, 109.

Cotton.—Midlings sold in lots at 9½ cts. per lb. Petroleum.—Crude 7½ cts. in barrels, and standard white at 8½ cts. for export, and 11½ 12½ cts. per gallon for home use.

Flour—Prices were lower. Penna. extra, \$3 50 a \$1; Minnesota extra, \$4 50 a \$4 62½; Ohio extra, \$4 75 a \$4 80; \$4 50 a \$5; patent and other high grades, \$7 75 a \$8,

Rye flour, \$2 75 a \$3 00. Corn meal, \$2 55 a \$2 66. Feed—Wheat, \$1 4 a \$1 50 per ton.

Grain.—Wheat a fraction lower—red \$1 a \$1 06½; amber, \$1 06½ a \$1 07½; white, \$1 07 a \$1 08. Rye, 47, 37 cts. Corn, western yellow, 47, 47 cts.; Penna. and southern, 47 a 48 cts. Oats, fair and good, 30 a 32 cts.; choice, 32 a 33 cts.

Seeds.—Clover, 5½ a 6½ cts. per pound. Flaxseed, \$1 35 a \$1 37½ per bushel.

Hay and Straw.—Prime timothy, 55 a 65 cts. per 100 pounds; mixed, 45 a 55 cts. Straw, 60 a 70 cts.

Ewt cattle were in steady demand 2500 lbs. and under, at \$1 a \$1 10; extra, 41 a 43 cts. for fair and good, and 3½ a 4 cts. per pound gross for common Sheep, 33 a 35 cts. per pound, as to condition. Hog 3½ a 4½ cts. per pound.

FOREIGN.—Parliament adjourned on the 17th inst. to the 13th of 2nd mo. next. Before adjournment the resolutions that the House consent to the defrayal of the expenses of the Afghan war, from the Indian resources was adopted. Stafford Northcote, in course of the debate, expressed the hope that the war was near ended.

Additional failures in the iron business are reported. Great distress prevails among the laboring poor. D. Stokson-Treadwell, a constituent of our assembly, kept pace with the demands. The Liverpool dispatch says, it is many years since the working classes have endured such distress and privations as now. Similar reports come from other parts of the Kingdom. The weather is reported very severe, especially in Scotland, where railroad trains are snowed up and traffic suspended. It is said to be the coldest winter since 1814. Great Britain imported during the last fiscal year \$99,600,000 of cereals and live and dead meat, and the excess of imports over exports during that time was £146,000,000.

Bayard Taylor, United States Minister at the Court of Berlin, has returned on the 13th inst. to New York. Trouble is reported to have arisen in Russia between the Government and the students. A large number of the latter have been arrested; the cause of the difficulties is not clearly given in the dispatches.

It is stated that instructions have been sent to the Russian Mission at Calcutta to withdraw.

The American consular office at Constantinople has refused to recognize the alleged American citizen imprisonment there, as the Grand Vizier informs him that he persists of his guilt. It is thought the Porte will demand his expulsion.

A telegram from Jellalabad on the 23d, announces that the English forces took possession of the city of Herat. The same intelligence was reported from Herat. Amerer is said to have left Cabul, and gone to Turkestan.

WANTED

A well qualified teacher for Friends' Select School for Girls, in this city. To enter upon duty early, practicable. Apply to

Thomas Lippincott, 929 Franklin St.
John Biddle, 728 Buttonwood St.
Anna Richards, 234 North Twelfth St.
Rebecca W. Kite, 459 North Fifth St.
Philadelphia, 12th mo. 1878.

FRIENDS' ASYLUM FOR THE INSANE.

Now Frankford, (Twenty-third Ward), Philadelphia. Physician and Superintendent.—JOHN C. HALL, M. D. Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

MARRIED, in Friends' Meeting, Somerset, Niagara Co., N. Y., on Fourth-day, Twelfth month, 1878, GEORGE BALDWIN, of Colara, Md., to MYRA daughter of Levi H. Atwater, of the former place.

DIED, on the 14th of 11th month, 1878, MIRIAM wife of John Thomas, in the 81st year of her age, member and elder of Hickory Grove Monthly and Colar Particular Meeting, West Branch, W. Va. In the close of her life, when a silence had settled on in the room, she remarked "O what a peaceful quiet and again afterwards, "There is a stillness that is betwixt them words." Having lived a very exemplary as Christian life, her bereaved and sorrowing relatives have the comforting hope that their great loss is eternal gain.

WILLIAM H. PALE, PRINTER,

No. 422 Walnut Street.

PHILADELPHIA.

From the "American Journal of Science and Arts,"
Forest Geography and Archaology.

BY ASA GRAY,
(Continued from page 158.)

The first step toward an explanation of the poorer richness in trees of these antipodal regions, is to note some striking similarities of the two, and especially the number of peculiar types which they divide between them. The ultimate conclusion may at length be attained, that this richness is normal, and that what we really have to explain is the absence of so many forms from Europe on the one hand, from Oregon and California on the other. Let me recall to mind the list of kinds (i. e. genera) of trees which enrich our Atlantic coast but are wanting to that of the Pacific; or almost all these recur, in more or less similar but not identical species, in Japan, North China, &c. Some of them are likewise European, but more are not so. Extending the comparison to shrubs and herbs, it more and more appears, that the forms and types which we count as peculiar to our Atlantic region, when we compare them, as we first naturally do, with Europe and with our West, are their close counterparts in Japan and North China; some in identical species (especially among the herbs), often in strikingly similar ones, not rarely as sole species of peculiar genera or in related generic types. I was a very young botanist when I began to notice this; and I have from time to time made lists of such instances. Evidences of this remarkable relationship have multiplied year after year, until what was long a wonder has come to be so common that I should now not be really surprised if a *Sarracenia* or a *Dionea*, or their like, should turn up in Eastern Asia. Every few of such isolated types remain without counterparts. It is as if Nature, when she had enough species of a genus to go round, call them fairly, one at least to each quarter of our zone; but when she had only two of one peculiar kind gave one to us and the other to Japan, Manchuria, or the Himalayas; when she had only one, divided these between the two partners on the opposite side of the globe. As to number of species generally, it cannot be said that Europe and Pacific North America are at all in arrears. But as to trees, either the contrasted regions have been exceptionally favored, or these have been hardly dealt with. There is, as I have intimated, some reason to adopt the latter alternative. We may take it for granted that the indi-

genous plants of any country, particularly the trees, have been selected by climate. Whatever other influences or circumstances have been brought to bear upon them, or the trees have brought to bear on each other, no tree could hold its place as a member of any forest or flora which is not adapted to endure even the extremes of the climate of the region or station. But the character of the climate will not explain the remarkable paucity of the trees which compose the indigenous European forest. That is proved by experiment, sufficiently prolonged in certain cases to justify the inference. Probably there is no tree of the northern temperate zone which will not flourish in some part of Europe. Great Britain alone can grow double or treble the number of trees that the Atlantic States can. In all the latter we can grow hardly one tree of the Pacific coast. England supports all of them, and all our Atlantic trees also, and likewise the Japanese and North Siberian species, which do thrive here remarkably in some part of the Atlantic coast, especially the cooler temperate ones. The poverty of the European sylvia is attributable to the absence of our Atlantic American types, to its having no *Magnolia*, *Liriodendron*, *Asimina*, *Negundo*, no *Aesculus*, none of that rich assemblage of Leguminous trees represented by *Locusts*, *Honey-Loests*, *Gymnocladus*, and *Clastratus* (even its *Cereis*, which is hardly European, is like the Californian one mainly a shrub); no *Nyssa*, nor *Liquidambar*; no *Eriacaceae* rising to a tree; no *Bumelia*, *Catalpa*, *Sassafras*, *Osage Orange*, *Hickory*, or *Walnut*; and as to *Conifers*, no *Hemlock*, *Spruce*, *Arbutus*, *Taxodium*, nor *Torreya*. As compared with Northeastern Asia, Europe wants most of these same types, also the *Ailanthus*, *Ginkgo*, and a goodly number of coniferous genera. I cannot point to any types tending to make up the deficiency, that is, to any either in East North America or in Northeast Asia, or in both. *Cedrus*, the true Cedar, which comes near to it, is only North African and Asian. I need not say that Europe has no *Sequoia*, and shares no special type with California.

Now the capital fact is, that many and perhaps almost all of these genera of trees were well represented in Europe throughout the latter Tertiary times. It had not only the same generic types, but in some cases even the same species, or what must pass as such, in the lack of recognizable distinctions between fossil remains and living analogues. Probably the European Miocene forest was about as rich and various as is ours of the present day, and very like it. The Glacial period came and passed, and these types have not survived there, nor returned. Hence the comparative poverty of the existing European sylvia, or at least, the probable explanation of the absence of those kinds of trees which make the characteristic difference. Why did these trees perish out of Europe

but survive in America and Asia? Before we enquire how Europe lost them, it may be well to ask, how it got them. How came these American trees to be in Europe? And among the rest, how came Europe to have *Sequoias*, now represented only by our two Big trees of California? It actually possessed two species and more; one so closely answering to the Redwood of the Coast Ranges, and another so very like the *Sequoia gigantea* of the Sierra Nevada, that, if such fossil twigs with leaves and cones had been exhumed in California instead of Europe, it would confidently be affirmed that we had resurrected the veritable ancestors of our two giant trees. Indeed, so it may probably be. "*Cedrus non animatum mutans*," &c., may be applicable even to such wide wanderings and such vast intervals of time. If the specific essence has not changed, and even if it has suffered some change, genealogical connection is to be inferred in all such cases.

That is, in these days it is taken for granted that in individuals of the same species, or with a certain likeness throughout, had a single birthplace, and are descended from the same stock, no matter how widely separated they may have been either in space or time, or both. The contrary supposition may be made, and was seriously entertained by some not very long ago. It is even supposable that plants and animals originated where they now are, or where their remains are found. But this is not science; in other words it is not conformable to what we now know, and is an assertion that scientific explanation is not to be sought.

Furthermore, when species of the same genus are not found almost everywhere, they are usually grouped in one region, as are the *Hickories* in the Atlantic States, the *Asters* and *Golden-rods* in North America and prevailing on the Atlantic side, the *Heaths* in Western Europe and Africa. From this we are led to the inference that all species closely related to each other have had a common birth-place and origin. So that, when we find individuals of a species or of a group widely out of the range of their fellows we wonder how they got there. When we find the same species all round the hemisphere, we ask how this dispersion came to pass.

Now, a very considerable number of species of herbs and shrubs, and a few trees, of the temperate zone are found all round the northern hemisphere; many others are found part way round,—some in Europe and Eastern Asia; some in Europe and our Atlantic States; many, as I have said, in the Atlantic States and Eastern Asia;—fewer (which is curious) common to Pacific States and Eastern Asia, nearer though these countries be.

We may set it down as useless to try to account for this distribution by causes now in operation and opportunities now afforded, i. e., for distribution across oceans by winds and currents, and birds. These means play their

place in dispersion from place to place, by step after step, but not from continent to continent except for few things and in a subordinate way.

Fortunately we are not obliged to have recourse to overstrained suppositions of what might possibly have occurred now and then, in the lapse of time, by the chance conveyance of seeds across oceans, or even from one mountain to another. The plants of the top of the White Mountains and of Labrador are mainly the same; but we need not suppose that it is so because birds have carried seeds from the one to the other.

I take it that the true explanation of the whole problem comes from a just general view, and not through piecemeal suppositions of chances. And I am clear that it is to be found by looking to the north, to the state of things at the arctic zone,—first, as it now is, and then as it has been.

North of our forest-regions comes the zone unwooded from cold, the zone of arctic vegetation. In this, as a rule, the species are the same round the world; as exceptions, some are restricted to a part of the circle.

(To be continued.)

Testimonies of Profane Writers to the credibility of the New Testament.

Extracted from *Horne's Introduction to the Holy Scriptures*.

Striking as is the evidence for the credibility and truth of the facts and events related in the Old Testament, furnished by natural and civil history, the books of the New Testament are verified in a manner still more illustrious; these books being written, and the facts mentioned in them being transacted, during the times of Augustus, Tiberius, and the succeeding Caesars. The learned and most exact Dr. Lardner has collected from profane writers a variety of important testimonies to the truth of the New Testament, in the first part of his "Credibility of the Gospel History," and also in his "Jewish and Heathen Testimonies;" from which elaborate works the following particulars are chiefly abridged. The results of his observations may be arranged under the following heads; viz. Testimonies of Jewish and Pagan authors to the account of princes and governors mentioned in the New Testament;—Testimonies to the character of the Jewish and heathen nations, which are either directly mentioned, or incidentally alluded to therein;—Testimonies of Jewish adversaries to the name and faith of Christ;—Testimonies of Pagan adversaries to the character of Jesus Christ, and also relative to the doctrines, character, innocency of life, and constancy of the first Christians in the profession of their faith.

Testimonies of Jewish and Pagan Authors to the Account of Princes and Governors mentioned in the New Testament.

Josephus and various heathen writers mention Herod, Archelaus, Pontius Pilate, and other persons, whose names occur in the New Testament; and they differ but little from the evangelical historians, concerning their offices and characters.

1. From the New Testament we learn that Jesus was born at Bethlehem of Judaea in the days of Herod the king; and Josephus informs us that a prince of that name reigned over all Judaea for thirty-seven years, even to the reign of Augustus. Concerning this

Herod, Matthew (ii. 1—16,) relates that he commanded all the male children in Bethlehem and its immediate vicinity to be put to death; because he had heard, that in that place was born one who was to be the king of the Jews. To us, who are accustomed to the finer feelings of Christianity, this appears almost incredible; but the character of Herod, as portrayed by Josephus, is such a compound of ambition and sanguinary cruelty, as renders the evangelical narrative perfectly credible. Herod left three sons, Archelaus, Herod Antipas, and Philip, among whom his territories were divided. According to Josephus, Herod by his will appointed Archelaus to succeed him in Judaea, with the title of king; and assigned the rest of his dominions to Herod Antipas as tetrarch of Galilee, and to Philip as tetrarch of Trachonitis and the neighboring countries; and according to the narrative of Luke (iii. 1), these two princes were tetrarchs in the fifteenth year of the reign of Tiberius Cæsar.

2. The will of Herod, however, being only partially confirmed by Augustus, Archelaus was appointed ruler over Judæa and Idumæa with the title of ethnarch, the regal dignity being withheld until he should deserve it. But Archelaus soon assumed the title; and Josephus, who has given us an account of this limitation, calls him the king that succeeded Herod, and has used the verb *reigning* with reference to the duration of his government. It likewise appears from the Jewish historian, that Archelaus was a cruel and tyrannical prince. All these circumstances attest the veracity of the evangelist Matthew, who says (ii. 22,) that when Joseph heard that Archelaus did reign in Judæa, in the room of his father Herod, he was afraid to go thither, and turned aside into the parts of Galilee, which were under the jurisdiction of Herod Antipas.

3. Luke relates (Acts xii. 1—3,) that Herod the king stretched forth his hand to vex certain of the church, and that he killed James, the brother of John, with the sword, and because he saw that it pleased the Jews, he proceeded further to take Peter also. The correctness of this statement is also confirmed by Josephus, from whom we learn that this Herod was a grandson of Herod the Great, whom the favor of the emperors Caligula and Claudius had raised to royal dignity, and to whom nearly all the territories that had been possessed by his grandfather were gradually restored. He was also exceedingly zealous for the institutions and customs of the Jews; and this zeal of his accounts for his putting James to death, and causing Peter to be apprehended. The death of this monarch is related by Luke and Josephus with so much harmony, that, if the latter had been a Christian, one would have certainly believed that he intended to write a commentary on that narrative. This haughty monarch had deferred giving an audience to the Tyrian and Sidonian ambassadors, who had solicited peace with him, until a certain day.* And upon a set day† Herod, arrayed in

* Josephus (Ant. Jud. lib. xviii. c. 8, § 2,) has not mentioned this particular day, but he informs us, that the termination of the king's life succeeded a festival which had been appointed in honor of the emperor Claudius. Hence we may conceive why Herod deferred to receive the ambassadors from Tyre and Sidon until that particular day, viz. that he might show himself with so much greater pomp to the people.

† Josephus determines this day expressly. It was the second day of the shows, which were exhibited at Cæsarea, in honor of the emperor.

royal apparel, sat upon his throne,* and made an oration upon them. And the people gave shout, saying, "It is the voice of a God, and not of a man."† And immediately the angel of the Lord smote him, because he gave not God glory.‡ And he was eaten of worms,§ and gave up the ghost (Acts xii. 20—23.) Both historians relate the fact, as to the chief particulars in the same manner. Luke describes the pride of the king, as well as the nature of his illness, more circumstantially; and omits superstitious addition which is recorded in Josephus;—a proof that the former surpasses in fidelity, accuracy, and judgment, even the learned historian of the Jews. Herod had three daughters, Bernice, Mariamne, and Drusilla; the last of whom, according to Josephus and Luke, was married to Felix, who was appointed governor of Judæa on the death of Herod.

4. According to the testimonies of Tacitus and Josephus, this FELIX was an oppressive, avaricious, and tyrannical governor, who has persuaded Drusilla to abandon her lawful husband, Azizus, king of the Emesenes, art to live with him. It was not unnatural for such a man to tremble, when Paul reasoned right-ousness, temperance, and judgment to come and to hope that the Apostle would have given him money to liberate him. (Acts xxiv. 26.)

5. Luke (Acts xvii. 14—16,) gives an honorable character of the temper and manner of Gallio; and this account is confirmed by Gallio's brother, the celebrated philoſophic Seneca, who represents him as a man of sweet and gentle disposition, and of much generosity and virtue. Gallio is styled by the evangelical historian, in our translation, the deputy, but in the original Greek, the proconsul of Achaia. The accuracy of Luke, in this instance, is very remarkable. In the partition of the provinces of the Roman empire, Macedonia and Achaia were assigned to the people and senate of Rome; but in the reign of Tiberius, they were at their own request transferred to the emperor. In the reign of Claudius (A. U. C. 797, A. D. 44,) they were again restored to the senate, after which time proconsuls were sent into this country. Paul was brought before Gallio, A. D. 52 or 53, or, as some think, subsequently he was proconsul of Achaia, as Luke expressly terms him. There is likewise

* Josephus says that he came into the theatre, early in the morning, dressed in a robe or armor made wholly of silver of most wonderful workmanship; and that the reflection of the rays of the rising sun from his silver gave him a majestic and awful appearance.

† In a short time (says Josephus) his flatterers exclaimed, one from one place and one from another (though not for his good), that "he was a God;" and they entreated him to be propitious to them, saying, "Hitherto we have revered thee as a man, but henceforth we acknowledge that thou art exalted above men."

‡ Josephus has here inserted a superstitious story that Herod, shortly after, looking up, perceived an owl sitting on a certain cord over his head, which he held to be an evil omen. The fact itself he thus relates:—Immediately after, he was seized with pains in his bowels, extremely violent at the very first, and was carried to the palace.

§ The very same cause is assigned by Josephus, viz. because the king had neither reprieved his flatterer nor rejected their impious adulation.

¶ Josephus has not described the disease so circumstantially; he relates that Herod died, worn out by his exercising pain in his bowels. Luke states that he died of worms. These narratives are perfectly consistent. Luke relates the cause, Josephus the effect of his disease; on the nature of which the reader may consult Dr. Mead's *Matæra Sacra*, c. 5.

peculiar propriety in the name of the province of which Gallio was procurator. The country subject to him was all Greece; but the proper name of the province among the Romans was Achaia, as appears from various passages of Roman historians, and especially on the testimony of the Greek geographer, Ptolemy, which are given at length by Dr. Hudson.

Equally striking with the preceding testimonies to the credibility of the New Testament history, is the agreement between the angelical historians and profane writers, relative to the SECTS, MORALS, AND CUSTOMS OF THE JEWS.

1. Thus it appears from Josephus, that they joyed the free exercise of their religion, but the power of accusing and prosecuting, not of putting any man to death. In consequence of this power, they impunedly dared to crucify Jesus; and when he commanded them to take him and crucify him, they said, *It is not lawful for us to put any man to death.* (John xviii. 31.)

2. Further, it appears from Philo, Josephus, and other writers, that the Jews were dispersed into many countries, before the destruction of Jerusalem; and Luke tells us, in different parts of the Acts of the Apostles, that Paul preached in the Jewish synagogues of Antioch, Iconium, Thessalonica, Athens, Achaia, and Rome.

3. The accounts related by the evangelists, the sects of Pharisees, Sadducees, and Herodians, as well as of the depravity of the Jewish nation, in the time of Christ, and of the bigotry that subsisted between the Samaritans and the Jews, are all confirmed by Josephus; and the Roman mode of treating prisoners, and crucifying criminals, as mentioned in the New Testament, is corroborated by the testimonies of Cicero, Plutarch, and other writers, who have incidentally mentioned it. According to Luke's narrative, Acts ix. 36, the person whom Peter raised on the dead at Joppa was named Tabitha or Dorcas; and it appears from Josephus that his name was at that time in common use. The same evangelist relates, that there was a great famine throughout the land of Judea, at the reign of the emperor Claudius (Acts xi. 3, 29); Josephus also mentions this calamity, which began in the fourth year of that reign, and raged chiefly in the two following years; and says, that many persons died for want of means to procure food.

4. When Paul was taken prisoner, in consequence of an uproar which the Jews at Jerusalem had excited against him, the Roman chiliarch, according to the relation of Luke (Acts xxi. 38.), asked him—*Art thou not an Egyptian, which before these days (or a short time since) madest an uproar, and leddest us into the wilderness four thousand men that were murderers?* Josephus has recorded at length the transaction here incidentally mentioned. During the government of Felix, and consequently at the time alluded to by Luke, an Egyptian, who pretended to be a prophet, and led into the wilderness several thousand men, and marched against Jerusalem, promising that the walls should fall down at his command. But Felix marched out of the city with a strong force, and attacked the impostor, who escaped with only a small part of his army. There is a remarkable agreement between the chiliarch or chief captain in the Acts and Josephus. The former says, *Art*

thou not that Egyptian? Josephus has nowhere mentioned the name of this man, but calls him the *Egyptian*, and the *Egyptian false prophet*.

(To be continued.)

For "The Friend."
Thoughts and Feelings,
SILENT MEETINGS.

It is often queried mentally by the writer, whether the great benefit, as well as solemn duty of seeking after inward stillness in order for spiritual communion with the Great Author of our being in whose hand our breath is, is duly considered or appreciated by the many, especially in their religious obligations and engagements. It is highly important in our efforts to draw nigh to that God who is a Spirit, and who hath said, "They that worship Him must worship him in spirit and in truth," that the mind be really solemnized by a vital experience and under a lively sense of His omnipresence; that so, shutting out external things, we may in inward stillness and in nothingness, as commanded by the Psalmist, "Commune with our own hearts and be still." Barclay, the Apologist, no doubt appreciated this, when in a meeting, in which he was convinced, it is said there were but these words uttered, viz: "In stillness there is fulness. In fulness there is nothingness. And in the nothingness of self there is all the fulness of God."

The prophet Isaiah has told us, "They that wait upon the Lord shall renew their strength," &c.; and the Psalmist: "The eyes of all wait upon Thee, and Thou givest them their portion of meat in due season." And again, "As the eyes of servants look unto the hand of their masters, and as the eye of a maiden unto the hand of her mistress; so our eyes wait upon the Lord our God, until that he have mercy upon us." Were these precepts, and such as these, more generally observed in our professed approaches to Him whose eye is on the heart, how would He condescend to be the ever present Helper of such! How would He bow the heavens and come down! How would He be a spirit of judgment to them that sit in judgment, and strength to them that turn the battle to the gate! How would He enable these to seek Him, *to feel after* and find Him; who, continues the Apostle, is not far from every one of us: for in Him we live, and move, and have our being." Oh! the unspeakable importance of weightiness of spirit in our religious assemblies, whatever may be the profession of Christ or denominational adherence we may make. It is true intrusion; it is wrestling in spirit; it is the earnest desire to draw nigh to, and to meet with the God of our lives; it is the unfeigned application of the soul to Him; it is waiting upon and feeling after the High Priest of our profession, who is declared to stand knocking, through his Holy Spirit, at the door of our hearts for entrance, that must ever constitute that worship which is acceptable to the Father. This too will prove the most effectual antidote against wandering thoughts, or any other thing that obstructs inward communion with Him, who is a Spirit. Herein, how comprehensive is the injunction: "Be still, and know that I am God." Again, said the Saviour to Paul, "My grace is sufficient for thee," &c. Is not here all we stand in need of, without the introduction of any denominational or external things? Jonathan Dry-

mond, in his "Essays on Morality," has well expressed: "When the soul is thus permitted to enter as it were into the sanctuary of God; when it is humble in his presence; when all its desires are involved in the one desire of devotedness to him; then is the hour of acceptable worship—then the petition of the soul is prayer—then is its gratitude *thanksgiving*—then is its oblation *praise*."

Robert Barclay, before alluded to, writes: "When I came into the silent assemblies of God's people, I felt a secret power among them, which touched my heart; and as I gave way unto it, I found the evil weakening in me, and the good raised up; and so I became knit and united unto them, hungering more and more after the increase of this power and life, *whereby I might feel myself perfectly redeemed.*" How true it is, that while forms and adjuncts appended to our religious worship, may be indefinitely multiplied—and so far they may but disturb the heavenly bias of the purpose—yet, at the same time, it is the true prostration of the heart, it is contrite reverent thoughts of the Creator, it is digging and bagging, hungering and thirsting for the springing up of the well of Divine Life, that constitutes vital, practical worship. It is a drinking at that Fountain whose waters give life to the soul, as the Messiah told the Samaritan women:—The water that I shall give him shall be *in him* a well of water springing up unto everlasting life.

May all who attend meetings mostly held in silence—it may be often under discouragements—be incited to double diligence, and not let go their confidence in the everlasting Arm, who hath promised to be with the two's and the three's that are met in His name. As these are faithful, diligent, inward, and prayerful in waiting upon Him, the Master and Head of all religiously gathered assemblies, He will cause them not only to renew from time to time their faith and strength in Him who is the resurrection and the life of His spiritual heritage, but, as He has said, "They shall mount upward with wings as eagles; they shall run and not be weary, and they shall walk and not faint." His power is the same yesterday, to-day, and forever; and as His dependent, trustful children cleave close to Him, the promise shall be sweetly realized in their experience: "In returning and rest shall ye be saved; in quietness and confidence shall be your strength." For "In the Lord shall all the seed of Israel be justified, and shall glory."

Butter and Milk.

Every one of our agricultural products, with the single exception of Indian corn, is surpassed in value by our dairy yield. The value of the cows, and of the land especially devoted to their support, is reckoned at \$1,300,000,000. The annual production of cheese is estimated at 550,000,000 pounds, and that of butter at 1,500,000,000 pounds. Their combined value—estimated at \$350,000,000—is only one-fifth less than that of the corn crop. The production has increased thirty-three per cent. within the past year and since the introduction of the American factory system in the manufacture of them, they have become important objects of export, the foreign sale amounting during the last season to \$13,000,000 for butter and \$14,000,000 for cheese. The exports this year have paid more than \$1,000,000 freight, or enough to support a weekly line of

steamers to Europe. They have paid \$5,000,000 freight to the railroads of the country, and milk pays nearly as much more.

Dairying is a quiet industry, which is so dispersed among the great majority of farms in all parts of the country that we fail to realize its aggregate importance. As a money-producing industry it is, under the combined influence of the factory system for cheese-making and of the introduction of improved methods of butter-making, rapidly extending in every direction. One of the very best butter-making regions of the country, both in quantity and in quality of product, is Northern Illinois and the adjoining parts of the States to the north and west of it. A few years ago it was believed that good butter could not be made in the Southern States. There are now important butter districts in all parts of the South, and there are indications that the Northern cities will soon be supplied with fresh grass-butter throughout the whole winter from Mississippi, Tennessee, and other regions, where, before the war, the profitable growth of grass was regarded as an impossibility. No single influence has had more to do with the increased attention given to butter-making in these new districts than the introduction and wide distribution of the cattle of the Island of Jersey. These were formerly the "Alderneys" of the lawns and paddocks of the rich; they are now the practical butter-producing animals of the best dairymen throughout the country.

The American system of co-operative factories has already given us a prominent and favored place in the great cheese-markets of the world. So much has been published during recent years concerning the methods of these factories that those who have cared for such matters have been fully informed concerning them. But there has taken place, within less than ten years, such a complete revolution in the processes of butter making that few, even among ordinary farmers, have any conception of the present best state of the art. Until very recently it was the universal custom to set milk for the raising of cream in shallow pans of tin or earthenware, in a cool room in summer and in a warm room in winter. In many limestone regions, where springs were abundant and constant, the pans were in summer-time set in troughs of cool water. The theory prevailed that exposure in the air and to ample ventilation was necessary for the removal of "animal odor." The early but not too rapid removal of the "animal heat" was equally insisted upon. It was believed that cream rose most readily and completely at a temperature of about 60°, and that its entire separation required a period of about thirty-six hours—a period during which the milk invariably became sour, and in warm weather curdled. Churning was very much a matter of the most fickle luck, occupying a long or a short time according to temperature, to the degree of acidity, and to conditions which always remained inscrutable. The quality of the product was far from being assured. In winter the butter might be lumpy, or in summer oily, and it was always a matter of congratulation—by no means a matter of course—that the churning turned out well. With the more intelligent and painstaking dairy men the chances and drawbacks were very much reduced, but every one failed at times, and quality always depended largely upon the individual skill of the dairy-maid.

The scalding, airing, and sanning of the pans, to remove the taint of the sour and curdled milk they had contained, added much to the labor and annoyance of the business.

The extent to which these conditions have been set aside is quite remarkable, considering its rapidity and the conservative class among whom it has taken place. About a dozen years ago a Swedish dairyman, named Schwartz, tried the experiment of setting his milk in cans twenty inches deep and twelve inches in diameter, covering them with ventilated lids, and floating them in ice-water. The reports of his success attracted much attention. A little later at Ogden Farm, and in several creameries, experiments were made with a modification of the system, spring-water at a temperature of about 50° being used instead of ice-water at 35° to 37°. Experiments were tried elsewhere, often with unfavorable results owing to unfavorable conditions, and the discussion waxed hot between the champions and the opponents of the new process. Little by little the opposition gave way, and by 1875 the deep-can system had gained the approval of the leading dairy-men of the country. A Western inventor devised a refrigerator to be used without water, the cans standing in the drip of ice contained in an upper chamber. This was in some respects an advance. Two years later the spring water system and the refrigerator system were met, and have since been overcome, by a further improvement which seems to combine every requirement of the simplest and most uniform work. This is the Cooley system introduced by the Vermont Farm Machine Co., which exhibited it in complete working at the Fair. Considering its cheapness and its adaptability to the largest and the smallest dairies, it seems to us to have been the most important object shown there—at least among those which have stood the test of sufficient trial.

The Cooley system disregards everything that was deemed inseparable to success in the former method of setting milk in shallow pans. A closed box, like a refrigerator, of a size to accommodate sufficient cans to hold the whole product of the morning or evening milking, is packed full with cans twenty inches deep and eight inches in diameter. Into these the milk is strained the moment it is brought from the stable. Each can is covered with a small inverted pan, like a milk pan, and these are held firmly in place by slats wedged above them. The box is then filled with cold water so as to cover pan and all, the pans keeping the water out of the milk on the principle of the diving bell. If a sufficiently cold spring is available (temperature less than 50°) a constant stream enters the box and passes out through an overflow. In the absence of such a spring, ice is used to keep the water down to from 40° to 50°. It is found that all of the cream rises within twelve hours, so that it may be taken off and the cans emptied in time to receive the product of the next milking. No account is made of "animal odor," but atmospheric odors are absolutely excluded by the complete immersion in water. Owing to the low temperature at which it has been kept, the skimmed milk is perfectly sweet and useful for cheese-making and other purposes. By an ingenious device the skimmed milk is drawn off below the cream and the cream is poured from the cans. Owing to the low temperature also, which prevents incipient decomposition, the cans are kept so sweet

that it is not found necessary to scald them oftener than once a week. The whole curd of the milk and the utensils is safely entrusted to common farm-hands. The old-fashioned milk room is no longer necessary. The Cooley box, occupying but little room, may stand in a passageway, in a cellar, or under a shed. The exhibitors showed one of their cans filled to a depth of seventeen inches with milk from a herd of Jerseys which had, in twelve hours, thrown up six and a quarter inches of cream.

The modern churning of the cream is different from the old method with which we are all familiar as Cooley's box is from the old milk-room. Dashers, cleats, and beaters are done away with. The cream is put into an oblong box, which is arranged to vibrate longitudinally, the cream being dashed first against one end and then against the other. There were several forms of churn working on this principle shown at the Fair, the oldest of them, Bullard's being as good as any. There is no material difference in the time required for the butter to "come" in these churns and in the old ones; but these have the marked advantage that the wash of the cream keeps the walls of the churn always washed down so that the entire contents are subjected to a uniform agitation. With the dasher and beater churns, when the cream begins to thicken, much of it adheres to the walls like a paste, and causes a considerable amount of half-churned cream to become mixed with the butter. By the new process this is obviated to the great advantage of the product.

In butter-workers there was nothing strikingly new, but the invention of Cooley's creameries and the Bullard churn probably marks a more important advance in an enormous and universally diffused industry than has ever been seen before within a single decade. The mower and reaper were longer in coming into general use and had much more influence in modifying our general system of agriculture; but the Jersey cow and these two utensils have an aggregate importance hardly inferior to that of those implements.

We made the reservation, above, that Cooley's exhibit was the most important that had stood the test of trial. The reservation was made in favor of Durand's cow-milking machine. The only serious limitation to which a dairy-man is subjected, supposing him to have ample land and money, lies in the difficulty of securing a sufficient number of good milkers and of finding profitable employment for them throughout the day. This limitation being removed, the number of cows may be greatly increased with decided benefit to the land, and with direct profit to the farmer. A machine which would milk the cow dry; which would communicate to her bag the movement incident to hand milking or sucking; which could be adjusted to teats of different size; and which could milk a three-teated cow, or, in an emergency, a single teat, has long been sought. Numerous promising inventions have proved failures, and many a good herd has been ruined in the experiment. The English agricultural papers are just now considering the difficulties of the case, and are clamoring for a machine which will meet all the requirements. We do not venture to say that Durand has solved the problem, but he certainly seems to have overcome all the difficulties found in the earlier inventions.

The luxury of luxuries is that of doing good.

For "The Friend."

John Croker.

(Continued from page 154.)

About the year 1636, John Croker entered to marriage with Margery Peters, daughter of John Peters of Minver, with whom they sided; here they carried on business, in which they prospered; and he was not unkind to give thanks for the blessings of God which attended their labors, being often imbued with a feeling sense of His goodness towards them. About this time we find him early exercised in spirit, and bowed under a sight which he was scarce able to understand, and from his Journal we give the following:

"There remained something with me, which led me into solitary walks and private retirements, sometimes into prayer, and sometimes I read, and sometimes I sat still, as one desiring to hear; the reason hereof I knew not,—for I was careful not to offend God in anything which I knew He required of me: still it increased, insomuch that morning and evening, it became my constant practice retire; at which times I cried, and desired the Lord would be pleased to make known a mind to me, that then I would obey him, and to be the giving up of my natural life. 'At last it was discovered to me; but then I was told signs and tokens, that I might be certain it was the Lord's requiring,—fearing base the enemy, working many times in a mystery, had deceived many; and he was likely to have reasoned all good out of me, I made me prove disobedient to the call of God, though not without a desire of performing his will. However, I thought if this or any other stranger would speak to my condition, or tell me what God required of me, I did not then consult with flesh and blood any longer. So it pleased God to answer my desire; for several spake to me and bid me be faithful. And upon a time on a First-day morning, as I was walking alone, and more thoughtful than usual, it opened in me a voice, saying, 'This day will I open thy mouth, if thou art faithful to me.' It seemed to surprise me, and being willing to be more acquainted with this voice, I turned myself about and walked further into the orchard, hearing the Lord to be wisdom and strength me; and it rested with me that that was my day of the trial of my obedience. So went home, and prepared for that meeting, which most of our family went to. I sat reading until at last the word of the Lord was made to me as a fire; my father and mother-in-law, both took a little time in the meeting,—which I thought had relation to me, and then present exercise; yet, I found it hard to give up. But being sensible it was my duty, at the latter part of the meeting I spake my words; and, although it was a little out of my season, yet I was thereby as one discharged of a great and heavy load, and comfort came to my soul; so that I found it was God to obey the Lord. Being faithful in the things, He made me ruler over more; so that I found it often my place to speak a few words, and began to be concerned for the discipline of Truth, that it might be kept up, and first and primitive simplicity maintained amongst us; that we might not only profess principles, but also be found like the first disciples of Truth in this island, in plainness of dress and fewness of words, as well as infulness of running after the gain of riches,

or too much frequenting the conversation of the people of the world; because there are many snares and dangers in it, which many incline after, respecting which, at times, I was concerned both to speak and write.

"Thus for about three years I passed my time, in the enjoyment of a tender and affectionate wife, who truly feared the Lord, and with whom I had great comfort; and we were a strength and rejoicing to each other. But at length it pleased the Lord to take from me my dear wife, in the year 1639. What shall I say; it was a near parting and a sharp exercise: yet I was made to say, surely the Lord is good, let him do as it pleaseth him, and who dares to speak hardly, or say why doesst thou so? Job said, the Lord gives and He takes away, blessed be the name of the Lord. God knows what is best for us, better than we ourselves; therefore I will labor to be contented in his will, and to follow after that; hoping we may meet again where all disappointments are at an end: for all things here are uncertain, and man is born to trouble as the sparks fly upwards. There is no dependence on any thing below the sun, therefore my dependence shall be in the right arm of His salvation; hoping He will carry me through this vale of tears,—and how soon, the Lord only knoweth; I desire not length of days, but that I may at last finish my course in peace."

(To be concluded.)

Selected.

With fearful eyes I look around,
Life seems a dark and stormy sea,
Yet midst the gloom I hear a sound,
A heavenly whisper—Come to Me!

It tells me of a place of rest;
It tells me where my soul may flee;
Oh to the weary, faint, oppress'd,
How sweet the bidding—Come to Me!

When the poor heart with anguish tears
That earthly props resigned must be,
And from each broken cistern turns,
It hears the accents—Come to Me!

When against sin I strive in vain,
And cannot from its yoke get free,
Sinking beneath the heavy chain,
The words arrest me—Come to Me!

When nature shudders, loth to part
From all I love, enjoy and see;
When a faint chill steals o'er my heart
A sweet voice utters—"Come to Me!"

Come for all else must fall and die;
Earth is no resting place for thee;
Heavenward direct thy weeping eye;
I am thy portion—Come to Me!

Oh voice of mercy, voice of love!
In conflict, grief and agony,
Support me, cheer me from above, Me!
And gently whisper,—Come to Me!

Charlotte Elliott.

Curialance.—"Hard times," says one, "are God's time of trial, in which to test us, to see if we are worthy to receive the answer to our many prayers for spiritual blessings." This being true, and it undoubtedly is, how many are in this crisis giving evidence that they are not fitted to receive the spiritual mercies they ask for? For, instead of denying themselves, and continuing to give their formerly acknowledged quota of offerings to the Lord, they are rather denying the Lord and appropriating as ever to themselves. This is their mode of retrenchment, in response to the "necessities of hard times."

Suggestions to Aid in Securing the Guidance of the Holy Spirit.

From *Uphasia's Interior Life*.

One of the most important questions which can occupy the minds of those who wish to experience the reality of the interior spiritual life, is—In what manner can we most certainly secure the ever-present and guiding influences of the Holy Spirit? We learn from the Scriptures, that those who are the sons of God are led by the Spirit of God. And a woeful example is expressly denounced against those "foolish prophets that follow their own spirit." The facts of individual experience, in relation to the subject of a Divine guidance, abundantly confirm the truth of the scriptural declarations. "Through this secret direction of the Almighty," says Sir Matthew Hale, who was distinguished as a Christian as well as a scholar and a judge, "is principally seen in matters relating to the good of the soul, yet even in the concerns of this life, a good man, fearing God, and begging his direction, will very often, if not at all times, find it. I can call my own experience to witness, that even in the temporal affairs of my whole life, I have never been disappointed of the best direction when I have, in humility and sincerity implored it." And I think we may undoubtedly regard it as a great truth, ever to be kept in remembrance, that the true children of God, so far as they live acceptably to Him, are guided by the Spirit of God. This great truth, that, as followers of God, it is our privilege and duty to be led by the Spirit of God, may be realized continually in our personal experience, as it seems to us, in connection with a few simple but fundamental conditions.

I. In the first place, we cannot reasonably expect to be guided by the Spirit, unless we desire it. And if we expect a continuance of this guidance, the desire must be permanent and strong. It would be extremely absurd to suppose that the Holy Spirit will condescend to dwell with us, if we have no desire for it, or if we have not a permanent and strong desire. But we cannot suppose that those who aim after holiness of heart are without this desire; and therefore we do not consider it necessary to dwell upon this point.

II. In order to realize this great blessing, we must have faith in God, that He will do for us the thing which we ask. To desire of God without having faith in the Giver, is nearly as effectual a way to defeat the object of our request, as to be without desire. But on this point also we will not delay. Who can be ignorant that one of the first elements in the life of holiness is the doctrine of faith? "Without faith it is impossible to please God." How can it be possible, then, without faith, to receive the blessing of the Holy Spirit?

III. Besides those which have been mentioned, there is another condition necessary to be realized, in order to have the guiding influences of the Holy Spirit always with us; namely, we must cease from our natural activity. We do not mean to say that we must be inactive; that we must be wholly and absolutely without mental movement; but merely and precisely that we must cease from the activity of nature. In other words, ceasing from self and from its turbulent and deceitful elements, and as a consequence of this, ceasing to please, and self and our personal interests, foremost, we must keep our own plans, purposes, and aims, in entire subjection. For

instance, when we ask God to guide us, we must not at the same time cherish in our hearts a secret determination and hope to *guide ourselves*; just as some persons foolishly, and almost wickedly, ask the advice of their neighbors, when they have already fully decided in their own minds upon their future course of action. If we would have our desires of being continually guided by the Holy Spirit fully realized, we must not only give up our personal and self-interested plans and purposes, submitting every thing into God's hands with entire childlike simplicity, but it is important also not to give way to uneasy, agitated, and excited feelings. The existence of undue eagerness and excitement of spirit is an evidence that we are, in some degree afraid to trust God, and that we are still too much under the influence of the life of nature; so that to cease from the activity of nature, when properly understood, seems to be nothing more nor less than to cease from the spirit of self-wisdom, self-seeking, and self-guidance, and thus to remain in submissive and peaceful simplicity and disengagement of spirit, in order that God may enter in, and may guide us by the wisdom of his own Divine inspiration.

It may be proper to add here, that the view which has now been expressed is entirely consistent with the exercise of our powers of perception and reflection. A cessation from our natural activity, in the sense which has been explained, is not only consistent with, but it is evidently favorable to, a just exercise of these powers. They will be found at such times to be free from erroneous and disturbing influences, and to possess a clearer insight into the truth.

IV. In order to secure the continual presence of the Holy Spirit, we must not only fulfil the condition of ceasing from the self-interested activity of nature; we must not only believe in God's truth and faithfulness to his promises, attended with a sincere desire for the blessing under consideration; but when we ask under such circumstances, it is our privilege and duty to believe that we now have the thing which we ask for. If, for instance, in true detachment and simplicity of spirit, and with a sincere desire for the object, we seek the Divine wisdom, which is in the gift of the Holy Spirit, to guide us in some difficult case of duty, we are bound, on the principles of Scripture, to believe (provided, further, that we exercise all our powers of perception and reasoning applicable to the case) that we do now have all that wisdom which God sees to be necessary for us. Accordingly, we are not at liberty, in the spirit of distrust towards God, to go about to seek some new natural light to see our spiritual wisdom with. Such wisdom, resting, in its origin, upon the immutable promise of God,—a promise which is fulfilled in connection with the exercise of faith,—is, for the most part, hidden from all forms of sight on the part of the creature, except one. That is to say, as it has its origin in connection with the operations of faith, and cannot exist except in that connection, so it is visible, in general, *only to the eye of faith*. It seems very evident, under the circumstances which have been mentioned, that we should do wrong, we should sin against God, not to believe in the actual possession of the thing which had been interceded for. It would evidently be a case of UNBELIEF; and

unbelief can never be accounted otherwise than a great sin. It is in accordance with this view, that we find the following expressions in the First Epistle of John, v. 14, 15: "And this is the confidence that we have in Him, that if we ask any thing according to his will, He heareth us; and if we know that He heareth us, whatsoever we ask, we know that we have the petitions that we desired of Him."

In conclusion, we would remark, that in yielding ourselves up to the Divine direction under such circumstances as have been mentioned, we not only have the guidance of the Holy Spirit, but I think we are not exposed to those illusions and mistakes which might otherwise be likely to befall us. Indeed, it is hardly too much to say, that we may be sure of being kept in the right path at such times. The state of mind which we have described is not only one of earnest desire and strong faith, but, as it seems to us, of true meekness. And we are told in the Scriptures, "The meek will He guide in judgment, and the meek will He teach his way." (Ps. xlv. 9.) It is the opinion of Fenelon, who seems to have had a personal experience of the Divine operation deeply interior, that in the moments of mental quietness and of recollection in God,—in other words, when we look to God in a state of cessation from our natural activity,—we should not hesitate to follow the interior impulses and attractions of the soul; meaning to be understood, undoubtedly, that if we believably ask for Divine guidance in such a state of mind, the attraction or tendency of the soul, which then exists, cannot be safely ascribed to any thing but the Spirit of God; and that, consequently, we may consider ourselves under a Divine, and not under a mere human direction. This we believe to be true. Nevertheless, in this case, as in all others, we should never yield to the guidance of any interior attraction, however it may have the appearance of originating with the Holy Spirit, which at the same time we know to be at variance with the written Word of God. God can never contradict himself; and whatever revelation He has made of Himself in his holy Word we must regard as authentic, and as entitled to our supreme confidence. But with the limitation implied in this remark, we have no doubt that God, operating upon the mind in a Divine manner, will certainly teach and guide those who, in renouncing the self-interested eagerness of nature, possess true meekness and quietness of spirit, and who believably and earnestly look to Him for such teaching and direction.

Professor Henry, when a boy, was an inveterate novel reader, until at sixteen an English book of scientific lectures happened to fall into his hands. He was so interested in it that the other presented it to him, and he kept it ever afterwards among his treasures. On the fly leaf in this paragraph, written by him in 1837: "This book, although by no means a profound work, has, under Providence, exerted a remarkable influence on my life. It accidentally fell into my hands when I was about sixteen years old, and was the first book, with the exception of works of fiction, that I ever read with attention. It opened to me a new world of thought and enjoyment, invested things before almost unnoticed, with the highest interest, fixed my mind on the study of Nature, and caused me to resolve at the time of reading it that I

would devote my life to the acquisition of knowledge. JOSEPH HENRY."

For "The Friend"

It is reasonable to suppose there is no member of the religious Society of Friends, who is acquainted, however partially, with its history and its present condition, but must, at times, mourn over the contrariety of sentiment on points of religious belief and conduct which prevails more or less throughout its organization. Whatever may be his or her opinion or feeling in relation to the contravened points, the frequent evidence gives that the Society has in measure lost, and is still losing the influence for good on other religious professors which it once exerted, and is experiencing in itself the weakness and instability of a house divided against itself, can hardly fail to clothe the spirit at times with regret, if not with pain and sorrow.

It is now more than forty years since the seeds of this disunity and degeneracy were widely sown, and the fruit is too abundant and too bitter, to admit of its origin being attributed to mere verbal inaccuracies, or essential divergencies from the long accepted principles promulgated by the early Friend and their consistent successors.

It is a saddening truth which time continues to make more palpable, that those principles and their legitimate practices must be contended for within the limits and among the members of the Society. Nor is it less evident that unity cannot be restored by an agreement not to manifest its absence where points are exposed where the members are at variance, and openly to profess fellowship wherever there is ground to believe there is no positive disagreement. This is sometimes spoken of as consistent with the declaration of the apostle, "I am made all things to a man, that I might by all means save some;" but it is not a practical dissembling altogether inconsistent with Paul's deep religious convictions and sturdy honesty? And yet man who may shrink from avowing that this is their panacea for healing the wounds under which the Society is suffering, by their conduct indicate they are afraid to apply any other remedy.

It is a self-pleasing sentiment—sometimes called charity—that we need not regard difference of belief or practice in what are stylized as *little things*, the *minor testimonies* into which our forefathers were led by the Holy Spirit; but simply keep the eye fixed on the more comprehensive points of our religious profession, where it is supposed all can agree, and leave every one to adopt or reject the others as they may see fit.

In one of the addresses made to the Friends composing the smaller Western Yearly Meeting, as given in the British Friend, 2d volume, page 277, eleventh month number, is the following: "Should we not then be taught to dwell in that which unites, rather than in that which separates; to look out for points of union, rather than upon those in which we may differ, and so find that we are often nearer to one another than we may think? The soundness of the sentiment here inculcated depends upon what is united with, and what is separated from. The Spirit—obedience to which alone can produce true unity—not only may, but does forbid unity with those however small it may seem in itself, which has a controversy with, and requires a firm

timony to be borne to that which it conceals to be of the truth. If Friends are sincere in the religion they profess, they cannot esteem any thing small or indifferent which has been brought forth under the operation of Divine Grace; and were those who are sought under this operation, to turn away from that required, because it would, or might separate them from others, they could make straight steps in the highway of holiness. Had George Fox and his worthy yokefellow acted on the bald principle, that it is better to unite than disagree, they would never have set up a distinct Society and suffered the persecution they endured for their principles, but "dwelling in that which unites, rather than that which separates," kept their connection with the professors to which they belonged, and smothered their conscientious aversions.

Nor did they consider any of what are now known of slightly as *minor testimonies*, all in themselves; nor of trifling importance that they should be faithfully maintained before the world. I. Pennington had occasion to write a letter to the Earl of Edgewater, the earl had him thrown into prison, and declared he should be kept there though he might rot, unless he would address him as "My Lord," and sign himself his humble servant, and that meek and patient spirit of Christ remained incarcerated in a small prison for more than a year rather than betray the testimony of truth to plaudits of speech, trivial as it may seem to many of the present day. It may be well to mark the following expression in one of his appeals to justice. "I have been, and still am, a patient sufferer for well-doing, blessing the Lord to redeemeth and preserveth the souls of children out of evil-doing, and who bringeth his indignation and wrath, with great complexity and misery, upon nations and upon sons who set themselves in opposition to him." Can it be considered a small matter to trample on any of the testimonies springing out of obedience to the convictions of Divine Grace, and for the support of which our faithful predecessors thought nothing too dear to pay? He who despiseth small things shall fall by little and little.

In the same number from which the previous quotation is taken, 1st col. p. 275, is the following: "The importance of cherishing a large and untruncated appreciation of the manifoldness of the truth, a manifoldness answering to the variety of our minds, as the daisy is not to be jealous of the rose, nor the rose despise the daisy." That is to be understood here by "the manifoldness of the truth," is not clear. The truths of the gospel are plain and simple, not lying in their meaning and force to suit the variety in men's minds. They bear the impress of the purity and wisdom of their Divine Author; the *manifoldness* belongs to the interpretations given to them by expositors not under the enlightening influence of the Spirit which dictated them. The contrast exhibited between the two flowers is evidently intended to represent the divergent doctrines presented within the Society: it is a strong one, but not applicable. In many respects these doctrines and their results are as palpably different in their characteristics as the rose and the rose tree; showing they do not spring from the same root. No manifoldness of floral development can destroy the distinction between the two blossoms, nor would any large-hearted-

ness justify us in calling the daisy a rose, while our senses convinced us it was devoid of its shape, color and aroma. For similar reasons the modern novelties introduced among Friends cannot be properly called Quakerism. There need be no jealousy nor contempt of the one of the other, was each called by its proper name, and not allowed to assume the title of the other.

The four Apostles alluded to in the same place, all preached the same gospel. No one of them inculcated doctrine inconsistent with that taught by the others; and so far were they from admitting that any *manifoldness* would permit uniting with that not in accordance with the truth they set forth, that one of them, addressing a church, uses the emphatic language: "If any man preach any other gospel unto you than that ye have received, let him be accursed." And another: "If there come any unto you and bring not this doctrine, receive him not into your house, neither bid him God-speed. For he that bideth him God-speed, is partaker of his evil deeds."

In one of the communications quoted from, in the editorial of last week's "Friend," some specimens of the doctrines now taught by many of the modernized preachers are given, which are in direct opposition to those ever held by Friends, and the two cannot be reconciled by any variety in men's intellectual endowment. It may be said they are the opinions of the individual only. But the meetings which certified them to be ministers in unity with them, and sent them forth to promulgate these unsound notions, must hold the same doctrines, and thus give equal evidence they are not Friends in religious belief, however they may assume the name.

The doctrines of the gospel and the testimonies resulting from them, as held by Friends, have always been fixed and clearly defined by them. They compel none to adopt them, but they cannot allow them to be undermined and overturned by those claiming to be members of the Society though not holding to its faith, who, like the seven women laying hold of one man, say, "We will eat our own bread and wear our own apparel, only let us be called by thy name, to take away our reproach." Whether few or many, Friends rightly adopt the following language of Robert Barclay, considered and approved by the London Morning Meeting.

"We being gathered into the belief of certain principles and doctrines, without any constraint or worldly respect, but by the mere force of truth upon our understandings, and its power and influence upon our hearts, these principles and doctrines and the practices necessarily *pending upon them*, are, as it were, the terms that have drawn us together, and the bond by which we became centred into one body and fellowship, and distinguished from others. Now if any one or more so engaged with us, should arise to teach any other doctrine or doctrines, contrary to those which were the *ground of our being one*, who can deny but that the holy hath power in such a case to declare; This is not according to the truth we profess, and therefore we pronounce such and such doctrines to be wrong, with which we cannot have unity; nor yet any more spiritual fellowship with those who hold them, and so cut themselves off from being members, by dissolving the very bond by which they were linked to the body."

Division and separation are hazardous and

very uncertain remedies for the evils now existing in the Society of Friends, and greatly to be deplored; but they are not to be prevented or remedied by ignoring the cause producing them; nor by treating those who are contending for the doctrines and testimonies of Truth ever held by Friends, as though they were no part of and had no hold upon the Society. The Lord is no respecter of persons, and He will preserve and bless those who, in sincerity and faithfulness, are standing for his cause and testimony, however they may be despised and rejected by others.

C. E.

12th mo. 29th.

Be not weary in doing what God bids, or in waiting for what God has promised. Your work may be difficult, but persevere in it. The delay may seem long, but it will come to an end. Look to the Saviour; rest on the promise; keep on with the work, and in due season you will go to your rest, if you faint not.

THE FRIEND.

FIRST MONTH 4, 1870.

"The just shall live by faith," is a scripture truth which the Christian has need to hold constantly in view, if he would not be jostled from the foothold which he has attained by Divine favor on the narrow way of life and salvation. The material world is constantly pressing against and opposing the spiritual, and it we allow our eyes to look too much upon that which is seen, they will inevitably become dimmed to that which is unseen and eternal. The revolution which has occurred within the past ten years in the commercial world has so disturbed the outward means of many good men and women, that their faith in Him who sees the sparrow fall, to provide things needful for them and their dependent families has been sorely tested. Those principles of integrity and high Christian honor which they once gloried in and felt it a privilege to practise in days of prosperity, are now being subjected to a strain they little anticipated. Others making as high a profession as themselves of honorable conduct, may have succumbed to the storm, and with it relinquished the strict line of integrity, for the sake of saving a part of their worldly substance. "Such a policy seems successful and legitimate: Why should I not practise the same?" is perhaps the inward thought. Our sympathies and concern are freshly aroused for such, with a desire that they may endure as seeing Him who is invisible, and not succumb to the temptation. "Whosoever will save his life shall lose it, but whosoever will lose his life for my sake shall find it," says Christ; and it is in just such critical periods of our lives as this, that we must keep these blessed promises in view and act upon them. "The just shall live by faith." Ye are of more value than many sparrows, and a tender Father is behind the cloud and rides upon the storm, who will, with the temptation, make a way whereby you may escape, if the eye and expectation are directed unto Him in faith and prayer.

Again, we live in a day when the value of religious principles is estimated greatly by their popularity, or their success in prose-

lytting others. "Who hath believed our report?" may well be queried by the consistent upholder of the views of Fox and Penn. "The preaching of the cross" remains to be foolishness to those whose wisdom is confined to the natural reasoning faculties; and who require a material sign to attest a spiritual truth; but unto them who are saved by living faith in a crucified Saviour, "it is the power of God." Isaac Penington makes some pertinent remarks on this subject, which are subjoined. "Now the lowest persuasion of faith is higher and of a more noble nature than the highest persuasion of reason; because faith is of a higher principle and of a deeper nature and ground than man's reason is. But this because it appears not in man's sphere, but rather out of it, and is contrary to the line and reach of his wisdom, is accounted by him foolishness and madness. Thus is the wisdom of God, and the children thereof judged and condemned by man in this day. And how can it be otherwise? How can the wisdom of man but judge that as foolishness, whose beauty and excellency is hid from its eye? But this is because the wisdom of man is out of its place, not subjected to the wisdom of God, but exalted above it." * * *

"But what ear of man can hear this? surely none that is whole in the line of man's wisdom, reason and understanding; but that alone that is bruised, broken, and in some measure dashed in pieces by the inroads of a Diviner life and nature." * * *

"Happy is he who knows and hearkens to the persuasions of God's Spirit, who is born of God, and taught to wait upon Him and worship Him in spirit; who receives his religion from the light of faith into the renewed nature and mind, and not from the reason of man into the natural understanding, which is easily corrupted and cannot be kept pure, but alone by the indwelling of the principle of eternal life in it. For though such may suffer very deeply from the men of this world, as the subjects and servants to the principle of life have done in all ages and generations, yet their principle will bear them out; in which trial will appear to strengthen and refresh their spirits and carry them up above all their sufferings in the patience, meekness and faith of the Lamb. And keeping to their principles they cannot be overcome, but must either live or die conquerors, according to the will and good pleasure of Him who ordereth and disposeth of all things well, and bringeth good out of every evil in despite of all the powers of darkness. And he that overcometh whether by life or death in the Lamb's spirit, shall wear the Lamb's crown, and sit down in that perfect rest in the Kingdom of the Father which will give the hearts of all His children full satisfaction. In which assured hope (life stirring in our bosoms, and quickening our hearts with love to God and zeal for His truth), we can freely give up all that is near and dear to us in this world, and lay down our heads in inward peace, in the midst of the greatest outward persecution and trouble. Even so, O Lord, thy will be done concerning this generation of thy people, whom thou hast begotten to thyself and brought forth by thy mighty power, to testify to thy Truth in the present day. Dispose of them as it pleaseth thee, and let not their faith in thee nor thy faithfulness to them fail; but let them be a praise to thy name throughout all generations."

SUMMARY OF EVENTS.

UNITED STATES.—The largest and most powerful locomotive engine ever built in this country, has just been completed by the Baldwin Locomotive Works, for the New Mexico and Northern Pacific Railroad, and is specially intended to work on a long, heavy grade, at a point on the Rocky Mountains. It is a ten-wheeled engine, having eight driving wheels, and a two wheel truck. The cylinders measure 20 by 26 inches, and the driving wheels are but 42 inches in diameter. The boiler is 58 inches diameter and has 213 tubes, each over 11 feet long. A water-tank almost the entire length of the boiler, rests on top of the engine, and when filled with water will add materially to the weight. The truck wheels are 30 inches in diameter, are of paper, with steel tires. This engine, when in working order, will weigh 118,000 lbs.

During the present year over 60,000 Bibles have been sent from Philadelphia to Australia and the Antipodes. Heavy snows and extreme cold are reported in Canada and the West. Throughout the lake region railroad travel at various points has been suspended. At Oswego the snow is stated to be four feet in depth. The woods of Maine have not much exceeded one-half the work of the year, and has been done in either of the three preceding years. Only 11 ships were in the State, and not one of the total on the Penobscot, or to the eastward of it. The total tonnage for the year is 41,060. In 1877, the total was 76,205; in 1876, 73,573; in 1875 it exceeded 75,000 tons. The prospect is that next year's work will be less than that of 1878.

One of the Chimpanzees belonging to the Zoological Garden of this city, died from the effects of a severe cold contracted several weeks since. The animal was about five years old, and was brought from the Gaboon river on the west coast of Africa.

The work of refitting the part of the Smithsonian Institution building in Washington, formerly occupied by Professor Henry and family, and by the use of the Fish Commission and the officers connected with the exchange system of the Smithsonian Institute, is nearly completed. The change of quarters has been made, and the crowded condition of the offices relieved. Telegraphic communication has been established between all parts of the building. In the work of refitting, many improvements have been made to facilitate the work done under the exchange system.

Five Ute Indians arrived in St. Louis on the 29th ult., on their way to Washington to consult with the Interior Department relative to the sale by them to the Government of a strip of their reservation, said to contain valuable mineral deposits.

The Commissioner of Patents, in Washington, has issued a circular which requires that letters patent and certificates of registration must be perfected and ready for delivery upon receiving the signature of the Commissioner, thus preventing the delay which has heretofore occurred to the patentee in receiving his papers.

Since gold leaf is put, the demand for silver dollars has steadily increased. Previously the stock on hand at the Treasury Department averaged about \$10,000 daily. Since orders for \$30,000 have been received in one day.

The long tunnel, through solid rock, to carry water to the city, is being cut in nineteen sections, the plan adopted being to sink shafts to the proper level, and then work in both directions, which requires no complex calculations. Thus far the engineers have been remarkably successful, five sections being joined, without a foot's deviation from straightness.

The immense sugar pine logs cut near Tucker, Nev., are sent floating precipitous side of the mountain in a chute that empties them into a deep pool. The descent is 1700 feet, the last third of which is perpendicular, so that the logs strike the water with a report that can be heard a mile distant.

The manufacture of lucifer matches is stated to consume annually 300,000 cubic feet of the finest pine.

A general meeting of the Board of Control of the coal corporations was held in New York on the 27th, and there being no representative of the Leitch Valley company present, it was resolved to adjourn *sine die*. This ends the coal combination.

The exports of petroleum from Philadelphia to foreign ports, during the present year, amount to 74,994,740 gallons—an increase of 25,835,793 gallons over last year.

The foreign commerce of New York for the week ending on the 28th ult., was as follows: imports, \$5,565,356; exports, \$7,269,771.

The number of deaths in New York city during the past week was 502. The number in this city was 265, of whom 176 were adults, and 129 children. The total

number of deaths for the year is 15,743—being 260 more for the previous year.

Markets.—**Gold**—1000 a 1001. U. S. sixes, 11 registered, 106½, coupon, 109½; 5's, 118½, registered, 106½; 4½ per cents, 104½; 4 per cents, 101½; 2½, 1897, registered, 102½; do, coupon, 105½; 1898, registered, 103, and coupon, 109.

Cotton.—Sales of middlings at 93 a 9½ cts. per 100 for uplands and New Orleans.

Floor.—Minnesota extra at \$4 for mealina to \$4 for fancy S. L. Louis, \$5 a \$5.50. Rye flour, \$2.75 a \$3.

Grain.—Wheat was in fair demand, **Red**, \$1.04; **White**, \$1.06; **Soft**, \$1.06. Corn, 48 cts. Oats, mixed, 28 a 29 cts.; white, 30 a 32 cts.

Seeds.—Clover, 6½ a 6½ cts. per bushel. Flaxseed, \$1.37 per bushel.

Hay and Straw.—Prime timothy, 60 a 70 cts.; mix 45 a 55 cts. Straw, 60 a 70 cts. per 100 pounds.

Beefcattle were in fair demand and prices were firm except Penna. and western, 5½ a 5½ cts. per pound; to good, 4½ a 5 cts.

Pork.—Hogs, 3½ a 4½ cts. per lb., as to condition to foreign. A dispatch from Lahore, published by the Times, says: "Yakooob Kahn, son of the Ameer Afghanistan, has just come into Jellalabad, now held by the British troops. This circumstance is regarded here as a portent of evil to the British."

Upwards of 150 failures in Glasgow and the west of Scotland, are said to be directly or indirectly traceable to the stoppage of the City of Glasgow Bank. The total liabilities of the Scotch firms who have been dragged down are \$125,000,000.

Information is received from Odessa, that preparations are making for the return home of 100,000 General Tobler's men. This is regarded as a sign that a definitive Turco-Russian treaty is near being concluded.

A destructive conflagration broke out in the city Hong Kong on the 25th ult., and raged all the following day. The loss of property is very large.

It is reported from Fort au Prince, that in Port au Paix the river changed its bed, and crossed the bank, overflowing the principal part of it, and destroy many houses and lives. St. Louis del Nardi, at three miles distant, is said to be entirely destroyed the flood.

WESTTOWN BARDING SCHOOL.

A Stated Meeting of the Committee having charge of the Barding School at Westtown, will be held Philadelphia on Sixth-day, First month 10th, 1879, 10 A. M.

The Committee on Admissions will meet the same day at 9 A. M., and the Committee on Instruction 2.30 P. M.

SAMUEL MORRIS, Clerk.

FRIENDS' ASYLUM FOR THE INSANE. *New Branford, (Twenty third Ward), Philadelphia* Physician and Superintendent—JOHN C. HALL, M. D. Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

MARRIED, in Friends' Meeting, Easton, Fifth-day Eleventh month 14th, 1878, **ELI SHARPLESS** to **ESTER A. WILKINS**, daughter of Ezra Egan, all of Baring Co., New Jersey.

DIED, at her residence, Mattapoisett, Mass., 1st month 14th, 1878, **BETSY HILLEE**, widow of Seth Hillee, aged 69 years, a member of New Bedford Friends' Meeting. With a desire to heed the Heavenly Shepherd's voice, she was commended to follow in a narrow path of self-denial, and as she neared the end of life's journey spoke of the satisfaction she had in remembrance of these things. Increasingly dear to were the doctrines and principles of Friends; said desired no new or better way; they embraced fully her purity and simplicity of the truth as it is in Christ Jesus.

—, at her residence, Pickering, Ontario, CAN. **DEBORAH BOONE**, widow of the late Amrose Boone in the 70th year of her age, a member of Scipio Mont Meeting, New York. She was of a kind and affectionate disposition, and evinced an unwavering attachment to the principles of the Christian religion as held by primitive Friends. Her relatives and friends have consulting belief that her close was peaceful.

PHILADELPHIA.

Testimonies of Profane Writers to the credibility of the New Testament.

Extracted from *Horne's Introduction to the Holy Scriptures*.

(Continued from page 163.)

The Testimonies furnished by Jewish Adversaries to the Name and Faith of Christ are further Corroborations of the New Testament.

1. Thus JOSEPHUS, in a passage of his Jewish Antiquities which the opposers of Christianity (unable to resist its force) have, contrary to all evidence, affirmed to be spurious,—bears the following testimony to the character, miracles, and doctrines of Jesus Christ.

After relating a sedition of the Jews against Pontius Pilate, which the latter had quelled, he says,—“Now there was about this time such a wise man, if it be lawful to call him a man; for he performed many wonderful works, and was the teacher of such men as received a truth with pleasure. He drew over to him many of the Jews, and also many of the Gentiles. This was the Christ. And when late, at the instigation of the principal men among us, had condemned him to the cross, those who had loved him from the first did not cease to adhere to him. For he appeared to them alive again, on the third day; the nine prophets having foretold these and ten thousand other wonderful things concerning him. And the tribe (or sect) of Christians, so named from him, subsists to this time.”

2. The TALMUDS,* though blended with much falsehood, and with malicious insinuations against Jesus Christ, refer to his nativity, relate his journey into Egypt, and do not deny that he performed numerous eminent miracles.

But they absurdly ascribe them to his having acquired the right pronunciation of the *memphothosa*, or the ineffable name of God, which (they say) he clandestinely stole out of

* The Talmuds are two in number, and consist of two parts, viz. the *Mishna* and the *Gemara*.—The *Mishna* is a collection of Jewish traditions, which were committed to writing by Rabbi Jehohai, surnamed *Hildah* or *the Holy*, about the middle of the second century. On this there are extant two commentaries, by the Jews, called *Genara*, i. e. perfection; viz. that of Jerusalem, which was compiled in the third or fourth century; and that of Babylon, compiled in the sixth century. When the *Mishna* or text, and the *Genara* commentary, accompany each other, they are called *a Talmud*; and accordingly as the Jerusalem or Babylonian commentary accompanies the *Mishna*, it is called *a Jerusalem* or *Babylonian Talmud*.

the temple; or they impute it to the magic arts, which he learnt in Egypt (whence they affirm that he brought them, having inserted them in his ill-sh), and exercised with greater dexterity than any other impostor ever did! They call him Jesus of Nazareth, the son of Mary, the daughter of Eli, whose son he was without the knowledge of her husband. After this, they say, he fled into Egypt, and there learned those magic arts, by which he was enabled to perform all his miracles. Again, they own two witnesses were suborned to swear against him, and declare that he was crucified on the evening of the passover. Mention is also made in these writings of several of his disciples, of Matthew, Thaddeus, and Barni, the name of him who was afterwards called Nicodemus, and of whom, as a very great, and good, and pious ruler, much is related in these books. In one of them Eliezer tells his friend Akiba, that he met with James, a disciple of Jesus of Nazareth, in Zippor, a town in Galilee; who gave him the interpretation of a passage in the Old Testament, which he had received from Jesus, and with which Eliezer was at that time pleased. That the disciples of Jesus had the power of working miracles, and the gift of healing, in the name of their Master, is confessed by these Jews; who give an instance of it in the grandson of Rabbi Joshua, the son of Levi, who being in great danger, one of the disciples came and would have cured him in the name of Jesus. This power is again acknowledged in the case of the son of Dama, grandson of I-hmael, who was lying of the bite of a serpent, when James, the same who had the conference with Eliezer, came and offered to cure the young man, but the grandfather forbid it, and he died. In a much later work of the Jews (the *Toledoth Jesu*), and that the most virulent of all the invectives against Jesus, his power of raising from the dead, and healing leprosy persons, is repeatedly acknowledged. Further, it appears from the Talmuds, that Christ was put to death on the evening of the passover, and that a crier preceded him for forty days, proclaiming,

“This man comes forth to be stoned, because he dealt in sorcery, and persuaded and seduced Israel.” But the Talmudical acknowledgments of the miracles, of his preaching, and of his suffering as a malefactor, are blended with most virulent aspersions of his character, of his mother Mary, and also of the Christians. The falsehood of these assertions has been well exposed by Professor Vernet. Concerning the destruction of Jerusalem by Vespasian and Titus, the testimony of the Talmuds is very valuable.

Nor are the testimonies of heathen adversaries to Christianity less explicit or less satisfactory than those stated in the preceding pages; these may be arranged under two classes, viz. 1. Testimonies to the life and character of Jesus Christ, and 2. Testimonies relative to the Christians.

1. Testimonies to the Life and Character of Jesus Christ.

(1.) PONTIUS PILATE.—The ancient Romans were particularly careful to preserve the memory of all remarkable events which happened in the city; and this was done either in their acts of the Senate (*Acta Senatus*), or in their *Daily Acts of the People* (*Acta Diurna Populi*), which were diligently made by a clerk at Rome. In like manner, it was customary for the governors of provinces to send to the emperor an account of remarkable transactions that occurred in the places where they resided, which were preserved as the acts of their respective governments. In conformity with this usage, Pilate kept memoirs of the Jewish affairs during his procuratorship, which were therefore called *Acta Pilati*. Referring to this usage, Eusebius says,—“Our Saviour’s resurrection being much talked of throughout Palestine, Pilate informed the emperor of it, as likewise of his miracles, of which he had heard; and that, being raised up after he had been put to death, he was already believed by many to be a God.” These accounts were never published for general perusal, but were deposited among the archives of the empire, where they served as a fund of information to historians. Hence we find long before the time of Eusebius, that the primitive Christians, in their disputes with the Gentiles, appealed to these acts of Pilate as to most authentic testimony. Thus Justin Martyr, in his first apology for the Christians, which was presented to the emperor Antoninus Pius and the senate of Rome, about the year 140, having mentioned the crucifixion of Jesus Christ, and some of its attendant circumstances, adds,—“And that those things were so done, you may know from the Acts made in the time of Pontius Pilate.” Afterwards, in the same apology, having noticed some of our Lord’s miracles, such as healing diseases and raising the dead, he says,—“And that all these things were done by him, you may know from the Acts made in the time of Pontius Pilate.”

The learned Tertullian, in his Apology for Christianity, about the year 200, after speaking of our Saviour’s crucifixion and resurrection, and his appearance to the disciples, and ascension into heaven in the sight of the same disciples, who were obtained by him to publish the Gospel over the world, thus proceeds:

“Of all these things relating to Christ, Pilate himself, in his conscience, already a Christian, sent an account to Tiberius, then emperor.” The same writer, in the same Apology, thus relates the proceedings of Tiberius on receiving this information:—“There was an ancient decree that no one should be received for a deity, unless he was first approved by the senate. Tiberius, in whose time the Christian name (or religion) had its rise, having received from Palestine in Syria, an account of such things as manifested the truth of his” (Christ’s) “divinity, proposed to the senate that he should be enrolled among the Roman

gods, and gave his own prerogative vote in favor of the motion. But the senate"—(with those whose consent no defilement could take place)—"rejected it, because the emperor himself had declined the same honor. Nevertheless, the emperor persisted in his opinion, and threatened punishment to the accusers of the Christians. *Search your own COMMENTARIES (or public writings), you will there find that Nero was the first who raged with the imperial sword against this sect, when rising most at Rome.*" These testimonies of Justin and Tertullian are taken from public apologies for the Christian religion, which were presented either to the emperor and senate of Rome, or to magistrates of public authority and great distinction in the Roman empire. Now it is incredible that such writers would have made such appeals, especially to the very persons in whose custody these documents were, had they not been fully satisfied of their existence and contents.

(2.) Suetonius, a Roman historian who flourished in the reign of the emperor Trajan, A. D. 116, refers to Christ, when he says that "Claudius Caesar expelled the Jews from Rome, because they raised continual tumults at the instigation of Christ," who (it is well known) was sometimes called Christus, and his disciples Christians." This event took place A. D. 52, within twenty years after the crucifixion.

(3.) Tacitus, the historian, who also flourished under Trajan, A. D. 110, when writing the history of Nero (Claudius's successor), and speaking of the Christians, A. D. 64, says that "the author of that (sect or) name was Christus, who in the reign of Tiberius was punished with death, as a criminal, by the procurator Pontius Pilate." And,

(4.) The younger Pliny, in his celebrated letter to Trajan, written A. D. 107, says that Jesus was worshipped by his followers as God.—"They sing among themselves, alternately, a hymn to Christ as to God."

(To be continued.)

For "The Friend."

Incidents and Reflections.—No. 29.

Among the pleasant things to which the mind reverts with grateful feeling, as the occurrences of former years pass in review before it, are some of those seasons of spiritual refreshment, which are often spoken of in the Society of Friends as "religious opportunities." When friends and relatives are gathered in social circle, and passing the time in conversation, a feeling of silent solemnity sometimes spreads over the little company. One after another yields to the quieting influence, till without a word being said, all are found waiting in silence on the Lord, and gathered into a sense of His holy presence. The silence is sometimes broken by the voice of supplication, or the word of exhortation; and sometimes it continues unbroken till a liberty is felt again to resume the social converse. We doubt not most of our readers can recall such seasons, in which their hearts have been melted before the Lord, and earnest desires raised to run with patience in the heavenly path set before them.

John Richardson relates that after landing on the Bermudas, he and his companion came after night to the house of Richard Stafford, an old man in the station of Judge, who was one of the leading men on the island. On reaching the house, his wife took them to the

room where the Judge was. John says: "When we came to him he rose up, and took the candle in his hand and said, 'I see you the strangers that I have sent for?' I said, 'Who thou may'st expect I know not, but we are strangers.' When he had looked well in my face, he set down the candle and said, 'What a mercy is this, that the Lord should send men from I know not where, in his love to visit me!' and took me in his arms and kissed me; and I said to him, 'The Lord of heaven and earth bless thee;' and we shed many tears and wept together.

"As I entered the house, I felt the love of God; and his glory, I thought, shone in and filled every room as I passed through them; and I said, 'Peace be to this place,' and I felt it was so."

The next morning, "I was walking in our lodging-room early, and the Judge's wife came to the door and asked, if she might speak with us? I said, she might; then she came in and said, she had a message from her husband to us. I queried what it was. She said, he desired we would come and pray for him before we went away. I desired she would favor us so much as to lay before her husband something which I had to say, and she promised she would; well then, tell the Judge, that if he will suffer us to come into his room, and sit down and wait upon the Lord, as our manner is in such a case as this, if it please the Lord to move us by his Holy Spirit to pray, we may; but if not, let not the Judge take it amiss, for we are willing to be at the Lord's disposing in all things. She went, and I believe, as she said, laid the matter before him as I had delivered it to her; for she was a woman of a good understanding, and came back again to us in a very little time. I asked what the Judge said? She replied, he said, 'Let the men take their own way, and whether they pray for me or not, I believe they are men of God.' So after some little respite, we being brought to the Judge's bed-side, sat down and waited upon the Lord, who was pleased in his love and by his mighty power, to break in upon us, and also opened my mouth in his gift of grace and of supplication, in which gift, ardent and fervent cries went up to the Lord of heaven and earth that He would send health and salvation to the Judge, and also to all his family, and to all people far and near, that all every where might repent and come to the knowledge of the Truth and be saved. The Judge wept aloud, and a mighty visitation it was to his family, and especially to himself and his tender wife. We felt the Judge in a fine frame of spirit, and no doubt near the kingdom."

Thomas Story mentions, that in the course of one of his religious visits, he came to Bristol. "Where, lodging at our ancient and honorable friend, Richard Smeal's, one morning the canopy of the Divine presence came over us in the family, and brought us all into right silence for a time; and then the holy spirit of prayer and supplication came upon us: And, while we were in that exercise, William Penn, who ever loved the Truth in the meanest, came into the room, and joined with us; and, after him, that ancient, able and eminent Friend and minister of the Lord Jesus, Roger Hadlock, who joined in the same likewise; and some others following them, all coming to see us, were favoured with the same visitation and good presence of the Lord our God, and the enjoyment of Him together in the

Beloved, to our great and mutual refreshment, edification and consolation."

On another occasion, when at West All, Dale, he says, "In the evening came to several friends, and among others our ancient and honorable friend, Cutlbert Featherston, as we were conversing together in the friendship which the Lord begets in those we are his, He drew our minds under the canopy of Divine silence; in which, remaining for time, we had a heavenly visitation of his melting goodness together; and I, observing the tears to trickle down from the eyes of our ancient friend, upon his clothes, was greatly affected with love towards him from the same cause; and had this hope and confidence upon that occasion, that as I then observed the Lord was as near his children in old age, who he visited Him faithfully from the time of the revelation, as when He first revealed Himself through his Son, the Lord Jesus Christ, to their own hearts, so He would be with us also in advanced years, if I proved faithful to the Lord, and attained that degree."

In 1698, when he was about to embark for America on a religious visit, several of his friends accompanied him on board the vessel in which he proposed to make the voyage. He says: "Being together in the great calm the good presence of the Lord commanded deep and inward silence before Him, and the Comforter of the just brake in upon us by His irresistible power, and greatly tendered us together in his heavenly love, whereby we were melted into many tears. Glorious was the appearance to the humbling of us all, and a miration of some there who did not understand it. And, in this condition, we remained for a considerable season; and then William Penn was concerned in prayer 'For the good and preservation of all, and more especial for us then about to leave them; with thanksgiving also for all the favours of God, and that holy and precious enjoyment, as an addition to his many former blessings.' At when he had finished, the Lord repeated his own holy embraces of Divine soul-melting love upon the silent weeping assembly, to the full confirmation of us more immediately concerned, and further evidence to the brethren of the truth of our calling."

Sarah Lynes Grubb, in one of her letters after speaking of the marriage of her dear friend, Ann Baker, says: "We made an excursion to Malvern, eight miles distant from Worcester, where we were delighted with the admirable display of the beauties of nature in the country; but without attempting a task unequal to, that of describing the scene I hasten to tell thee that I think we had mark that this innocent gratification was not displeasing to our Heavenly Father; for, as we had descended a little below the summit of the highest hill, sitting down to rest on a bank, an uncommon degree of Divine light and sweetness spread over my mind, under which I recollected a dream I had in the winter, and felt the opening of life to tell it to my companions, and that the reality was my experience. I dreamed I was on an eminence, surrounded by my fellow-creatures in their habitations, and under great exercise for myself and them, when serenity and sweetness preciously diffused itself into my soul, and my tongue was loosened to sing, 'Alleluia, Alleluia.' The relating of it, together with enlargement through the gospel light vouchsafed at the time, broke as all into contrition

dear Ann said a little matter, and supplication was poured forth, with thanksgiving and praise to Him who shuts and none can open, who opens and none can shut. We sat home under the consoling persuasion of His mercifully cares for his little ones, till the incomes of love and life so strong, felt thus, as it were, unbenumbed with my dear in, that we reckoned it might be intended answer the purpose of the forty days' food."

The Sale of Tobacco.

In a recent number of the *Episcopal Register*, published in this city, is a letter taken from an English periodical, giving the names of several dealers who have recently given up the sale of tobacco, from a conviction of its injurious effects upon those who use it. From its letter the following passages are extracted, which give a gratifying evidence of adhesion to principle rising above mercenary considerations.

"That the relinquishment, on conscientious grounds, of the lucrative sale of articles which did not injure one's neighbor not only brings forth its own immediate reward, but is attended in most cases by a pecuniary loss, has recently received some pleasing illustrations in connection with the sale of tobacco, which merely premise that the evidence which appealed to a decision in most of the cases referred to was the medical testimony of the following (among other) celebrated physicians, viz: Sir Benj. Brodie, Dr. B. W. Richardson, F. R. S., Professors Solly and Lizars, R. Edmunds, and Dr. Drysdale, whose opinions are published gratis (as tracts or pamphlets) by the Anti-Narcotic League, 26 Corporation street, Manchester, England.

"George Whitturst, Mow Cop, has sent me the following letter: 'I have given up the sale of tobacco, as I firmly believe it to be a physical, social, mental, and moral evil, which smoked, chewed, or snuffed. It was no small trial to summon up courage to act out my convictions, as I live in the midst of a mining population, and some of my best customers were inveterate smokers; but I did it by God's help, and although I have lost by it at present, yet I believe that if a man suffers for conscience sake, the sun will smile upon him in the end.'

"James Smith, Grassmarket, Edinburgh, writes: 'When I succeeded to my father's business I dropped, on principle, the sale of tobacco and snuff, and I have never for one moment had reason to regret the step I took. The few customers I lost by so doing were speedily replaced fourfold. I have now the supreme satisfaction of offering for daily sale only such goods as directly benefit mankind.'

"Alfred Stephenson, Grimsby, writes: 'Since joining the Anti-Tobacco Society I have given up the sale of tobacco, notwithstanding that mine is the largest family grocery store in the town, and although we turn hundreds of tobacco customers away; yet I cannot tell that my returns have suffered, but rather other-

wise.' James Griffiths, Horslyfields, Wolverhampton, writes: 'You may be glad to hear that I have given up the sale of tobacco, as well as its use. I wavered for a year or two, for fear of injuring the other portion of my business. But after twelve months' trial I am thankful to say that business has increased.'

"Joseph Lingford, Bishop Auckland, whose returns from tobacco were £100 per week, recently sent the following circular to his customers: 'Being desirous not to put you to unnecessary inconvenience, I hereby inform you that I intend to discontinue the sale of tobacco and snuff on and after ——. Believing, as I do, that the use of tobacco is fraught with much mischief, especially to the young, I have for some time felt it to be inconsistent to deal in an article which, according to eminent medical testimony, is injurious to the system.'

"R. Aungier, King street, Witton Park, Durham, writes: 'I was selling cigars to the amount of about 10s. a week, and all to little boys; but I may say that I am just as well off without it, and am quite willing to give the profit to those who think it a good trade.' Joseph Roa, Churchview, Lisburn, writes: 'I have never used tobacco myself, but sold it extensively, until, from reading and witnessing the prevalence of the habit among very small boys, I gave up the sale entirely.' "The following other dealers have given up the sale of tobacco: E. A. Vince, Harrow; E. Glaizer, Leighton Buzzard; John Saffrey, Sheerness-on-Sea.

FRANK SPENCE,
Manchester, Aug. 19th."

For "The Friend."

John Croker.

(Continued from page 165.)

John Croker was a faithful attendant at meetings, allowing nothing to prevent his gathering with Friends, though his residence was several miles from the meeting-house, and he says, whatever I neglected, I attended it, if at home, on Fourth-days as well as First-days."

We find, in perusing his memoir, that he like others who have been called to labor in the Lord's vineyard, and to proclaim to the world the gospel of our Lord and Saviour Jesus Christ, was not exempt from the temptations of an unwearied adversary; who tries in his endeavors to turn those aside who are striving to follow in the footsteps of the Redeemer; and who at times seems but to double his diligence in laying his snares with to double his diligence in laying his snares with to double his diligence in laying his snares with to double his diligence in laying his snares with to become more and more watchful of their footsteps, and that they are serving a Leader whose power is far beyond his own. It was during one of these times of trial and deep proving, that he wrote the following:

"I found I had in some way or other received hurt; for there seemed to come over me a cloud of thick darkness, so that my mouth was stopt for a time; and I was as in a wilderness, having no comfort in meetings nor in retirements, but great temptation followed me, and it was with me sleeping and waking, inasmuch that I was not able to follow my business. At last I thought I would make my state and exercise known to my father and mother-in-law Peters, who were not only related to me by marriage, but were truly near in spirit. When they had the knowledge of it, I had their advice; and their prayers for me were not wanting, and I have reason to believe were answered; for in a little time the temptation began to grow weaker and weaker,—strength began to increase,—and light to shine out of darkness, which gave me to see the travail of my soul, and that it was good for me to be tried,—for I should thus be better

able to speak to such as might be under the like affliction. Then I had a word to speak again for God amongst his people, and cheerfulness increased. I also became fit for conversation with others, and followed my business, in which God blessed me, and I took delight in my friends."

About the year 1701, he accompanied his father-in-law in visiting meetings, where, he says, "as I found my heart engaged I dropped a few words."

In 1702, he again entered into marriage with Elizabeth Gates, and settled in Cornwall, where they resided nine years, afterwards removing with their three children to Horsham, his wife's native place.

He was closely concerned for the welfare of their children, which will be shown by the following extract from a letter written to his son Charles, probably the eldest of the family:

"Remember thy Creator in the days of thy youth. The more thou continest thus to do, the more the Lord will love thee. What opportunities thou hast, spend in serving God, by privately walking and meditating on the things of God, and what relates to thy eternal good. Keep to meetings, and when there, bend thy mind to God, desiring him to be a stay thereunto, for in vain thoughts the Lord has no pleasure. Delight thyself in the company of good honest Friends, discoursing of good things, as thou hast opportunity for it. Be diligent to hear the ancient Friends or elders, whose experience hath been great in the Lord; and let thy words be few, seasoned with grace, that those who converse with thee may have cause to say, that thou art one who is careful to be a good example, both in words and actions. Flee from all bad company as from a serpent; for if thou hast not a care, they will betray thy soul, and bring thee into thralldom, for the end of such is to propagate and advance their master's kingdom, which is the devil, the pleasure-monger of this world. Mind to fear always lest thou should offend; and often inquire in thy heart, of God, the way towards His kingdom, that thou mayest not miss the crown of glory, and thou hast no need to question but He will lead thee on, and arm thee with strength to withstand the devil and his agents. Remember that I, thy father, have left it for thee to take notice of, that thou art brought into a world where the devil reigns in the heart of very many, and such will seek to betray thee. Therefore have a care and watch in the light of the Lord who shineth in the secret of the soul. Take heed unto it, for it never consenteth to any evil action; mind the loadings of π , which as it is obeyed, will open wisdom unto thee, whereby thou wilt come to be wise in the things of God.

"Look not abroad after outward things and outward wisdom, or to any of the lo-heres or lo-thers; the Lord is nigh to all them that love Him, therefore, attend upon Him daily, and He will make thee wise unto salvation; His wisdom is beyond rubies, or the golden wedge of Ophir; there is nothing to be compared with it. Remember that I have told thee, He that is the giver is near unto thee. A measure, or manifestation of his Spirit is in the closet of thy heart; therefore, sink deep there, for there the pearl is to be found. I know, and am well satisfied, if thou keeps near to the Lord, it will be well with thee; and the Lord whom I desire to serve, will do great

things for thee, and thou wilt be honorable in thy day.

"Read not in foolish books, with which the nation abounds; but read in the Holy Scriptures, in which there is a great deal of comfort: for by this wisdom which I would have thee seek diligently after, thy, the Scriptures, are able to make wise unto salvation; likewise read Friends' books, and others which tend to edification.

"* * * "The abundance of the things in this life never made any happy, but it is godliness with content, that hath ever been the great gain of the righteous, which they labor for more than for outward riches. Therefore, as I have said, seek the kingdom of God and the righteousness thereof, and all other things shall be added. And if the Lord should be pleased to bless thee in the things of this life, set not thy heart thereon; it is a blessing bestowed on thee, the more to humble thy soul; for the more God gives, the more humble He expects us to be. If losses and crosses come, be not dismayed or discouraged; the Lord sees what is best for thee; and remember what a good man said in his day: 'I have been young, and now am old, yet I have not seen the righteous forsaken, nor his seed begging bread.' Therefore be free, and desire God to open thy heart to those that stand in need, and be merciful in thy day in doing good, and communicate to those who stand in need of outward things, with which God may have blessed thee."

In writing of the last days of John Croker, his wife says: "Although he had very little ease day or night, but was mostly in great pain, yet he gave us who attended on him, not one hasty or unsavory word; and he was very tenderly concerned of me, lest I should be overmuch troubled for the loss of him; and said, 'we came together in love, and had lived in love, and so should part,' with much more of this kind."

His death took place on the twenty-ninth of the Eleventh month, 1727, aged very nearly fifty-five years.

From the "American Journal of Science and Arts,"
Forest Geography and Archaeology.

BY ASA GRAY,
(Continued from page 162.)

The polar projection of the earth down to the northern tropic, as here exhibited, shows to the eye—as our maps do not—how all the lands come together into one region, and how natural it may be for the same species, under homogenous conditions, to spread over it. When we know, moreover, that sea and land have varied greatly since these species existed, we may well believe that any ocean-gaps, now in the way of equable distribution, may have been bridged over. There is now only one considerable gap.

What would happen if a cold period were to come on from the north, and were very slowly to carry the present arctic climate, or something like it, down far into the temperate zone? Why, just what has happened in the Glacial period, when the refrigeration somehow pushed all these plants before it down to Southern Europe, to Middle Asia, to the middle and southern part of the United States; and, at length receding, left some parts of them stranded on the Pyrenees, the Alps, the Apennines, the Caucasus, on our White and

Rocky Mountains, or, wherever they could escape the increasing warmth as well by ascending mountains as by receding northward at lower levels. Those that kept together at a low level, and made good their retreat, form the main body of present arctic vegetation. Those that took to the mountains had their line of retreat cut off, and hold their positions on the mountain-tops under cover of the frigid climate due to elevation. The conditions of these on different continents or different mountains are similar, but not wholly alike. Some species proved better adapted to one, some to another, part of the world; where less adapted, or less adaptable, they have perished; where better adapted, they continue,—with or without some change; and hence the diversification of alpine plants, as well as the general likeness throughout all the northern hemisphere.

All this exactly applies to the temperate zone vegetation, and to the trees that we are concerned with. The clew was seized when the fossil history of the high arctic regions came to light; when it was demonstrated that in the times next preceding the glacial period—in the latest Tertiary—from Spitzbergen and Iceland to Greenland and Kamtschatka, a climate like that we now enjoy prevailed, and forests like those of New England and Virginia, and California, clothed the land. We infer the climate from the trees; and the trees give sure indications of the climate.

I had divined and published the explanation long before I knew of the fossil plants. These, since made known, render the inference sure, and give us a clear idea of just what the climate was. At the time we speak of, Greenland, Spitzbergen and our arctic seashore, had the climate of Pennsylvania and Virginia now. It would take too much time to enumerate the sorts of trees that have been identified by their leaves and fruits in the arctic later Tertiary deposits.

I can only say, at large, that the same species have been found all round the world; that the richest and most extensive finds are in Greenland; that they comprise most of the sorts which I have spoken of, as Magnolias, Sassafras, Hickories, Gum-trees, our identical Southern Cypress (for all we can see of difference), and especially *Sequoias*, not only the two which obviously answer to the two Big-trees now peculiar to California, but several others; that they equally comprise trees now peculiar to Japan and China, three kinds of Gingko-trees, for instance, one of them not evidently distinguishable from the Japan species which alone survives; that we have evidence, not merely of Pines and Maples, Poplars, Birches, Lindens, and whatever else characterize the temperate zone forests of our era, but also of particular species of these, so like those of our own time and country, that we may fairly reckon them as the ancestors of several of ours. Long genealogies always deal more or less in conjecture; but we appear to be within the limits of scientific inference when we announce that our existing temperate trees came from the north, and within the bounds of high probability when we claim not a few of them as the originals of present species. Remains of the same plants have been found fossil in our temperate region, as well as in Europe.

Here, then, we have reached a fair answer to the question how the same or similar species of our trees came to be so dispersed over

such widely separated continents. The land all diverge from a polar centre, and the proximate portions—however different from their present configuration and extent, as however changed at different times—we once the home of those trees, where they flourished in a temperate climate. The period which followed, and which doubtless came on by very slow degrees during ages of time, must have long before its culmination have brought down to our latitudes, with a similar climate, the forest they possess now or rather the ancestors of it. During that long (and we may believe first) occupancy Europe and the United States, were deposited in pools and shallow waters the cast leaf-fruits, and occasionally branches, which imbedded in what are called Miocene Tertiary or later deposits, most abundant in Europe from which the American character of the vegetation of the period is inferred. Geologists give the same name to these beds in Greenland and Southern Europe, because the contain the remains of identical and very similar species of plants; and they used to regard them as of the same age on account of this identity. But in fact this identity is good evidence that they cannot be synchronous. The beds in the lower latitudes must be later, and were forming when Greenland probably had very nearly the climate which it has now.

Wherefore the high, and not the low, latitudes must be assumed as the birth-place of our present flora; and the present arctic vegetation is best regarded as a derivative of the temperate. This flora, which when circumpolar was as nearly homogenous round the high latitudes as the arctic vegetation is now when slowly translated into lower latitudes would preserve its homogeneity enough to account for the actual distribution of the same and similar species round the world, and for the original endowment of Europe with what we now call American types. It would also vary or be selected from by the increasing differentiation of climate in the divergent continents, and on their different sides, in a way which might well account for the present diversification. From an early period, the direction of the winds, the great ocean current (however they may have oscillated north and south), and the general proportions and features of the continents in our latitude (at least of the American continent) were much the same as now, so that species of plants, ever so little adapted or predisposed to cold winters, and hot summers, would abide and be developed on the eastern side of continents therefore in the Atlantic United States and in Japan and Manchuria; those with preference for milder winters would incline to the western sides; those disposed to tolerate dryness would tend to interiors, or to regions lacking summer rain. So that, if the same thousand species were thrust promiscuously into these several districts, and carried slowly onward in the way supposed, they would inevitably be sifted in such a manner that the survivors of the fittest for each district might explain the present diversity.

* This takes for granted, after Nordenskiöld, that there was no preceding glacial period, as neither paleontology nor the study of arctic sedimentary strata afford any evidence of it. Or if there were any, it was too remote in time to concern the present question.

Selected.

testimony from the Monthly Meeting at Carse, in the County of Cumberland, containing an account of the life and services of our dear and worthy friend, Christ-pher Story.

his our dear friend and worthy elder, was at Righaid, in the Parish of Kirlking, and County of Cumberland, in the year 1763, and was convinced of the Truth, and re-ded it in the love of it, in the year 1672, be- about the 24th year of his age. And the d who was graciously pleased to visit and er him, as one of the first fruits in this e of the borders of England, and caused o work in his vineyard early, endowed with a good understanding of the things aining to his kingdom, and in the year 17 bestowed on him a gitt of the ministry, h he exercised freely; and we have good se to believe he made good improvement eef, as appeared by his faithful and un- ried labor in the Church of Christ in these es. His service among us was great and l accepted, he being one who ruled well in own house, and also in the Church, for h he was counted worthy of double or. He visited the meetings in this on, also in Ireland and Scotland divers es; and as his service was great, and well eived amongst his brethren, both at home e abroad, so likewise it was often his con- in our own county to appoint meetings on other people, which frequently proved great satisfaction, and caused many to con- to the truth, he being ended with living, in and powerful testimony, to the reaching e hearts and consciences of the hearers. His care over the people of God was great, t all who professed the truth might walk eless, and come up in faithfulness in every uch of their testimony. Zealous he was t stand undue liberty or going into excess in ing or drinking, or into the foolish, vain e gaily fashions of the world, in superfluity e apparel; and his circumspect behavior, hich was attended with much meekness and eavity, had often an awful effect upon such. He suffered imprisonment and spoiling of ds with much patience, which proved to this lot pretty early, by wicked men who ame informers, seeking his ruin with many ers; yet the Lord preserved him in faith- ness, and brought him clean through all ese exercises. He stood firm in his testi- ny against the anti-Christian yoke of es, that none might be unfaithful there- either in paying or receiving them. And eiving a gift beyond many in the government e Church affairs, he exercised the same in eah wisdom and prudence, and labored dili- ntly for the peace of the Church, and to eep out everything that might appear to euse strife and debate. He had an excellent ot of healing and making up of breaches, d although his way was not to lay sudden ds on any, yet he was indeed as a tender, eising father, and watched with a careful e of love over the flock of Christ, that his eartful thing might get place among the e great lover and promoter of good order e discipline, and very diligent to attend meet- gs of that nature, leaving his own business e serve the Church. And when it was his ecern to deal with any by way of rebuke, e was in much tenderness and solidity, and e in harshness or sourness. He was pattern e humility in his conduct and conversation, d bore a noble testimony against pride in

every branch of it, and also against covetous- ness and the eager pursuit of things of this world, by launching into trade and business beyond men's abilities and capacities, as be- ing great enemies to the work of God and the prosperity of his truth. And as he was much loved and honored amongst his brethren be- cause of his faithfulness, so he was greatly eesteemed by his neighbors, whom he was very ready to serve in reconciling differences and preventing lawsuits. And as he was not negligent in the work of the Lord to promote truth and righteousness, wherever his lot was among any people, being of an un- versal spirit, and concerned for the good and welfare of all, so when at home about his law- ful affairs, he was not negligent in providing things honest in the sight of all. And the Lord was pleased to bless his endeavors by affording him outward mercies, and giving him wisdom in using them in moderation; so that he was a good example in his county, having his heart and house open to receive and entertain the Lord's servants and mes- sengers. He was a great encourager of his children and servants to frequent meetings; but a great discourager of their going to mar- kets and fairs unnecessarily, and often en- couraged Friends of the great danger that you'th were in, of being drawn into too much liberty at such times, and thereby bringing reproach upon the Truth, and disesteem upon them- selves.

And though he was much against idleness, and such as spent their time like the sluggard, yet he was charitable and compassionate to the poor, and such as were in want, and would often provoke and stir up Friends to liberality in contributions, and was himself exemplary herein.

And as old age came upon him, his zeal and fervency were not lessened, which was demonstrated by the living freshness that attended his ministry, and his continued con- stancy in attending meetings, when under great bodily weakness, having been seized with a consumptive distemper, which in- creased upon him about the space of nine months, in all which time he bore his affliction with abundance of patience. Though often in great bodily distress, yet his inward man was strengthened and renewed, and his memory and understanding remained firm and perfect; often commemorating the great and unspeakable loving kindness and mercy of God, in visiting him in his youth. And much was the good counsel and seasonable advice that dropped from him in Friends' meetings, even in the times of his great weak- ness; as also to many of several ranks and degrees, who came to visit him, not forgetting to give tender and fatherly advice frequently to his own children. And though it be our loss to be deprived of such a worthy and serviceable instrument in the Lord's hand as he was, whose memory will remain sweet among us; yet we firmly believe it is his great gain; having finished his day's work, his reward, we doubt not, is great with the Lord.

He departed this life the 6th day of the 11th month, 1720, and was buried the 8th of the same, being accompanied to the burying ground, at Hetherside, by the greatest num- ber of Friends and others, that has almost ever been seen in these parts at any burial. Aged seventy-two years. A minister forty-three years.¹¹

The Bermuda Islands.

For "The Friend."

In the recently published volumes of the results of the exploring voyage of the British steamship "Challenger," there is an interesting account of observations made on these islands, from which the following has been condensed.

Bermudas seem to have been discovered about the year 1503, by Juan Bermudez, a Spaniard. The first English printed account of Bermudas is by Henry May, a sailor, who was wrecked there in 1793, in a French ship. May states that he and the French crew found on the island many hogs, and an abundance of birds, fish and turtle. In 1609, the *Sco. Adventure*, dispatched from London to convey the newly appointed Governor Gates, and some other officials to the young colony of Virginia, was wrecked on the shores of these islands. At this time they were uninhabited, and upon the return of some of the party to England, a company was formed to colonize it; the first settlers arrived in 1612, and it has since been a British settlement. Of latter time it has been an extensive naval station, with a fort and garrison of troops.

The civil population, in 1871, was 12,426, of whom 5039 were white, and 7396 colored. In the earlier days of the settlement many laborers and slaves were brought from Virginia and other parts of North America; and the aquiline nose and characteristic features of the North American Indian may often be recognized; now, however, except in one or two families, very much masked by negro intermixture.

Approaching the islands from the south- ward, their general effect is somewhat sombre. The land is low, rising nowhere to a height greater than two hundred and sixty feet, and by far the greater part forming gentle undulations at a height of from twenty to sixty feet above the sea level.

Although very valuable crops are raised, it is by a system of market-gardening in isolated patches rather than by agriculture, and the islands cannot be said to be generally or uniformly cultivated. The whole area of the islands is not more than 12,000 acres, and of these only about 1200 are under cultivation. The principal islands are well wooded, but the great preponderance of the Bermudian cedar, with a close and rigid foliage of the darkest green, gives a gloomy character to the woods.

There is a total want of springs and wells of fresh water, and it has become an almost universal custom to roof the houses with thin slabs of white limestone, and, further, to whitewash both roof and walls; the rain-water collected on the roof, and kept clean and fresh by the constantly renewed whitewash, is carefully led into a tank, and forms the only supply of pure water. Every house of any pretension is provided with such a tank, also covered with a sloping whitewashed roof. The white roofs are altogether peculiar, and as the houses and cottages of the rural population are scattered over the whole island, so as almost to run into one continuous strag- gling village, the white squares gleaming among the dark trees produce rather a pleasing effect, and one which is certainly very characteristic of Bermudas.

Bermudas is practically an "atoll" or annular coral reef. The reef is about twenty-four miles in length by twelve in width. The portion above the level of the sea, stretches

along the southern or weather side, and consists of a chain of five narrow islands and a multitude of islets and detached rocks, which raise the number of the elements of the archipelago to over three hundred. There are only two or three channels through which vessels can come in through the reefs on the north side, and all of these are difficult. An unbroken reef stretches along the south shore, about a quarter of a mile from the land, from one end of the islands to the other. The central portion of the reef forms an imperfect lagoon, with an average depth of seven to eight fathoms. The general character of this "atoll" is much the same as that of like reefs in the Pacific, with certain peculiarities depending upon the circumstances that it is the coral island farthest from the equator, almost on the limit of the region of reef building corals.

The water over the reefs is extremely clear, and by using a water glass—a square bracket with the bottom of plate glass, just lowered so far as to get rid of the ripple and reflections of the surface—every detail can be made out of the economy of the reefs, and that of their inhabitants.

The surface of the reef is covered with massive, branching and feathery things of very many kinds, occupying it as closely and as irregularly as the various weeds do a fallow field. First we have the growing corals themselves, which may represent the docks and the thistles, or rather a mass of beautiful marigolds and carnations, and daisies, which have been thrown over a hedge in clearing a luxuriant garden and gone on flowering. Most of the Bermuda corals are like groups of sea anemones, in every shade of purple, orange or green. The base or stock of the coral is dead, and forms part of the reef; but each of the living branches is tipped with its sea anemone. In most cases the bodies of these sea anemones with their ranges of tentacles and their high coloring, are so prominent, that they entirely mask the corals; but in a few, as in the brain coral, which seems to thrive at Bermuda better than almost anywhere else, forming domes six or eight feet in diameter, the animal matter is in comparatively small quantity, and covers the coral with what appears little more than a coating of grayish or yellow mucus. Other zoophytes, like the other more prominent weeds in a field, grow in the spaces between the clumps of the different kinds of coral, and beneath them there is often a close fitting of sponges and smaller zoophytes, which like corals, take carbonate of lime from the sea water and incorporate it with their tissues.

All these things, living and dying, are constantly yielding a fine powder of lime, which sinks down and compacts in the spaces among their roots, and every breaker of the surf grinds down more material and packs it into every hollow and crevice capable of receiving and retaining it. The Bermudas of the present day is simply a bank of blown sand in various stages of consolidation. There is only one kind of rock in Bermudas. The islands consist from end to end of a white granular limestone, which makes excellent building stone. The stone is cut out of the quarry in rectangular blocks by means of a peculiarly constructed saw, and the blocks, at first soft, harden rapidly on being exposed to the air.

The fine coral sand which surrounds the islands to a distance of about twenty miles, is

washed in by the sea; it is then caught at certain exposed points by the prevailing winds and blown into sand hills often forty or fifty feet in height. There is a wonderful "sand glacier" at Elbow Bay, on the southern shore of the main island. The sand has entirely filled up a valley, and is steadily progressing inland in a mass about five and twenty feet thick. On its path upward from the beach, this "glacier" had overwhelmed a wood of cedars. Firewood is valuable in Bermudas, and it is probable that in this case the trees were cut down when their fate seemed inevitable. The only way of stopping it artificially seems to be to cover it with vegetation. If planted in large numbers, and tended and watered for a time, it seems that oleanders and the native juniper will grow in the pure sand, and if they once take root the motion of the sand ceases.

Wandering about among the pretty hill and dale scenery of Bermudas, one is not at first conscious of a singular omission, until all at once it bursts upon him that there is not a drop of lake to be seen anywhere—no river, stream, lake, not even a ditch or a duck-pond. The heavy rain falls upon the porous sand heap, and runs through it as if it were a sieve. There are some marshes and ponds on the main island, the marshes covered with a luxuriant vegetation; but in all of them the water is brackish, and they are all more or less affected by the tide, though the rise and fall are almost imperceptible in those at a distance from the sea. The wells do not yield good drinking water, and the people trust greatly to their rain-water tanks.

Reference has already been made to the use of the common oleander for arresting the progress of moving sand. The plant was introduced into Bermudas in modern times, and appears to have been encouraged, partly on account of its value for that purpose, and partly, doubtless, for its showy flowers. The climate and soil seem to suit it wonderfully, and it has regularly taken possession of the islands. Large bushes, twenty feet high, are everywhere—around the cottages, along the roadsides, and in the woods; and thick hedges of great height, planted partly as bounding hedges, and partly for shelter, intersect the cultivated ground in every direction. Nothing can be imagined more ornamental. There are all varieties of color, from white through pale rose and lilac to nearly crimson; the flowers tend to come double or semi-double, and they bloom most profusely. The oleander is not now so popular as it was, and although it is still planted in large numbers in shifting sand, it is suspected that high thickets and hedges of it near dwellings are not healthy, and latterly they have been cleared away in many places.

As in all limestone districts, the caves at Bermudas consist of large vaulted chambers hollowed out in the rock by the removal of its material by running fresh water or by the action of the sea. The entrances are usually small crevices in the rock, often masked by vegetation. One called the Convolutus Cave, is covered with a glorious mantle of *Ipomoea vil.* its ephemeral flowers changing during the day from brilliant azure to rich purple. The Painter's Vale cave was thought to be the prettiest of all. From the roof innumerable stalactites perfectly white, often several yards long and coming down to the delicacy of knitting-needles, hang in clus-

ters; and wherever there was any continual crack in the roof or wall, a graceful, soft-brown curtain of white stalactite fell, and opened, much to our surprise, deep in the ter. Stalagmites also rose up in pinnacles fringes through the water, which was so exquisitely clear and still, that it was somewhat difficult to tell where the solid marble traced, and its reflected image began. In a cave, which is a considerable distance from the sea, there is a slight change of level, the tide sufficient to keep the water perfectly pure. The mouth of the cave is overgrown with foliage, and every tree is draped festooned with the fragrant *Jasminum polyanthum* mingled not unprofitably with the "poivy."

(To be continued.)

For "The Friend" Thoughts and Feelings. THE CROSS OF CHRIST.

Perhaps there is no more severe, with the same time no more indispensable requirement made upon us as pilgrims to the heavenly country, than whole-hearted submission to obedience to the cross of Christ Jesus; which in its thoroughly cleansing process, as apostle represents, crucifies to the world, the world to us. The terms upon which all we can become scholars and followers of crucified yet risen Saviour, are thus clearly and unequivocally set forth by His own I. "If any man will come after me, let him deny himself, and take up his cross daily, and follow me." And again, "Whosoever doth not bear his cross, and come after me, cannot my disciple." Moreover, such strong I did this subjugating doctrine take upon mind and life of His faithful apostle, that writes to the Galatians: "God forbid that I should glory, save in the cross of our Lord Jesus Christ, by whom the world is crucified unto me, and I unto the world."

The very term "cross" or "yoke," represents its nature with its leaving, subduing operation upon us. Being always opposite the natural will and desires of the carnal, renewed heart, its aim is to mortify and daily humble the selfish, proud nature with so as to bring it into conformity with mind of Christ; even that that portion of prayer, given for our learning, from his o hallowed lips, may have free course, "Thy will be done on earth (in us) as it is done in heaven." Wm. Penn. in his arduous work entitled, "No Cross, No crown declares, that "The unmortified Christian; the heathen are of the same religion." Heedful then is mortification, self-abasement and humility of mind, in order that we come dead to the world; that the affective lusts be crucified; that no flesh have room to glory; and that what we are, we may be by the grace and cross of Jesus.

If this is the way Christians were made the beginning, is there any new or easier way of becoming Christians now? Have the questions of the gospel of Jesus grown obsolete, or so changed as to suit the compromised, religious taste of the times? Have terms of discipleship with a world-renouncing Lord become modified, so as to accommodate and embrace the multitude, to whom "preaching of the cross is foolishness?" Or the straight gate and the narrow way so enlarged their portals, as to admit such as but not so disencumbered themselves of pro-

and flesh, as, upon Christ's own conditions, can alone obtain entrance there?

Were there a due consideration of the importance of this life, of the value of a soul, of shortness and uncertainty of our tarryance, with the unsatisfying nature of every earthly enjoyment unconnected with a faith—a hope which embraces the eternal bed, how it would point to a voluntary and aided taking up of the cross; how tend to see a laying up treasure in heaven before beyond anything else; how to count these light afflictions of earth as but for a moment compared with the eternal recompense of the reward; how help to lay aside every weight, and the sin that doth so easily beset us, and to run with patience the race before us, looking unto Jesus the author and finisher of our faith; who, for the joy that is set before him endured the cross despising shame, and is now set down at the right hand of the throne of God."

Having promised to make His yoke easy. His burden light to such as are willing to take it upon them; which is confirmed to us by the concurrent testimony of every one that has so submitted and committed themselves, why is it that sons and daughters—loved children of the Lord—are not induced to yield themselves to Him, the Saviour, in humility and contrition of soul? Why do they not, with Moses "choose rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season?" Why do they not rally unreservedly to the banner, submit themselves wholly to the discipline of the restraints of Jesus? Or why do they not seek to become true-hearted disciples—pupils in the Redeemer's school—that the narrow way of self-denial and the daily cross—the only one to the crown of glory—may become the joyful recipients of the hundred fold promised such in this present world, and in the world to come, life everlasting.

Evil Speaking.—Speaking evil of others is one of the most unamiable habits that can be acquired, and one that leads to infinite mischief. It is not always easy to avoid it, for there are a great many people in the world who are not what they ought to be, who do many things they ought not to do. It is hard to have a blunt, generous mind to refrain from expressing itself about mean people and mean acts. There is something in meanness and dishonesty that rouses the luxury of denouncing them in bold and unsparring terms. But practice, as a practice, is a troublesome and dangerous one. There are occasions when it is our duty to speak out in exposure of wrong. But in general it is best to abstain from evil speaking, even of evil persons. We are not made judges of others' actions. No one has the right to assume the character of censor and censor. Even the best of us have faults; and if every one should presume to denounce the vices and misconduct of others, the world would be given up to defamation.

We may see and hear much we do not admire and cannot like; we may become cognizant of many evil deeds done by evil persons; but it is a part of wisdom and discretion to see them by without notice, except when to speak of them cautiously may be necessary as a warning to friends.

We all have enough of enemies in this

world, without provoking others by ill-tempered comments. The enmity of evil men is a thing to be avoided—for while it can do us no good, it may do us much harm.

Besides we may make mistakes in the haste of honest indignation, and speak evil of good men for acts we do not understand.

Such a mistake is worse than the other; for while it is imprudent to promiscuously denounce evil men, it is a cruel wrong to defame a good one.—*Late Paper.*

For "The Friend,"

"Speaking to yourselves in spiritual songs,
Making melody in your heart to the Lord."

The reading of some articles in "The Friend," of later times, stirs up some incidents of the past in my mind, that may not be without interest to others. Though but a child when my grandmother died, something in his character and bearing made an impression upon my mind for good, like that of the just, whose memory is blessed. At the time of his marriage, in the year 1780, he was nearly twenty-one years of age, of good talents and agreeable manners; a pious member of the Presbyterian denomination, by whom he was much esteemed. He possessed a deep, solemn voice, and was valued as a leader in the exercises of congregational singing. He was not only well satisfied in these performances, but took great delight in them, with sincerity of heart. At this time my grandmother was a member of the Society of Friends. When visited by Friends on account of transgressing the discipline by her marriage, she said, she feared she was not in the right state of mind to make the proper acknowledgment at that time, and desired to be disowned till she could do so, which was some time afterward. Her husband was very kind in assisting her to attend her meetings, though he still kept to his own. My grandmother said, greatly as I desired him to come with me, I never said much to him about it. Unexpectedly to his friends, he stopped going to his accustomed place; and when fellow-professors came to urge his return, saying they could not do without his voice, he told them he could not. It appears that while giving out some lines to be sung, he felt a check to his proceeding, and was given to feel he was tempting others to say what they felt not, and that he could no longer mingle in this performance as an act of worship. He stayed at home with an exercised mind. After some time he was free to go with his wife, was received into membership with Friends, and in course of time was appointed an elder. He lived the life of the upright, whose end is peace.

Can it be that any of our profession are returning to that the Truth gave freedom from without a check or serious thoughtfulness, that it is parting the way with weakness and sorrow to others. We may not judge other sects that are accustomed to their own way, according to their own belief. But such as are seeking to introduce a new order of things amongst us, according to their own wills, may be brought to solemn judgment by Him who executeth righteousness.

The longer some of us live, the more silent waiting in a meeting for worship is felt to be a privilege to be sought for, and not trifled with; a profitable hour not to be intertered with by uncalled for offerings. It may be a season of thanksgiving and praise to those whose

hearts are tuned aright; who have undergone a preparation to seek the Lord. But we may often go to these meetings and find a host ofumbering, disturbing things have followed us, and have been carelessly or willingly allowed a place in our minds. So at such times our best feelings may be wounded and tried. But they who gather as in the presence of their Maker, striving for solemn thought and a crumb of faith-sustaining bread, will not always be disappointed, but may rejoicingly say at times, "Lo, this is our God, we have waited for Him, and He will save us; this is the Lord, we have waited for Him; we will be glad, and rejoice in his salvation."

A Volcano 1600 feet high thrown up in the 18th Century.

Jorullo is a volcano of Mexico, in the State of Michoacan, 160 miles west by south of the City of Mexico. It rises from the plain of Malpais, which forms a part of a platform having a mean elevation of 2500 feet above the sea, and is on a line with a chain of volcanoes, including Tuxtla, Orizaba and Popocatepetl to the east, and Colima to the west. From the discovery of America down to the middle of the 18th century, no volcanic eruption had occurred in this region; and the present site of Jorullo, about 100 miles from the nearest sea, was the centre of a series of sugar and indigo fields, drained by two small streams, the Cuicimba and the San Pedro. In June, 1759, strange hollow sounds were audible, and earthquakes succeeded each other until the end of September, when flames issued from the ground, and rocks were thrown to a prodigious height. On the line of a chasm running from N. N. E. to S. S. W., were formed six volcanic cones composed of scorie and fragmentary lava, the smallest of which attained 300 feet in height, while Jorullo, the central volcano, rose to an elevation of 1600 feet above the level of the plain, and launched forth streams of basaltic lava with included fragments of granitic rocks, which ejection did not cease until February, 1760. The natives, on returning to the spot many years after the outbreak, found the ground still uninhabited from the excessive heat.

Around the base of the newly formed cones and radiating from them as from a centre, over an area of four square miles, is a convex mass of matter some 550 feet high at its junction with the cones, and gradually sloping thence in all directions toward the plain; and on its convex protuberance, sloping at an angle of about 6°, are thousands of low conical mounds, called *hornitos*, ranging from 6 to 9 feet in height, from which, as well as from extensive fissures across the plain, issued clouds of sulphurous acid and aqueous vapor.

In 1827 they had entirely ceased to emit steam, and the mountain has not since shown any signs of activity; vegetation had marked progress on the flanks of the new hills, and cultivation had been resumed on the fertile plain surrounding the volcanic centre. The great distance of Jorullo from the ocean is observed by Lyell as an important circumstance, showing that proximity to the sea, though a common characteristic, is not an essential condition of the site of active volcanoes. The two streams above mentioned disappeared at the time of the eruption below the eastern extremity of the plain, and afterward reappeared as hot springs at its western limit.—*Appleton's American Cyclopaedia.*

Selected.

Third mo. 27th, 1859.—The Lord can raise up his servants, and give them power to preach his word, over all the opposing powers of darkness, and the secret resistance that others may cherish, who feel coldness and indifference towards them. True ministers of the gospel have nothing in view but to comply with the Lord's will, that they may be found clear in the day of account. The spirit of opposition to such, is felt at times in meetings, and may be permitted to close up the way for gospel service, but they who indulge it will bring flatness over themselves, and have to suffer for their wrong opposition to the Lord's children and servants. How different is the state of meetings where brethren and sisters draw near to one another in heart and spirit, like holding up each other's hands, travelling together for the arising of Divine life, and rejoicing when the Lord opens the way for the current of true baptizing ministry to flow freely. Elders are appointed to watch over the ministry, to guard and counsel ministers, when needed; if they have left the gift, or said any thing not according to sound doctrine, but this is not all their duty; they have as much need as any others, to watch over themselves, that they may know what spirit rules and actuates them; and they are to give themselves up to sympathize with the ministers, and to share in bearing the burdens which they are brought under, by which they may be preserved from judging in their own will and temper, and may be made instruments to help them, and by a harmonious labor and travail of soul, assist in bringing to the birth concerns which ministers are brought under. Hereby they are fellow helpers in the Lord. And when ministers are raised up by their Divine Master, in his authority, then a harmonious exercise is again known in the preaching of the Gospel, the Great Name is exalted, and the baptizing power goes over the meeting. Ministers and elders thus fulfill their respective services, and contribute to each other's growth and establishment in the blessed Truth. The one preaching what the Holy Spirit opens to them, and the other keeping close to them in spirit, to aid and steady them in their work, that they may not give out, nor deviate from the line of service appointed them by the Great Minister of the Sanctuary.—*Wm. Evans' Journal.*

Influence of a Holy Life.—"There is," says Chalmers, "an energy of moral action in a good man's life, passing the highest efforts of the orator's genius. The seen but silent beauty of holiness speaks more eloquently of God and duty than the tongues of men. Let parents remember this. The best inheritance a parent can bequeath to a child is a virtuous example, a legacy of hallowed remembrances and associations. The beauty of holiness beaming through the life of a loved relative or friend, is more effectual to strengthen such as do stand in virtue's ways, and raise up those that are bowed down, than precept, command, entreaty or warning."

Come, ye blessed of the Lord, rejoice together, *keep in unity and oneness of spirit.* Triumph over the world, be joyful in the Lord, reigning over the world! and above all things that draw from the Lord; that in clearness, righteousness, pureness and joy, you may be preserved to the Lord.—*G. Fox.*

THE FRIEND.

FIRST MONTH II, 1879.

SUMMARY OF EVENTS.

UNITED STATES.—The mean temperature at Philadelphia for the Twelfth month, was 23.7 degrees—the highest being 62 deg. on the 21 and 10th, and the lowest 13 deg. on the 26th and 29th. Total rainfall 3.19 inches. Prevailing direction of wind, west. Maximum velocity 63 miles per hour. Frost or freezing weather occurred nearly every day. About two inches of snow fell during the month. For the entire year the mean of Barometer was 29.877 inches, and the mean temperature 54.8 degrees. Rainfall 34.53 inches; number of rainy days 118. Recent reports from different sections of the country, indicate that the temperature has generally moderated. In the South, where the weather is unusually severe for that section. Heavy snows have fallen in New Orleans, Mississippi, Arkansas and Georgia. At Jacksonville, Florida, the trees and pavements were covered with ice on the morning of the 5th inst. On the morning of the 6th, the temperature at Little Rock was 4 degrees above zero. An ice bridge formed across the Niagara river, below the Falls, on the 5th inst., and hundreds of people, it is said, have crossed upon it.

The report of the Inspectors of steam vessels for the Philadelphia district, shows that 11,863,297 passengers were carried during the past year, by steam vessels belonging to this port. Of this number the American flag carried 6,032,000, and foreign 5,831,297; the Red Star line 795 cabin, and 1,538 steerage passengers.

There were 7348 vessels from foreign ports arrived in New York during last year, an increase over the previous year of 1104. One-third of these were American, and another third British, there being 23 more of the former than of the latter.

The telephone is about being introduced by the New York Department of Dock and Harbor, and the dredging for the foundations of piers, it has been found necessary to employ divers to examine the bed of the river, and there has been felt a need for some means of communication between the divers and men on the dredges. Edison's battery telephone is the one used by the department. A duplex connected with one instrument on the dredge, and another on the shore, is connected to a second telephone in the helmet of the diver, so arranged that he can apply either his mouth or ear to the speaking cups, by turning his head, and thus converse with ease while at work on the bed of the river.

To make shoes-pegs enough for American use, consumes annually 100,000 cords of timber; lasts and boot-trees being represented in one year \$12,000,000; and the timber used each year in making wagons and agricultural implements is valued at more than \$100,000,000. A writer who has been making a study of forest trees, their rapid destruction in this country, and the effect on climate and health, says, that since 1835 the forest area of the Western Hemisphere has decreased at the rate of 100,000 acres a year, and at this rate in the United States alone has advanced from 1600 square miles, in 1835, to 7,000 in 1855, and 8400 in 1876, while the last two years have been scarcely less exhaustive.

The annual statement of precious metals produced in the States and Territories west of the Mississippi river, including Brazil, Columbia, and the receipts in San Francisco from the west coast of Mexico, shows the aggregate of gold \$38,956,231; silver \$38,146,341; lead \$38,42,000, the total being less by \$11,207,132, than for 1877.

The Mint Bureau turned into the United States Treasury on the 2nd inst., \$575,000 as the net profit accruing from the exchange of the standard dollar during the past three weeks.

During the year 1878, the total shipment of live stock from Boston to Europe, was 24,658 cattle, 27,905 sheep, 13,680 hogs, and 207 horses.

Upwards of 36,000,000 pounds of codfish and 11,000,000 pounds of haddock, were landed at Gloucester, Mass., during last year.

During the year 1878, there were received and sold at the Philadelphia markets of live stock, 138,630 heaves, 15,225 sows, 282,000 hogs, and 630,100 sheep. The receipts of cotton aggregated 151,760 bales; 379-

380 barrels of flour; of all kinds of grain 40,577 bushels; 113,922 bales of wool.

Markets, &c.—The following were the quotator the 4th. The Government bond market was strong, the registered 5's, which advanced 1/4, and the 10's, which advanced 1/2. The remainder of the list weak. The Secretary of the Treasury called on \$10,000,000, 1867's, for redemption, interest on the ceasing on the 4th of 10 mo.

Cotton.—Sales of middlings at 9 1/2 cts. per lb for uplands and New Orleans.

Hay.—Market steady. \$1 a \$4.25 for good, \$4.60 a \$4.62 for fancy; potent and other high grade \$6 a \$7.50. Rye straw, \$2.75 a \$2.90.

Grain.—Wheat, \$1.05 for red; \$1.07 for an and \$1.06 a \$1.08 for white. Corn, 41 a 43 cts. C 28 a 29 cts. for mixed, and for choice white, 32 a 33 per bushel.

Hay and Straw.—Prime timothy, 65 a 80 cts. per pound; mixed, 45 a 60 cts. Straw, 65 a 75 cts, 100 pounds.

Seeds.—Choice clover seed, 6 1/2 cts. per po Flaxseed, \$1.37 per bushel.

Beef cattle were active, and prices a fraction high 3500 head arrived and sold at 3 a 6 cts, as to quality, 9 1/2 a 9 1/2 cts. per pound. Hogs, 4 1/2 cts.

The number of deaths in this city for the week ending on noon on the 4th, was 313: 185 being adults, 128 children.

FOREIGN.—In Great Britain the weather is reported cold and frosty, with additional heavy snow. The thermometer has been a daily increase of a popular distress in every quarter during the past week. At Manchester, there were 3000 applications, of heads of families, to the Relief Committee in one day. During the week 1200 families have been relieved. Wolverhampton.

The failure of the Cornish Bank, announced on the 4th inst. It is thought will produce terrible distasteful to the people of West Cornwall, the further statement of Cornish mines being inevitable.

The number of business failures officially announced in the Kingdom, during the year 1878, is 15,050, an increase of 467 over the preceding year.

The revenue of Great Britain, for the year 1878 shows an increase of 1,803,455 pounds sterling above the year 1877.

France.—The senatorial elections, which took place on the 5th inst., resulted in a great Republican triumph. Of 47 conservative Senators whose terms expired only 13 have been re-elected. The Republican majority in the Senate will be about 57.

Berlin.—The Emperor William, in receiving Minister of the Interior, said he was not fatigued attention to public affairs, although he has not regained his former elasticity. He encourages the minister continue to exert their full activity to combat dangers to the State. The Socialist Democrats have lately carried most of their municipal candidates across the Rhine.

Petersburg.—Official confirmation is given of report that the plague has broken out in Astrachan, is said to have been introduced by Cossacks return from Turkey.

The difficulties which had arisen regarding the Russian evacuation of the Dobruja are said to have been smoothed away, and General Todleben has ordered evacuation to begin on the 12th inst.

FRIENDS' ASYLUM FOR THE INSANE, Near Frankford, (Twenty-third Ward), Philadelphia. Physician and Superintendent—JOHN C. HALL, M. D. Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

MARRIED, in Friends' Meeting, at Coal Creek, K. K. Co. Iowa, the 18th of 12th month, 1878, JOY VAIL, Jr, son of John and Abigail Vail, to LYDIA daughter of Jesse and Myra Garwood, all of same place.

DIED, at his residence, near Moorestown, N. Jersey, on the 8th of 11th month, last, JESSE H. BROWN, an elder and member of Chester Monthly Meeting Friends, in the 62nd year of his age. He was sincere attached to the doctrines and testimonies of the Society of Friends; and during his protracted illness manifested a patient, humble and tender spirit, with a desire to do his work might, he fully accomplished before he died. To his friends, who constantly loved his happy experience, and that his reasoned and deeded spirit has entered into one of those "mansions" prepared for the righteous.

Testimonies of Profane Writers to the credibility of the New Testament.

Extracted from *Horne's Introduction to the Holy Scriptures*.

(Continued from page 174.)

5.) The historian **ELIUS LAMPRIDIUS** reports, that the emperor Alexander Severus reigned from A. D. 232 to 235, had two private chapels, one more honorable than the other; and that in the former "were the deities of the gods, and also some eminently good ones, and among them Apollonius, and as a star of his time says, *Christ*, Abraham, and others (whom he considered as deities), and images of his ancestors." The same historian adds, that the emperor "wished to erect a temple to Christ, and to receive him among the gods. But he was forbidden by those who consulted the oracles, they having said that, if that was done, all men would become Christians, and the other temples be taken."

6.) **CRISTUS**, one of the bitterest antagonists of Christianity, who wrote in the latter part of the second century, speaks of the founder of the Christian religion as having lived but a few years before his time, and mentions the principal facts of the Gospel history relative to Jesus Christ,—declaring that he had read the account from the writings of the evangelists. He quotes these books (as we have already had occasion to remark), and makes extracts from them as being composed by the disciples and companions of Jesus, and under names which they now bear. He takes notice particularly of his incarnation; his being born of a virgin; his being worshipped as the magi; his flight into Egypt, and the slaughter of the infants. He speaks of Christ's baptism by John, of the descent of the Holy Spirit in the form of a dove, and of the voice in heaven, declaring him to be the Son of God; of his being accounted a prophet by his disciples; of his foretelling who should betray him, as well as the circumstances of his death and resurrection. He allows that Christ was considered as a divine person by his disciples, nor worshipped him; and notices all the circumstances attending the crucifixion of Christ, and his appearing to his disciples afterwards. He frequently alludes to the Holy Spirit, mentions God under the title of the most High, and speaks collectively of the Father, Son, and Holy Spirit. He acknowledges the miracles wrought by Jesus Christ, which he engaged great multitudes to ad-

here to him as the Messiah. That these miracles were really performed, he NEVER disputes or denies, but ascribes them to the magic art, which (he says) Christ learned in Egypt.

7.) **PORPHYRY**, another learned antagonist of Christianity, who flourished about a century after Celsus, has also borne evidence to the genuineness of the books received by the Christians. He not only allowed that there was such a person as Jesus Christ, but also honored him as a pious person who was conveyed into heaven, as being approved by the gods.

8.) About the middle of the fourth century reigned the emperor **JULIAN**. It is a remarkable fact, that this very learned and inveterate enemy of the Christian name and faith could produce no counter evidence in refutation of the truth of the evangelical history, though (as we have already seen) he attests the genuineness and early date of the four Gospels; and that he never attempted to deny the reality of Christ's miracles. Jesus, he says, did nothing worthy of fame, unless any one can suppose that curing the lame and the blind, and exorcising demons in the villages of Bethsaida, are some of the greatest works. He acknowledges that Jesus had a sovereign power over impure spirits; that he walked on the surface of the deep, and expelled demons. He endeavors to depreciate these wonderful works, but in vain. The consequence is undeniable; such works are good proofs of a divine mission.

9.) Lastly, to omit the very numerous intervening testimonies that might be adduced, **MOHAMMED** (who lived in the latter end of the fifth and the former part of the sixth century), though he assumed the honor of delivering to mankind a new revelation, expressly acknowledged the authority of the Gospels. He speaks of Jesus Christ and of his mother by their names, and calls him the Word of God. He says, that he was miraculously born of a virgin; acknowledges the truth of his miracles and prophecies; and speaks of his death and ascension, of his apostles, of the unbelief of the Jews, of Zacharias the father of John the Baptist, and of the Baptist himself, describing his character in a manner perfectly conformable to the Gospels.

2. *Testimonies of Heathen Adversaries to the Lives and Characters of the first Christians.*

(1.) The first persecution of the Christians was raised by the emperor Nero, A. D. 65, that is, about thirty years after the crucifixion of Jesus Christ. Concerning this persecution, we have the testimonies of two Roman historians, Tacitus and Suetonius.

TACITUS was contemporary with the apostles. Relating the great fire at Rome, in the tenth year of Nero's reign, he says, that the people imputed that calamity to the emperor, who (they imagined) had set fire to the city, that he might have the glory of rebuilding it more magnificently, and of calling it after his own name; but that Nero charged the crime

on the Christians, and, in order to give the more plausible color to this calumny, he put great numbers of them to death in the most cruel manner. With the view of conciliating the people, he expended great sums in adorning the city, he bestowed largesses on those who had suffered by the fire, and offered many expiatory sacrifices to appease the gods. The historian's words are:—"But neither human assistance, nor the largesses of the emperor, nor all the atonements offered to the gods, availed; the infamy of that horrible transaction still adhered to him. To suppress, if possible, this common rumor, Nero procured others to be accused, and punished with exquisite tortures a race of men detested for their evil practices, who were commonly known by the name of Christians. The author of that sect (or name) was Christus, who in the reign of Tiberius was punished with death, as a criminal, by the procurator Pontius Pilate. But this pestilent superstition, though checked for a while, broke out afresh, not only in Judaea, where the evil first originated, but even in the city (of Rome), the common sink into which every thing filthy and abominable flows from all quarters of the world. At first those only were apprehended who confessed themselves of that sect; afterwards a vast multitude discovered by them; all of whom were condemned, not so much for the crime of burning the city, as for their enmity to mankind. Their executions were so contrived as to expose them to derision and contempt. Some were covered over with the skins of wild beasts, that they might be torn to pieces by dogs; some were crucified; while others, having been daubed over with combustible materials, were set up as lights in the night-time, and thus burnt to death. For these spectacles Nero gave his own gardens, and, at the same time, exhibited there the diversions of the circus; sometimes standing in the crowd as a spectator, in the habit of a charioteer, and at other times driving a chariot himself; until at length these men, though really criminal and deserving exemplary punishment, began to be commiserated, as people who were destroyed, not out of regard to the public welfare, but only to gratify the cruelty of one man."

The testimony which **SUETONIUS** bears to this persecution is in the following words:—"The Christians likewise were severely punished,—a sort of people addicted to a new and mischievous superstition."

The preceding accounts of the persecution of the Christians by Nero are further confirmed by Martial, the epigrammatist (who lived at the close of the first century), and by Juvenal, the satirist (who flourished during the reigns of Domitian, Nerva, Trajan, and Adrian), both of whom alluded to the Neroian persecution, and especially to the pitched coat in which the Christians were burnt.

Martial has an epigram, of which the following is a literal translation:—"You have,

perhaps, lately seen acted on the theatre, Mucius, who thrust his hand into the fire: if you think such a person patient, valiant, stout, you are a senseless dotard. For it is a much greater thing, when threatened with the troubles *in coat*, to say, 'I do not sacrifice,' than to obey the command, 'Burn the hand.' This troublesome coat or shirt of the Christians was made like a sack, of paper or coarse linnen cloth, either besmeared with pitch, wax, or sulphur, and similar combustible materials, or dipped in them: it was then put upon the Christians; and, in order that they might be kept upright,—the better to resemble a flaming torch,—their chins were severally fastened to stakes fixed in the ground.

In his first satire, Juvenal has the following allusion:—

Now dare

To glance at Tigellinus, and you glare

In that pitch'd shirt in which such crowds expire,
Chain'd to the bloody stake, and wrapp'd in fire.

Or, more literally, "Describe a great villain, such as was Tigellinus" (a corrupt minister under Nero), "and you shall suffer the same punishment with those, who stand burning in their own flames and smoke, their head being held up by a stake fixed to a chain, till they make a long stream" ("of blood and fluid sulphur") "on the ground."

The above-cited testimony of Tacitus, corroborated as it is by contemporary writers, is a very important confirmation of the evangelical history. In it the historian asserts, 1. That Jesus Christ was put to death as a malefactor by Pontius Pilate, procurator under Tiberius; 2. That from Christ the people called Christians derived their name and sentiments; 3. That this religion or superstition (as he terms it) had its rise in Judea, where it also spread, notwithstanding the ignominious death of its founder, and the opposition which his followers afterwards experienced from the people of that country; 4. That it was propagated from Judea into other parts of the world as far as Rome; where in the tenth or eleventh year of Nero, and before that time, the Christians were very numerous; and, 5. That the professors of this religion were reproached and hated, and underwent many and grievous sufferings.*

(To be continued.)

I prayed for direction, and saw clearly that plainness of dress and behavior best became a Christian, and proved it good for a proud heart to wear the plain and modest livery of God's children. For when I appeared like the world in Babylonish garments, I had its esteem, and knew not how to part with it. But when I showed by my appearance that I considered myself as a stranger and a foreigner, none can know (but by experience) what an influence it has on the whole conduct, and what a fence it is to keep us from sinking into the spirit of the world. But there is no medium,—they who are conform'd to the maxims and customs and fashions of the world *must embrace*

its spirit also, and they shall find the esteem they seek, for the world will love its own. But let them remember, also, that its friendship is enmity with God.—*Mary Fletcher, a Methodist Preacher.*

From the "American Journal of Science and Arts,"
Forest Geography and Archaeology.

BY ASA GRAY.

(Concluded from page 172.)

Besides, there are re-sittings to take into the account. The Glacial period or refrigeration from the north, which at its inception forced the temperate flora into our latitude, at its culmination must have carried much or most of it quite beyond. To what extent displaced, and how far superseded by the vegetation which in our day borders the ice, or by ice itself, it is difficult to form more than general conjectures—so different and conflicting are the views of geologists upon the Glacial period. But upon any, or almost any, of these views, it is safe to conclude that temperate vegetation, such as preceded the refrigeration and has now again succeeded it, was either thrust out of Northern Europe and the Northern Atlantic States, or was reduced to precarious existence and diminished forms. It also appears that, on our own continent at least, a milder climate than the present, and a considerable submergence of land, transiently supervened at the north, to which the vegetation must have sensibly responded by a northward movement, from which it afterward receded.

All these vicissitudes must have left their impress upon the actual vegetation, and particularly upon the trees. They furnish probable reason for the loss of American types sustained by Europe.

I conceive that three things have conspired to this loss. First, Europe, hardly extending south of latitude 40°, is all within the limits generally assigned to severe glacial action. Second, its mountains trend east and west, from the Pyrenees to the Carpathians and the Caucasus beyond, near its southern border; and they had glaciers of their own, which must have begun their operations, and poured down the northward flanks, while the plains were still covered with forest on the retreat from the great ice-wave coming from the north. Attacked both on front and rear, much of the forest must have perished then and there. Third, across the line of retreat of those which may have flanked the mountain ranges, or were stationed south of them, stretched the Mediterranean, an impassable barrier. Some hardy trees may have eked out their existence on the northern shore of the Mediterranean and the Atlantic coast. But we doubt not, Taxodium and Sequoias, Magnolias and Liquidambar, and even Hickories and the like were among the missing. Escape by the east, and rehabilitation from that quarter until a very late period, was apparently prevented by the prolongation of the Mediterranean to the Caspian, and thence to the Siberian ocean. If we accept the supposition of Nordenskiöld, that anterior to the Glacial period, Europe was "bounded on the south by an ocean extending from the Atlantic over the present deserts of Sahara and Central Asia to the Pacific," all chance of these American types having escaped from or re-entered Europe from the south and east, is excluded. Europe may thus be conceived to have been

for a time somewhat in the condition in which Greenland is now, and, indeed, to have been connected with Greenland in this or in other times. Such a junction, cutting off access to the Gulf Stream to the polar sea, would, some think, other things remaining as are, almost of itself give glaciation to Europe. Greenland may be referred to, by way of comparison, as a country which, having a gone extreme glaciation, bears the mark of it in the extreme poverty of its flora, and the absence of the plants to which its southern portion, extending six degrees below the Arctic circle, might be entitled. It ought to be a forest, and might support them. But its destruction by glaciation, no way has been opened for their return. Europe fared better, but suffered in its degree in a similar way.

Turning for a moment to the American continent for a contrast, we find the land broken and open down to the tropic, and mountains running north and south. The trees, when touched on the north by the coming refrigeration, had only to move to the southern border southward, along an open way, as far as the exigency required; and there was no impediment to their due retreat. Then the more southern latitude of the United States gave great advantage over Europe. On the Atlantic border, proper glaciation fell only in the northern part, down to a latitude 40°. In the interior of the continent, owing doubtless to greater dryness and summer heat, the limit receded greatly northward in the Mississippi Valley, and gave only local glaciers to the Rocky Mountains; and no volcanic outbreaks or violent changes of a kind have here occurred since the type of our present vegetation came to the land. Our lines have been east in pleasant plain and the goodly heritage of forest trees is the consequence.

The still greater richness of Northeast Asia in arboreal vegetation may find explanation in the prevalence of particularly favorable conditions, both ante-glacial and recent. The trees of the Miocene circum-polar forest appear to have found there a secure home; and Japanese islands, to which most of these belong, must be remarkably adapted to them. The situation of these islands—analogs of that of Great Britain, but with the advantage of lower latitude and greater sunshine—the ample extent north and south, their diversified configuration, their proximity to the great Pacific gulf-stream, by which a vast body of warm water sweeps along their eastern shores, and the comparatively equable division of rain throughout the year, all probably conspire to the preservation and development of an originally ample inheritance.

The case of the Pacific forest is remarkable and paradoxical. It is, as we know, the refuge of the most characteristic and widespread type of Miocene Coniferæ, the Sequoia, it is rich in coniferous types beyond any country except Japan; in its gold-bearing gravels are indications that it possessed, singly down to the very beginning of the Cenozoic period, Magnolias and Bœches, a taxodium, Liquidambar, Elms, and other trees wholly wanting to that side of the continent, though common both to Japan and Atlantic North America. Any attempt at explanation of this extreme paucity of usually major constituents of forest, along with a great development of the minor,

* On the above-cited passage of Tacitus, Gibbon has the following remark:—"The most sceptical criticism is obliged to respect the TRUTH of this extraordinary fact (the persecution of the Christians under Nero), and the integrity of this celebrated passage of Tacitus. The former (its truth) is confirmed by the diligent and accurate Suetonius, who mentions the punishment which Nero inflicted upon the Christians. The latter (its integrity and genuineness) may be proved by the consent of the most ancient manuscripts; by the inimitable character of Tacitus; by his reputation, which secured his text from the interpolations of pious fraud; and by the purport of his narration."

iferous, element, would take us quite too and would bring us to mere conjectures. Such may be attributed to late glaciation; or to the tremendous outpourings of lava, immediately before the period of reparation, deeply covered a very large part the forest area; much to the narrowness of forest belt; to the want of summer rain, to the most unequal and precarious distribution of that of winter.

Upon all these topics questions open which are not prepared to discuss. I have done that I could hope to do in one lecture if I distinctly shown that the races of trees, the races of men, have come down to us through a pre-historic (or pre-naturalistic) period; and that the explanation of the present condition is to be sought in the past, and not in vestiges, and remains, and survivals; and that for the vegetable kingdom also there is a veritable Archeology.

For "The Friend."

Incidents and Reflections.—No. 30.

DIVINE GUIDANCE.

The Psalmist, in referring to the superintending care which the Lord exercises over the trusting children, makes this encouraging assertion:—"In all thy ways acknowledge me, and He shall direct thy steps." This applicable to all our movements, both in temporal and spiritual matters. As to the latter, we all admit it, and generally in some degree attempt to act upon it; but in our outward affairs we are far more deficient in faith, and less disposed to submit them to the Divine judgment and disposal; and hence we often become involved in difficulties, which might have been avoided if there had been less self-will and self-confidence, and more of a humbly seeking to the Lord for counsel.

These thoughts are connected at the present time, in the mind of the writer, with the removal of residence from one neighborhood to another—a matter in which serious mistakes are sometimes made. Some years ago a valuable friend lived in the compass of a country setting, where he was esteemed by his friends, and was useful both as a citizen and as a member of our religious Society. In these respects, notably few in his own vicinity excelled him. Some family changes presented an inducement to move away from this sphere of usefulness, and he parted with his farm, and took his family to reside in another neighborhood. The meeting he had left sustained a loss by removal, but that to which he went was not benefited by his coming.

This case was an illustration of what Gratian, the Irish orator meant, when he said that an oak at fifty might not be to be transplanted. He retained the esteem of his friends as a worthy man, but for many years, and in successive removals, he did not take root in the different meetings and circles where he went. His what ought to have been the most useful period of his life, was comparatively wasted; and he could scarcely be considered as having been harnessed again into religious service till the decline of life, when strength and vigor were failing.

His example has often been remembered as showing the need there is to consider well, before leaving the field of usefulness in which we have been placed.

Yet there are cases, where the way clearly opens for change, and where it is plainly the duty of individuals to follow on in the way

cast up before them, relying on that Divine Power which can enrich them both with outward and with spiritual blessings.

There are many who can bear witness as to the reality of the guidance furnished by a wisdom higher than that of man, to those who sincerely seek it, and follow its directions even when they lead (as is often the case), in a way contrary to the natural inclinations.

John Richardson relates, that when about 27 years old, having for a time some release from the active religious service in which he had been engaged, he wished to settle more closely to business. He says: "Upon seeking unto the Lord to know what place I might now settle in, though my great inclination was for Whitley, yet it sounded as in my ear, Bridlington, Bridlington is the place to settle in; and in the cross, I repaired thither, and settled for some time, keeping a little shop, and mended clocks and watches, as I had done for several years past at times. It was of good service my settling there, for the Lord began to work mightily, especially amongst the young Friends, so that in a few years many had their mouths opened in testimony for the Lord, and a fine spring of heavenly ministry was in that Monthly Meeting, the like I have not known in the like bounds, (for it is but a small Monthly Meeting, and hath been so ever since I knew it.) For Truth did so mightily prosper, and Friends grew so in the ministry, that it became a proverb, that Bridlington was become a school of prophets.

When Joseph Hoag was about to settle in life, his mind was turned towards the small meeting in Little Nine Partners, in New York; but he yielded to the suggestion that if he went there he would not prosper in business, and so took a farm in another neighborhood. For several years he met with much trouble, and little success, though he labored hard. At length, he says, "After living through many and varied trials, with an almost constant scene of conflict, and being permitted to get my mind into the quiet, I entered into deep searching of heart, to know the cause of all these troubles so continually coming upon me. The Lord in his own time gave me to see, that if I had sought to Him for direction, instead of listening to others' contrivings, I might have been settled in Little Nine Partners for many years, and been in my right place, where the Lord's blessing would have been upon me; and as I had neglected his pointings therein, He had withheld his blessing.

"Having striven so long that I had neither money nor friends to help me, it now appeared clear that if I would give up and go into the new country, I would then be blessed. It so settled on my mind that I told it to my wife, and opened my prospect to my own and my wife's relatives. Keeping steadily to the prospect, it brought my wife under deep concern. It was not long before she told me, that she saw clearly there was a good farm for us in that country, and was willing to go with me, ever after remaining steady in the prospect; and I now believe we are on the very spot presented to her view. When I opened it to my friends for their consent, they utterly decided me any liberty to move. In this situation they kept me for more than two years, which did not jostle or move me, feeling easy as having done all on my part, without feeling hard towards my friends; fully believing they would have to give it up. The Lord had

shown me that I had much to suffer for my own neglect, so that I dared not murmur."

After a time, the way opened for them to move, and they settled in Vermont, where they witnessed a prosperous change, and soon became comfortably established.

Ostriches on a Cape Farm.

Not long ago one of the most trustworthy of the herds, an old Bushman named Moos, was wandering one day after some of his charges. Their talents are in general limited; to track the spoor of a creature over the hardest soil, where no apparent mark has been left, and to run unweariably so as even to tire out a horse, pretty nearly exhausts the sum of them. But Moos Julius was more intelligent than some of his countrymen. The wild ostriches are becoming rare and he was greatly delighted to come upon a nest scratched in the sand with 16 great eggs in it, well within the boundary of his master's property. And here that slur on the moral character of the ostrich must be protested against as a base calumny, time-honored though it be. So far from leaving their eggs to chance and the sun to hatch, they are particularly careful parents, the father and mother birds taking it in turn to sit for six or eight hours at a time. In a tame state they are as regular as clock-work in relieving each other, and the herders declare that they followed the farm-bell to a minute. The incubation is very long, and lasts 60 days, during which they are exemplary in their attentions to the eggs. If they are away for a short time seeking food, which, when they are wild, must sometimes be very far afield, it is true that they scatter sand and dust over the nest to keep it warm; but sit they must, and sit they do, or there can be no progeny. Moos made haste home with his welcome news—it was Christmas day, and therefore, the height of summer in that Southern latitude—and as soon as he reported that the little birds were hatching, a wagon filled with straw, drawn by four horses, was sent to fetch them up. Meantime, however, the mother had taken fright at being watched, and carried off her family into the scrub, so that when the party arrived there was nothing to be seen but two added eggs kicked out of the nest and one still unhatched within it. The inmate was pecking feebly at the shell, but, deprived of the necessary warmth, it could not make its way out of prison. The master flung his coat and those of his men hurried round the egg, while they all followed on the track of the escaping birds. They were soon caught up, for the little ones, only just out of the shell, could not run fast; they looked like balls of yellow-brown fluff, the legs and neck much shorter in proportion than in more advanced life, and with a little dainty manner of holding themselves very pretty and amusing. The poor mother defended them gallantly, but in vain; she looked so piteous, however, with her beautiful, large, liquid, tender eyes, which have long lashes on them, and are very human, that the tender-hearted master's conscience was sore at his own cruelty, and the next time he took an ostrich's nest he left two of the children to the parent bird. He was sorry after for his generosity, for they were never seen again, and he believed were devoured by the civet cats; besides which, after a fortnight or so, the young are turned off by the parents to shift for themselves. When the party returned to

the nest, they found that the small haggard had got out of his shell, looking rather woe-begone, cramped, and high shouldered, but still all alive and right. The fourteen precious little captives were brought sadly up to the farm, where they were fed with chopped lucerne, bran, carrots, and the pounded shells of the addled eggs, which are considered excellent food for them. Later in life they require bits of bone, and unlimited pebbles which, indeed, are necessary to assist the gizzard in grinding down the food of all grain devouring birds, and may be found in the stomachs of fowls, turkeys, &c. It is only when the hard shell of the barley, wheat, &c., is thus bruised and crushed that the gastric juice can act upon the mealy matter within; and it is a proof of the weakness, not the strength, of the digestion of the ostrich, that it thus requires assistance. At first they kept each other warm by huddling close together under a shed, where they were put at night for shelter, as they are tender little things. They became very tame, especially with the women on the place, and would always come to them. Men they did not like, perhaps because the boys of the farm, (black and white are all alike in such matters,) had tormented them. For about a year they stalked about, never straying far, but going where they pleased, getting their own living for the chief part, but coming in two or three times a day for a little barley.—*Good Words.*

THE LAST WALK IN AUTUMN.

BY J. G. WHITTIER.

Selected.

I.

O'er the bare woods, whose outstretched hands
Plead with the leaden heavens in vain,
I see, beyond the valley lands,
The sea's long level dim with rain,
Around me all things, stark and dumb,
Seen praying for the snows to come,
And, for the summer bloom and greenness gone,
With winter's sunset lights and dazzling moonstone.

II.

Along the river's summer walk,
The withered tufts of asters nod;
And trembles on its arid stalk
The hoar plume of the golden-rod.
And on a ground of sombre fir,
And azure-studded juniper,
The silver birch its buds of purple shows,
And scarlet berries tell where bloomed the sweet wild-rose!

III.

With mingled sound of horns and bells,
A far-heard clang, the wild geese fly,
Stormless, from Arctic moors and fells
Like a great arrow through the sky
Two dusky lines converged in one,
Chasing the southward-dying sun;
While the brave snow-bird and the harly Jay
Call to them from their peaks, as if to bid them stay.

IV.

I passed this way a year ago:
The wind blew south; the noon of day
Was warm as June's; and save that snow
Flecked the low mountains far away,
And that the vernal-seeming breeze
Mocked faded grasses and leafless trees
I might have dreamed of summer as I lay,
Watching the fallen leaves with the soft wind play.

V.

Since then, the winter blasts have piled
The white pagodas of the snow
On these rough slopes, and, strong and wild,
On river, in its overbow,
Of spring-time rain and sun, set free,
Crashed with its ices to the sea;
And over these gray fields, then green and gold,
The summer corn has waved, the thunder's organ rolled.

Rich gift of God! A year of time!

What pomp of rise and shut of day,
What hues wherewith our Northern clime
Makes autumn's drooping woodlands gay,
What airs outblown from ferny dells,
And clover-bloom and sweet-brier smells,
What songs of brooks and birds, what fruits and flowers,
Green woods and moonlit snows; have in its round
been ours!

VII.

I know not how in other lands,
The changing seasons come and go;
What splendors fall on Syrian sands,
What purple lights on Alpine snow!
Nor how the map of sunrise waits
On Venice at her watery gates;
A dream alone to me is Arno's vale,
And the Alhambra's halls are but a traveller's tale.

VIII.

Yet, on life's current, he who drifts
Is one with him who rows or sails;
And he who wanders widely lifts
No more of beauty's jealous veils
Than he who from his doorway sees
The miracle of flowers and trees
Feels the warm Orient in the noonday air,
And from cloud minarets hears the sunset call to prayer!

IX.

The eye may well be glad, that looks
Where Pharpar's fountains rise and fall;
But he who sees his native brooks
Laugh in the sun, has seen them all.
The marble palaces of land
Rise round him in the snow and wind;
From his lone sweetbrether Persian Hair smiles,
And Rome's cathedral awe is in his woodland aisles.

X.

And thus it is my fancy blends
The near at hand and far and rare;
And while the same horizon bends
Above the silver-sprinkled air
Which flashed the light of morning skies
On childhood's wonder-lit eyes,
Within its round of sea and sky and field,
Earth wheels with all her zones, the Kosmos stands
revealed.

XVII.

What greetings smile, what farwells wave,
What loved ones enter and depart!
The good the beautiful, the brave,
The Heaven-lent treasures of the heart!
How conscious seems the frozen sod
And beechen slope whereon they trod!
The oak-leaves rustle, and the dry grass bends
Beneath the shadowy feet of lost or absent friends.

XVIII.

Then ask not why to these bleak hills
I cling, as elms the tufted moss,
To bear the winter's lingering chills,
The mocking spring's perpetual loss,
I dream of lands where summer smiles,
And soft winds blow from spicy isles,
But scarce could Ceylon's breed of flowers be sweet,
Could I not feel thy soil, New England, in my feet!

XIX.

At times I long for gentler skies,
And bathe in dreams of softer air,
But homestead tears would fill the eyes
That saw the Cross whitened the Bear.
The pine must whisper to the palm,
The north-wind break the tropic calm;
And with the dreamy languor of the Line
The North's keen virtue blend, and strength to beauty join.

XX.

Better to stem with heart and hand
The roaring tide of life, than lie,
Unmindful, on its flowery strand,
Of God's occasions drifting by!
Better with naked nerve to bear
The needles of this goading air,
Than, in the lap of sensual ease, forego
The godlike power to do, the godlike aim to know.

XXI.

Home of my heart, to me more fair
Than gay Versailles or Windsor's hall,
The painted, shingly town-house where
The Freeman's vote for freedom falls!
The simple roof where prayer is made,
Than Gothic roof and carved arcade,
The living temple of the heart of man,
Than Rome's sky-mocking vault, or many-spired Milan!

XXII.

More dear thy equal village schools,
Where rich and poor the Bible read,
Than classic halls where Priestcraft rules,
And Learning wears the chains of Creed;
Thy glad Thanksgiving, gathering in
The scattered sheaves of home and kin,
Than the mad license following Lenten pains
Or holiday of slaves who laugh and dance in chain!

XXIII.

And sweet homes nestle in these dales,
And perch along their wooded swells;
And, best beyond Arcadian valleys,
They hear the sound of Sabbath bells!
Here dwells no perfect man sublime,
Nor woman winged before her time,
But with the faults and follies of the race,
Old home-bred virtues hold their not unhonored place!

XXIV.

Here manhood struggles for the sake
Of mother, sister, daughter, wife,
The graces and the loves which make
The music of the march of life;
And woman, in her daily round
Of duty, walks on holy ground.
No unpaid mental tills the soil, nor here
Is the bad lesson learned at human rights to sneer!

XXV.

Then let the icy north-wind blow
The trumpets of the coming storm,
To arrowy sleet and blinding snow,
Nor slanting lines of rain transform,
Young hearts shall hail the drifted cold,
As gently as I did of old;
And I who watch them through the frosty pane,
Unevident, live in them my boyhood o'er again.

XXVI.

And I will trust that He who leads
The life that bides in mead and wald,
Who hangs yon alder's crimson beads,
And stains these mosses green and gold,
Will still, as He hath done, incline
His gracious care to me and mine;
Grant what we ask aright, from wrong decay,
And, as the earth grows dark, make brighter every star!

XXVII.

I have not seen, I may not see,
My hopes for man take form in fact,
But God will give the victory
In due time; in that faith I act,
And he who sees the future sure,
The baffling present may endure.
And bless, meanwhile, the unseen Hand that leads
The heart's desires beyond the halting step of deeds!

XXVIII.

And thou, my song, I send thee forth,
Where harsher songs of mine have flown;
Go, find a place at home and hearth
Where'er thy singer's name is known;
Revive for him the kindly thoughts
Of friends; and they who love him best,
Touched by some strain of thine, perchance may tal-
The hand he professes all, and thank him for thy ask!

His Loving Kindness is better than Life.—
I called the other day on a dear friend whom
had not seen since she was the gayest, bright-
est, liveliest girl in the whole village circle
my old home. Three years ago she was
thrown from a horse and injured her spine,
and she has been a hopeless invalid ever since.
I found her reclining in a great arm chair,
propped up with pillows, her face as white
the pure white linen on which it lay, the
girlish beauty of rosy health gone, but a ne-
and more sacred beauty transfiguring the con-
tenance. In the course of our conversatio-
I spoke sympathetically of the bitter sorro-
it must be to her, as I knew her, lithe, full
activity, rejoicing in her health and streng-
to be thus imprisoned, bound hand and foot
and made dependent on others for even lit-
tle power to change her position. "It was ver-
very hard at first," she replied. "But of
day, two years ago—I shall never forget it—
day of the hour—as I was looking listless
over my Bible, my eye lighted on the promise

dear children? Is it not allowing the government of ourselves to be upon the shoulders of Him, the wonderful Counsellor and sure Guide into all truth? Herein, we believe, lies the indispensable pupilage and preparation for service in the church of Christ. Yea, it is those that, taking his yoke upon them, learn of Him lowliness and meekness; and experience the discipline of the cross to be made easy and his burden light, because of their obedient heart and willing spirit. It is these that are enabled to become strong in the Lord and in the power of his might. It is these who, planted in the likeness of his death, because of steadfastly "holding the Head, from which all the body by joints and bands having nourishment ministered, and knit together, increaseth with the increase of God," shall experience a being raised in the likeness of his resurrection. For there must of necessity be a death unto sin, before there can be a life unto righteousness.

Would that we might examine in the light of the Lord, freely dispensed to every one, how it is with us; and whether we have been caught in this subtle snare of the great enemy. Whether we have in our own unfortified or unsuspected will and wisdom, set about the erection of any Babel of good works? Whether we have, with unsanctified hands, essayed to steady the tottering ark as did Uzzah? Whether we are guilty of sacrificing before the prophet Samuel came, or power from the high has been given, as in the case of king Saul? Or whether in the prosecution of any other professedly religious engagement we have been careful, before entering upon it, to submit ourselves to the Lord in living obedience; saying, "If Thy presence go not with me, carry (me) not up hence." As this tender, teachable, dependent spirit prevails, as the primary concern is to be brought to and taught at the feet of the crucified, yet risen and glorified Emmanuel, as the one thing needful, He will to these impart grace, knowledge, and comfort sufficient for all their need. The place for them to labor, the niche they are to fill, the work they are to do, will be duly shown unto them by the Good Shepherd; and such labor, proceeding from Him, the root and ground of Truth, and Vine of life, it is declared, shall not be barren nor unfruitful; but shall prosper wherunto it is sent.

As this is the case, the Lord omnipotent will more and more water and bless his heritage; will yet have mercy upon Zion; and will cause his servants to take pleasure in her stones, and to favor the dust thereof. He will again build her waste places; make her wilderness as Eden, her desert as the garden of the Lord, to the exceeding joy and rejoicing of those who now mourn over her desolations.

For "The Friend."

The Bermuda Islands.

(Continued from page 174.)

There is little live stock on the islands. Cattle and sheep do not thrive well, probably mainly owing to the want of a plentiful supply of good water. Butcher's meat is almost all imported from America. Horses are not very numerous, and only tolerably good. The principal crops raised are potatoes, tomatoes, and onions for the New York market. They are of the very best quality, but they are raised in comparatively small quantity, owing partly to the scarcity of labor, and partly to the unequal distribution of the fertile soil, and

the want of a sufficient supply of manure. Arrowroot was at one time a principal article of export; but the quantity produced has been steadily decreasing of late years. What is made is certainly excellent, and fetches a higher price than the West Indian, which is driving it out of the market. The crop however is a troublesome one, the labor connected with it extending about a year, and the Bermudians find the culture of the potato, which lies only about one hundred days in the ground, gives much less trouble, and commands a certain and speedy market in America, a more profitable speculation. Indian corn is greatly used as an article of food, but it is imported from America. Cassava is common in the gardens and thrives well. All the European vegetables grow in Bermudas, and, with care, seem to come to considerable perfection. It is singular that seed potatoes, and garden-seeds of all kinds, including those of the onion and tomato, are imported every year, usually from America or Madeira. It is generally understood that seed grown on the islands will yield a deteriorated crop.

Some years ago Bermudas was famous for its oranges; several of the best varieties were cultivated in gardens, and the fruit arrived at wonderful perfection; while the lemon, the lime, and the bitter orange sprung up everywhere, so that the country lanes and hedgerows were redolent of the delicious perfume of orange blossoms, and the fruit fell off, and rotted on the ground. About the year 1854, a minute insect, of the family *coccida*, appeared on the orange trees, and multiplied greatly. The leaves, covered with scales and glutinous with a viscid excretion from the animal, became yellow and fell off, the fruit dropped before ripening, and finally many of the trees died. Bermudas has never recovered from this plague, and now there is scarcely an orange grown on the islands. The wild lemons and limes still flourish, but the cultivated varieties have disappeared from the gardens.

Fruit is by no means abundant. The smaller English fruits, gooseberry, raspberry, currant, &c., run to wood and do not bear. Strawberries fruit fairly. Bananas are generally cultivated, and are good. There are some fine trees of the avocado pear, which bear abundantly. The mango has been introduced into some gardens, but the crop cannot be depended upon.

The climate of Bermudas is very genial; the mean annual temperature is about 69° Fahr., while that of Madeira, in almost exactly the same latitude, is 64° Fahr. The temperature of the coldest month (62° Fahr.) is, however, somewhat lower at Bermudas than at Madeira, while that of the warmest month is considerably higher. (72° to 80°). The greater summer-heat, telling upon the flowering and the ripening of the seeds of plants, gives the flora of Bermudas a more tropical character than that of Madeira, and this is undoubtedly increased by the circumstance, that while the vegetation of Madeira, and the other "Atlantic islands," the Azores, and the Canaries, appears to be to a great degree an extension of that of Southern Europe, that of Bermudas, if we except a large number of introduced plants, is in the main derived from the West Indies and the South of North America.

The fauna of Bermudas is singularly poor. There are no wild mammals excepting the

rats and mice which have been imported with foreign produce. Only about half a dozen land birds breed on the islands, and all these are common North American species probably the most abundant are the American crow, and a pretty little ground dove. Many American birds are annual visitors. Only one reptile is known, a lizard common in Carolina.

It is pleasant to ride on an evening along the green roads in Bermudas. The exuberant character of the vegetation is not obtrusive. The palmetto is the only indigenous palm. The cabbage palm, the date palm, the coconut, and the grugra palm have been introduced and grow well; but they do not ripen their fruit. The bananas around the cottages look tropical, and so do the stars of scarlet tracts of *Ponsettia*, and the stars of crimson flowers of *Erythrina*; but the far more general tamarisks and oleanders are familiar. An exotic cast is given to the undergrowth by the prickly pear, the Mexican yellow poppy, the scarlet sage, and the wild ipsecania; but nettles, chickweed, sow-thistles, clovers, and other cosmopolitan weeds, both their accustomed place.

Alexander of Russia.

During Stephen Grellet's sojourn in Petersburg, Prince Alexander Galitzin related some interesting particulars respecting the Emperor Alexander; among others, the peculiar circumstances attending the renewing of those religious impressions that of latter years had been of an abiding nature with him. When the information was received at Petersburg, that the armies of Napoleon had entered Moscow, a general panic came upon the inhabitants, and they packed up their valuable to take their flight into some more secure place; for they expected the French would soon march for that city. The emperor was preparing to go with the body of troops collected there to oppose them. Prince Alexander Galitzin had at that time many men employed in repairing his palace, which he continued calmly to go on with, whilst so many others were panic stricken. Some envious persons told the emperor what he was doing and that he must be a traitor. He went to the Prince, and queried, "Galitzin, what are you doing? What means all this: every one prepares to flee, and you are building?" "Oh," said the Prince, "I am here in as sure a place of safety as any I could flee to; the Lord is my defence, in him I trust." "Whence have you such confidence?" replied the Emperor, "who assures you of it?" "I feel it in my heart," answered the Prince, "and it is also stated in this Divinely inspired volume"—holding forth the Bible to the Emperor. By some inadvertent motion of the hand, the Bible fell upon the floor—open. "Well, permit me," said the Prince, "to read to you in that very place on which the Bible lies open before us." It was the ninety-first Psalm; on hearing which, the Emperor stood for awhile like a man astonished. The army, during that time, was marching out of the city. It is the usual practice on such occasions, or when the Emperor is to be absent for a length of time, that the last place he leaves is the great church. He repaired there; the portion of Scripture read on the occasion was again the 91st Psalm. The Emperor sent for the priest, and queried, "Who told you to make choice of that particular passage of Scripture

is day?" He replied, "that nobody had it, but that he had desired in prayer that the Lord would direct him to the particular portion of the inspired volume he should read, encourage the Emperor, and that he apprehended that Psalm was the word of the Lord him." The Emperor proceeded some distance on his way; and late in the evening he lit his mind under great seriousness, and decided that the Bible should be read to him, when the person who came in for that purpose began, he also read the 91st Psalm. The Emperor, interrupting him, queried, "who did you read this to—has Galitzin told you?" He replied that he had not seen the Prince, but had any one told him what to read; but on being told he was sent for to read to the Emperor from the Bible, he had desired that the Lord would direct him to what was most appropriate for the occasion, and accordingly he had selected this portion of Scripture. The Emperor felt astonished at this, and paid the greater attention to what was said, believing that this must be of the Lord's ordering; he was therefore very solemnly and orderly impressed, and from that time he concluded, morning and evening, to read privately a chapter in the Bible.

An Ant Battle.

On a sultry afternoon, the first day of July, was lazily sauntering in the grove, when, on looking down, I found, to my surprise, that I was in the midst of a battle-field. A powerful myrmidon of red ants had invaded the dominions of the black colony which, for three years past, had a kind of supervision over. I had often thought plants covered with aphides—the immortal Linnaeus called these aphides the ants'—and stuck the plants into the earth round their dwelling, and had given them sugar, and had driven and carried toads from their nests which were devouring them. In short, I had become very much interested in and quite attached to this colony, but I was useless to aid them now. I could only look on in wonder and astonishment.

A yard or more around the foot of the tree the battle was raging, and no place for the file of my foot without crushing the combatants. I found in every instance a red ant pitted against a black; sometimes two red ones against one black, in which case the black was on dispatch. For three hours I watched the conflict; all around me the combatants were engaged in close embrace, rolling and tumbling out, never separating until one was killed, and often the dead victim had fastened with a firm hold on his adversary that it was with the utmost difficulty he could free himself from his death-grip.

The sun went down, and the gathering darkness compelled me to leave my post of observation, but, as long as I could see, the conflict was as fierce as when I first beheld it. I now picked up several of the warriors, and so intent were they in their terrible struggle that my handling did not divert them in the least. I carried several pairs into the house, placed them under a large oval glass (the cover of a fernery), on a marble-topped table, and watched the conflict.

I found I had ten black and ten red warriors not engaged in a general melee, but each intent upon killing his own adversary. It was fully an hour before the first warrior was killed—a red has at last despatched his black

antagonist, and not satisfied with killing him, he tears his legs from his body and severs his antennae. After convincing himself that he is really dead, he looks around at the other warriors which are still closely locked in their deadly embrace, and now he hurries from one couple to another, as if to see where his services are most needed. He finds a couple whose struggles are nearly over—a black is fastened with a death-grip to his adversary's foreleg. The red hero soon severs the head from the black soldier, and leaves it hanging to the leg of his dying comrade. He now goes to another couple who are still fiercely contending; he seizes the black, and now all three roll and tumble about together; but the black is soon killed, and as in the other case, his mandibles are locked on his adversary's leg. But this time our hero does not sever the head from the black soldier, but leaves his comrade to free himself as best he can, while he goes to the assistance of a third less fortunate brother, where the black seem to have the better of his antagonist. Here a long struggle ensues, and now another red soldier has dispatched his opponent, and he comes to the struggling three, moves about them in an excited manner, with his mandibles stretched wide apart, waiting his opportunity to fasten them on the black; he finds his chance, seizes him between the thorax and abdomen, and severs the body in two; but the dying black does not relax his hold of the first antagonist, and they die together.

I now leave the fierce combatants for the night. In the morning I find that every black is killed, and four red soldiers are dead, and two others not survive. The legs and antennae and mutilated bodies of the dead warriors are strewn about, every fragment showing conspicuously on the white marble. Out of the twenty, fourteen are dead and two nearly lifeless—only four have survived. I put some drops of water and moistened sugar under the glass for the surviving heroes; two find the water and drink. I now repair to the battle-field. The struggle is over—not a black to be seen, but a column of the red invaders is emerging from a large cavity that leads to the numerous galleries and underground chambers of these industrious blacks, and each invader is carrying a larva or pupa. I follow the column, which is from four to five inches in width, to the nest of red ants before mentioned. There is a wide opening in the side of this nest, down which they all disappear and leave their burdens, and again start for more plunder. All day long these powerful marauders are engaged in this work. They carry a larva or pupa carefully and drop it on being disturbed. But what does this mean? Every little while a red warrior comes out with a black bundle, which he carries as carefully as he does the pupa or larva. I stop him to inquire into the matter; he drops his bundle, which immediately unrolls, and lo! it is a lively black ant, apparently unhurt, and, to my eye, no way different from the warrior with whom he was so fiercely fighting.

The books which I have read on the subject inform me that "the red ants carry the pupae and larvae of the blacks to their nest, where they rear them for slaves, but they never capture the adult ant, for it would not stay in the new home if they did." But these ants certainly carried a great number of adult blacks to their nest, and I am quite sure they did not run away, but stayed and helped to nurse and

feed the larvae. I captured several of the red marauders with their victims, and placed them under the glass. The reds now pay no attention to the blacks, but simply try to make their escape. I take larvae and lay them on a leaf, and put them under the glass also, and place moistened sugar in their reach. Very soon the blacks are feeding the helpless larvae. I remove the glass cover; the reds immediately run away, but the blacks stay and continue to sip the moistened sugar and feed the young. I hold a magnifying glass over them, and find the little larva raise up their heads and open their mouths to be fed, very much like young birds. I now take the larvae, together with the nurses, and place them near the nest of red ants. I soon lose sight of the nurses, but the larvae are quickly taken to the nest by the red soldiers.—*Harper's Magazine.*

War.—War, in its origin and its progress, its glories and its triumphs, is rooted in sin, and is sustained by the pride and corruption of man.—*Jacob Lindley.*

THE FRIEND.

FIRST MONTH 18, 1879.

The Scriptures of truth contain many consoling assurances of the goodness of the Lord towards those who are faithfully endeavoring to serve Him. The Psalmist says, "I sought the Lord and He heard me, and delivered me from all my fears." "This poor man cried and the Lord heard him, and saved him out of all his troubles." "The young lions do lack and suffer hunger; but they that seek the Lord shall not want any good thing." "The eyes of the Lord are upon the righteous, and his ears are open unto their cry." "The righteous cry and the Lord heareth, and delivereth them out of all their troubles." "Many are the afflictions of the righteous, but the Lord delivereth him out of them all." These expressions are all contained in a single one of the Psalms of David; and the number of such precious promises might be greatly increased.

The upright in heart are not promised freedom from those proving dispensations which are the lot of all in this state of existence; and which are a necessary discipline in the Divine ordering of events, to train and prepare us for usefulness in the church militant here, and for enjoyment of the glorious blessedness promised to the Church triumphant in Heaven. The language used is, "Many are the afflictions of the righteous,"—but what a soul-reviving promise is annexed thereto, "But the Lord delivereth him out of them all!"

Our late valued friend, Hannah Williams, says in one of her letters, "If, under our provings, we endeavor to do our best, no doubt we shall be helped;" and also that she had been particularly impressed, "in reading the life of Thomas Shillito, to find him overcome and overcome again, out of great weakness and difficulties and trials, as a last resort, summing up his energies and resolving 'to do his best'; and he was helped, even to admiration."

Doubts and fears will at times assail even those who sincerely desire to follow on in the tribulated path that leads to rest and peace,

and to know tribulation to work patience, and patience to have its perfect work. Their faith is often reduced to a low ebb; but what a mercy it is at such seasons to know that help is laid upon One who is mighty to save and able to deliver, even to the very uttermost. The humble follower of Christ in such a condition, may be prepared to adopt the language of Jonah when he said, "The waters compassed me about, even to the soul; the depth closed me round about, the weeds were wrapped about my head;" but the subsequent experience of the Prophet will be his also:—"When my soul fainted within me, I remembered the Lord, and my prayer came in unto thee, into thine holy temple;" and he will feel bound to adopt his holy resolution, "I will sacrifice unto thee with the voice of thanksgiving; I will pay that that I have vowed;" and be enabled to make the same acknowledgment, "Salvation is of the Lord."

On the 10th inst., Benjamin Hunter was executed in the neighboring city of Camden, for the murder of an individual some months ago. The verdict of the jury who found him guilty has been confirmed by his own confession; from which it appears that the leading motive for the commission of the horrible crime, was that love of money which the apostle declares to be "the root of all evil;" and which, in the present case, certainly induced the unhappy criminal so to act as to "pierce himself through with many sorrows."

In his confession, he states that the murdered man was indebted to him. To secure himself from ultimate loss he effected large insurances on his life in different Insurance Companies. Then the suggestion entered his heart, that if his debtor were to die, it would be greatly to his pecuniary advantage by enabling him to collect the sums that would then be payable. As he allowed this thought to take possession of his mind, and meditated upon it; the temptation presented to hasten the death on which so much was at stake. Thus step by step the cunning Adversary of man's happiness led him into the snare which he had prepared for him; until his heart was given over to murderous thoughts, and his hands were imbued with a brother's blood. He could not have reached this condition without doing violence to the convictions of the Light of Christ in his heart; obedience to which would have enabled him to resist the first departure from the way of peace, and would have preserved him from falling into so dreadful a state.

May this sad case be a warning to all to shun the first step in the downward path. Every yielding to temptation to evil, no matter in how slight a degree, weakens the power of resistance, and places us more under the influence of that Evil Spirit who is ever watching to beguile the unwary.

The violent ending of the life given by his rational creatures by God for his own Divine purposes, is shocking to our feelings; even when effected by the authority of law, by the hands of officers legally appointed for that purpose, and as a punishment for atrocious crimes. We believe it would be more in accordance with the Divine Will, and with the spirit of that Gospel which breathes "peace on earth and good will to man," that such criminals should be placed in confinement, where time could be allowed for quiet reflection, in which there might be some hope

that true repentance would be experienced and forgiveness obtained.

In the present instance, the execution of the criminal was attended with many revolting circumstances, and we hope may have the effect to arouse the feelings of the community to the barbarity of this method of punishment, as well as to its inadequacy for the end in view—the deterring of wicked persons from the commission of this crime—and to the utter incompatibility of it with what should be the effect of all judicial punishment; and the reformation of the offender. Would that just and humane views in regard to the treatment of such criminals should prevail to the entire abolition of what appears to us a remnant of barbarism!

SUMMARY OF EVENTS.

UNITED STATES.—The report of the Treasurer of Pennsylvania shows that the State debt, during the year ended 12th mo. 1st, 1878, was reduced \$1,068,193, and on that date amounted to \$21,875,620. The sinking fund at that date held assets valued at \$8,504,899, leaving the net debt \$13,370,721.

There has been a decrease shown, at the Ledger office in this city, a tax notice dated 1795, which notifies a resident of Southwark that his tax rate was 23.3 cents on the \$100.

The operations of the Philadelphia Post-office, for the year 1878, show a steady, and in some particulars, a decided increase over any previous year. There were delivered by carriers, letters and drop letters, 1,034,541 over last year; of postal cards, 1,107,465; newspapers, 715,754—making a total increase of 2,877,700. The collection shows an increase in letters of 624,084; postal cards, 479,112; newspapers, 420,815.

The English revisers of the New Testament have finished their second and final revision. The company have held 83 sessions, and have spent 337 days on the work. There were 24 members of the company, and the average attendance has been 15. There now remains the consideration of any further suggestions that may be made by the American company, and the adjustment of some questions which have been reserved for the final reading.

Heavy rains on the 12th inst. caused another rise in the James river, which was reported eleven feet above ordinary high water mark. The streets in the lower part of Richmond, Va., were flooded by an ice gorge. Families were moving from their houses, and merchants removing their goods in the flooded district. The breaking of an ice gorge in the Kanawha river, has caused a disastrous flood, and fears were entertained of a general ice break in the Ohio river; three steamers and 89 barges, some of the latter laden with coal, have been sunk at different points.

The snow storm of the 9th inst. is spoken of as the heaviest known for twenty years, in southern Ohio and northern Kentucky. Railroad cars were delayed, and at Ironton, Ohio, mills stopped for want of coal.

The hostile Cherokees imprisoned at Fort Robinson since last autumn, broke from the windows of their prison-room on the night of the 9th inst., and escaped to the prairie. The guards followed in pursuit, and fired upon the Indians, killing about 40 of them. The escape of the Cherokees is stated to be the determination on the part of the Indians not to go to the Indian Territory, where it had been decided to remove them.

The export of sugar from Boston, in 1878, amounted to 20,696,941 pounds, of which 14,634,238 pounds went to Canada.

On the 11th inst., the Secretary of the Treasury received over \$2,600,000 subscriptions to the 4 per cent. loan, and issued another call for the redemption of \$10,000,000 5-20's of 1867. This makes since the opening of the year, \$14,021,830 4's subscribed, and \$50,000,000 1867's called.

In New York last week there were 270 cases of scarlet fever reported, and 63 cases of diphtheria—the number of deaths from the former was 41, and of the latter 22. The mortality from all causes was 569. The number of deaths in this city for the week was 359, of whom 50 were of consumption.

Markets, &c.—Gold 100 U. S. sixes, 1881, 106½; 5's, 1881, registered, 106; coupon, 107½; 4½ per cents, 104; 4 per cents, 104½; 5-20's, 1867, 102½; do. 1868, 104.

Cotton, 9½ a 9½ cts. per pound for uplands and New Orleans.

Flour—Choice Minnesota extra \$4 for medium, and \$4 for fancy; western, \$4.50 a \$5.12½. Patent and O high grades, \$5.50 a \$7.50. Rye flour, \$2.75 a \$2. Grain.—Wheat, red, \$1.05; a \$1.00; amber, \$1.00; \$1.07½; white, \$1.05. Rye, 55 cts. corn, 42 a 46 cts., 28 a 32 cts. per bushel.

Hays and Straw.—Prime timothy, 65 a 75 cts. per 1000 lbs.; clover, 45 a 60 cts. Straw, 65 a 75 cts., 100 pounds.

Seeds.—Choice clover seed, 6½ a 6½ cts. per po for choice, and 5 a 5½ cts. for common.

Beef cattle were in fair demand; 1700 head arrived at 4½ a 5½ cts. for Penna. and western steers and 4 a 5 cts. for fair to good, and 3½ a 4 cts. for common lots at 3 a 5½ cts. per pound gross for country to choice. Hogs, \$4½ cts. per pound, as to quality.

FOREIGN.—The Library of the Birmingham and M Land Institute was burned on the 11th inst. It contained 80,000 volumes. Comparatively few books were saved.

The Wardale Iron and Coal Company have charged £1500000 because of the depression of trade. There are about sixty joint-stock companies in Sheffield working coal and iron mines, rolling mills, steel works, and about twenty of these are in liquidation.

The British Post-office is said to have in its employment 45,000 persons—including the telegraph department. A despatch from Calcutta says, General Stewart has been ordered to march towards Candahar. The other 11 divisions of the British army have gone into their quarters. The Afghans are reported friendly. It is stated that the Amer is expected to arrive in Petersburg about the middle of next month.

General anxiety is said to prevail throughout Russia on account of the plague in Astrakhan. The insect which has been surrounded by troops.

Experiments were recently made at several foundries in Geneva, for the purpose of proving the quality of American coal, and have resulted very satisfactorily. The iron made with it was so much superior to that produced by the coke invariably used through out Switzerland, that the manufacturers confess the advantage is clear and gratification. The American consuls think that the extensive demand for anthracite coal in Switzerland.

The average grain product of Europe is reported 5,900,000,000 bushels, of which Russia raises one-third, France and Germany 520,000,000 bushels each, and Austria 300,000,000. Russia raises nearly twice what France and Great Britain produces about one-fourth of her requirement.

The difficulty between the government of Tunis and the French, is reported to have been settled by the Prime Minister of Tunis tendering to the French Consul, on behalf of the Bey, a full apology.

FRIENDS' ASYLUM FOR THE INSANE.

New Brunswick, (Twenty-third Week.) Philadelphia Friends and Superintendent—JOHN C. HALL, M.D. Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on 14th month 11th 1878, at the residence here, Mrs. Samuel Carey, Warren Co., Iowa. SARA CAREY, a beloved and wise Christian, and member of the Religious Society of Friends, aged fifty-four years. Her dear Friend had long been much afflicted, having been entirely deprived of eyesight for a considerable time and finally became paralyzed, which she bore with Christian patience. Her relatives and friends have been consulting her at her residence in Okawaha, who was a woman prepared to enter into that rest which remaineth for all people of God.

On the 20th of 12th month, 1878, at the residence of her son, Samuel Carey, Warren Co., IOWA, RHOADA, widow of the late Thomas Carey, in the 87th year of her age, an esteemed member of Coal Cree Monthly Meeting of Friends in Okawaha. She was a woman of meek and quiet spirit, and strongly attached to the principles of the gospel as professed by our religion Society. She manifested an ardent desire that she might be sustained in her primitive purity, and gave evidence that she was prepared as a shock of corn fall ripe, ready to be gathered into the heavenly garner. Her funeral services were held at her residence on the 27th of 12th month, 1878, JESSE STANLEY, aged 7 years. Though called from works to rewards—as in moment, in the twinkling of an eye, yet his relative and friends are consoled in believing he was read and prepared for the great change.

WILLIAM H. PILE, PRINTER,

Testimonies of Profane Writers to the credibility of the New Testament.

Extracted from *Horne's Introduction to the Holy Scriptures*.

(Continued from page 175.)

(2.) The next testimony to be adduced is that of Caius Plinius Cæcilius Secundus, better known by the name of the *younger Pliny*. He was born A. D. 61 or 62; and, after holding various distinguished offices, was sent to the province of Pontus and Bithynia, by the emperor Trajan, A. D. 106—108, as his lieutenant, and proprietor, with proconsular power. The persecutions of the Christians under that emperor had commenced A. D. 100; and in that remote country there were at this time prodigious numbers of Christians, against whom, by the emperor's edict, was obliged to act in a manner of severity. Being, however, a person of good sense and moderation, he thought it prudent not to proceed to the extreme rigor of the law, until he had reported the case to Trajan, and had received his commands concerning it. He therefore wrote him the following epistle, A. D. 107, which is too important to be abridged, and the same year received the emperor's reply.

Pliny, to the emperor Trajan, wisheth health and happiness:

"It is my constant custom, sir, to refer myself to you, in all matters concerning which I have any doubt. For who can better direct me when I hesitate, or instruct me where I am ignorant? I have never been present at any trials of Christians; so that I know not all that is the subject matter of punishment of inquiry; or what strictness ought to be used in either. Nor have I been a little perplexed to determine whether any difference ought to be made upon account of age, or whether the young and tender, and the full grown and robust ought to be treated alike; whether repentance should entitle to pardon, or whether all who have once been Christians ought to be punished, though they are now no longer so; whether the name itself, although no crimes be detected, or names only belonging to the name, ought to be punished. Concerning all these things I am in doubt.

"In the mean time I have taken this course with all who have been brought before me, and have been accused as Christians. I have at the question to them, Whether they were Christians. Upon their confessing to me that

they were, I repeated the question a second and a third time, threatening also to punish them with death. Such as still persisted, I ordered away to be punished; for it was no doubt with me, whatever might be the nature of their opinion, that contumacy and inflexible obstinacy ought to be punished. There were others of the same infatuation, whom, because they are Roman citizens, I have noted down to be sent to the city.

"In a short time, the crime spreading itself, even whilst under persecution, as is usual in such cases, divers sorts of people came in my way. An information was presented to me, without mentioning the author, containing the names of many persons, who, upon examination, denied that they were Christians, or had ever been so; who repeated after me an invocation of the gods, and with wine and frankincense made supplication to your image, which, for that purpose, I had caused to be brought and set before them, together with the statues of the deities. Moreover, they reviled the name of Christ, none of which things, as is said, they who are really Christians can by any means be compelled to do. These, therefore, I thought proper to discharge. Others were named by an informer, who at first confessed themselves Christians, and afterwards denied it; the rest said they had been Christians, but had left them—some three years ago, some longer, and one or more, above twenty years. They all worshipped your image, and the statues of the gods; these also reviled Christ. They affirmed that the whole of their fault or error lay in this, that they were wont to meet together, on a stated day, before it was light, and sing among themselves, alternately, a hymn to Christ as God; and to bind themselves by a solemn oath (sacramento), not to the commission of any wickedness, but not to be guilty of theft, or robbery, or adultery, never to falsify their word, nor to deny a pledge committed to them, when called upon to return it. When these things were performed, it was their custom to separate, and then to come together again to a meal, which they ate in common, without any disorder; but this they had forborne since the publication of my edict, by which, according to your commands, I prohibited assemblies.

"After receiving this account, I judged it the more necessary to examine, and that by two, two mid-serivants, which were called ministers. But I have discovered nothing beside an evil and excessive superstition. Such I therefore allow all judicial proceedings, I have recourse to you for advice; for it has appeared unto me a matter highly deserving consideration, especially upon account of the great number of persons who are in danger of suffering; for many of all ages, and every rank, of both sexes likewise, are accused, and will be accused. Nor has the contagion of this superstition seized cities only, but the lesser towns also, and the open country. Nevertheless, it seems to me that it may be restrained and corrected. It is certain that the temples, which were

almost forsaken, begin to be more frequented; and the sacred solemnities, after a long intermission, are revived. Victims likewise are every where brought up, whereas for some time there were few purchasers. Whence it is easy to imagine what numbers of men might be reclaimed, if pardon were granted to those who shall repent.

To the preceding letter, the emperor Trajan sent the following reply:—

"Trajan to Pliny, wisheth health and happiness:—

"You have taken the right method, my Pliny, in your proceedings with those who have been brought before you as Christians; for it is impossible to establish any one rule that shall hold universally. They are not to be sought for. If any are brought before you, and are convicted, they ought to be punished. However, he that denies his being a Christian, and makes it evident in fact, that is, by supplicating to our gods, though he be suspected to have been so formerly, let him be pardoned upon repentance. But in no case, of any crime whatever, may a bill of information be received, without being signed by him who presents it; for that would be a dangerous precedent, and unworthy of my government."

The preceding letter and rescript furnish numerous important testimonies to the state of Christianity, and to the purity of Christian principles. We learn from it, in the first place, the great progress of the Christian religion in a short space of time. Christianity was neither known nor heard of in the world before the reign of Tiberius. Eighty years had not elapsed since the crucifixion of Jesus, when Pliny wrote this letter, nor seventy years since the disciples of Jesus began to make any mention of him to the Gentiles; and yet there were at this time great numbers of men whom Pliny repeatedly terms Christians, in that part of Asia where he presided, at a great distance from Judea. Christians there were every where, throughout the whole extent of his province, in cities, in villages, and in the open country. Among them were persons of all ages, of every rank and condition, and of both sexes; and some of them also were citizens of Rome. The prevalence of Christianity appears likewise from the universal decay of pagan worship: the temples were deserted, and the sacrifices discontinued. Beasts brought to market for victims had few purchasers. So many were accused, and were in danger of suffering on account of the prevalence of this opinion, as gave the president no small concern. Farther, it is evident that there were not only many at this time who bore the Christian name, but that such people had been there for many years; some, for several years; and one or more, who had been brought before Pliny, had professed Christianity, and had renounced it more than twenty years. All which circumstances prove that Christianity had been planted there for

many years before his arrival. Such an increase, indeed, could only be the work of time.—SECONDLY, Pliny's letter bears a noble testimony to the fortitude of the Christians in suffering, and to their steady perseverance in the faith of Jesus Christ; and it also communicates several interesting particulars relative to their religious belief and worship. More particularly, 1. They disowned all the gods of the heathens, and would not worship the images of the emperors or of their gods. The people who embraced this religion forsook the heathen temples and altars, and offered no sacrifices there. 2. They assembled together on a stated day, which we know from the collateral testimony of Christian writers was the Lord's day or Sunday, on which day Christians celebrate the weekly festival of Christ's resurrection. 3. When they were assembled, Pliny says that they sang a hymn to Christ as God; and also engaged themselves, "by an oath, not to commit theft, or robbery, or adultery, never to falsify their word, nor to deny a pledge committed to them." This account is highly to the honor of the first Christians. They paid divine worship to their God and Saviour, Jesus Christ, and devoted themselves to the practice of moral virtue.—LASTLY, both the epistle of Pliny, and the letter or rescript of Trajan, attest the innocence and virtue of the first Christians. From the former it is evident that no crime, besides that of their religion, was proved against any of those who were brought before Pliny. Even their accusers and prosecutors alleged nothing else against them, but that they were Christians; he examined apostates; he put to the torture two young women who were ministers or deaconesses, and yet he discovered nothing but what was quite harmless. The only charge against them is an absurd superstition, and obstinacy in adhering to it. Trajan's rescript affords equally strong proof of the innocence of these men. He knew not of any offence of which they were guilty, excepting only that they did not supplicate the heathen deities. The honesty and innocence of these men oblige us to pay great regard to their belief and profession of the Christian religion. If they were sober and discreet before they embraced it, we may be sure that there then were such evidences of its truth as approved themselves to serious persons. If they are supposed to have formerly been vicious and irregular, here is a strong proof of the truth and goodness of Christianity, inasmuch as it had so great an influence on the minds of men, at a time when they might easily know whether it was well grounded or not. In either case, it is an honor to those principles, that those who embraced them maintained such innocence in their lives, that their enemies, even after the strictest inquiries, could discover nothing criminal against them.

(To be continued.)

Strait and narrow, the way to the kingdom hath always been attended with difficulties, and entered into through many tribulations; yet the commandments of the Lord are not grievous; in keeping his law there is great delight; there is a recompense a thousand fold, even in this life, for all our sufferings, in the enjoyment of that peace which passeth the human understanding; as the earnest of that great and eternal weight of glory, with which our sufferings in this world are not to be compared.—Letter of John Thorp.

[At the request of a Friend in Ohio we publish the following:]

A paper of John Burnyeat's, that came to hand since his works were printed.

The twenty-seventh of the eighth month, 1667.—In the morning, as I was laying upon my bed, and my soul greatly afflicted under the view and consideration of the state of things, as it was among Friends in the city of Bristol and some parts adjacent, because of the great contention and opposition; and when I was under the exercise, and my life appeared grieved, even until my soul was brought into sore anguish, at times, and grief, to see how hard some were, and unruly and obstinate. In this travail of spirit my heart being bowed, I said within myself, and before the Lord, and unto him; I matter not, what I be, nor how much I be abused, for we must pass through good and bad report, as the faithful in former times did. And then when I was thus gone down into the grave of self-denial, where I thought I could lie and be trodden upon, the Lord God signified unto me by his Holy Spirit on this wise:—Though thou be willing so to be, yet will not I be trodden under; and further said, there are some of them, that are as dead men before me, because they have lifted up their heel against me, and have rejected my word, and slighted or set at naught my reproof.

And further the Lord God signified unto me, that the spirit of Core and Balaam had entered, which would shut truth out of doors, and pluck Christ from his throne, and lead away the minds of people after their own inventions, to worship the works of their own hands. And He further signified unto me, how that the plague of leprosy and sore judgment of hardness of heart, was upon them; and they had lost their beauty, and were not fit to come nigh the altar of the Lord, nor to be in the Lord's congregation; and that he would decide the matter. And further he signified to my comfort, there was a Priest to stand between the living and the dead, with a holy censor and pure incense, to make an atonement; and the eyes of all the tender and sensible were to be towards Him, that they might receive the law from his mouth, and that his lips might preserve their knowledge. And further, there was something also of the spirit of Cain, which did appear had entered, even that which did envy Abel's acceptance.

When I had seen these things from the Lord, and it was showed me I could speak forth the matter unto the people, my heart was wonderfully broken within me; and I cried and said, Woe is me! must I be the messenger to carry this message unto this people? And when I was under this exercise the Lord did signify unto me: If I delivered his word faithfully, then should I deliver my own soul; but if not, I should die for it; my life should go for theirs. Then did the dread of the Lord's word, and his majesty strike me down, and made me willing to be given up, without any more reasoning: blessed be the Lord for ever, who both gives the word, and power to deliver it!

JOHN BURNYEAT.

From Memoir of William Crouch.

And because evil speaking is become almost an epidemical fault, take these rules and directions which he hath laid down for the prevention and cure of it.

1. "Never say any evil of man, but what you certainly know.—He that easily credits

an ill report, is almost as faulty as the first inventor of it; for though you do not make yet you commonly propagate, a lie. Therefore never speak evil of any upon common fame, which for the most part is false; but almost always uncertain whether it be true or not.

2. "Before you speak evil of any man, consider whether he hath not obliged you to some real kindness, and then it is a bad return to speak ill of him, who hath done us good.

3. "Let us accustom ourselves to pity the faults of men, and to be truly sorry for them; and then we shall take no pleasure in publishing them. This, common humanity requires of us, considering the great infirmities of human nature, and that we ourselves also are liable to be tempted.

4. "Whenever we hear any man evil spoken of, if we know any good of him, let us say that. It is always the more humane at the more honorable part, to stand up in the defence and vindication of others, than to take a case and bespatter them.

— "They that will observe nothing in wise man, but his oversights and follies; nothing in a good man, but his failings and infirmities; may make a shift to render a very wise and good man very despicable. If one should heap together all the passionate speeches, a the forward and imprudent actions of the best man; all that he had said or done amiss in his whole life, and present it all at one view, concealing his wisdom and virtue; the man in this disguise would look like a madman or fury; and yet if his life were fairly reported and just in the same manner as it was led, all his many and great virtues set over against his failings and infirmities, he would appear to all the world to be an admirable and excellent person.

5. "That you may not speak ill of any, do not delight to hear ill of them. Give no countenance to busy bodies, and those that love to talk of other man's faults.

6. "Let every man mind himself, and his own duty and concernment. Do but endeavor in good earnest to mend thyself, and it will be work enough for one man, and leave the rest but little time to talk of others.

7. "And lastly, let us set a watch before the door of our lips, and not speak but upon consideration: I do not mean to speak finely, but fitly; especially when thou speakest of others; consider of whom, and what thou art going to speak: use great caution and circumspection in this matter; look well about thee; before thy words slip from thee; which when they are once out of thy lips, are for ever out of thy power."

The reducing of these rules to practice, would be an especial means to purge out that leaven which sours conversation; and render it so dangerous and unsovable.

I should have had no occasion to mention them here, but because the tongues of some men run into that unbridled liberty, as to spare neither the living, nor the dead.

Our friend showed us a better example; he knew a bridle to his tongue, and set a watch before the door of his lips, remembering, that if any man offend not in word, the same is perfect man. Jam. iii. 2; but if any man seem to be religious, and bridled not his tongue, he deceiveth his own heart, and his religion is vain. Jam. i. 26.

Watch ye, stand fast in the faith.

For "The Friend."

The communication by Thomas Clark, which appeared in "The Friend" of 11th month, 1878, professing to supplement mine of the 5th, is, so misleading in several particulars as to render some further explanation necessary.

That which he thinks will be news to ends in reference to doctrine, Norwich Monthly Meeting in a testimony issued the 11th mo. 1877, gave Friends of Canada elsewhere faithful warning of. The errors it are pointed out in that "testimony" are among the prominent features of the doctrine "The Plymouth Brethren." A further defence that the said doctrine is held and propagated by members of Canada Yearly Meeting, is the fact that the Dublin Doherty Tracts have been largely circulated by members. And at the Annual Meeting the Book and Tract Association of said Yearly Meeting, held 6th mo. 1877, those tracts were advocated by some members, and a majority of the visitors then present, as being better than Friends' Tracts.

In reference to artificial music, he sadly misconstrues my words. I stated distinctly at the divergence in paths was *general* in character. When the issue took place it stood upon one point, "that of artificial music." It would be more proper to say, that a meeting could not unite upon that point, and consequently the delay of the business of a meeting.

If Thomas Clark had read "or carefully investigated the mass of evidence" he speaks of, he would not be so much in the dark as he professes to be. He would have no need to throw a plea, nor make suppositions for which he can find no data; but would know at the difference was not so much in reference to members keeping instruments of music in their houses; but that a person who was a teacher of artificial music had applied for membership with Friends. And that at the meeting held, that for a Monthly Meeting to receive such an one on the grounds of religious conviction, while still engaged as a teacher, would be a compromise of principle, and give official sanction to members to play instruments in their houses. From the lips of George Fox, the Society of Friends bore testimony that, "for artificial music, either by organs or other instruments, we have neither example nor precept in the New Testament." It is not the business of the Monthly Meeting to compromise or make changes in either principle or discipline, but to have a care that its members walk consistently therewith. But if, as Thomas Clark says, such things are "tolerated nearly or quite all the Yearly Meetings of Friends," it is the legitimate fruit of the new practices which have obtained so large a place amongst Friends. Levi Varney has truly said, that "existing difficulties are not confined to Friends of Canada, but are found in all the Yearly Meetings, and the cause is the same—a departure from the doctrines and practices of our religious Society.

William Valentine has correctly presented the matter in reference to the action of the early Meeting in the case. Yet a little further explanation is necessary in relation to the manner in which the troubles in Pelham Quarterly Meeting were presented to the early Meeting. In 1877, the reports from Pelham Quarter stated that no official report

had been received from Norwich Monthly Meeting, and that it was the *judgment of the meeting* that Norwich members take no part in the business of the Quarterly Meeting. The Representatives to the Yearly Meeting (three in number) were members of Pelham Monthly Meeting. After reading the minutes from the Quarters and calling the names of the representatives, the Clerk called the attention of the meeting to the reports from Pelham, which showed that one *Monthly Meeting* was not represented in the meeting, and proposed that a committee be then appointed to enquire into the reason of such non-representation, and make official report of the same. Thomas Clark at once objected to the proposition, and asserted that the Clerk was out of order in making it; and the meeting did not act upon it. I claim that the attention of the Yearly Meeting was then and there called to the difficulties in a constitutional way, and that it was bound by its paternal relationship to, and by the ties of brotherhood amongst its members, to have exercised religious care in the matter. Neither was the meeting fully organized until all its members were known to be represented, or some official action taken in the matter.

It was at the early part of the second session of the meeting, when the new clerk took his seat, that the subject of the non-representation of Norwich Meeting was again introduced, when the paper referred to by Wm. Valentine was laid on the table, and the Clerk presented it to the consideration of the meeting as an unofficial document; but the meeting refused to notice it in any way at that time. It was at a late subsequent session that it was disposed of as described by Wm. Valentine.

Is it to be inferred that two sets of minutes from a Quarter is the constitutional way of presenting a difficulty to the Yearly Meeting? The fact is, that such a state of disorder was presented that the Yearly Meeting could no longer avoid taking cognizance of it.

Thomas Clark says, "The committee asked the two parties to give them all the information in their power; and they were certainly ably represented by Adam Spencer and James F. Barker, who performed their duties in a commendable manner—and laid before us a mass of evidence in the form of printed and written documents, minutes of meetings," &c. What evidence James F. Barker laid before the committee, or what he said to them, I am ignorant of, for I was not allowed to be present with the committee at the time that he was with them. I had been requested by one of their number to present such evidence as I was possessed of. Accordingly I met with the committee at the time appointed; but I was soon requested to withdraw. After a time I was called upon for the minutes of the meetings, which I presented to the committee together with copies of a printed statement that Norwich Monthly Meeting had issued for the information of Friends. I was not asked to point out the portion of the records that treated of the matters at issue, therefore withdrew. Subsequently James F. Barker went in with the committee and remained some time. After he withdrew I was called in and requested to make any remarks that I wished. But I was ignorant as to the extent of the "investigations" that the committee had made, and of what James F. Barker had laid before them. If the committee had fully

examined all the minutes of the meeting touching the questions at issue, and the printed documents, there could not be much left to do. There was, however, one point to which I called the attention of the committee. That was, in reference to the committee that was appointed by the Quarterly Meeting (as then constituted) in 2d mo. 1877, who were to report to the next Quarterly Meeting. And that although said committee was continued to service in the sixth month following, Norwich Monthly Meeting was not officially informed of it. And when the said committee, or a part of their number, attended Norwich Meeting in Eighth month, they did not present a minute showing their continuance to service. Such attendance was not officially recognized by the meeting, consequently the acts upon which they based their final report in the case were out of order and illegal. It seems right here to state, that on that occasion, after some time spent in the Monthly Meeting without coming to any united judgment as to the course to be pursued, the meeting adjourned to the usual time the next month, as it had done for some time past. It was after the adjournment had taken place, and many Friends, including the Clerk, had left the house, that the new meeting was set up, based upon the advice of said committee.

As two sets of minutes were before the committee of the Yearly Meeting, conflicting statements would naturally accompany them. And it is certainly a novel way of eliciting the truth by hearing one of each party, and that separately. As each of those minutes had the names of their respective representatives, they should have been allowed a hearing before the committee in the presence of each other. As it was, much remained in the dark, and the committee were divided in sentiment. Thomas Clark says, "The report which, as clerk of the committee, I drew up and read, was adopted without any expressed dissent." When it was read in the Yearly Meeting, one of the committee protested against it, and stated that a part of their number was opposed to it. To which reply was made by another member of the committee, that there were only seven opposed to it. Reply was again made that seven objected, but some others who had said nothing were opposed to it.

The difficulties in Canada Yearly Meeting are not confined to one Monthly or Quarterly Meeting. The departure from principle and practice first appeared in Pelham Monthly Meeting, and it was there those departures first gained the ascendancy. (From which standpoint may be seen the action of the "Bisected Quarterly Meeting" in the difficulties at Norwich.)

No pains were spared to make proselytes in other parts of the Yearly Meeting, to the new way of thinking and acting; which was effected chiefly by the instrumentality of persons from abroad. The result is, that the said "departures" have obtained the ascendancy in the Yearly Meeting. Hence its action in the case under review. Neither the committee nor the Yearly Meeting was united in the course pursued. The matter was simply controlled.

The language made use of by the Clerk on the occasion, as he was about to read the minute he had prepared, is unexplainable. He said, "This is the most solemn hour of my life, for it falls to my lot to take the sword and

sever the living child." King Solomon would not do so. He had a better way of settling difficulties than by taking life. It is a strange instance of parental care on the part of a Yearly Meeting, to require, or admit of, such a measure.

ADAM SPENCER.

Springford, Ontario.

The Changes in the Frog.—Nowhere in the animal kingdom is there so favorable an opportunity for peeping into nature's workshop as in the metamorphoses of the frog. This animal is a worm when it comes from the egg, and remains such the first four days of its life, having neither eyes nor ears nor nostrils nor respiratory organs. It crawls. It breathes through its skin. After a while a neck is grooved into the flesh. Its soft lips are hardened into a horny beak. The different organs, one after another, bud out; then a pair of branching gills, and last a long and limber tail. The worm has become fish. Three or four days more elapse, and the gills sink back into the body, while in their place others come, much more complex, arranged in vascular tufts, 112 in each. But they, too, have their day, and are absorbed, together with their framework of bone and cartilage, to be succeeded by an entirely different breathing apparatus, the initial of a second correlated group of radical changes. Lungs are developed, the mouth widened, the horny beak converted into rows of teeth; the stomach, the abdomen, the intestines, prepared for the reception of animal food in place of vegetable; four limbs, fully equipped with hip and shoulder bones, with nerves and blood vessels, push out through the skin, while the tail, being now supplanted by them as a means of locomotion, is carried away piecemeal by the absorbents, and the animal passes the balance of its days as an air-breathing and flesh-feeding batrachian.—*Penn. Monthly.*

Copy of a Valuable Manuscript.—The Presbyterian College, Montreal, recently received from Alexander II., Emperor of Russia, a facsimile copy of the famous *Codex Sinaiticus*. The *Codex Sinaiticus*, of which this is a perfect facsimile, consists of 345 1/2 leaves of very fine and beautiful vellum, probably fabricated from the skins of antelopes or asses, each leaf being 13 1/2 x 14 1/2 inches. In the poetic books the writing on each page is distributed in two columns, and in the rest in four columns containing forty-eight lines of from twelve to fourteen letters each, the characters being uncial or capitals without spaces between the words, or breathings, or accents, or the iota *script* or *postscript*, and with very few marks of punctuation. The manuscript contains the entire New Testament, and nearly the whole of the Old Testament, together with the Epistle of Barnabas and Hermas' Shepherd. It was discovered by the learned and indefatigable Dr. Tischendorf in the Convent of St. Catherine's on Mount Sinai in 1841. He was then permitted to copy only a few pages of it. Having informed the monks that it belonged to the fourth century, and was of great value, it was at once withdrawn from him. In 1853 he visited the convent a second time, but could get no tidings of the manuscripts. In 1859 he returned the third time, under the protection of Alexander II., the patron of the Greek Church, and now he gained access to the coveted treasure, and had it transferred to Cairo for transcription.

He finally persuaded the monks to present this ancient monument of piety and learning to the Emperor of Russia. Accordingly, he submitted it early in November at St. Petersburg, and the emperor liberally undertook to defray the cost of a splendid facsimile edition of 300 copies, which appeared in 1862 as a memorial of the thousandth anniversary of his kingdom. Two hundred copies seem to have been absorbed immediately as presents from the Emperor to various public bodies, chiefly in his own dominions, and to a few learned men.—*Christian Advocate.*

THE PRAISE MEETING OF THE FLOWERS.

Selected.

The flowers of many climates
That bloom all seasons through,
Met in a stately garden
Bright with the morning dew.

For praise and loving worship
The Lord they came to meet:
Her box of precious ointment
The Rose broke at His feet.

The Passion-Flower His symbols
Wore fondly on her breast;
She spoke of self-denial
As what might please Him best.

The Morning-Glories fragile
Like infants soon to go,
Had dainty toy-like trumpets
And praised the Master so.

"His word is like to honey,"
The Clover testified,
"And all who trust Thy promise
Shall in Thy love abide."

The Lilies said, "O trust Him,
We neither toil nor spin,
And yet His house of glory,
See how we enter in!"

The King-cup and her kindred
Said, "Let us all be glad,
Of His redundant sunshine
Behold how we are clad."

"And let us follow Jesus,"
The Star of Bethlehem said,
And all the band of flowers
Bent down with reverent head.

The glad Sun-Flower answered
And little Daisies bright,
And all the cousin Asters,
"We follow toward the light!"

"We praise Him for the mountains,"
The Alpine Roses cried:
"We bless Him for the valleys,"
The Violets replied.

"We praise Him," said the Air-plant,
"For breath we never lack."
"And for the rocks we praise Him,"
The Lichens answer back.

"We praise God for the waters,"
The gray Sea-mosses sighed;
And all His baptized Lilies
"Amen! Amen!" replied.

"And for the cool green woodlands,
We praise and thanks return,"
Said Kalmias and Azalias,
And graceful Feathery Fern.

"And for the wealth of gardens
And all the gardener thinks,"
Said Roses and Camellias,
And all the sweet-breath'd Pinks.

"Hosannah in the highest,"
The Baby-Bluets sang;
And little trembling Hare-Bells
With softest music rang.

"The winter hath been bitter,
But sunshine follow'st storm,
Thanks for His loving kindness
The earth's great heart is warm."

So said the pilgrim May-Flower
That coucheth after snow,
The humblest and the sweetest
Of all the flowers that blow.

"Thank God for every weather,
The sun-shine and the wet,"
Spoke out the cheering Pansies
And darling Mignonette.

And then the sun descended,
The heavens were all aglow;
The little Morning-Glories
Had faded long ago.

And now the bright Day-Lilies
Their love watch ceased to keep—
"He giveth," said the Poppies—
"To His beloved sleep."

The gray of evening deepened,
The soft wind stirred the corn:
When sudden in the garden
Another flower was born.

It was the Evening Primrose,
Her sisters followed fast;
With perfumed lips they whispered,
"Thank God for night at last."

For "The Friend."

Edith Lovell.

The letters of Richard Shackleton of Ballinacorney, Ireland, contain several references to the religious visit paid to Friends in that land by Edith Lovell. In writing to Elizabeth Pim under date of 18th of Tenth month, 1788 he says:

"Edith Lovell from Bristol, was at our Quarterly Meeting at Edenderry. She is sweet minister, nor large in her gift."

On the 18th of Twelfth month, he addressed a letter to his young friend, and former pupil, James Abell, who appears to have been attending Edith in her travels in Ireland. In this he remarks:

"The account of your progress is very agreeable to us; I doubt not but Edith will fare much the better for having none but stripplings along with her. The supply of lesse streams being cut off, will be likely to attract her with stronger necessity to the Spring, and to fix her dwelling beside it. There has been too much of a crying out, help, help, among the laborers, one to another, instead of waiting in a sense of their own helplessness for the help of the Lord Almighty; and He who is jealous of his own honor, and sees the secret movements of the heart, has not blessed in so full a manner, nor added so great a degree of his own strength, as would have been the case, if the servant had entirely looked and turned to Him alone."

On the 18th of the following month Elizabeth Shackleton wrote to her daughter Margaret:

"This dismal news (the shipwreck of Edith Lovell and Joseph Sparrow), has affected me so that it is seldom out of my thoughts while awake. Remember we cannot pretend to judge for what cause it was permitted. Edith was a near and dear friend, in the prime of life for public service, a humble, devoted servant, the mother of a number of small children, whom she appeared to be qualified to educate in the way they should go. Our dear Joseph, reared with care, and arrived at man's estate, a dutiful and helpful son, an affectionate brother, a kind, sincere friend, an example of sobriety and virtue, and likely to be of extensive service in the Society. How can we then but admire why such should come to an untimely end?"

A recent number of "The British Friend"

ains some interesting particulars of the occurrence referred to, written by the late Liam Ball in 1830; from which the following narrative is condensed.

Edith Lovell, a minister in our Society, living at Bristol, having paid a religious visit to some parts of Ireland toward the end of the year 1781, and being about to return, it was arranged that she should be accompanied by Joseph Sparrow, a young man whom she had become acquainted during her stay in that country, and who, having gained an attachment for a young person (Mary Davis) of Minehead, was preparing to visit the Channel on a visit to her. This arrangement was altogether voluntary on his part, originating in that disinterested concern for the situation of an unattended female during a voyage (appearing in those days, when steam packets were unknown, as a formidable undertaking), which became his amiable nature. Instead of taking passage by the Whitworth from Waterford near his own home in the ordinary way, he went to Cork, whence Edith Lovell proposed to embark, with the purpose of giving up his arduous plan, in order to conform his movements to that she was intending to pursue. It is not a little remarkable, that in seeking a suitable accommodation for their passage, they went on board a vessel loading for Minehead to see whether it would do for them; when he observed, it would suit himself well, thinking it not adapted to receive E. L. The idea of availing themselves of it was relinquished; which vessel however, as well as Whitworth, arrived at their respective destinations in perfect safety.

It was ultimately decided that they should take the Elizabeth Packet, plying between Bristol and Cork, in which they accordingly embarked from Cork, on the 29th of 12th mo., 1781, with every prospect of favorable success.

It is known that the afternoon was beautiful when the Elizabeth passed Minehead, where Joseph Sparrow would have been put ashore in due course, but for his kind anxiety to see Edith Lovell to her journey's end in safety. And who may well imagine, that having no reason to doubt his friend was at home the time, he did not come in view of the table hill that rises above the pier of that port, without many deep and tender thoughts, or a loss of sight of it, as they were borne away down the sweep of the Channel toward the Severn, about some sense of regret."

"The Packet, taking an easterly direction, sailed smoothly on (though the darkening sky betokened an alarming change of weather) guided, as was too secretly imagined, by the Beacon on the Flat Holms. But here singular and touching incident must be recounted, which led to the fatal mistake which precipitated the catastrophe. At that period only two persons were the inmates of the solitary abode furnished by the solitary dwelling of the Holms Lighthouse—a father and a son, and on that very night the former died; and the son, too anxiously engaged in attendance upon the dying bed, omitted to put fire to the beacon; so that the helm-man of the Elizabeth, unapplying taking the Burnham light on the coast of Somerset for the one of the Flat Holms, steered the perilous course which, aided by the storm of that awful night, wrecked her on the Calver Sands, towards the mouth of the Bridgewater river off

the Burnham strand. These sands, which at low water are discoverable and seem but an extension of the beach, stretch their shoals when the tide is in, among the shallows, in the most dangerous and deceitful manner; for, the waves rolling smoothly over them, there is no indication of the foe beneath, as on a rocky shore where the resistance that breaks the surge proclaims an open enemy. The Burnham light warns the pilot from this point of danger; but in this case the error alluded to turned the warning into a fallacious and destructive security. The tide, which, at low, is fearfully impetuous over these shoals, was just upon the turn of the high flood, and swelling into a tempestuous gale. The vessel was struck, and it was evident she would soon be overwhelmed, and that instant ruin awaited those who should decide to remain in her. These and the subsequent particulars were gathered from those of the crew that escaped by the boat or by swimming. It is said that Edith Lovell could not be prevailed upon to leave the ship, and commit herself to the boat, which became every moment more and more clearly the only course that admitted any hope; while the roaring waves, which had already filled the cabins and the hold, drove the ship's company to the deck and the shrouds. Even then Joseph Sparrow, having an excellent swimmer and having prepared to make that last exertion in case he could have persuaded E. L. to take to the overloaded boat, might no doubt have saved himself, but his generous heart could not consent to quit his helpless friend in this awful emergency. "I will not leave thee" was too the firm resolve of this magnanimous but too self-sacrificing young man, though threatened with instant destruction as the price of his decision, by the voice of the devouring waters, which mustering their accumulated force against the devoted bark, rode over her in final triumph. And there is abundant reason to believe that, as respects both these lamented sufferers, the experience so beautifully delineated by Bunyan, when his pilgrims are made to pass the cold river, was graciously verified, and that a hope full of immortality lay as a glowing coal at their heart, even in the hour of this terrible death. It was soon over—"Thou didst blow with thy wind, the sea covered them, they sank as lead in the mighty waters!"

"I think the body of Edith Lovell was never discovered, but that of Joseph Sparrow was washed on shore about seven weeks afterwards, at the village of Quantoxhead in Somersetshire, and was immediately buried on the spot. It was identified by the singular color of the stocking, which was drab, according to a custom then prevalent among Irish friends."

"My father and uncle, on learning the sad news, went over to Burnham, and saw the wreck at no great distance from the beach. They perceived two dead bodies in the shrouds, the last desperate resort of those wretched victims amongst the crew who had resolved to keep to the ship; and were about to proceed to the spot, which at low water connects with the coast, but the strand there being very perilous, abounding with mud and sand, they gave up the attempt. It was well that they desisted, for it proved that the hull was full of *weathers*, whose heartless and nefarious cupidity had braved the dangerous approach, and from whom any respectable witness of their further operations would have probably

received injury, if not been effectually silenced in a scene so favorable to summary vengeance. This infamous class of thieves was at that period, when the trade to the declined ports of the Bristol Channel was extensive and flourishing, almost as numerous or at least as abandoned on the shores of Cornwall, as it still is on the shores of Cornwall."

"A few words should be added respecting the manner in which Mary Davis's religion enabled her to bear this piercing affliction. She was, as has been observed, paying a visit at my grandfather's, (whence she was about to return home to await her friend, who she was well apprised was on his way to the Elizabeth, at the time when the fearful tidings arrived; they were not long in reaching Bridgewater, which is only ten miles from Burnham. One of the family, then but a lad, ran into the room, where she sat enjoying the society of her valued friends, little aware of what befell her, and which came with all the aggravation of the shock, when he suddenly exclaimed, "The Elizabeth Packet is wrecked on the strand of Burnham, and all the passengers lost." He was immediately called out of the room by his father for the communication of the particulars, and was of course much distressed on finding how the case stood; but it was afterwards considered that the matter was as well broken in that, as in any other manner that could have been conceived by deliberation, since in its very nature it admitted so little alleviation. And it reached her in a frame of spirit well fitted to sustain the stroke, being remarkably prepared to meet such an almost overwhelming visitation, by much recent converse, in the fellowship of His saints, with that God who had declared that they who trust in Him shall not be *greatly* moved. She felt as one, having not only human, but peculiarly feminine feelings, must have felt, "but as a Christian bore." She was grieved, but not murmured, and sighed, but not despaired! exemplifying in unvarying and filial submission to the blow, the sacred language, "I was dumb with silence, I opened not my mouth, because Thou didst it!"

To the Senate and House of Representatives of the United States, in Congress assembled.

The Memorial of the Representatives of the religious Society of Friends, in Pennsylvania, New Jersey and Delaware, respectfully presents:

That, your memorialists have regarded with deep interest and anxiety the proposition now pending before your body, to transfer the management of the Indians within the United States, from the Interior Department to the War Department, and they would respectfully, but earnestly remonstrate against such transfer for the following reasons:—

"The past history of the Indian Nations of this Continent, proves that they are susceptible to the softening influences of kindly christian treatment, and the European discoverers found that as they were thus approached, they almost invariably responded in a friendly and even generous spirit. The peaceable policy pursued by William Penn and the early settlers of Pennsylvania and New Jersey, avoided all Indian wars in those colonies so long as it was adhered to—a period of 70 years; whilst the settlers of New England who depended on military defence during the same period, were almost constantly embroiled in desolating contests with the aborigines.

We believe it is essential for the ultimate safety and the best interests of the Indians, that they should be trained in the habits and arts of civilization, and should be induced to exchange the unsettled life of the chase for the practice of agriculture. It is evident that the necessary instruction to promote these ends, cannot be looked for from men whose own training and habits have been of an altogether different character. It is a fact admitted by most military officers familiar with the subject, and proved by experience, that the presence of soldiers among the Indians is a fruitful source of demoralization and disease. In a Memorial to Congress by the "United States Indian Commission," dated "July 14, 1868," the view is expressed, that "One of the finest physical types of man has already become seriously enfeebled, and that tribes originally comparatively pure, are fast sinking into a grossness of vice, which threatens their utter extinction. This latter evil in all its destructive extent, seems to be an inevitable attendant of the presence of our troops in the Indian country. All these and many other disgraceful facts are attested by respectable officers of the government, by a large number of Indian chiefs, and by many trustworthy private citizens." It must be further borne in mind that the misery thus produced is not confined to the immediate victims, but reaches in its consequences to generations yet unborn. It is clear therefore to us that the proposed transfer would greatly interfere with the educational agencies now in operation, would retard the progress of the Indians, and, we do not doubt, would cause a retrograde movement.

The system of treatment inaugurated of late years, whereby men and women of philanthropic views, were engaged to co-operate with the government in instructing and encouraging the Indian tribes in literary knowledge, christian morality, the arts of agriculture and of civilized life, we consider a truly wise and just one, and we trust it may be continued. Its practical value has been already proved by the result among many of the tribes, where it has been in operation for several years. Some of these, who were as intractable and as warlike as any Indians on the Continent, have yielded to the patient efforts of their agents and teachers, until now they remain on and cultivate portions of their Reservations; many of them send their children to the schools, and have begun to build houses and raise stock. Should a similar line of action continue to be steadily pursued by the government, there is abundant reason for believing that a few years would suffice to render the wildest tribes of the West peaceful, law-abiding, and settled in their mode of life, and eventually, self-supporting and even useful citizens. Shall we now arrest the progress of the good work by a change of policy, and the return to a system which has hitherto proved defective and injurious?

Moreover, your memorials would call attention to the manifest inconsistency of military rule with a system of republican government like ours, and to the determined opposition which our ancestors manifested to its exercise over them by the king of Great Britain. It was made a special subject of complaint in the preamble to the Declaration of Independence, that large bodies of armed troops were quartered among the colonists, and that the military was made independent

of and superior to the civil power. Among the self-evident truths asserted in that declaration were these—"That all men are created equal, and that governments derive their just powers from the consent of the governed." We are credibly informed that all the Indian tribes who have been granted an opportunity to express their sentiments on the proposed change, have signified their decided objection to it, and have predicted that, if tried, it will operate to their serious disadvantage. To insist upon it under these circumstances would be a clear violation of the principles on which our government is founded.

We believe the United States are bound by every consideration of religion, honor and self-interest, to regard the welfare of the feeble remnants of the tribes who formerly occupied the whole breadth of our country from the Atlantic to the Pacific, and who still retain a paramount right to a fair share of its territory. Regarding civil government as existing by Divine appointment, we believe it can only be rightly administered so long as its accountability to the Most High is recognized, and the important fact remembered that it is "righteousness" alone that truly "exalteth a nation," while on the other hand, national sins, like those of individuals, are visited by just retribution. Representing, as the government of the United States does, a people professing Christianity, we feel that its position as such can only be consistently maintained, as its general policy is in accordance with the benign precepts of the Gospel. It is true the Indian may be regarded as a somewhat incongruous element in our population, but while a knowledge of the arts of civilized life renders us his superior in many respects, that fact affords no warrant for our disregard of rights which are inherent in him. Still further should the injunctions of that Holy religion we profess, forbid us to follow him with those deeds of violence and revenge which, in his savage ignorance, he has been taught to regard as virtues.

Our true policy, as a people enlightened by the teachings of the Gospel, should therefore manifestly be, to extend to the Indian the same blessed influences which have thereby come to us—to gain his confidence by the strict performance of every promise—to secure to him and his children a suitable and permanent home—to instruct him, as rapidly as his condition will permit, in useful arts and modes of life—to surround him by wholesome moral influences—to shield him from the contaminating contact with unprincipled men of our own race—in short both by example and precept to impress upon him the fact, that the habits of civilized life, and the religion which we profess, are better than his own.

We look with feelings of sorrow and abhorrence on the great injustice and suffering that have repeatedly been inflicted upon the aborigines of this land, and we may rest assured that those who violate the rights of others and oppress those who are unable to protect themselves, will sooner or later experience the truth of the Scripture declaration,—"Vengeance is mine, I will repay, saith the Lord." It was the belief in this truth that led Thomas Jefferson to exclaim, "I tremble for my country, when I remember that God is just and that His justice will not sleep forever."

Let us then endeavor to atone, so far as we

can, for past injustice towards the Indian, for our breach of solemn treaties and slaughter of their helpless women and children, by recognizing the obligations rest on a powerful people to protect and rescue these weak and defenceless wards of the nation; and so fulfil the law of Christ, "Whoever ye would that men should do to you, even so do ye even so to them."

Taken from the Minutes of a Meeting of said Representatives held in Philadelphia, 1st mo. 6th, 1871.

JOSEPH WALTON, Clerk.

For "The Friend"
Thoughts and Feelings.

OBEEDIENCE IN LITTLE THINGS.

It was a solemn interrogation of the Lord, through his prophet, to Israel of old, "Will a man rob God? Yet ye have robbed me." And to the query, "Wherein have ye robbed thee?" the answer was forthwith, "In tithes and offerings." After dwelling with stirring words upon such sacrifice, record continues:—"Bring ye *all* the tithes the storehouse * * * and prove me herewith, saith the Lord of hosts, if I will open you the windows of heaven, and if I will pour on a blessing, that there shall no room enough to receive it." We may remember that under the law these tithes and offerings were as small and as insignificant to outward eye, as two turtle doves or two young pigeons, or even the tenth part of an ephah of fine flour without oil or frankincense. Under the more perfect dispensation, Saviour alludes to these offerings by way of censure of the Scribes and Pharisees for giving over-regard to them to the neglect of more important duties; saying, "Ye pay tithes of mint, and anise, and cummin, and have omitted the weightier matters of the law, judgment, mercy, and faith: these," He continues, "ought ye to have done, and not leave the other undone."

We are assured that there is no requisit of the Divine will, being clearly impressed whether it be conveyed through Holy Scripture or by the immediate enlightening influence of the Day-spring from on high upon mind and heart, that can, without imminent danger to our souls, be put away from us. Large things are made up of small. And it is not the first little steps either in obedience or disobedience to the manifestations of Saviour's all-sufficient grace, that generate leads, on the one hand, to the greater sacrifices of love and allegiance, or on the other to the downward course, so greatly to be deplored, of blindness and insensibility of heart. It is the testimony of our Holy Redeemer, "He that is faithful in that which is least, faithful also in much; and he that is unfaithful in the least, is unfaithful also in much." It is also a foretime written, "He that contemns small things shall fall by little and little." It is well to be oft reminded that we are poor, frail, insignificant creatures ourselves, called forth, by the Psalmist, the inspired language,—"That is man that Thou art mindful of him." Which of itself should induce carefulness to let obedience in little things keep pace with the dear Saviour's revealed will, and our knowledge in relation to them: being at the same time watchful that we neglect not those "weightier matters" of baptism into death with Christ, that so we may experience life to be the resurrection and life, with

hing of regeneration and renewing of the y Ghost, which are indispensible to a life faith and a death unto sin, through the warding blood, and the inward saviour of Him who is the Life and the Light gen.

obedience to what is made known in the rt of each one of us, is what is wanting, dience in the lesser as well as the greater s, without consulting with flesh and blood, quering whether the same is called for n others around us. The question put to v Saviour by Peter, "And what shall this o do?" with His answer, "What is that o? Follow thou me," surely brings into ch significance the fact, that the obedience ach of us—the following each for ourselves. Captain of salvation—without unduly nting into things that belong not to us, was close home-work, the especial duty of y follower of Christ, from Peter to this day.

The submission, the obedience, the chableness of little children, even babes in rist, is what opens the way for the great h of the kingdom, through the power of

Holy Ghost, to be revealed in and unto according to the thanksgiving prayer of dear Redeemer, viz: "I thank thee, O ther, Lord of heaven and earth, that thou hid these things from the wise and prut, and hast revealed them to babes: even Father; for so it seemed good in thy sight." f the Scriptures, in representing what are ed the smaller requisitions of the Divine l recorded in them, had expressly and defely conveyed to us in minute what these, where would have been the need of instructions of the Spirit of truth which eth all things—even opening and apply- the Scriptures? Where would have been exercise of living, practical faith, through hich they (the scriptures) are able to make s unto salvation? Where the need of the mediate revelation promised us throughout y New Testament? See especially I Cor. xi.

11. We are instructed by holy men of l, that the Word made flesh "was the true h which lighteth every man that cometh o the world." That "All things that are roved are made manifest by the light," &c. at "A manifestation of the Spirit is given ery man to profit withal." That "The ee of God bringeth salvation," &c. That the anointing," received of Christ, abideth s, &c. That "That which is to be known G is manifest in them (men); for God h shown it unto them." Well, how are se unspeakable blessings to be realized n experience, but through faithful obedie to their Author in them?

It is obedience, then, in little things, in eat things, in all the *tithe* called for, that st constitute our acceptance with a con- sionate Shepherd, and tender and loving h Priest; but who, nevertheless, hateth bery for burnt offering. May we with y purpose of heart, and in a lively con- eration of the great things He hath done s, cleave unto the Lord in the obedience ich is of faith: when He will be a God ther to us; and will make us His sons and ghters, after the new generation, unto an heritance incorruptible and undefiled, that leth not away.

There is nothing in the universe that I fear t that I shall not know my duty, or shall t to do it.—*Mary Lyon.*

It is a precious thing to know what the ross of Christ is, and how to take it up, and make use of it; Or indeed it is no less than the power that crucifies for sin, and saves from it: which Christendom, too generally being ignorant of, sets up something else in- stead thereof, and so sin remains alive, un- crucified, and salvation is wanted.

The cross of Christ is the wisdom and power of God, reproving and crossing the wills and lusts of mankind in their own hearts; and the way to take it up is, to believe in it and follow it in its manifestations.—*William Shewen.*

Plans have been perfected and prospectives issued for a scientific and educational tour around the world, to be known as the "Woodruff Scientific Expedition." A first-class iron steamer has been purchased, and is now re- fitting for this expedition. The maximum number of students that can be received is 250, and the minimum number, without which the expedition will not start, is 200. The voyage is expected to last 16 months, and the expenses of each student, including state- rooms, meals, and tuition, will be \$2,500. The faculty will consist of 10 professors, all rank- ing high in their respective departments. W. S. Clark, LL.D., now President of Amherst Agricultural College, will be president of the faculty. The expedition is expected to start from New York on 5th mo. 8th, 1879.

Be Short.—When you call on a business-man in business-hours, do your errand at once; come right to the point. The Duke of Wellington, as is well known, was not given to use too many words. One example of his economy this way will suffice. The Duke wrote to Dr. Hutton for information as to the scientific acquirements of a young officer who had been under his instruction. The doctor thought he could not do less than answer the question verbally, and made an appointment accordingly. As soon as Wellington saw him he said, "I am obliged to you, doctor, for the trouble you have taken. Is — for the post?"

Clearing his throat, Dr. Hutton began, "No man more so, my lord. I can—"

"That's quite sufficient," said Wellington. "I know how valuable your time is; mine, just now, is equally so. I will not detain you any longer. Good-morning!"

When Geraldine Hooper was about to address a public audience at Plymouth, a man present rudely exclaimed, "You're cracked to go on like this." She turned quickly, and, looking at him kindly and brightly, said, "Well, every nut must be cracked before you can get at the kernel, must it not?"

THE FRIEND.

FIRST MONTH 25, 1879.

In recently reading a tract issued by the "Central Book and Tract Committee," at Richmond, Indiana; and which was obtained from the book room of another Yearly Meeting of Friends; we were impressed with the evidence it furnishes of the spread of erroneous and defective views of religion,—and that too among those claiming the name of Friends,

and professing to uphold the doctrines which our Society in its early days proclaimed to the world as "Primitive Christianity revived."

The tract alluded to is No. 89 of the series, and gives the experience of a man named Archibald Boyle, who lived in the vicinity of Glasgow many years ago, and was noted both for talent and profligacy. The account states that about a year before his death, he had a fearful dream, in which he thought himself introduced into the state of torment which awaits those who die in their sins. This awakening visitation had a great effect upon him for a time, and he made some attempts at reformation, and resolved to lead a better life; but through the persuasions and influence of his former evil associates, he was induced again to frequent their company, returned to his former wicked habits, and finally was found dead by the road-side after an evening spent in blasphemous revelry.

The narrative is a very striking one, and though the style in which it is written conveys the impression that some of the details and coloring are due to the vivid imagination of the writer, yet we have no reason to suppose that it is not correct in its main features. It is in the concluding remarks, in which the lessons of instruction it conveys are attempted to be enforced on the reader, that the objectionable sentiments are expressed to which we have alluded.

These remarks are *permeated* with the sentiment, that all that is necessary for salvation is to "believe" in Christ. This is evinced by the following extracts from them:

"God now proclaims the fact. He freely publishes it, that all who believe—who take to themselves the benefit of that stupendous fact which was consummated upon Calvary for the salvation of the lost—are free! How wonderful! How blessed! Would that men did but know and believe it!"

"Reader, are you saved! In other words, have you believed the good news which this little book brings to you from the God of grace? Have you believed how God, in grace toward us, gave his Son to die, and how that death, while it showed his love to the Saviour, was also the judgment borne for his sins. Have you then seen Him, 'a just God and a Saviour'? It is only to see it, to believe it, and to find rest for your soul. 'We who have believed do enter into rest.'—Heb. iv. 3."

"What saves, and what fortifies us when saved, is *believing* on the Lord Jesus Christ as our Saviour."

"As soon as we believe in Christ the benefit of his death is reckoned unto us. We become thus associated with Him, and are said to have 'died with Him,' to have received our condemnation and judgment in Him, so that now 'we are as He is'—justified, free."

We have no desire to under-estimate the importance of a correct belief in the great truths of religion, as set forth in the sacred scriptures, and as manifested in the living experience of the children of God. But the teaching of our Saviour and his apostles is directly opposed to the dogma, that such a belief is the *only* essential to salvation; or that "as soon as we believe in Christ, the benefit of his death is reckoned unto us," and we "are said to have died with Him." The scriptures declare to be indispensable, repentance, a godly sorrow for sin and forsaking of it; conversion, or turning from evil to good;

and regeneration, which implies that thorough change of heart and character which makes the difference between the sinner and the saint. These wondrous effects are wrought in us by the powerful operations of the Spirit of Christ himself; and unless they are experienced, salvation is not obtained. True faith,—that living faith which is manifested by its fruits,—is the gift of God, and grows up in the heart through submission to the work of his Spirit.

It was their conviction of the reality and importance of these views that led our early Friends so earnestly to call the attention of the people to the Light of Christ in their hearts individually, as that which showed them their sins; and which, if heeded, would give them power to forsake them and obtain the forgiveness which the blessed Saviour had purchased for all those who believe in and follow Him. This was indeed a message of glad tidings to many weary souls who had long been oppressed with the weight of their sins, and though they believed in Christ, yet knew not how to come unto Him for relief. They found as they turned to His Spirit within them, took up His cross daily, and walked in His Light, that rest, peace and settlement were graciously dispensed to them, which they had before sought in vain. Many have left behind them grateful and living testimonies to the blessed result of this humble walking with Christ. They experienced, as Isaac Pennington expresses, that "it is not by an outward knowledge, but by an inward virtue and spiritual life, received from Christ, and held in Christ, that those who are saved are saved." And in another passage, the same writer says: "He that knows the grace and Truth which comes by Jesus Christ, receives it, learns of it, is subject to it, and partakes of its virtue and power,—he knows Christ unto salvation; but, he that knows not, receives not, is not subject to the grace, doth not experience the sufficiency of the grace, nor witness ability and power through it to become a Son to God, and to do the will of God,—he doth not yet at all know the Lord Jesus Christ unto the salvation of his soul, notwithstanding whatsoever he may profess or believe concerning Him."

In the number of our Journal, dated 11th mo. 30th, 1878, we printed a communication from Thomas Clark, of Canada, reviewing a previous article in reference to the action of Canada Yearly Meeting, which cut off from membership with it a large part of those who had been members of Norwich Monthly Meeting. Some comments on the statements of T. Clark by William Valentine and Levi Varney have since appeared in our columns. Adam Spencer, whose article was criticised by T. Clark, has sent us some further information on the subject. His remarks are written in a temperate spirit. The whole subject is one of much importance, affecting, as it does, the rights of a considerable number of Friends; who, so far as we can see from anything which has yet reached us, appear to have been influenced by a concern to maintain the original principles of our Society; and to have acted in accordance with its discipline. The article referred to will be found in another part of our columns.

In the present number we reprint a Me-

morial to the Senate and House of Representatives, lately prepared by the Meeting for Sufferings of Philadelphia Yearly Meeting, remonstrating against the proposed transfer of the care of the Indians to the War Department, and expressing the views which Friends have ever held, upon the justice and wisdom of honest and pacific measures in the treatment of the aborigines of this country.

The Memorial was presented to Congress by a committee appointed for the purpose, who, we understand, had interviews with several of the members particularly charged with the consideration of the subject; and also with the President and the Secretary of the Interior. It is understood that no action will be taken by Congress on the subject, until a report is received from a Commission appointed at the last session to examine it, which is expected about the 1st proximo.

SUMMARY OF EVENTS.

UNITED STATES.—During the year 1878, iron and metal products, amounting in value to nearly \$3,000,000, were exported from Philadelphia and neighboring workshops, to foreign countries, mainly in vessels from our wharves. Locomotives represent the largest total value, 79 of which were exported—40 to Russia, 21 to Australia and Peru, 14 to Brazil, 3 to Cuba, and 1 to France. Steam engines were next in value. Russia taking 2, Brazil 8, and Cuba 1. Three thousand eight hundred and sixteen tons of wrought iron bridges were shipped to Canada. Of iron and other railway cars, Brazil 193, to Cuba 230, South America and West Indies 50. Nearly 6,000 tons of iron and steel rails were sent to Brazil and Cuba. Dental instruments valued at \$72,155, were shipped to Liverpool; 91 packages of sewing machines were shipped to Genoa, Antwerp, Liverpool, West Indies, South America and Lisbon.

At a recent sale in this city of imported Jersey and Guernsey cattle, the average price per head, realized, was \$24.61.

The annual statement of the City Controller shows that the funded debt of the City of Philadelphia, at the 1st inst., was \$91,092,641; and the outstanding warrants were \$107,122,150—a decrease of \$1,151,359 during the year. The assets of the sinking fund were valued at \$17,259,899—making the net debt \$55,831,063.

A fire in New York city on the night of the 17th, destroyed several buildings on West street; the estimated losses aggregate \$2,400,000.

The Chyenne prisoners, recently escaped from Fort Robinson, are reported to have assumed the most inaccessible position of any of the many from which they lately held the troops at bay. Captain Wessells believes they cannot be dislodged without a greater sacrifice of life than he deems advisable.

In New York, during the past week, there were 193 deaths by scarlet fever. In this city the mortality for the week was 361—an increase of 49 over the same period last year.

Markets, &c.—U. S. sixes, 1881, 107; 5s, registered, 106; do. coupon, 107; 4s, per cents, 106; 4, per cents, 100; 2s, 1887, 102; do. 1885, 103.

Cotton is firmly held. Sales of biddings were reported at 94 1/2 cts. per pound for uplands and New Orleans.

Petroleum.—Crude 8 cts. in barrels, and standard white at 9 cts. for export, and 11 1/2 a 12 1/2 cts. per gallon for home use.

Flour.—Pennsylvania and Minnesota extra, \$4.25 for medium, and \$4.75 for fancy; western, do. do. at \$5.25 a \$5.50 for fancy; patent and other high grades, \$5.25 a \$7.50. Fine flour, \$2.75 a \$2.87 1/2 per barrel.

Grain.—Wheat, red \$1.05 a \$1.05 1/2; amber, \$1.01 a \$1.03. Corn, 44 a 44 cts. per bushel. Oats, 30 a 32 cts. per fair to fancy.

Hay and Straw.—Prime timothy, 65 a 75 cts. per 100 pounds; mixed, 45 a 60 cts. Straw, 65 a 75 cts. per 100 pounds.

Beef cattle were in good demand, and prices were a fraction higher; 1700 head arrived and sold at 54 a 57 cts. for extra Penna. and western steers; 43 a 56 cts. for fair to good, and 35 a 48 cts. per pound for common. Sheep were in fair demand, and sold at 32 a 37 cts. according to quality. Hogs 4 a 5 1/2 cts. per pound for common to extra.

FOREIGN.—Since its foundation the British N. Lifeboat Institution has contributed to the say 26,051 shipwrecked persons. Last year its life saved 471 lives, and helped seventeen vessels in danger, and rewards were paid for the saving of persons by fishers and watermen. Though 12,600 were engaged in the society's 269 life-boats last month, it was lost.

The sheep farmers in Scotland estimate their by recent storms at over 100,000 head of sheep.

The North Wales Miner's Association has resolved to vote 27 to every member of the Union who dares to emigrate to America, and £14 to emigrants to trials.

Notices were posted on the 18th, by the iron building yards and foundries in Liverpool and the tract around, of a reduction in wages of 7 1/2 per cent after the 31st of present month. It is thought the fall will strike.

The United States frigate Constitution, on her from Havre to New York, with goods from the Exposition, went ashore on the coast of England, on the 17th inst. She was taken off during the day, and taken to Portsmouth for examination, when it was found her false keel only was damaged. Her cargo is so far in good condition.

The political situation of France is just now a subject of much interest. It is reported that the Republic is determined to support its ministry, if some concessions can be made.

During the two months, from the 21st of 10th mo. to the 21st of 12th mo., 144 societies, 44 newspapers and 157 other publications in France, were proscribed by virtue of the Socialist law.

The last report of the French Minister of Instruction on the state of elementary education, shows that the total number of children between the years of six and thirteen, were 4,502,000. Of this number 3,875 were attending public and private schools—leaving 624,000 not in receipt of school education.

The Times Berlin despatch says: "Up to the earliest date, the total number of injunctions issued in accordance with the socialist law, was 457, which had been applied to 189 clubs, 100 newspapers, 138 cabs, and 210 non-periodical publications. The number of persons expelled from the empire under the law amounts to 62."

Prince Bismarck has a bill prepared, to be submitted to the Reichstag, providing for the punishment of a member who indulges in speeches in opposition to the will of the Government, or in any opposition manifested to the bill, but it is expected to pass.

Privy Councillor Finkelnberg has been sent Vienna to arrange with the Austrian sanitary and other common measures against the spread of the plague westward. Official intelligence from Astrachan, says that the epidemic is diminishing, while private information is to the effect that it is on the increase.

Owing to the severity of the weather in Switzerland, the farms are frequently visited by wolves, and a droll of chamois have descended into the valley search of food.

FRIENDS' ASYLUM FOR THE INSANE, Near Franklin, (Twenty-third Ward,) Philadelphia. For particulars apply to JOHN H. HALL, Jr., Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

MARRIED, at Friends' Meeting-house, at Sunnyside, in Guthrie county, Iowa, on the 12th of 11 mo, 1878, BENJAMIN SMITH, of Dear creek, and SIDA PEARSON, of the former place.

DIED, at his residence, at Ercildoune, on the 22d 12th mo, 1878, SARAH NORTH, widow of the late J. North, a beloved member and elder of London Circuit Monthly and Fallowfield Particular Meeting, in 88th year of her age. She was firmly attached to principles and testimonies of our Society as professed by early Friends, and lived a consistent example thereof. She retained possession of all her faculties during her last illness, and felt her end drawing near. Having given suitable directions for her funeral, she was anxious of being released, yet patient, having no fear of death. No doubts nor misgivings were permitted assail her, but like a shock of corn fully ripe, she gathered, we reverently believe, into the heavenly garner.

For "The Friend"

Early Steam Navigation on the Atlantic.

In a recent number of the *London Railway*, an interesting account has been published of the beginning of ocean steam travel, which has now become so important a feature of the commerce of the world. From the account the following has been condensed:

There exists a general impression that the navigation across the Atlantic is of a modern date, and that the enterprise is not dreamt of by the first builders of steamships. It is a belief which arose, not from the fact that the establishment of regular steam routes between this country and America, with hours of departure and arrival as punctual, or nearly so, as railway trains, is within the memory of middle-aged men, and all the more strongly impressed on the mind of the opposition it encountered, and ridicule its predicted success met with on the part of many persons, even scientific authorities. However, the belief is altogether erroneous. The idea of crossing the broad Atlantic in steam-propelled vessels is as old as the steamers themselves, and the first inventor entertained it most distinctly. Poor John Fitch, of Philadelphia, already referred to as the inventor of what really was the first practical steamer, expressed, in the clearest and simplest manner, his belief that mercantile steamships, as well as men-of-war, propelled by steam power, could run between Europe and America, and, in fact, over all the seas of the globe. In a remarkable letter addressed to a friend, one David Rittenhouse, of whom he was to beg now and then the loan of a five-cent note to carry on his steamboat experiments, he said, on one occasion, 'This ship, whether I bring it to perfection or not, will be the mode of crossing the Atlantic, in time, packets and armed vessels.' It is lamentable to think of the fate of this true mechanical genius, falling in the end into despair through the most abject poverty. 'Often as I see him,' relates a Philadelphia acquaintance, Thomas P. Cope, 'stalking about as a troubled spectre, with downcast eyes and lowered countenance, his coarse soiled coat peeping through the elbows of a tattered garment.' The way in which his friends and contemporaries looked upon the dreamer of universal steam communication is graphically told by the same writer. Speaking of his visit he once paid to John Wilson, his boat

builder, and Peter Brown, a blacksmith, who forged the rough engines of the little steamer which actually ran on the Delaware for eighteen months, at the rate of eighty miles a day, without being appreciated, T. P. Cope tells this story of his friend John Fitch: 'After indulging himself for some time in his never-failing topic of deep excitement, he concluded with the memorable words, "Well, gentlemen, although I shall not live to see it, you will see the time when steamboats will be preferred to all other means of conveyance, especially for passengers." He then retired, on which Brown, turning to Wilson, exclaimed, in a tone of deep sympathy, "Poor fellow! what a pity he is crazy."

'The prediction of John Fitch that steamers would one day cross the Atlantic, received its first fulfilment in 1819. It was in the summer of this year that an American vessel, the *Savannah*, arrived at Liverpool from Savannah, Georgia, having traversed the Atlantic Ocean in thirty days, partly sailing and partly steaming. The event created very little attention at that time, the *Savannah* being a small boat of but 300 tons, and rigged as a sailing vessel, while her steam power was regarded as purely auxiliary; so much so, that the engines, and even the paddles, were removable. Her passage being of the same duration as that of the time "liners" which had been built to carry on intercourse between Great Britain and the growing population of the United States, it was but natural that slight interest should have been taken in the first voyage of the first Atlantic steamer, and, having repeated it once or twice without proving commercially successful, the *Savannah* was withdrawn from the route to seek better fortune on the Mississippi. No less than nine years elapsed before another ship furnished with steam power followed the example of the *Savannah* in attempting an Atlantic voyage. This time the venture came from the Netherlands. It seems highly probable that the sight of the *Caledonia*, which James Watt, junior, brought in the spring of 1817 from the Clyde, to take up the Rhine, staying for a little while at Rotterdam, had a considerable effect in stimulating the interest of the Dutch in steam navigation; at any rate they ordered several small steamers soon after from Scotland, and in 1827 a number of merchants in Amsterdam and Rotterdam united together for the hazardous experiment of running steamships between the Netherlands and the West Indies. Accordingly, they had a steamer built on the Clyde, named the *Curacao*, of 350 tons and 100 horse power, and despatched her, in the summer of 1829, for a first trip from Amsterdam to the Dutch West Indies. The voyage to and from was repeated several times, with great commercial success; but, nevertheless, the enterprise soon came to an end. It did so chiefly on account of the soundings of alarm that arose on all sides against steam navigation. It was deemed by almost

all persons deemed to be competent to have a judgment in the matter, as an undertaking utterly foolish in itself, and beyond hope of practical attainment. The majority of so-called men of science were foremost in denouncing Atlantic steam navigation, showing, by elaborate arrays of figures and of arguments, the impossibility of such a feeble thing as a 'whiff of steam' to combat the tremendous power of wind, waves and tides, and predicting dire calamities if such attempts were persevered in. The effect of these evil forebodings became visible in the temporary cessation of further Atlantic steam trips. While nine years had elapsed from the first voyage of the *Savannah* to that of the *Curacao*, full ten years were to go by till another steamer was sent across the broad Atlantic. For the first time the start was on the British side. At 10 o'clock in the morning of Fourth-day, the 4th of 4th mo. 1838, the steamship *Sirius*, Lieutenant Roberts, R. N., commander, left London for New York, with ninety-four passengers on board. An immense crowd on shore greeted with their hurrahs the departure of the first English steamer for America as she slowly glided down the Thames.

'The *Sirius*, a vessel of 700 tons register, with engines of 320 horse-power, built by Thomas Wingate, of Glasgow, was not destined originally for Atlantic navigation. Her construction was due to a small joint stock association, called the St. George Steam Navigation Company, with the intention of establishing a line between London and Cork. On this route the *Sirius* was first placed, with excellent effect, her performances being so good as to create the delighted surprise of all persons interested in steamships. This led to an important consequence. Among the few persons in England who had faith at that time in ocean steam navigation was M'Gregor Laird, of Liverpool, brother of the late John Laird, M. P., for Birkenhead, who had become known as the leader of a stout controversy on the subject, maintaining his ground well against a host of would-be scientific antagonists. Among the latter was Dr. Dionysius Lardner, the well-known compiler of a number of scientific treatises. He laid it down, in his great "Encyclopaedia," as an absolute rule, perfectly indisputable, that the project of building steamers to cross the Atlantic was quite absurd, and, the more to enforce this dogma, the learned doctor took the trouble of going to Liverpool and lecturing an audience, on hearing that a company, projecting to build Atlantic steamships, was about to be established in the growing town on the Mersey. A part of the curious lecture of the distinguished encyclopaedist has been preserved in the Liverpool *Albion* of 12th mo. 14th, 1835, which gave a report of it. After dwelling on storms, trade winds and all kinds of "natural phenomena" on sea, earth and sky, Dr. Lardner thus pitifully expressed himself about Atlantic steam navigation: 'As to the project,

he exclaimed, 'which is announced in the newspapers, of making the voyage directly from New York to Liverpool, it is, I have no hesitation of saying, perfectly chimerical, and you might as well talk of making a voyage from New York or Liverpool to the moon.' This was as decided as strong; but M'Gregor Laird, a doughty Scot, had nevertheless no fear to attack the great authority. He did so in a remarkable letter to the Liverpool *Albion*, signed 'Chimera,' in which he demolished, one by one, all the arguments of Dr. Lardner against ocean steam navigation. The principal of these, aside of 'natural phenomena' fancies, was that, even if steamers could be constructed to brave the dangers of the Atlantic, their whole space would have to be filled with coal, to the exclusion of any other cargo, as well as of passengers. Being a practical shipbuilder and engineer, it was easy for M'Gregor Laird to prove that all that Dr. Lardner had said about the necessity of filling steamers entirely with coal was absolutely nonsense. The letter of 'Chimera' created a great impression, gaining over not a few influential men in Liverpool previously prejudiced against ocean steam navigation.

(To be concluded.)

For "The Friend."

Incidents and Reflections.—No. II. CONFESSION AND RESTITUTION.

Those readers of "The Friend" who have been interested in the anecdotes on this subject, published in Nos. 26 and 27 of "Incidents and Reflections," may find satisfaction in the additional testimony, contained in the following narrative, to the heart-searching operations of the Spirit of Christ, where it is allowed to carry on its work in the repentant sinner. The account is condensed from a communication to "The Earnest Christian."

"In the year 1864, while I was living without God, it became necessary that some one should assist my mother-in-law with money, to secure from her unfaithful husband, her support out of a piece of property, the income of which he had placed in her hands for such purposes while he was absent in a foreign land. During this time he undertook to cast her off from his protection and support; and I, in her behalf, instituted proceedings against him for separate maintenance. By stipulation of counsel, and order of court, it was agreed that a certain sum of money should be paid by her to him, and the property be conveyed to her, through a trustee, whom she might appoint. I was chosen for this purpose. Finding no one able or willing, seemingly, to loan her the money, (she not having any of her own,) and I being the owner of a piece of property, made a verbal agreement with her and two of her children, of which she had four, two of whom were not consulted, that I would mortgage my property to raise the money needed; which was readily acquiesced in by her, and the two children who knew of it. The conditions were that I should take a mortgage on the property to be acquired; she was not to pay any interest while she lived, all was to be for her benefit during her life, and not for her children's afterwards. As a remuneration for this, she was to make a will and make me executor, leaving the property to me at her death: all of which was readily acquiesced in and legally and lawfully executed.

"After the effervescence of feeling had

passed away, mother and one of her children began to regret that the two who were not consulted, and were poor, should be cut off; and wanted the will altered to give them a small portion; but I was inexorable, for I did not like them. Mother could have done it without my consent, by making another will; but she had regard for her word. And mother took it so to heart that I believe it shortened her days; for in eleven months she died.

"The will was filed for probate, and opposed on the ground of insanity, by three of the heirs. Both sides were defended by able counsel, in a law suit of two years. After this the surrogate admitted it to probate, and gave me letters testamentary at the enormous expense to me of \$5,234 for surrogate and my lawyer's fees, not including loss of time, expenses of witnesses, &c.

"I now took the property from the receiver, and repaired it to a very considerable amount, feeling quite sure I was done with law. But it was not long after that I was notified by my counsel that one of the parties was about to commence a suit against me as executor, for my share of the inheritance, which he and any heir in turn had a right to do any time within twenty years. On learning this, my heart sunk within me, and my stubborn will began to bend, for I could not endure such harassing; and these poetical lines kept running in my mind:

'You that are fond of pure vexation,
And chief procrastination,
Just place yourselves in a situation
To take a suit at law.'

"And now I think the Lord began to work upon my heart; for I repaired to one of the parties with whom I had been in bitter hostility for years, and asked them what would satisfy them; and I gave to three of them, \$1,790 cash, and took their quit-claim deed. Now I was sure I was beyond the reach of man; and so I was, for no power of man could disturb me in its peaceable possession. My health now began to fail; my nervous system was much impaired. I was emaciated, and my spirits broken down; and in the day I looked for night, and when it came I looked for day; and time wore heavily with me, and in this condition I took up my abode in this contested house.

"Now I will pass over a few years, and come to a crisis in my life never to be forgotten, when God by his Holy Spirit deeply convicted me of sin, of righteousness, and a judgment to come. This poor man cried unto the Lord, and the Lord heard my cry, and for Christ's sake delivered me out of my troubles, and so restored my health that after a few months I weighed twenty-seven pounds more than before conversion; for which I do, and shall forever bless and praise his holy name. A contented mind is a continual feast. Now I commenced making my crooked paths straight; and followed on to know him, whom to know aright is life eternal. And that life abides in me, praise God. I was now like unto the man that doeth truth and cometh to the light, that his deeds might be made manifest that they were wrought in God.

"At times in the closet, when my soul was filled with rapturous delight, this transaction would be brought to my mind, and my spirits would drop; and this was presented to my mind, that the powers ordained of God sanctioned it, and it was right; and I called the suggestion the work of Satan, and I put it

behind me; but it was hard to kick against the goads. It returned again at intervals with greater force, until by reason of the use of strong meat, my senses were exercised to discern good and evil.

"At this time I felt called of God to leave the church to which I belonged, and I was providentially led among a people whose doctrines and teachings and practices were, at still age, in sympathy with the way in which I had learned Christ; and on the second Lord's day of my meeting with them, a sermon on confession and restitution was preached, and the Holy Ghost sent it home to my heart and it was troubled; nor did the Lord who began this work, stop here. Testimonies on restitution were called for and given, which deepened the wound the sermon had made, and after this, the Lord, to make it like a nail driven in a sure place, inspired a sister to strike up a hymn in which was sung,

'Bold shall I stand in thy great day,
For who ought to my charge can lay?'

"Now my belly began to tremble. (I know whereof I affirm.) I felt I could not say that from my heart; now my understanding began to be opened. I went home in heaviness to take it to the Lord in prayer, and the Lord revealed to me by the Holy Spirit, my sin's oppression. Nor was Satan idle in making Scriptural excuses for me, and as often did the Lord say to my heart, 'It is also written I tell you when the Lord works, none can hinder. In this way, for a week or so I agonized and besought the Lord to reveal to me his whole will concerning this matter, and in his grace assisting me it should be done, in the small hours of the morning, a dungeon flamed with light, the Holy Ghost showed me that I was not only an oppressor but a supplanter, and could not stand in the judgment; showing clearly that the inheritance belonged to the children; that confession and restitution should be made to the heir. At this time my wife awoke, and seeing me sitting up, or hearing my talk, asked me the matter; and I told her what the Lord had shown me. She arose and paced the floor, exclaiming I was crazy, and it was the work of Satan; but my response was, that to me was eternal life, or eternal death; and were not that the Lord had undertaken this matter I could not foretell the result upon my wife, but, bless his name, he doeth all things well. "The way that opened to me, was to separate and divide among the heirs. To do this my wife's consent was necessary, she holding the right of dower, and the right of an heir. After a little waiting upon the Lord, she concluded it might be the best thing after all. Immediately it was offered for sale. The suggestion was to wait till May. But the Lord said, 'What your hands find to do, do with all your might.' The suggestion also was to keep my intention from the heirs until the property was sold; but the Lord said, 'What can be done to-day, put not off till to-morrow for you know not what a day may bring forth to-morrow is in eternity.' And it was so sold for the sum of \$12,500, which, after deducting expenses and mortgages, was divided between the Lord, with earnest prayer at thanksgiving. Nor was this all; for the Word and the Spirit shone more and more into my heart, and it was apparent that the Lord had determined on a clean work; to lay judgment to the line, and righteousness to the plumbline, and sweep away the refuge of lies, by over-

wing the hiding places with the waters of salvation, and bringing to light all the dark things of darkness.

While disposing of the hall furniture of a house in question, my wife, spoke of a base-agent under whom we had lived twenty-years before, how she and other had provided her to put new oil cloths in their halls; and as it was spoken, I clapped my hands; and I exclaimed, 'We owe him one quarter's t.' (I had forgotten it.)

But, but a month, because we only staid one month and nine days in the quarter. The owner, as I reasoned, thus: the owner was a good man, and the agent would pocket and we might, as well say nothing about it, and the Lord said, 'Owe no man anything, pay at them owest.' The next morning, I set out to find the agent, and had no trouble in finding him. Quite contrary to my expectation, not to my desire, when I entered his office, he sat. I asked him if he knew me, he simply replied, yes; and spoke of my being a good tenant. I then asked him if I owed him anything. He answered, yes. I asked a how much. He replied one quarter's rent, and I asked him was it a quarter or a month.

He produced a dusty book, and there showed the charge made twenty-six years before. He told him to give me a receipt. I took care, thanked God, and went on my way rejoicing, and singing,

'Bold shall I stand in thy great day,

For who ought to my charge can lay?

My to the Father and to the Son, and to my Ghost forever.

These suggestions often come to my mind: and I the only one in these latter days who I can restitution to make? (For I scarcely ever hear or read of a case.) The Lord says, 'I will not forgive you; except they repent and restore you; they shall perish; they will not come unto me, that I may give them light. The Lord will bring every work into judgment, with every secret thing, whether it be good, or whether it be evil.' Now, as Samuel said to Israel, so say I to this ungodly world, 'Whose ox have I taken? or whose ass have I taken? or whom have I defrauded? whom have I oppressed? or of whose hand have I received any bribe to blind mine eyes therewith? and I will restore it you.'

For with the heart man believeth unto righteousness; and with the mouth confession is made unto salvation. Whosoever believeth in Him shall not be ashamed."

Testimonies of Profane Writers to the credibility of the New Testament.

Extracted from *Horné's Introduction to the Holy Scriptures*.

(Continued from page 186.)

(3.) A. D. 176. CELSUS ridicules the Christians for their worship of Christ, and attests the gradual increase of their numbers. He so acknowledges that there were modest, temperate, and intelligent persons among them, and bears witness to their constancy in the faith of Christ. At the very time when he wrote against them, they were suffering a grievous persecution, but were enabled to withstand both his sharp-pointed pen, and so the sword of the magistrate.

(4.) LUCIAN, the contemporary of Celsus, as a bitter enemy of the Christians. In his account of the death of the philosopher Peregrinus, he bears authentic testimony to the principal facts and principles of Christianity;

that its founder was crucified in Palestine, and worshipped by the Christians, who entertained peculiarly strong hopes of immortal life, and great contempt for this world and its enjoyments; and that they courageously endured many afflictions on account of their principles, and sometimes surrendered themselves to sufferings. Honesty and probity prevailed so much among them, that they trusted each other without security. Their Master had earnestly recommended to all his followers mutual love, by which also they were much distinguished. In his piece, entitled Alexander or Pseudomantis, he says, that they were well known in the world by the name of Christians; that they were at that time numerous in Pontus, Paphlagonia, and the neighboring countries; and, finally, that they were formidable to cheats and impostors. And in the dialogue entitled Philopatris (which, if not written by Lucian himself, to whom it is usually ascribed, was composed not long after his time), there are numerous allusions to the writings, principles, and practices of Christians, all of which are ridiculed, and especially their belief of the doctrine of the Trinity.

(5.) The fortitude and constancy of the Christians under persecution is referred to by EPICTETUS (A. D. 109,) under the name of Gallians. The emperor MARCUS ANTONINUS (A. D. 161) mentions the Christians as examples of an obstinate contempt of death. And GALEN (A. D. 200) acknowledges the constancy of Christians in their principles. PORPHYRY (A. D. 270) acknowledges that they were then very numerous in the Roman empire, and unwillingly admits the miracles wrought by the apostles, which, however, he ascribes to the magic art; and he endeavored to expose them to popular reproach by insinuating that they were the causes of the calamities that befell the Roman empire.

(6.) Lastly the emperor JULIAN (A. D. 361), though he endeavors to lessen the number of the early believers in Jesus, yet is constrained to acknowledge that there were multitudes of such men in Greece and Italy before John wrote his Gospel, and that they were not confined to the lower classes; men of character—such as Cornelius, a Roman centurion, at Casarea, and Sergius Paulus, proconsul of Cyprus—being converted to the faith of Jesus before the end of Claudius's reign (who ascended the imperial throne A. D. 41, and died A. D. 54); and he frequently speaks, with much indignation, of Peter and Paul, those two great apostles of Jesus, and successful preachers of his Gospel. So that, upon the whole, the apostate emperor Julian has undesignedly borne testimony to the truth of many things recorded in the New Testament. He aimed to overthrow the Christian religion, but has CONFIRMED it; his arguments against it are perfectly harmless, and insufficient to unsettle the weakest Christian; for he has not made one objection of moment against the Christian religion, as contained in the genuine and authentic books of the New Testament.

Thus do all the inveterate enemies of Christianity—from its first origin to its complete establishment in the then known world, in the fourth century of the Christian era—unite in giving an honorable testimony to the character of Christ, the reality of his miracles, to the genuineness, authenticity, and credibility of the writings of the New Testament, and to the wide and rapid progress of

the Christian religion, as well as to the unity of the objects of the Christian faith and worship, the blameless lives of the Christians, and their unshaken constancy in adhering to their holy profession, regardless of the most sanguinary and exquisite torments that could be inflicted on them. It is true that, concerning many important articles of Scripture history, the Greek and Latin writers now extant are totally silent; and hence some have attempted to raise an argument against the credibility of this history. But the silence of the writers in question may be satisfactorily accounted for, by their great ignorance of such facts as occurred very long before their own time, and by the peculiar contempt entertained for both Jews and Christians, arising from the diversity of their customs and institutions. To these general considerations we may add, particularly with reference to the silence of profane historians relative to the remarkable events in the life of Christ:—

1. That many books of those remote ages are lost, in which it is very possible that some mention might have been made of these facts.

Hence it has happened that many occurrences which are related in the evangelical history, are not to be found in the writings of the heathens. Of these writings, indeed, we have now but few remaining in comparison of their original number; and those which are extant, are only fragments of preceding histories. Thus, the mighty works performed by Jesus Christ, and the monuments of the great achievements that took place in the age when he was born, are now missing or lost. All the history of Dion Cassius, from the consulships of Antistius and Balbus to the consulships of Messala and Cinna (that is, for the space of ten years—five years before and five years after the birth of Christ) is totally lost, as also is Livy's history of the same period.

In vain, therefore, does any one expect to find the remarkable passages concerning the birth of Christ in these writers; and much more vain is it to look for these things in those writers whose histories are altogether missing at this day. To instance only the census or enrolment ordered by Augustus, and mentioned by Luke (ii. 1, 2), the silence of historians concerning which has been a favorite topic with objectors;—there can be no doubt but that some one of the Roman historians did record that transaction (for the Romans have sedulously recorded every thing that was connected with the grandeur and riches of their empire); though their writings are now lost, either by negligence—by fire—by the irruption of the barbarous nations into Italy—or by age and length of time. It is evident that some one historian did mention the census above alluded to; otherwise, whence did Suidas derive information of the fact?—that Augustus sent TWENTY SELECT MEN, of acknowledged character for virtue and integrity, into ALL the provinces of the empire, to take a census both of men and of property, and commanded that a just proportion of the latter should be brought into the imperial treasury. And this, Suidas adds, was the first census.

(Continued next week.)

Prof. Luttermack, of Germany, after carefully examining the question, decided some months ago that an eclipse of the moon took place on the day of Christ's crucifixion, 4th mo. 3, A. D. 33.

For "The Friend."

Thoughts and Feelings.
CONFORMITY TO THE WORLD.

The apostle Paul in his injunction, "Be not conformed to this world," has left as clear and conclusive instruction on that subject, as is in that conveyed by our Divine Lawgiver: "Swear not at all." And yet how little heed professed Christians generally give to the former precept compared with that paid to the latter! Our great inconsistency, as well as unequal upholding of scripture truths, is again manifested in our obedience to some of its requisitions, while at the same time, we may much, in the expressive language of conduct, disregard and ignore others of no less binding and sacred obligation. Thus, the Saviour enforces: "Search the Scriptures; for in them ye think ye have eternal life;" and which a great many are, perhaps, not deficient in doing: while as respects the latter part of the text, "Ye will not come to me, that ye might have life," and wherein the kernel or pith of the whole matter may be said to consist, is too greatly neglected; in large measure perhaps because conformity to the world and its opinions, or to the sense and standard of others, induces content in their view of things, and with going their pace.

We are not sure whether some of the requisitions of the Divine will concerning outward conformity, because of their very little and insignificance, as so considered, are not as severe and conclusive tests of our love of conformity to the world, and our want of obedience to even the written revelation, as any other! Thus, how comparatively few of the professors of Christ, pay practical heed to the solemnly imposed restraints of the apostle Peter: "Let not your adorning be that outward adorning of plaiting the hair, and of wearing of gold, or of putting on of apparel," &c. Again, I will therefore, Paul writes, "That women adorn themselves in modest apparel, with shamefacedness and sobriety; not with brodered hair, or gold, or pearls, or costly array; but (which becometh women professing godliness) with good works." So far has outlandish excess, in these particulars, gotten hold of the professed followers of a "meek and lowly" Saviour, who, on earth, "had not where to lay His head," that there is not any monstrous novelty or strange disguise, in the way of attire, that fashion does not seem to reconcile, with her votaries, conformity to. With regard to this, and the deplorable and sinful waste of time, mind, talent and expense involved in, and sacrificed to "the outward adorning," to the corresponding neglect, it is to be feared, of that which is "not corruptible, even the ornament of a meek and quiet spirit, which is in the sight of God of great price," well might William Penn, who had himself tasted of the corrupting vanities and wicked customs of the world, with the bitter fruits thereof, write: "Let none deceive themselves, nor mock their immortal souls, with a pleasant, but most false and pernicious dream. * * * No, no, my friends, 'what you sow, that shall you reap.' If you sow vanity, folly, visible delights, fading pleasures; no better shall you ever reap than corruption, sorrow, and the awful anguish of eternal disappointment."

Accordancy with usage, doing as the rest do, or conformity to the spirit of the world, so falls in with the natural propensities of the unrenewed heart, that it is no wonder

if young persons, over whom those who are older exert a powerful—it may be helpful or stumbling—influence, should find it exceedingly difficult to take up the cross to "the lusts of the flesh, the lusts of the eyes, and the pride of life" so inviting and ensnaring, which are not of the Father, but of the world; and thence destined to perish with the world. But for this junior class how appropriate is the injunction in effect: Call no man master in things pertaining to the conscience! How encouraging are the promises, "I love them that love me; and those that seek me early shall find me." And, "Blessed is the man that endureth temptation: for when he is tried, he shall receive the crown of life, which the Lord hath promised to them that love him." But alas for those, be they parents or others, set over this class, whose doctrine and whose life coincident, it may be, have not been of a kind to lead away from conformity to the world, neither into the obedience of the cross to a cross bearing and crucified, yet risen and glorified Redeemer! Oh! the fearful responsibility resting on these! For, as the Lord himself said concerning His visited children: "Whosoever shall offend (either in word or act) one of these little ones that believe in me, it were better for him that a millstone were hanged about his neck, and he were cast into the sea."

May we all be willing, with the light and grace of the Lord Jesus—the means freely dispensed and all-sufficient—to examine and see, whether conformity in anywise to the corrupting spirit of the world in ourselves, so as to exert a prejudicial leaving influence over others, is not weakening us as Christians; is not robbing us of spiritual strength; is not depriving us of that power for good, which the more earnestly it is sought, and faithfully used, the more it is found to increase with the increase that is of God.

The Drainage of Lake Fucino.

The opening lecture to the class of Civil Engineering, at the University of Edinburgh, was lately given by Prof. Floeving Jenkin. The professor gave an account of the great project for draining Lake Fucino, in Italy, which, commenced 2000 years ago, had at last been successfully accomplished. The lake was situated in the Abruzzi province, 53 miles east of Rome, and covered the greater part of a large table land near the small town of Avezzano. The surface of the water was 2094 feet above the sea, but to the lake there was no natural outlet; and, though the action of the wind on the water prevented it from stagnating, the neighborhood of the lake was very unhealthy. Whenever there was a succession of years in which the rainfall was heavy, the lake rose enormously, and covered the adjoining country. The nearest river was the Liris, 31 miles away, but the mountain Salviano and a high plain separated the two. The comparisons between what the lake was recently and what it had been in ancient times were extremely curious, as showing the changes which took place in the rainfall over a long cycle of years. Between 1783 and 1816 the lake rose 30 feet 5 inches, and was then 74 feet deep. From the commencement of 1820 to 1835 it fell to nearly 11 feet below its level in 1783, being then 31 feet deep. In 1861 it had risen again 30 feet. The remains of drainage works on the lake showed that its area was about the same in

1816 as it was in the reign of Julius Caesar the Emperor Claudius; though there was evidence that it had risen much higher in prehistoric times. The average extent of the lake was 33,950 acres. It was 12.4 miles long and 6.8 miles broad. The Italian engineers calculated that the lake had been sinking up at the rate of 12 inches per cent, and that was an interesting geographical fact as showing the rate at which these large lakes sink; so that the present bottom was 15 feet higher than it was in the reign of the Emperor Claudius. Julius Caesar had conceived the utility of draining the lake for the sake of the health of the district, and also with a view increasing the corn-growing area near Rome, but his death put an end to the scheme. The reign of Claudius the project was revived, and the favorite Narcissus was desired to go on with the necessary works at the public expense. Suetonius stated that for eleven years 30,000 men were employed there, and the elder Pliny said that the work was so extraordinary that no language could give any idea of them. These works consisted in boring a tunnel under Mount Salviano, 9 feet below its summit, and under the Palatine fields at an average depth of 328 feet, discharge into the river Liris the surplus water of the lake. The construction of a tunnel of about four miles in length at a great depth under a mountain was, in the then state of engineering science, a wonderful undertaking. It would not be an easy job. The tunnel actually was made, and the lake partially drained; and it appeared from the remains of the old tunnel that the original engineer understood his work well, but that the designs were imperfectly carried out, as the work shockingly scamped by the contractor. First of all, levels could not have been well understood in those days; nevertheless the outfall had been most correctly chosen, as to give the reasonable fall to the river Liris in 1000; the new outlet at the River Liris was within a foot or two, and at the same level as that chosen by the Roman engineer, and the Roman engineer had also selected the direction of the tunnel very properly, and had followed so correctly the configuration of the ground in making it that the modern engineers had not been able to improve upon it. The old shafts—40 in number—which had been sunk so that headings might be driven in various directions at one and the same time, had been well constructed, and had been largely taken advantage of in constructing the modern tunnel. A great difficulty the Romans must have encountered was the quantity of water which flowed from the strata, and how they got over it was not easy to say, as it was not known that they had pumped sufficient to cope with large accumulations of water. One of the most curious things about the old tunnel was the constant variation of the cross sections. Beginning with a finely arched entrance, the tunnel as it went into the hill got smaller and smaller, just as if the men got tired of the work, until in the centre there was only a hole large enough for a man to creep through. Then it opened out again to ward the outfall. Where it could be inspected it was all right, but what was altogether out of sight had been scamped in the way indicated. During the progress of the work a great slip had occurred, and, evidently as they could not get through the loose earth, the workmen turned off to the right and made a

nd gallery through the stone, some 400
length, round the obstructing mass.
The tunnel was opened by Claudius, who
of all witnessed a sanguinary sham scene
on the lake, in which the convicts, re-
dered from all parts of Italy, were made
stroy each other. The tunnel, however,
got blocked, and it was not until Ha-
le's time that it was put right. The lake
then reduced to some 17,000 acres. The en-
ce to the tunnel seemed to have been kept
in order down to the fifth century, but
the fall of the Roman Empire the tunnel
abandoned and the lake resumed its an-
extent. Various abortive attempts were
wards made to open the tunnel from time
time. In 1851 a company, with a capital
1,000,000, was formed for draining the
—the concession they were to get in re-
being land which was reclaimed: but
enterprise, too, fell through. Prince
ander Torlonia, who held half the shares
concern, however, bought up the other
and having obtained the repeal of some
actionable clauses in the concession, pro-
ceeded with the work.

He consulted a French engineer—Franz
de Monsueher—under whose direction
the tunnel, following the line of the old one,
carrying off 11,000 gallons of water per
minute from the lake, was completed in June,
1853. The cost had been \$8,750,000. The
lake had now been completely drained. Tor-
lonia had got an estate of 35,000 acres, the
neighborhood was now healthy, and the gene-
prosperity which had been brought about
the population, by this great work, had
a most marked.—*Litté Paper.*

the revelation of God in Christ has done
much for the world to be put aside at the
rest of science. If science is right, then
Christianity is a falsehood; but did ever false-
do such work as true Christianity has
into? Can a lie transform a base and cruel
into one that is pure and brotherly? Can
we inspire the heroism and the sacrifice of
—which has illustrated the path and pros-
cess of Christianity from the earliest times?
Can a lie sweeten sorrow, strengthen weak-
ness, make soft the pillow of death, and irri-
tate the spirit shutting its eyes upon this
world with a joy too great for utterance?
This is what Christianity has done in millions
of millions of instances. It is busy in its
deficient work of transforming character all
over the world to day. Man of science, what
are you to put in its place? The doctrine
of a world without a personal God, and a man
without a soul? God pity the man of science
who believes in nothing but what he can
prove by scientific methods! We cannot
imagine a sadder or more unfortunate man in
the world. God pity him, we say, for if ever
human being needed divine pity he does.
Intelligent man, standing in the presence
of the Everlasting Father, studying and en-
deavoring to interpret his works, and refus-
ing to see him, because he cannot bring him
into the field of his telescope, or into the
range of a "scientific method," is certainly
an object to be pitied of angels and men. The
angel is that in his darkness and his sadness
turn to him for light—turn to a man for
light who denies not only God, but the exist-
ence of the human soul! Alas! that there
could be fools more eminent in their foolish-
ness than he!—*Scribner.*

Selected for "The Friend."

The following lines were addressed, by
Richard Peters, a clergyman of the Protest-
ant Episcopal Church, in Pennsylvania, to
Anthony Benezet, who had loaned him Bar-
clay's Apology. It was understood that Dr.
Peters, previously to his perusal of Barclay,
had entertained and expressed unfavorable
opinions of the Quakers, and their principles.

For Barclay's learned Apology, is due
My hearty thanks and gratitude to you.
The more I read, the more my wonder's raised,
I viewed him often, and as often praised,
Commanding reason through the whole design,
And thoughts sublime appear in every line.
Sure some divine spirit did inspire
His pregnant genius with celestial fire.
Long had I censured with stupendous rage,
And cursed your tenets with the foolish age,
Thought nothing could appear in your defence,
Till Barclay shined with all the rays of sense,
His works, at least shall make me moderate prove,
And those who practise what he writes I'll love.
With the censorious word, no more I'll sin
In damning those who own the light within.
If they can see with Barclay's piercing eyes,
The world may deem them fools, but I shall think them
wise.

For "The Friend."

Memorial of the Yellow Fever in 1793.

The following document is published in the
pages of "The Friend," as an interesting relic
and reminiscence of the sad days of the Yellow
Fever in Philadelphia in 1793.

The Committee therein referred to is thus
spoken of in "The Arm Chair."

"When Pestilence her raven wing outspread,
When terror swept the living from the dead,—
When love's own ties were severed in afflict,
And duty's call had lost its wonted might,
O'fly, and others, a devoted band,
Before the march of terror took their stand,
They nobly dared in that dark hour to make
Themselves an offering for the people's sake.
He was accepted! Great the church's loss,
She mourned a faithful champion of the cross.
Gathered at mid-day—soon the race was run—
Long'er the evening shades his labor done!"

"To the Surviving Relatives of Daniel Offley.

At a meeting of the citizens of Philadelphia,
the Northern Liberties and Di-strict of South-
wark, assembled on Saturday, the 22d day of
March, 1794, at the City Hall for the purpose
of taking into consideration the report of their
committee appointed to prepare an instru-
ment expressive of the most cordial, grateful
and fraternal thanks of the citizens to their
committee of health, for the important, hazard-
ous, and successful services by them rendered
during the calamity that lately afflicted the
City and Liberties, the following form was
unanimously adopted and agreed to on this
occasion.

Whereas, it hath pleased the Supreme Ruler
and Governor of the universe to permit, dur-
ing the months of August, September and
October last, a most dreadful visitation or
epidemic malady to afflict the City and Liber-
ties of Philadelphia in such manner that it is
supposed not less than five thousand of the
inhabitants have fallen victims to the same:

And Whereas, the following citizens of
Philadelphia as Guardians of the poor, to wit:
James Wilson, Jacob Tomkins and Wil-
liam Sanson; and the following persons as a
committee of health, to wit: Mathew Clark-
son, Stephen Girard, John Letchworth, John
Haworth, Thomas Savery, Henry De'orrest,
Jonathan Dickinson Sergeant, Caleb Lowme,
Peter Helm, James Kerr, James Swain,
Jacob Whitman, John Connelly, Daniel Offley,
Thomas Wistar, Israel Israel, James Shar-
wood, Mathew Carey, Samuel Benze, Andrew
Adgate and Joseph Inskip; and the follow-
ing persons members of the assistant com-
mittee of health in the Northern Liberties
and District of Southwark, to wit: William
P. Sprague, William Gregory, Joseph Burns,
Jacob Winnemore and Shubart Armitage;—
totally disregarding their own personal preser-
vation, and only intent on arresting the pro-
gress of the malignant disorder; with a mag-
nanimity and patriotism meriting the highest
eulogiums, stood forth, and by every generous
and endeavoring exertion, preserved the lives
of many of their fellow citizens from death
by conveying them to a suitable hospital
which they had provided at Bush Hill, where,
under the meritorious exertions and peculiar
care of Stephen Girard and Peter Helm, two
of the citizens above mentioned, every possi-
ble comfort was provided for the sick, and
decent burial for those whom their efforts
could not preserve from the ravages of the
prevailing distemper. In order therefore to
perpetuate the memory of such distinguished
usefulness to distant times and to serve as

A MOTHER'S CARES.

I do not think that I could bear
My daily weight of woman's care,
If it were not for this:
That Jesus weepeth ever near,
Unseen, but whispering in my ear
Some tender word of love and cheer,
To fill my soul with bliss!

There are so many trivial cares
That no one knows and no one shares,
Too small for me to tell,
Things e'en my husband cannot see,
Nor his dear love uplift from me—
Each hour's unnamed perplexity
That mothers know so well.

The failure of some household scheme,
The ending of some pleasant dream,
Deep hidden in my breast,
The weariness of children's noise,
The yearning for that subtle poison,
That turneth duties into joys,
And giveth inner rest.

These secret things, however small,
Are known to Jesus, each and all,
And this thought brings me peace.
I do not need to say a word,
He knows that thought my heart hath stirred,
And by divine care my Lord
Makes all its throbbing cease.

And then, upon his loving breast,
My weary head is laid at rest,
In speechless ecstasy!
Until it seemeth all in vain,
That care, fatigue, or mortal pain,
Should hope to drive me forth again
From such felicity!

Christian Secretary.

Queyenet, a French chemist, recommends, as
a means for rapidly extinguishing fires in chim-
neys, that about 100 grammes of sulphuret
of carbon be burned upon the hearth. The best
way to burn the sulphuret is to turn it out in
a broad tin plate. It ignites at once, burns
rapidly, and produces great volumes of the
noxious sulphuric gas, which extinguishes
flame at once. The sulphuret of carbon, a
liquid combination of sulphur and carbon,
should be kept in large bottles, to allow for
its great expansion. In Paris the firemen, by
using this compound as directed, in three
months, extinguished 251 fires out of 319,
and that, too, without needing to go upon
roofs or deranging apartments in any way.

an example and encouragement to others to emulate the like beneficent virtues, should it ever unfortunately again become necessary to practise them, the citizens of Philadelphia, the Districts of Southwark and Northern Liberties, do by this Instrument, present to the above named William Sansom as a guardian of the poor; to the above named Mathew Clarkson, Caleb Lowmes, Thos. Wistar, Samuel Benge, Henry DeForest, John Connelly, Stephen Girard, Peter Helm, Israel Israel, John Letchworth, James Kerr, James Sharwood, John Haworth, James Swaim, Mathew Carey, Thomas Savery, Jacob Whitman, as a committee of health; and to the above named William P. Sprague, William Gregory, Joseph Burns, Jacob Winnemore and Shubart Armitage, as members of the assistant committee of health, their most cordial and fraternal thanks for their benevolent and patriotic exertions in relieving the miseries of suffering humanity on the late occasion. And as Andrew Adgate, Jonathan Dickinson Sergeant, Joseph Inskeep and Daniel Olfley, members of the committee of health, and James Wilson and Jacob Tomkins, members of the assistant committee of health, unfortunately fell victims to their generous exertions for the preservation of the inhabitants, it is hoped that their great services will be held in everlasting remembrance by the citizens to whose welfare they so nobly devoted themselves even unto death, and that this will be evidenced on all proper occasions in a suitable attention to their surviving relatives:

Ordered, that a copy of this instrument be duly engrossed on parchment, signed by the chairman of the meeting, and presented to each of the persons above named, and to the representatives of the deceased overseers of the poor and members of the committee above named, to remain with them as a Memorial of the sense their fellow citizens entertain of the services rendered them during the late dreadful calamity.

THOM. MCKEAN,
Chairman.

For "The Friend,"

In looking over the "Richmond Palladium," of 10th month 3d, 1878, in which are given "Notes" of the proceedings of Indiana Yearly Meeting, apparently taken by a reporter, I notice the following paragraphs, which may be laid before the readers of "The Friend," as indicative of the progress of innovation on the long established order and discipline of the Society of Friends.

Referring to the revision of the Discipline acted on by the meeting, it is said "A change was made in relation to the supply of small meetings with the ministry, so that ministers who are unable to furnish such labor gratis, shall be reasonably compensated for their time and services, and provision was made for raising money for that purpose."

"A proposition to change the clause in reference to the reception of members into the church, to vest in Monthly Meetings discretionary power to receive members from other religious Societies on letters; and allowing requests to come directly to Monthly Meetings without intervention of Overseers or Preparative Meetings, was adopted."

I understand the practice has obtained in some of the Monthly Meetings there for a considerable time, to give members wishing to join other religious Societies letters of dis-

missal, and the last provision is doubtless intended to reciprocate the courtesy, where other Societies receive them.

A Little Republic in Fendal Germany.

A half hour's ride by rail from Stuttgart is a pleasant little valley, bounded on the north by sloping vineyards, and on the south by fruitful hills. The name of the village is Kronthal.
